Six Ways To Make A Billion Dollars

By Henry Smith Williams

LET me suggest that before you start to read this article you get a glass of water, and put it in front of you.

My object is not to quench your thirst, but to stimulate your imagination. I shall ask you to see in that glass of water only things that are known to be there—things no less actual because they are invisible to the naked eye. And I shall attempt to show you how these infinitesimal habitants of the water give clues to billion-dollar opportunities.

Yes; it was *billion*-dollar I said, not mere million-dollar opportunities. If you can learn to juggle the contents of that glass of water in just the right way, you may count with full confidence on getting a billion dollars for your secret. Indeed, this understates the case, for there are more billion-dollar ideas than one in the glass, as I shall show you later on.

One world at a time, however. Our first concern is not so much with the water itself as with the energy that is stored in it. Yet this is perhaps a distinction without a difference, since energy and matter, in the last analysis, appear to be but two sides of one shield. At any rate, it will soon be clear that, while we *seek* working energy, we must *talk* constantly about atoms of matter, especially about hydrogen, which, as you know, is one of the two constituents of the molecule of water. The hydrogen atom is, indeed, the djinn that is to show you where the billion-dollar purse is hidden.

Tapping the Supply of Atomic Energy: After this preamble, let us get right down to brass tacks. The secret is that the hydrogen atom carries an amazing store of energy, part of which it is willing to dispose of under certain conditions. I will give you a formula which, by implication, tells what those conditions are.

It may be stated thus: "In each molecule of water in this tumbler, two hydrogen atoms are held captive by a big oxygen atom. If you will liberate these captives, and permit them to join, four by four, to form helium atoms, you will learn something to your advantage."

That's all there is to it. And I assure you there will be no trouble at all about forming a syndicate to give you a billion for your process for making helium out of hydrogen.

Helium, as you doubtless know, is an extremely valuable gas, exceedingly useful for filling balloons, because it is not inflammable. You are therefore to make helium, and nothing else; yet the helium, after it is made, will be only a by-product—the smoke that goes up the chimney, as it were. The really valuable product that your invention offers is working energy. When any atom, or any molecule, combines with one or more other atoms or molecules, a relatively enormous amount of energy is released. But in this regard there is no other atom at all in the class of hydrogen. The energy released when any four hydrogen atoms are permitted to join together to form an atom of helium is simply prodigious.

I'm not talking through my hat; I'm speaking from scientific facts. The tumbler of water before you contains roughly 20,000,000,000,000,000,000,000,000,000 hydrogen atoms.

If these hydrogen atoms were made into helium, the energy resulting would have the effective heating power of 4,800 *tons* of coal; or, to put it another way, this energy gradually released would be sufficient to propel the "Leviathan" across the ocean at full speed, no other fuel whatsoever being required.

Why, the hydrogen in any teaspoonful of water will generate 100,000 kilowatt hours of electrical energy, or 133,000 horse-power!

And any single drop of the water, if its hydrogen were recklessly made into helium all at once, would explode with the force of a two-pound stick of dynamite.

Incredible? Yet perfectly true. And there isn't any "catch" in it, either. The hydrogen-helium trick is simply waiting for someone to turn it.

The only difficulty is this: When you liberate the hydrogen atoms from their oxygen bondage, as may readily be done with an electric current, they will be able,

The Miracles of To-morrow

COAL and oil in the discard! Food from wood, water, and coal tar, and a whole dinner in capsules! Gold made in factories! Heat that travels in only one direction—from the outside in or the inside out! . . . Are these the imaginative vagaries of a new Jules Verne?

Not at all! Dr. Henry Smith Williams, the author of the article beginning on this page, has an extraordinary scientific training and background. Perhaps more extensively than any other man in America he has written and lectured on the wonders and miracles of science. And in this message he shows that such wonders as these may be accomplished.

What a blessed relief if there were no more furnaces to stoke, no more cooking to be done, and only three or four hours of work a day necessary to keep the wheels of civilization in motion. The Millennium! Why not? We keep reaching millenniums in science, and then calmly accepting them as commonplaces. Who knows what new millenniums are on their way? THE EDITOR.

4005

under ordinary conditions, to unite only two by two. But this won't do. You must make the conditions such that they can unite four by four.

The difference may not seem to you very material. But, from the atomic standpoint, it is so material that your reward (in units of energy) will be a *trillion* times greater for permitting the four-by-four combination than it will be if you permit only the two-by-two combination.

IN PRACTICAL terms, the hydrogen atoms in a teaspoonful of water, released and permitted to join two by two, will give you the heat-equivalent of a pea-sized pellet of coal. The same hydrogen atoms, permitted to join four by four will give the heat of one hundred *tons* of coal.

Can this bewildering discrepancy be explained? Ah! thereby hangs the billion-dollar tale. Its essence is this:

When two hydrogen atoms unite, it is a tame affair; when four are permitted to get together, the reunion is so riotous that a portion of the very world-stuff of which they were created is annihilated!

Can this be proved? Very simply. Every hydrogen atom by itself weighs exactly 1.008 atomic units. Two hydrogen atoms, united, weigh just twice that. But do four hydrogen atoms, joined to make an atom of helium, weigh four times 1.008? They do *not:* they are short weight, by .032 atomic units. Quite the strangest disappearance ever recorded in cosmic or other history has taken place. About three fourths of one per cent of the very substance of the four hydrogen units has been dissipated, apparently into nothingness. A miracle has happened!

Let us delve into the heart of this mystery. The hydrogen atom consists of two unit particles: the *proton* and the *electron*, the two being held in the grip of electrical and magnetic forces. The proton, however, has the weighable substance of 1,845 electrons. Practically, the total mass of the hydrogen atom is, therefore, proton-substance.

When four hydrogen atoms (four pairs of protons and electrons) unite to form a helium atom, it is mostly protonic substance that is missing.

Where did the missing proton matter, the essence of world-stuff, go? That's the mystery. And fortunately it is solvable. The missing proton matter has been changed into *energy*—basic, primordial, fundamental energy; call it *protonic*, or sub-atomic, energy, if you will, to indicate that it comes from the very heart of the atom.

So, when you induce four hydrogen atoms to unite to form an atom of helium, you are tapping the abysmal depths of the infinite storehouse of cosmic energy.

It is an experience in itself awesome; in its consequences, stupendous. For from each group of hydrogen atoms harnessed four by four, you will get a *trillion* times the energy that was ever obtained from a like mass of matter under human control in any furnace or engine or dynamo or device whatsoever, since the world began.

Your helium machine (when it's invented) portends a new era in civilization! No longer will you be dealing with mere molecules, as in a steam engine, or with interchange of atoms, as in a gas engine, or with the fairy flight of electrons from the power-house generator; but with the colossal power of the basic, primordial particles that are the unit structures of all the matter and all the cosmic energy in the universe.

Dare one tamper with such unthinkable power? Pounds of dynamite in a drop of water! The strength of a hundred thousand horses in a teaspoon! A power-house generator in a tumbler! How release such energies, and escape destruction?

That's easy. Release them gradually, of course. Nature gives the cue, when she makes water rise as vapor. The atoms in your tumbler *individually* are nothing to brag about. It's union, and the correct union at that, that gives them strength.

Even as you sit there looking into the tumbler, billions on billions of water molecules, each freighted with two atoms of hydrogen, are jumping up from the surface of the water, and go hurtling off into air. And when a single drop of water has thus evaporated, and mingled with the air, every cubic millimeter (pin-head size) of space in the atmosphere of the entire fifteen-foot room in which you sit, will contain upward of a hundred billion of the molecules that a few minutes ago were water in the tumbler, and now are no less water because they have assumed the guise of vapor.

There you have the clue.

A drop of water, even a fine spray of water, you dare not attempt to handle for your experiment. But a few cubic millimeters of vapor-laden air might with safety be introduced into a strong compression chamber—perhaps the cylinder of an automobile engine—in which you are to conduct your hydrogen-helium experiments.

Suppose you put about ten drops of water into the empty gasolene tank to evaporate. Small whiffs of this vapor-laden air, introduced through the carburetor, may be further diluted with absolutely dry air, or with an inert gas (which here implies a gas that contains no hydrogen).

Now, all that you have to do is to discover an agent that will strip the proton of the hydrogen atom of its electron mate, thus disturbing the electric balance and modifying the tense magnetic field that constitutes the atom's protective shield. Robbed of their mates, the most natural thing in the world—nay, the inevitable thing—is for four hydrogen atoms to rush into mutual compact, thereby constituting themselves a helium atom, and giving out a glorious offering of cosmic energy in the form of usable, and salable, heat.

MILLIONS of tons of helium are probably thus being made in the atmosphere above your head. Why not a few atoms in your machine?

The *molecular* outburst in a big steam engine gives a thrust of many hundred pounds to the square inch. The *inter-atomic* explosion in a gasolene engine produces heat enough to drive your car with the power of ten, fifty, a hundred horses. The *sub-atomic*, or protonic detonation in your helium-spark engine will liberate the power of a thousand horses—or a hundred thousand. There is no limit, except as imposed by the strength of your spark-chamber.

Harness your hydrogen atoms four by four, and you make coal and fuel-oil potentially obsolete. You make the vapor of water the universal fuel—with atmospheric air as the practical source of supply.

Just think of it! No fuel required but water-vapor for furnaces of every type; for power-house generators; for the engines of steamships, locomotives, automobiles, airplanes, and dirigibles; to heat dwellings; operate local electric plants, and drive farm machinery.

Coal and oil in the discard! Mines that produced a billion tons of coal last year, and oil wells that spouted a billion barrels, put out of business by that yet more abundant gift of nature—water! It is a vision to dazzle the eyes of prophetic imagination.

WILL it ever be more than a vision? Why not? Hydrogen-helium power is no more visionary to-day than the idea of making steam do the world's work seemed in the year 1800; no more visionary than the idea of making an electric current do the work of horses seemed in 1850; no more visionary than the idea of talking hundreds of miles over a wire seemed in 1870; or the idea of wireless control of a ship or car, in 1890.

It is not a thousandth part so fantastic as the crazy dream that whiffs of gasolene, whirling canoe blades, might lift great vehicles into the air and make them fly like birds above the clouds, seemed in the year 1900.

It is no such fantasy as the familiar facts of the X-ray, or radio broadcasting.

The idea of the helium engine seems fantastic only because it is new. Not till yesterday did we learn anything about the interior of the atom. One of these days it will seem as natural to lure power from vapor, by the hydrogen-helium route, as to get power out of steam or exploding gasolene.

The terms of the problem are clear enough. The conditions are well understood. It is now a mechanical rather than a mathematical problem. Why is not *your* chance to solve it as good as the next man's? And, beyond peradventure, there are billions in it!

Food From the Factory: Keep that tumbler of water in front of you. I am about to suggest a quite different type of juggling that you might do with it.

Instead of transforming the water into the equivalent of a coal mine, an oil well, or a cargo of dynamite, you might change it—if you knew how—into lumps of sugar, a quantity of starch, slices of bread and butter, or a helping of beefsteak. And, in the last analysis, it is not to be denied that food is more important to human life than any supply of super-power. Of what avail would be worldwide industrial prosperity, if there was not food enough in the world to feed its inhabitants?

The food problem, indeed, is the one crucial consideration that civilization cannot evade. The limits of population depend on it absolutely. Food comes from the soil, and the acreage of arable land is limited. The human population cannot much longer increase, even at a normal rate, without bringing us to the verge of world-famine; that is to say, unless a way can be found to produce food faster than it can be coaxed from the soil. If food could be synthetized in the factory, the problem of population control would take on a quite different aspect.

But is the synthesis of food possible?

Your tumbler of water may help us find an answer.

The water in the tumbler, in spite of its varied contents, is clear and transparent. It would still remain so, if, by waving a magic wand, you were to cause each carbon atom in a portion of the water to forsake its oxygen mates and link itself with a molecule of water. (A molecule of water being, as I have already explained, two hydrogen atoms held captive by one oxygen atom.) Yet every family group of six carbon atoms combined with six molecules of water would constitute one molecule of the kind of sugar called glucose.

AND if you were to take out a spoonful of the sirup that the tumbler now holds, and —again by waving your wand—remove a single molecule of water from each molecule of the sugar, what remained would be starch, and the water would become turbid.

Another spoonful of the sirup might be treated in a different way. By splitting each sugar molecule in half, and adding to each moiety two atoms of hydrogen, you have a molecule of glycerin. The sirup of a third spoonful may have its molecules of sugar modified by removal of two carbon atoms and two atoms each of hydrogen and oxygen, to form butyric acid.

By mixing glycerin with the butyric acid—in just the right way, of course—you produce a fat which is the equivalent of butter.

Thus, by a little juggling with the molecules of water and carbon-dioxid originally in the tumbler, you have sugar and starch, and butter. And there is no limit to the other kinds of sugars and fats and oils that would result from further manipulation of the same materials. You could even make such substances as cellulose, wood pulp, and paper, if you chose, for carbon, hydrogen, and oxygen comprise all of these.

If the supply of carbon atoms were to give out, you have but to take a straw, put it into the water, and bubble your breath through it. For the carbon-dioxid you exhale will be absorbed by the water, and give additional experimental material.

Absolutely pure, distilled water, plus your breath, would supply all the material needed for making a cracker, and butter to spread on it; or a portion of tapioca, and the sugar and cream to serve with it; namely, carbon, hydrogen, and oxygen.

Nor need you stop at that: Another pass or two of the magic wand, and you may have a whole-wheat bread sandwich, with cheese or egg or beef for filling. You will first combine two molecules of water with two atoms of carbon and then add a single atom of nitrogen, a constituent of the water that you have hitherto neglected—not needing it for any carbohydrate or fat.

PHOTOGRAPH BY D. JAY CULVER, N. Y.

Dr. Henry Smith Williams, famous in the field of medicine and of other sciences, is the author of a hundred volumes covering an incredible range of study. Among his works are "The Conquest of Nature," "Science and Civilization," "Adding Years to Your Life," "The Witness of the Sun," "Miracles of Science," "Practical Radio," "The Proteomorphic Theory and the New Medicine," "Mental Obliquities," and so on through the amazing list. In addition, he is editor of the "Historians' History of the World" and "Works of Luther Burbank." Doctor Williams was born in Durand, Illinois, in 1863. He has studied extensively in America and abroad, and has been associated with numerous hospitals and scientific organizations. His present home is in New York City

THIS new combination of two atoms of carbon, four of hydrogen, two of oxygen, and one of nitrogen will give you the simplest form of "amino-acid," named glycine. You have only to add increasing numbers of carbon, hydrogen, and oxygen atoms (and, toward the last, one more nitrogen atom), to make in sequence all the other amino-acids, about seventeen in number. And these are the building stones of which every molecule of albumen, or protein is compounded.

And protein, as of course you know, is the veritable life-substance. No living cell or tissue, vegetable or animal, has any basis but protein. So, by mixing together variously the different amino-acids you have made, you may gain wheat protein, for your slice of bread; or milk protein, for the cheese sandwich; or egg protein, chicken-meat protein, beef protein—what you will.

To make the proteins quite complete, you must, to be sure, have added a few atoms of sulphur, and sometimes an atom or two of phosphorus, to the large groups of carbon, hydrogen, oxygen, and nitrogen atoms making up the bulk of the structure. But these are supplied from the "traces" of sulphates and phosphates of magnesium and sodium in the water. So are various other minerals that enter into the structure of vegetable and animal tissues—though not entering into the composition of sugars, starches, fats, or proteins themselves.

Vegetable fiber contains silicon; traces of this element are always dissolved by water from the substance of any glass receptacle in which it is held. Even if your tumbler of water had been certified by a chemist as pure and unadulterated, it contains, as we have seen, all the constituents of a very palatable and nourishing lunch, garnished, if you wish, with salads or vegetables or fruits, and completed with a portion of apple pie, *à la mode*.

Of course the *quantity* of material in the tumbler might prove inadequate; but then you can always go to the tap or well for another helping of water.

All this sounds most inviting. But what about the magic wand with which to do these miracles? Ah, there's the rub. The constituents are there in the tumbler. It's up to you to do the rest.

Harnessing the Tides: Perhaps, however, your mind runs to the mechanical rather than to the chemical side of invention. Very well. Here is a mechanical problem that is good for ten-figure money —if you solve it. I mean the problem of tidal power.

All the oceans of the world rise and fall twice every day, (*Continued on page 78*)

Edgar S. Bloom Has Specialized On Straightening Out Snarls

He spent twenty years in helping to keep the rapidly developing telephone industry free of tangles—From the vice presidency of the American Telephone and Telegraph Company he stepped into the presidency of the Western Electric Company, which manufactures most of the country's telephone equipment

By Helen Christine Bennett

"GIVE him a jumble to set to rights, and he's happy. Why, that man actually likes a mess!"

The speaker was an official in the American Telephone and Telegraph Company. He was talking of a former vice president, Edgar Selden Bloom, who is now president of the Western Electric Company, the biggest manufacturers of telephone equipment in the world. Every piece of your telephone is probably made by this company: the two hundred and one parts that make up the instrument itself; the box, and bell, the wires running out of your home, and the cables running under the street; the switchboard somewhere in the center of town, and the wires and cables connecting it with other switchboards all over the country.

One hundred and ten thousand parts of telephone equipment are made by the Western Electric Company, and several hundred parts of radio sending-station equipment, including the microphone. In the manufacture and distribution of these parts, and in the purchase of certain additional material used in telephone construction, there is combined this year a force of forty-six thousand workers, and a gross business of a quarter of a billion dollars.

Edgar Selden Bloom was called to head this huge company in August, 1926, thirty years after his advent into the telephone business. For over twenty years he had served in telephone companies in various cities throughout the country. Everywhere he faced the problems of a new industry trying to grow fast enough to meet the public demand for its services. Organization and administration had to be adapted to the particular needs of a particular locality, and in many emergencies there was no precedent to follow.

As I talked with Mr. Bloom in the quiet of his New York office, I decided that what he liked about a hard job was not the "mess" he was called upon to straighten out, but the *order* that succeeded it. The office itself was spare, uncrowded, restful. The man who shook hands with me in a firm grip was in tone with the surroundings. Bloom is short, rather slight, yet compactly built. His speech is incisive without being curt. He uses few words; but his response is immediate and understanding. Almost before you have finished a question, he has the answer ready. And behind the speed with which he thinks and speaks you *know* that this man will meet competently any situation which comes up.

There was another impression that Bloom managed to convey to me. I have interviewed many men of great achievement, and often in their presence I have felt inadequate—a human being keyed to a low rate of production in life's undertaking. But from the moment Bloom spoke, I was comfortable in the conviction that he *expected* something of me. As I talked afterward with men who had worked with Bloom I found that this was characteristic. They expressed themselves in different ways.

"Bloom is never high-hat," said one.

"He doesn't recognize any 'least' in his organization," said a second. "His own output is remarkable; but he does not expect the same rate in others. What he expects is *what you can do*. If he finds that you are not 'top hole,' you're not an outcast. Instead, you are made to feel that what you *can* do is important."

BLOOM had the start of many another American boy who is born of good parents with fair means. His father was a wholesale druggist in Philadelphia, where the family moved shortly after Bloom was born in Bloomsbury, New Jersey.

"There are two tales as to the naming of that town," he said, smiling. "One is that it was named for my ancestors, who had been farmers in that vicinity about 1760, when they came from Holland. The second story says that the town is named from a small blast furnace that produced from the iron ore a mass of metal known as the 'bloom.' You can take your choice of the two tales. In any event, both sides of my family were Dutch."

Young Bloom went through the public schools of Philadelphia and won a scholarship from the Manual Training High School to the University of Pennsylvania. He went through college as many a young man goes, including among his activities an engineering course, membership in a fraternity, the class football team, the dramatic society, and a place on the staff of one of the college papers.

"When I was graduated," he said, "I had several offers of positions: A former University of Penn man who was with the New York Telephone Company asked for three or four men. I was one of those recommended to him. He offered me twelve dollars a week. His nearest competitor bidding for my valued services had offered me ten. I accepted the twelve. That extra two dollars, plus the distinction of living in New York City, was the determining factor in my choice of a career.

"WHEN I left my home for a boarding-house in New York and started in on my new job in the traffic department of the telephone company, it was July, and hot. I was assigned to one of the central offices of the company, at Eighteenth Street and Broadway. I learned to operate a switchboard; I went out with the trouble men 'chasing troubles,' and I climbed roofs to locate difficulties.

"After two months, I was restless. I decided that I had learned everything there was to be learned in that office, and I said so to my chief.

"Whatever he thought about it he was willing to have me make a change, so I went to the Franklin Street office. Here I was put on the subscribers' complaints. And it was here, too, that I first accomplished something worth-while; the fact is, I accomplished two things. At first, I was sent out to investigate complaints. At that time, there was no comprehensive method of checking the operators' service to subscribers. In connection with the investigation of complaints, we always made a number of test calls in the presence of the subscriber, the results being reported back to the Central Office manager for the correction of any faulty service.

"Our rules were strict. We had to see the complainant and pacify him. Indeed, we were not allowed to close the complaint until he *said* he was entirely satisfied.

"I remember that one old fellow who ran a hotel had written in what we called a 'blue' letter; it was simply studded with profanity. When I arrived at the bar—there was a bar in every hotel in those days and this gentleman never roamed far from his—he asked me what I wanted. When he heard I was from the telephone company the air became as blue as his letter. I stood there, (*Continued on page 70*)

Edgar Selden Bloom

EDGAR SELDEN BLOOM is president of the Western Electric Company—the largest manufacturing unit in the world outside of the Ford automobile plant. On leaving college he went to work for the New York Telephone Company. Beginning with the time when he was assigned to the "trouble chasers" division—a raw young telephone man—Bloom was destined for almost thirty years to aid largely in bringing cosmos out of chaos in an industry which was expanding with lightning rapidity. Difficult jobs of reorganization, construction and systemization were turned over to him. He reorganized the whole of the Pacific Coast telephone system after the great fire and earthquake in San Francisco, and assisted in the welding of many small telephone companies into the present vast American Telephone and Telegraph system. In 1926 Mr. Bloom was called to his present post.

Timothy O'Neil

"TIM" O'NEIL, Rhode Island manufacturer of emblems and badges, was born in "Dog Town," now South Providence, where a "regular guy" was supposed to "hit the booze." As a lad he took the pledge of total abstinence, and he has never broken it. At nineteen he found himself teaching Sunday-school in a reform school. Here he learned that the quickest way to a boy's heart is by the baseball route. Tim decided to use his discovery to keep boys out of prison. He promptly organized a boys' baseball team that won the state championship. This team and the dozens that followed it were all modeled along the lines of big league baseball. To-day, twenty years later, there are six Tim O'Neil big leagues of boydom, with more than seven hundred and fifty contracted players. (Above) Tim and a bunch of his live wires. Among Tim's "boys" are an ex-governor of the state and the present mayor of Providence, as well as lawyers, judges, doctors, ministers, and big business men.

King Of The Sand-Lots

By William S. Dutton

IF YOU go to No. 185 Eddy Street, in Providence, Rhode Island, and take the lumbering old factory elevator to the third floor, you will find, to the right in the dingy hallway, a door on which is lettered in faded black:

J. H. O'NEIL COMPANY
Badges and Emblems

Walk right in, and ask for "Tim" O'Neil.

"Hey-y, Tim!" will call a young woman who knows how to smile upon a stranger.

"Yeah-h?"

"Somebody to see you!"

And presently from out the rumbling, busy, old-fashioned New England shop beyond will emerge a man in shirt sleeves rolled to the elbows. The chances are his gray head will be boyishly tousled, and in his eyes there will be the quizzical, preoccupied look of the interrupted worker.

No, there is nothing formal about this shop, nor about the O'Neils. "Jim" is president of the little company, which he started twenty-odd years ago on a capital of ten dollars. "Tim" is treasurer. In all, including the two brothers, you will find six members of the O'Neil family on the pay roll, which, in busy seasons, numbers twenty-five.

Drop in about noon time, and a full dozen of the clan will be there—brothers and sisters, husbands and wives, and maybe some of their youngsters—come in from nearby jobs or school. A cook stove presided over by one of the women folks will be in service. A big table will be cleared of work things, bread, butter, and cream taken from the improvised "ice box" outside a window, if it's winter; chairs drawn up, dishes placed, and you will be invited to sit down with the rest of the folks.

So, in the O'Neil shop, it has been for twenty years. Daily they've met and turned the old work place into a home. There has always been, in fair weather and bad, an extra plate for the visitor, be he friend or stranger. In the old days, the mother used to come, before she died.

And into the customs and revenue services of the Government; into great national conventions; into schools and lodges and labor unions, churches and Sunday-schools, the O'Neils have sent their hand-wrought badges and emblems of gold and silver and bronze. Craftsmen all—they are proud of it! Plain folks all—and they are prouder of that!

But this isn't a story of the family, nor of the shop. It is one that belongs peculiarly to "Tim." However, I want you to see him first as I saw him, in his own little workaday world, where, with his hands and by the sweat of his brow, he earns his bread.

I don't know what he earns there, except that it isn't enough to do any talking about. Between times, for thirty or more years, he has also filled a job under the city treasurer of Providence, as a sort of server-in-chief of delinquent tax notices. For this, he probably receives less than fifteen hundred dollars a year.

Summing him up: I don't suppose, reckoning it in money, that Tim O'Neil is worth more than a few thousand dollars, though he is more than fifty years old. You won't find his name in any of the books of the elect, nor of the so-called great. He is without degree or title or glitter. As the busy world judges men, I suppose Tim would be rated merely as an "also-ran," a nobody.

But wait!

Not long ago, in Providence, I talked with one of the editors of a newspaper which is one of New England's oldest and most noted. It is the job of an editor to know men; and this editor and I fell to talking of "big" men.

"Who is your biggest man?" I asked him, "the man whom you would name first as your most useful citizen?"

I was thinking of Providence's great banks, and of its industries and commerce. Five of its factories are world-famous and the largest of their kinds on earth. On the hill overlooking the city's center is one of the nation's leading universities, and a noted old school of design. I thought of the old families of the city, and of its pride in its history and traditions.

The editor made no mention of any of these evident sources of big men. He passed them over as if they had not been there. Instead, he told me a story—not of wealth nor industry nor scholarship, but of sand-lots and back streets. He told me, strangely indeed, of boys and baseball, and of the heart of a man! The man whom he named was plain "Tim" O'Neil!

"In my opinion," he said, "Tim O'Neil is the most useful citizen of Providence. Without help, money, or pay, he has done more for the boyhood and, yes, for the manhood of Providence than have any other ten men put together. In money he may be poor; but in men made, happiness given, and good done for others, he is one of the richest men in America. Tim is a multi-millionaire in good!"

ABOUT twenty years ago, he went on to tell me, a new idea in recreation was introduced in town. It was a boys' baseball league, modeled exactly on the lines of the major leagues, with this exception—professionalism was absolutely barred.

Eight teams were in the league. Each team had its manager and a name. Every player was under a signed contract. The league had its official umpires and scorers, a regular schedule of games, real baseballs and uniforms, and to the winning team went a pennant.

If you had lived (*Continued on page 103*)

The Most Valuable Citizen In My Community

Prize Contest Announcement

WHEN the author of the accompanying article went to an editor in Providence, Rhode Island, and asked about some of the big men there, he received a surprise. For one of the men named was not included in any of the lists of commercial or professional leaders. Yet, as you will find out when you read the article, this man deserves high rank. In your own city, town, or rural community there is some man or woman who, as you see it, is doing more good than any other one person there. This is the person we want you to write about. Who is he? Or who is she? What is he doing that causes you to place him at the head of your list of worth-while citizens?

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes July 20th. Winning letters will appear in the October issue. Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Dot And Will Take A Vacation

A story

By Fannie Kilbourne

ILLUSTRATED BY T. K. HANNA

THERE are a few little trifles in life, of course, that Will and I feel different about. The radio, for instance. I like the radio very much when Graham MacNamee, or somebody interesting like that, is announcing, or of an evening when I've been out a while with some of the girls in the afternoon. But on the evenings after I've been in all day with the babies—and have thought of loads of things I want to talk over with Will, the radio doesn't look so good to me.

Will will dash up from supper the second he's through, and tune in on KYW. Probably he'll get a whistler, doing "Listen to the Mocking Bird." And just because it's coming a little clearer than usual, Will will sit there with a positively reverential look on his face, and never hear a word I say. It's like talking to a deaf-mute.

"And I think Rosemary would have done better to let it drop right there," I'll be saying.

Will's eye will happen to light on me as though by the merest accident. He'll smile at me dreamily.

"Hear that reception!" he'll exclaim. "Say, wouldn't you actually think that was a bird?"

It's very hard. After having waited all day long for a little decent conversation, who wants to sit and listen to a *bird*.

In the main, though, Will and I are extremely congenial, and we can't help feeling a little superior to couples we know who aren't. Getting along the way we do with our budget, for instance, we naturally glance at each other with a little satisfaction when Roger and Dulcie get to discussing money.

Roger came from New England, in the first place, and has worked in a bank for a great many years. Dulcie, on the other hand, is very free with money.

When she paid six dollars once for a pair of chiffon stockings, Roger nearly went into a decline.

"Six dollars!" he'd keep saying. "Six dollars is a year's interest on a *hundred dollars*. If you had put that six dollars out at interest and kept reinvesting it, in twelve years, it would have doubled itself."

"Yes," Dulcie answered, "and in twenty-four it would have been twenty-four dollars, and in thirty-six years—Oh, if you could only live to be a hundred or so, I suppose you might turn six dollars into enough to buy yourself a handsome coffin. No, thank you. I'll take my six in stockings—now!"

And the Mertons about bringing up their children. Howard has a lot of fancy ideas, which Rosemary, who is home all day with the four of theirs, says she'd like to see any human being make work.

"I do the very best I can," Rosie said once, with great feeling, "to stimulate the children's minds with one hand while I'm straining prunes and carrots with the other. But I think it's going too far for Howard to pick a Sunday when they've all got colds, and give them a child's intelligence test he'd found in a magazine. And then worry because Junior only rated a hundred and five when he should have been a hundred and seven!"

"'Well, Howard Merton,' I just told him, 'if a Soviet government were to give you an intelligence test on a day when you'd got one of your bad colds, they'd take one look at your rating, then give you gas!'"

Oh, even living as we did in a bunch of happily married couples, Will and I had plenty of occasions to pat ourselves on the back about how congenial we were.

When Mrs. Long, who never got along with her husband and has at last got a divorce, talked about its being a good thing for husbands and wives to take vacations away from each other, Will and I just laughed.

WE HADN'T had the least bit of trouble planning our vacation, though it was the first real one we had had since the babies were born. The year before, we had bought an electric washing machine for a vacation, and the year before that we had finished off an extra room in the attic.

But this year we were feeling quite flush, Will having at last sold the factory land to Sam Porter; Mother hadn't gone up to Kathie's after all, and she said she'd keep the twins if we wanted to go somewhere for a couple of weeks.

Lots of couples would have had trouble in agreeing on where to go, but Will and I didn't have a bit. Will was crazy to go camping at Lake Winneposocket and I was crazy to go to Chicago. So we decided to go camping for the first week and to Chicago the second.

Being only a few hours from Chicago gives all of us girls a considerable advantage. When we meet a girl from Minneapolis or Detroit or any of the big cities, if she tries to be the least bit patronizing we can always put her in her place very quickly.

If she says, "I don't suppose you get much in Montrose in the way of theatre," we always say, "Well, of course, we are so near Chicago—we can see almost anything there. Lots of the New York successes play in Chi first, you know."

And if she tries to insinuate that our stores aren't as big or as good as those in her own city, we can always say, "But, you see, we're so near Chicago, it's easy to get over spring and fall for our really important shopping."

Oh, Chicago, is a great help to us. We can do almost anything with it—except to get there very often. In fact, we use the idea of going there in our conversation so much that we kind of fool ourselves. We've all got ourselves to believing that we really do run over every little while; see all the new plays; do our shopping there, and so forth. But when you get right down to bare, hard facts, there don't any of us get over there once in three years.

It's not as easy as it sounds. Of course it is only a few hours away; but, even so, it costs money to get there. And unless you feel you can spend more yet to shop and go to shows, what's the point of going at all? Besides, we've all got husbands with businesses they can't very well get away from, and houses and babies that it isn't easy to leave. So, in actual practice, we do our shopping in Montrose and go to movies in the Montrose Arcade, and have all kinds of fun among ourselves, and keep Chicago mainly for conversation.

And here we were, after months and years of talking about it, actually going. And to stay there a week!

I had made up my mind to be an awfully good sport about the camping part of the vacation, and entered heartily into the preparations.

The north end of the lake is very wild, and we stopped at Dawson to get our provisions. I sat outside in the flivver while Will bought them.

"You have the housekeeping on your hands all the time when you're home," he said. "And this is a vacation. Camp cooking is a man's job, anyway."

That was awfully sweet of Will and it did seem wonderful, after having got three meals a day for years, to see Will go right ahead with our first meal. He built a fire and made coffee and fried bacon and potatoes and opened a can of beans. After our long ride, the smell of that coffee and bacon cooking outdoors is something I'll never forget.

"There, Mrs. Horton, draw up your chair to that!" said Will, beaming from ear to ear. "How's that for Delmonico's?"

I HAVE never seen anybody as happy as Will was. He just loves camping and it was a simply heavenly day. We leaned against tree trunks, and ate and drank as though we'd never had a meal before. Some of the bacon was a little bit scorched, and Will had bought tin cups, and the coffee made them so hot that mine burned my lips when I tried to drink. But I had made up my mind firmly to be a

good sport, so I never even mentioned it.

When at last we had eaten all we could, I said, "I'll wash the dishes while you get the tent up."

"Oh, we don't need to wash any dishes," said Will. "Just run the knives and forks up and down in the sand. That cleans them better than any scouring powder ever made."

They took us to a Russian tea-room for lunch, where all the waitresses were refugees and not one of them less than a countess

"What about the plates and cups, though? And the frying pan?"

"Well, you might rinse them off in the lake if you want to," said Will. "No need to for the frying pan, though. We'll be cooking bacon in it again."

As every woman knows, you can't rinse off plates all bacon-grease in cold water, so I heated some water in the coffee pot—Will hadn't brought anything to cook with except a coffee pot and frying pan—and washed up. By the time I was through, Will had the tent up. Then we walked up to the top of Hooker's Hill to see the view, and came back to camp and had a swim.

Will got supper and when it was ready he said again, "There, Mrs. Horton, draw up your chair to that. How's that for Delmonico's?"

We had coffee and fried potatoes and bacon and beans again; but the climb and the swim had made me so hungry that I didn't mind two meals just alike. Then I did the dishes—though Will protested that it was a lot of tripe, washing dishes when you were camping—while he smudged out the tent so we wouldn't have any mosquitoes. One or two managed to stay in, of course, as they always do, and they kept me awake for quite a while. Or maybe it was having drunk so much coffee. Whichever it was, it didn't bother Will a bit. He was asleep before I'd got undressed. It had really been a most lovely day.

But the second didn't begin so well. For the first thing, I found that I had got a little blister on my heel. I'd worn my regular street shoes, and they're so low-heeled and comfortable over silk stockings that it never occurred to me they might be just a little too snug over the heavy sports hose. "Oh well," I thought, "we'll be out fishing all day, and I can just sit still in the boat." But the next blow came when Will declared that it was too clear to fish. "No use trying to fish before twilight," he said.

"I'll tell you what," he suggested, "we'll take a good long hike!"

My heart sank down to the very blister on my heel, but I said nothing. I had made up my mind to be a good sport, and it wasn't a very big blister. So we had breakfast—coffee and bacon and fried potatoes—and started out.

THE hike Will had picked out would have been about six miles, but when we got to where the Old Dam Bridge had been, it was down. That meant that we had to walk clear around the arm of the lake, which made the hike over ten miles. Before I'd gone the first mile my heel had begun to hurt.

As anybody knows, a blister is much worse if you feel you mustn't speak about it. By the end of the second mile, every step was like rubbing sandpaper over a sore. I knew that if I mentioned it to Will, it would irritate him—blisters on anybody else's heel always do. He thinks it's sheer perversity not to have worn the right kind of shoes, in the first place. So I gritted my teeth and plodded on, determined to be a good sport and enjoy myself if it killed me.

For a while I was able to keep up my spirits by thinking about Chicago. That would make up for everything. And the camping would be only a week at most. This buoyed me up for the first five miles, but that was all. Every step was becoming torture, and the week ahead stretched out longer and longer. I began to doubt whether I could ever last it out.

Last out a week! By the eighth mile I was only praying that I'd live till I got back to camp. If I could have limped, it would have helped a little, but I was afraid that if I limped Will would notice it and ask what was the matter. By the ninth mile, I didn't care if he did. You can't expect a martyr to be a good sport while they're lighting the fagots. I just turned loose and limped.

And Will never even noticed that I was limping! He was so excited and happy over being off camping that I doubt he'd have noticed the difference if I'd started going on all fours.

The last mile back was something beyond description; but some way or other I lived through it.

"Now for dinner!" Will said, enthusiastically.

"What shall we have?" I asked.

Will looked puzzled.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Why, bacon," he said, as though that were the only food known to man.

And it shortly appeared that that was the only food we had with us. He seemed amazed that it should have occurred to me that he might have brought anything else.

"Bacon's what you always eat, camping," he said. "Bacon and fried potatoes and beans and coffee, except for breakfast; then you leave off the beans."

"But don't you think it will make us bilious or something?" I asked, dubiously. "Eating that three times a day?"

"Oh no," said Will, "not when you're tramping all day!"

"Tramping all day!" I felt as though I could never take another step as long as I lived. Sitting there watching Will build up a fire, it suddenly dawned on me that I had never really cared a great deal for camping, at best. And here I was, under the very worst circumstances possible, in for a week of it. And with the added burden of having to be a good sport.

"There, Mrs. Horton," said Will, "draw your chair up to that!"

IT BEGAN to drizzle in the afternoon, but we started out fishing just the same. However, we didn't stay long. Will hadn't got his line in before the drizzle had turned into a driving rain that even he admitted you couldn't stay out in.

We managed to half-cook supper—bacon, fried potatoes and beans, of course—over a sputtering fire under the flap of the tent. Will kept insisting that the rain was part of the fun, and singing that crazy old song, "It ain't gonna rain very hard anyhow—Hallelujah!"

But it did rain very hard and very harder. The tent sprung a leak in the night, and dripped right down on our faces. I didn't mind it at first, because so much bacon had made me thirsty, and I just opened my mouth under the leak and let the rain drip right into it. This kept the blankets from getting wet, but after a while I'd had enough to drink, and I couldn't be expected to keep it up all night.

After I stopped, though, the leak seemed to get larger. The rain just came splashing in. Pretty soon Will woke up. He was getting splashed on too. The blankets began to get wet. Besides, there were quite a few mosquitoes in the tent. Take it altogether, even his enthusiasm had got a shade limp by morning.

THE lake was bleak and gray, covered with chilly-looking whitecaps. Will had thoughtfully brought some wood into the tent in order to have dry firewood, but, thanks to the leak, that had got pretty damp, too, and it took an hour to get up enough fire to cook breakfast. And it was so chilly that we both got as close as we could to the sputtery little blaze.

All day long I huddled under the tent and shivered. Will went swimming in the rain, just to show he was virile; but by afternoon it was raining in sheets and blowing such a cold wind that even he dropped the idea of taking another walk. We had only a blanket apiece. We were both chilly all night. By morning it was still raining and blowing, and we realized that August's cold spell had arrived ahead of schedule. We'd put our camping trip first in order to avoid it.

Oh, but I was glad I hadn't mentioned the blister on my heel, or the fact that I didn't care much about camping at best! The chillier the wind blew and the darker and more lasting-looking the clouds were, the more hopeful I became. I insisted that the rain probably wouldn't last more than two or three days at most, and that it seemed a terrible shame to think of cutting our camping short. I knew it was perfectly safe to do this. No human being could possibly want to keep on camping in such weather. Not even Will.

About noon, I reluctantly allowed myself to be persuaded that we'd better break camp and head for Montrose.

It's a wonderful feeling to know that you have done your duty, and yet it hasn't cost you anything. I'd been a good sport and never once complained, and yet, here we were, heading for Chicago, the camping all over and done with. I'd had our city things packed and ready, so we drove in from camp at five o'clock and caught the seven-ten for Chi.

Never, as long as I live, shall I forget pulling into the Chicago Union station at quarter past eleven that night. It was still raining, but the streets were ablaze with lights. Will had wired ahead for a room at one of the very best hotels. A bell-boy met us at the door, the lobby was brightly lighted and unspeakably rich looking, all marble and potted palms and huge Chinese vases.

One usually stays with relatives in Chicago, and they always seem to live in the suburbs. But not this time. Our hotel was right down-town. Nothing in the world can ever seem more luxurious to me than our room, after camp.

THE rug was so soft, your steps were perfectly silent. There were twin beds with a reading light over each one. There was a writing desk with all kinds of stationery, and a beautiful lamp with a mosaic shade on it. There were both a chiffonier and a dressing table, and electric candles on each side of both.

The door to our private bath stood open, and the bell-boy put on the lights in there too, a white blaze of them. There was a great, thick white bath mat with the hotel monogram in purple, and as many towels as we have in a week's wash at home. There were little individual cakes of soap, and two full-length mirrors.

The joy of a long, lazy,

Your Family Tree

By Albert Payson Terhune

DRAWING BY R. M. BRINKERHOFF

LET'S say *her* name was Smith. And, while we are inventing quaint and original names, let's call *him* Jones. Those were not their names; but they will serve.

The two were acquaintances of mine. I don't think I am betraying any confidence of theirs by repeating the following conversation; for several of us were present.

The talk had turned to ancestry and genealogy. It was Miss Smith who brought it deftly around to these themes. Presently, she said:

"Of course, I don't believe in boasting about such things. But it is a source of keen delight to me that I can trace my descent unbrokenly to William the Conqueror. It is wonderful to know who one's remotest ancestors were.

She looked complacently about her. Jones was the only one of us to answer.

"Yes," he agreed, "it must be great to be able to trace your ancestry like that. *I* can't. I don't know anything about my ancestors. I don't even know who my own parents were."

Miss Smith glared at him, thinking he was trying to be funny. But he was not. He was telling the simple truth, a truth of which he was not in the least ashamed. I knew Jones well. I knew his fine history.

He began life as a foundling asylum waif. But it is the finish, and not the start of a race, that counts.

Jones had started his business career as tally boy in a lumberyard. By sheer pluck and brain and clean ambition, he had worked his way up to an enviable pinnacle in the business and social world.

Never did he make a secret of the foundling asylum. Therefore, nobody thought the less of him for it. It is only when a man tries to forget his origin that others insist on remembering it.

Let him accept it, frankly and unashamed, as did Jones; and there will be no spiteful whispers about it. That same rule seems to apply to many things.

MISS SMITH was still glaring, when Jones continued:

"No, I don't know the names of my own parents. I haven't an idea who or what they were. At that—if there's anything in heredity—I have a big advantage over the rest of you."

This queer statement seemed to call for much explanation. And Jones gave it.

"You say," said he, addressing Miss Smith, "that you can trace your line unbrokenly back to William the Conqueror. That's good! But not good enough. It means you know who your ancestors in a direct line were. They're docketed: the worth-while ones and the worthless ones. They can't have been any finer or any worse than you know they were.

"Now, I'm a lot better off than you. My ancestry isn't so limited. Nobody can prove that I'm not directly descended from John Hancock or Napoleon or Edgar Allan Poe or Cortez or Sitting Bull or Charlemagne. I may be, or I may not be. But you can't prove I'm not. Your genealogy chart proves conclusively that *you* are not.

"For instance, if you claim you're directly descended from Paul Revere, it can be disproved in a minute. But *I* can claim to be his great-grandson; and nobody—not even myself—can prove I'm mistaken. I may be descended from anybody. There is no proven limit to my ancestry.

"Old Bill the Conqueror may be just as much an ancestor of mine as of yours, for

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

all either of us knows. That's why I say I have the advantage of you."

He had; though, when I got to thinking about it, I found a score of flaws in his statements. Because, in all human probability, Jones *is* descended from William the Conqueror, and from Charlemagne as well. So are you. So am I. Though, as you'll see, presently, it is little enough to boast of.

It is high time someone put a large stick of dynamite under the ancestry fetish that has caused so much needless pride to some of us, and so much more needless chagrin to many of us. There is no other verbal dynamite so fearsomely devastating as are figures. Let's flash just a few figures on—well, say upon Miss Smith's descent from William the Conqueror.

I have been working on the subject. A professional genealogist has helped me. We have resolved it into a very simple sum in lower mathematics.

But before we start on our mathematical calculations, let's stop a moment and revive our memories of that egregious old rascal, William the Conqueror. He was a swashbuckling and bullying Norman duke, son of an unwed mother. He tricked Harold, the Saxon heir to the English throne, into swearing allegiance to him. Then he raised an army of fellow-adventurers and crossed the Channel into England. There, at the battle of Hastings, 1066 A. D., he conquered and killed Harold, and seized the English throne, to which he had no rightful claim, hanging everyone who opposed him and stealing by force everything in sight. Truly, a noble ancestor for any of us!

Very well. Suppose you and I are descended from William the Conqueror. He was at his prime in 1066 A. D. He died in 1087.

STATISTICS allow something like thirty-three and a third years to each average generation. That means there have been twenty-six, or more, generations between you and William the Conqueror, if he was one of your ancestors. And he *was* your ancestor, in all probability; as presently I shall explain.

Now then, for our simple sum in mathematics:

You had two parents and four grandparents and eight great-grandparents and sixteen great-great-grandparents; and so on. Continue doubling, for each generation, till you pass twenty-six. That means you have had (roughly speaking) about forty million ancestors since William the Conqueror.

It sounds preposterous, I know; but get a pencil and paper and figure it out for yourself.

At the end of your figuring you will find you have had fully forty million ancestors, since 1066; not deducting, of course, for the fact that the ancestral lines must have crossed and recrossed one another many times.

But as a basis we'll use forty million for a round arbitrary number, to save more abstruse calculations.

So, if you are descended from William the Conqueror, you have only one-forty-millionth of his blood. To make it a bit plainer, the very tiniest half-invisible sliver from one of your finger nails is a much larger part of you than is your share of William's physical or mental heritage.

Not a very large portion to be proud of, is it? But that isn't the worst of it. Here is another angle.

In all Great Britain and France combined, in 1066, there were not forty million people; nor anywhere near that number. Probably not in all western Europe. So, if you have had forty million ancestors since the days of William the Conqueror it is fairly certain you must be descended from him.

But before you let this glad news thrill you, stop and remember that you are also descended from almost every robber and homicide and mendicant and genius and celebrity who happened to be alive in western Europe in the Conqueror's time and earlier.

That means you are the proud descendant of kings and beggars, of warriors and thieves, of statesmen and galley slaves, of aristocracy, and of the offscourings of the London and Paris gutters.

They were a queer mixed lot, those ancestors of ours. Yet if we are going to claim descent from the foremost of them, we must also confess descent from the worst of them. It is not a sweet "Thought for the Day." But it happens to be logically true.

Some of our ancestors sat on thrones. Some were hanged. Others led armies. Others begged in rags. Others built up the destinies of nations. Others robbed on the highway or slit throats for hire or wrote immortal literature or composed glorious music or were chronic jailbirds.

We have had them all. A motley mob. But there is no getting away from the fact that they were our ancestors.

You may have traced your line of descent, flawlessly, as did Miss Smith, directly from the Conqueror. In other words, various generations of your forefathers took the trouble to trace one only of the innumerable lines from whence they sprang. They followed a single chosen branch of the Conqueror's issue, and ignored a thousand other branches. As wisely follow a single thread in a giant cobweb.

If your forefathers had been able or willing to trace every branch, instead of only one, they could have found a hundred ancestors better worth claiming as kinsfolk than was the predatory Norman pirate and super-highwayman who is glorified now by the title of "William the Conqueror."

For example, in that tangle of family-tree roots could be found men and women who died for their faith, or who sacrificed their lives to making the world better or wiser or happier.

THIS genealogy craze is a risky and fruitless thing. It has been tried out, from generation to generation, in my own family clear back to Godfrey de Bouillon, the Crusader; and beyond.

Our family tree is a really creditable and handsome bit of arboreal growth. I used to be frankly vain of it.

I might be boasting still about my lofty lineage had not a cousin and myself undertaken to trace other and equally close lines of our descent. That was an error—a pride-swatting blunder on our part.

In one line, we came upon a blacksmith ancestor who, from all contemporaneous accounts, seems to have led such a life that I wonder his influence with the Board of Pardons left him out of jail long enough to rear a family.

In another branch we were brought up against a dead wall in the shape of a foundling ancestor. In another, a somewhat cowardly seventeenth-century pirate captain. Finally, we ran up against a forefather so much worse that we looked at each other in disgusted silence. We had discovered something which gave our family tree an unpleasantly close resemblance to a gallows tree. We called it a day, after that, and quit. But it gave me much to think about, and little to be proud of.

It will be the same with you, whoever you are, if you are able to unravel every ancestral thread for a mere dozen generations or less.

IF YOU care to spend money enough, and have any kind of start in the way of two or three grandparents whose names you know, it is often fairly easy to get some reliable genealogist to create a true family tree for you; back to almost anyone you care to name.

It is a recognized business, this constructing of genealogies. Naturally, as the genealogist goes back, branch after branch becomes obscure or vanishes. But also, as he goes back, he is likely to strike some well-established line. Thereafter, his work is easy.

For example: Suppose eight hundred families in England, in 1700 A. D., could claim direct descent to the Conqueror. All the genealogist has to do is to trace one of your less remote lines to one of those families. After that, he has only to copy that family's genealogy.

There is a man in New England who had the ancestor craze so badly that he decided, some decades ago, to trace his descent straight back to Adam.

His friends laughed at him. But he had money and ingenuity and he had a long ancestry that already had been traced. So he employed expert genealogists and set to work on the seemingly impossible task.

Already he had proven his descent to a Mayflower passenger in 1620. Thence, by British church records, to a point where one of his forbears married the granddaughter of an English king.

Naturally, from there he could leave the archives of village churches and go on with the established records of the State itself. This he did, until he came to a king who ruled Scotland in 850, A. D.

That gave him a long line of Scottish kings to go on with; and Irish rulers before them. Then, by aid of O'Hara's "Irish Pedigrees," he continued through a female branch of one of these lines to a Jewish ancestor who belonged to a certain tribe of Israel. This Jew's tribal family traced its descent from one of the ancients named in the chronological chapters of the Bible—which carried it back unbrokenly, through the same source, to Adam and Eve.

I wonder if the New Englander stopped to realize that this 137-generation genealogy (if it was correct) proved him to be a known blood relative of almost every scoundrel from Cain down to Judas Iscariot.

According to William Montgomery Clemens, the genealogist, a family tree is very hard to trace back after the time of Charlemagne is (*Continued on page 93*)

The Sea Is A Hard Master

By Robert A. Bartlett

I HAVE been shipwrecked fourteen times. Four times I have seen my own ships sink, or be crushed to kindling wood against the rocks.

"How does it feel to face death?" is a question that has often been put to me.

"That depends," are always my first words in reply. And it does. Because, if the peril is short and swift, as when a man points a gun at your head, that is one thing. But if you have to cling, half-frozen, for many hours to the rigging of a sinking ship, not knowing which moment may be your last, that is another sort of shiver altogether.

One misery I have been spared: the feeling in the face of death that I was leaving wife and children behind me. I never got married. I don't think a seafaring man ought to. Women so often break your heart. A fisherman I knew got wrecked on the Labrador one winter. He left his wife in a snow dugout while he went to the nearest village for food. When he got back she was dead. He never got over the shock.

The early years of my life were spent with my father and uncles in the Newfoundland sealing fleet. Then I got into the banana trade in the West Indies, from which I was graduated to command of a full-fledged ocean tramp steamer, sailing to all oceans of the globe. For the past thirty years I have been going to the polar regions, with some sealing between expeditions. I was master of Peary's North Pole ship, the "Roosevelt," and I commanded a troop transport during the war, when I held rank in the United States Naval Reserve. At no time since my boyhood have I been for over a month on the beach, save whilst recovering from one voyage or preparing for another.

I was born in the little village of Brigus, on Conception Bay, Newfoundland, the 15th of August, 1875. The Bartletts of Brigus have always been seafaring people. When Thomas Jefferson was President of the United States, the Bartletts were cod fishers on the Banks and down to Labrador.

As I was the eldest son, my mother resolved that I should enter the ministry. So, at fifteen, I was sent to the Methodist College, at St. Johns. But the spirit of my fathers was in my blood. The sea was calling me. At seventeen I gave up the struggle, and went with my father to the seal fisheries.

Sealing is a hard life. Often a blizzard sweeps down while the men are away from the ship. Then, with no shelter, and frequently without food, they wander about for hours and sometimes days. Many a stanch Newfoundlander has become numb and dazed at such a time and has lain down and died. We have many "sea widows" at home.

Let me tell you a little incident in my own life to show how tough a young man ought to be for that work. One time I was with a gang, shooting old seals, when we came to a lead of water separating us from a fine bunch of animals. The lead was too wide to jump across, so I took off my clothes and plunged in.

The water was terribly cold, but I swam across. It was hard to climb up on the sharp ice on the other side. I finally crawled out, shivering. The other fellows threw my clothes and rifle across. With my teeth chattering, I got dressed and then ran hard in the direction of the seals, to warm up. It was a tough job. That evening the captain offered me a tot of rum for the unusual number of seals I had killed. I didn't take it. I don't drink. But I remember how fine I felt when he looked me up and down, and said, "You'll do, boy. You'll do."

THE first voyage I made outside the family was in the barkentine "Corisande." I enrolled as a common sailor before the mast. Then I walked back to the hotel in St. Johns and told my father what I had done. To my surprise, he did not object, though our schooner was already loaded with supplies for home.

After a little he said, "How will it be

(Left) Captain Bartlett gets a hair-cut. (Below) Captain Bartlett's schooner, the "Effie M. Morrissey"

about your mother?"

I wanted him to tell her. But he said, "No; you are her oldest son. You have got to tell her yourself."

Although I weighed nearly two hundred pounds, about twice the size of the woman who bore me, I hated to face the music. But, next day, I plucked up my courage and told her it looked as if the time had come for me to go off on my own hook.

Her eyes filled with tears. But, like Father, she did not object, although I could see it hurt her terribly to think of my being away from home for months at a time.

In the end she said, "I never intended you to go to sea, boy. But if you will persist in going, I cannot stop you."

Captain Bob Bartlett, who has sailed the Seven Seas for nearly forty years. He has been close to the North Pole with Peary, has chased pirates in the tropics and has been shipwrecked many times. Captain Bartlett was born in Brigus, Newfoundland. (Left) The "Morrissey" aground, with Captain Bartlett lashing casks under her at low tide, to help float her off the rocks

I am happy now to tell about her bravery, for she is still alive and has followed me in her mind's eye all over the Seven Seas, and clear to within a few miles of the North Pole.

That "Corisande" voyage to South America was a hot one, all right. And it ended in a terrible tragedy.

WE WERE bound for Pernambuco, South America, with a cargo of dry codfish. As I had had some training in handling a schooner, I was chosen to be a helmsman. We had a rattling fine wind over the counter all the way, and made our land-fall about three weeks later. I was pretty homesick; also, seasick, as more of us sailors are than you'd think.

I got tired of eating salt horse every meal. But I learned a lot. I never forgot how, on the first day out, the cook caught me washing my teeth with fresh water. He said I'd have to go without that much water for my coffee, because fresh water was so scarce.

One day the captain had a regular forepeak row with this same cook. We had all been complaining about the beef being too salty. The cook usually took it out of the kegs and boiled it the same day. We had a big Swede who threatened to throw the fellow overboard if he didn't improve the grub. So the cook made a sort of crate that would hold about fifty pounds of salt horse. He spliced a rope to this crate and hung it from the jib boom so it would trail in the water. He figured this would iron out some of the brine.

The captain saw it one day and threw a fit.

"What sort of river barge do you think I'm running?" he roared at the cook.

Cookie shook in his shoes.

"Haul that right aboard!" screamed the old man. "Don't you know that if we get our horse too fresh that gang of heathen down forward will eat too much of it?"

A few days later I had a boil on my neck. We had just crossed the equator. The captain was a great man to read the medical book that came with the regulation chest of surgeon's supplies. There was usually no doctor on a sailing ship in those days; the captain took his place.

Just when my boil was ripe he overdrew his grog of Jamaica rum. In his exaltation he decided he would practice his surgery on my boil. He chased me all around the ship with a long surgeon's knife he got out of the medicine chest. I hid behind the scuttle-butt for nearly twenty-four hours while he kept up his murderous search for a patient.

WE HAD some hair-raising experiences at Pernambuco, but nothing to compare with the voyage home. It seemed that our captain made a bet with one of the others in the harbor that he would beat him back to Newfoundland. The minute we cleared the harbor he crammed on all canvas and let her go.

This was fine until we got up to the Banks, where the wind backed into a

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

southeaster and increased to a full gale with blinding snow. We thought it'd take the sticks out of the old "Corisande." But the skipper wasn't going to lose his bet. Instead of heaving to, he drove her on a dead-reckoning course for Cape Race.

All of us down in the fo'c'sle were so scared we slept with our boots and gear on. At two A. M. of the morning we were due to round the Cape, we were thrown out of our bunks by a terrific crash. The poor old "Corisande" had impaled herself on the sharp rocks of South Newfoundland.

When dawn broke our hearts sank. Out ahead were black cliffs rising hundreds of feet up into the stormy sky, while behind us roared a heavy surf. There seemed no hope.

HOWEVER, with God's help we launched the long-boat and fought our way to the rocks through smashing seas. Soaked to the skin, bruised and half frozen, we crawled out on a narrow ledge of rock, where we found a slight protection. Over our shoulders we saw the "Corisande" break in half and disappear in the foam-streaked waters.

For a while it looked as if we should be drowned by the huge surf that roared at our heels, or frozen to death by the bitter wind which slashed down upon us from the cliffs. But finally one of the men managed to scale the dizzy wall of rock against which we crouched.

He was nearly blown into the sea by the blast which struck him. Yet he groped his way through the drifting snow, and a few miles east staggered into a hut where some fishermen had gathered to wait out the storm. When he told his story of the wreck they hurried back with ropes and warm clothes, and handed us up, more dead than alive.

Speaking of the "Corisande" reminds me of another shipwreck I went through. One spring, a friend of mine at St. Johns offered me his ship, the "Leopard," for the coming seal hunt down the Labrador.

Early in March I went aboard the "Leopard" with one hundred and fifty men I had secured for the cruise. On a raw morning two days later, the old ship was ready for sea.

I wanted to get away as early in the day as possible, before the gin mills opened, otherwise I knew that some of my men would be the worse for liquor. It was then a custom among seal fishermen to have a last drink or two, sometimes five or six, just before weighing anchor. This meant a lot of trouble on the dock, and always considerable lost time getting the madmen aboard.

Another reason for my hurry was that the harbor was still frozen over and there was a good deal of drift ice at the entrance. My father's ship, the "Viking," larger than the "Leopard," was due to leave the same day. If we could follow her, she would make a way for us through the ice. That meant we could probably get down to Cape Race before dark.

After a couple of rough-and-tumble fights, I managed to get my gang aboard, and we followed the "Viking" out and headed down the coast. As she was a bigger ship, she had no deck load of coal, as I had; so, when the sea began to rise with a strong easterly wind, she had no difficulty working off shore. I had to set my sails to help the "Leopard." But I soon found that the green water coming over her bulwarks was carrying my deck cargo overboard.

Captain Bartlett's brother Will, the mate of the "Effie M. Morrissey"

THINGS went from bad to worse. Pretty soon I had to nose in among the shore ice in order to handle the water which was rising rapidly in the hold. Before I knew it, we got in among the slob ice, thousands of small pieces all pressed in together by the wind. This ice had formed a sludge, fathoms deep, so that we couldn't even use our hand lead.

At midnight, it began to snow a perfect smother. You couldn't see your hand before your face.

I thought the ice would hold her until morning, and we could work our way out slowly. But along about two A. M. there was a crash.

"That's a heavy pan," said the mate.

"Pan, my eye!" I yelled. "*That's the bottom!*"

A couple more of big thumps came, and we were hard fast on the rocks.

The poor ship didn't have a chance in the world. Her weather side bulged in as if it had been made of rubber. One by one the timbers gave away with sickening crashes. She began to fill rapidly.

About fifty fathoms on our starboard bow was a shelf of rock on which lay the forward part of the steamer "Delmar," wrecked some years previously. There was only one chance to save my one hundred and fifty shivering men.

I set them to work right away ripping off deck sheathing, oars, spars, and other spare timbers. These they laid on the slush ice, forming a sort of roadway over to the other wreck. It sounds simple enough; but the ice was just wet slush, a sort of snowy quicksand with water all through it.

Gorry, how cold we were! The boards sank down with the men. Everyone was soaked when we reached the "Delmar." We huddled together inside the old hulk, nearly dying of cold, for the blizzard was still howling 'round us. When daylight came, we climbed the steep cliff with the aid of rope let down by some fishermen living near by.

IT IS bad enough to be shipwrecked yourself. But to be wrecked and saved, and then to have to look back and see another ship going down with all on board is the most terrible feeling in the world.

One bad winter when I was with the Newfoundland sealing fleet around Battle Harbor, it came on to blow straight out of Baffin Bay. Three thousand miles the howling wind sizzled across the bleak Atlantic, and built up a sea big enough to wear away a mountain!

I was on the "Retriever," which was skippered by my uncle Isaac. By his glass he knew the gale was coming. So he ran for Battle Harbor. But he got there too late. The "Retriever," solid oak that she was, was blown on the harbor boulders, and sunk. All of us were saved.

Within twenty-four hours the "Monticello," of considerably greater tonnage, laid her bones alongside the "Retriever." Her crew also was saved.

Farther out was the "Huntsman." She was a slow-sailing vessel with about fifty men on board. Her skipper couldn't make Battle Harbor, on account of the ice. So he picked out a sort of rough harbor among the floes and jammed his vessel in tight, hoping the ice would protect him from the seas.

There he stuck through the long black night, while the wind howled like a pack of wolves.

Small icebergs began to shift and tumble under (*Continued on page 97*)

Strange Things We Human Beings Swallow And Inhale

A button, pin, coin, and the like is all right in its place, but that place is not in Baby's mouth, or even within his reach—A distinguished doctor tells what he has found in human bodies, how the foreign articles got there, and gives some rules that may save you from tragedy

By Sherman Gwinn

DAMOH is a small town deep in the interior of India. There, a year or two ago, were stationed the American missionaries, Mr. and Mrs. Rice, and their three small children.

Tommy, second eldest of the youngsters, was five. One day, as he played with his sister, in boyish mischief he snatched from her a large glass native bead.

"Give it back!" demanded the sister, who was eight.

"Aw, take it from me if you can!" Tommy challenged, and dashed away as fast as his legs could go. His sister took up the chase. To hide the bead from her, Tommy slipped it into his mouth.

Suddenly he stumbled and fell. At once his sister was upon him with a shout of triumph, which in the next instant was changed to a cry of dismay. Tommy, sprawled on the ground, wasn't laughing any more. Instead, his boyish face was distorted in agony. He was choking, struggling for breath!

"I—I swallowed the bead!" he managed to gasp.

Thoroughly frightened, his sister ran for their mother. And thereby, with the scurry of her panic-sped feet, began in far-away Damoh one of the most dramatic races any family has ever made against Death—a race that was to half-girdle the globe!

The one physician available in Damoh was an American woman, a friend of the Rices. The boy's symptoms immediately indicated to her that the bead had been breathed into one of the air passages of the lungs. She knew that infection rapidly would set in. It was fortunate that the object was a bead; the tiny hole through its length would admit a modicum of air.

"We must get him to a hospital at once," she said.

The nearest hospital was at Jabalpur, more than a hundred miles away over the mountains.

Mr. Rice closed the mission; Mrs. Rice packed their necessary belongings; and with their children and the physician friend to keep up the fight for Tommy's life they set out for Jabalpur. It was in January. The trains were slow, crowded, uncomfortable. When Jalbalpur was reached the boy's temperature was 101°.

At once he was placed under the X-ray. The examination disclosed the bead's lodging place in the lungs. It was a quarter-inch in diameter by a half-inch in length.

"We can do nothing," said the surgeons. "We haven't the instruments here to remove it. You will have to go on to Calcutta."

Calcutta was seven hundred and fifty miles distant. The journey, with its sleepless nights, its delays, its changes and its monotony, took almost one week.

Again the X-ray. Again the surgeons consulted, and their spokesman sadly shook his head.

"Mr. Rice," he said, "I know of only one place in the world where your boy's life can be saved. That place is the Jefferson Hospital, in Philadelphia. The man you must see is Dr. Chevalier Jackson."

"We'll go," said Rice.

To get a boat for the United States they had to go to Bombay. It was now past mid-February. Every outward-bound vessel for America had its accommodations booked weeks in advance by home-returning travelers. Day after day Mr. Rice haunted the steamship offices, vainly trying to secure passage for the party. Little Tommy grew steadily worse. The physician friend, constantly at his side, could do little.

They prayed together at Tommy's bedside. But day dragged into day. They were at the verge of despair. Then, from nowhere, their prayers were answered.

Another American, who was returning to the United States with his family, heard of the Rices' plight.

"Use our tickets," he said. "We can wait. You can't."

On March 6th the party sailed.

Tommy still miraculously lived when, as the month closed, they disembarked at San Francisco. The wireless had made possible advance reservations on the fastest transcontinental trains, and the final lap of the race against Death was on.

AT TEN o'clock one sunny morning in April, three months after the accident in Damoh, Tommy was taken from the train in Philadelphia and admitted to the Jefferson Hospital as a patient of the Chevalier Jackson Bronchoscopic Clinic. A third time Tommy underwent examination. A third time skilled medical men conferred over his case. But this time when the conference closed there was no sad shaking of heads.

A marvelous and yet simple little tube-like instrument known as the bronchoscope was inserted through Tommy's mouth and into his lungs. A tiny electric bulb at the end of the instrument, a bulb not much larger than a grain of wheat, enabled the surgeon to see the bead lodged there, and to take hold of it gently with a delicate pair of forceps. Tommy felt no pain. The whole operation, for which he had journeyed half way around the world, took only a few short moments. And at one o'clock of that same sunny April day the parents of Tommy smiled for the first time since leaving Damoh. The bead which would have taken his life had been removed!

Within a few weeks Tommy Rice was a well and a healthy boy again, one of hundreds of boys and girls, and men and women, whose lives have been saved during the past ten years by Doctor Jackson's clinic at Jefferson.

WHEN I talked with Doctor Jackson, not long ago, he imposed upon me the condition that I would write about the work of his clinic and not about him.

"The work is important," he said in sincerity.

However, it is only repeating knowledge known to the whole medical world to say that it is due largely to the original discoveries and experiments of Doctor Jackson, and to his development of the bronchoscope, that such operations as the one performed upon Tommy Rice are possible, and even frequent, to-day.

The doctor was born in Pittsburgh, sixty-one years ago, studied at the Western University of Pennsylvania and later at Jefferson Medical College. He taught laryngology first at the University of Pittsburgh, and came to Jefferson College as professor in the same subject in 1916. He also is professor of bronchoscopy and esophagoscopy at the University of Pennsylvania. Through his writings, his contributions to laryngeal surgery, and the work of the famous clinic at Jefferson Hospital which bears his name, he has become known in every part of the world. To mention bronchoscopy in medical circles is to mention Chevalier Jackson.

Ten years ago, when Doctor Jackson began in Jefferson Hospital, his clinic occupied a single room. To-day it occupies the entire (*Continued on page 159*)

The Man Who Wouldn't Live On His Wife's Money

A love story

By Margaret Culkin Banning

ILLUSTRATED BY T. D. SKIDMORE

THIS is the way I like you best," said Cornelius.

"What way?" asked Olive, intending to get that look of his into words.

"Oh, like this," he repeated, "with simple things all about, and the luxury and trimmings gone. If I hadn't seen you without them, you know, I never would have asked you to marry me."

She was standing beside the fireplace, one strong young shoulder level with the ledge above the blocks of rough native stone.

"You had me all wrong," she told him. "I've had the best times of my life out here. I hate a lot of fussy stuff. And I'm never so happy as when I'm dressed like this."

He looked admiringly at the simple dress of green cloth cut close to the base of her neck and held together by a couple of small leather buttons there, at the jacket of antelope skin thrown over it, and at the tan stockings that certainly were not silk.

Then he came to her face, and paused still longer; for not three débutantes of ten seasons had eyes like Olive Mary's, gray and yet blue, without a trace of vulgarity or boldness or festering information in them.

She had eyebrows that arched swiftly over them, the broad, full mouth of a child, and dark hair that grew in its own curves so determinedly that barbers treated it with respect and never tried to alter its direction. But that may have been partly because she was a Tillsbury and knew what she wanted so well. She wanted Cornelius just now.

"You get to know a person so much better in a place like this," she said reflectively; "really what she's like, I mean. Isn't it funny that you should have thought I cared a lot for luxury and all that sort of thing? I don't, not a bit."

She tossed the little hat she was holding carelessly on the bench beside her, and it rolled off on the goatskin rug, wobbling about until it came to an unsteady stop, with its maker's name reproachfully on view. It was such a plain hat, a thimble of gray felt only, that Cornelius did not bother to pick it up. Hobbs, done in gold silk on a hat lining, meant nothing to him.

"We'll have to have an awfully simple little place, you know, Olive."

"A cottage—that's all we'll want," she agreed. "See how wonderful it's been here, and how we seem to fit."

"We can't get cottages in town, I'm afraid. But if we can't get a thatched roof, we'll get right close up under the fireproof tile one in some apartment house." He paused, looking at her again in the intent way that made Olive feel unsteady inside.

"You're sure you know what you're going to be let in for?"

"I know," said Olive, softly, and the admission brought her into his arms again.

Outside the open door the fir trees cast the long shadows of afternoon across silent wooded paths, and the river hummed along in the ravine below. The Tillsburys had fourteen acres along the Nokomis, and where the Tillsbury acreage ended the Pomeroys took up theirs, and then came the Emersons, and so on, running right through to the rushy borders of Rice Lake, where the duck shooting seemed never to fail.

It was very still throughout the cottage, as still and solemn as the two within it, who were frightened a little by their own happiness. They were used enough to gayety and their own lingo of noncommittal badinage. But this other thing had come upon them suddenly, and found them almost unprepared for it. Cornelius had seen Olive Mary against the trees, he had seen her swimming, he had seen her striding through the woods, even helping with the meals—and she had ceased for the time to be Olive Mary Tillsbury, and become instead the most beautiful and desirable girl in the world, and, like all girls, accessible to love.

AND everything had worked together to bring about these astonishing happenings. For example, if his new tweeds hadn't been ready Cornelius could hardly have come, for all his other clothes, except his dinner suit, were pretty well shot. Or if he had come on any other week-end, when the usual noisy lot of Olive's crowd were about and the sense of riot was everywhere, he would have had no chance to listen with Olive Mary to that seductive murmur of the pines, and to hear their brave, inarticulate messages. But this week-end the gay crowd had been at the Pomeroys'. Here there had been only Olive's mother, with two or three other bridge-playing women, and the Bateses.

"Where are the Bateses?" he asked, smoothing Olive's hair, and thinking how strangely different this caress was from casual petting.

"They went over to the Pomeroys'. Jim Pomeroy came down with some guns and things from town. Why? Do you miss Billy?"

"He certainly is a sad mess."

"Oh, I don't know," said Olive. "He really is lots of fun—keeps things going, and all that. Everyone likes to have him around. Why do you dislike him so much?"

"I can't see anything there at all. Any man who lives on his wife like that—and doesn't pretend to do anything else!—seems to me to be pretty nearly the lowest form of human animal."

"Poor Billy—you're awfully hard on him."

"I just haven't any respect for him!" said Cornelius.

He gave that final judgment with the ardor of his creed, the creed of the young man who is making his own way, and knows that it can be done and what the methods are to do it.

"When we are married," he added, "remember, it doesn't make a bit of difference whether you have a family with money or not. We live on what I've got. We'll begin small; but you watch my smoke, after a few years."

"I love your ambition!" said Olive Mary.

OF COURSE that was inaccurate. She loved Cornelius, as he stood there with his eager eyes awakened to all her beauty and charm. She loved his height, which surpassed hers, and the fact that he was so good-looking and so apparently unconscious of it. She loved something in the touch of his hands, which reverenced her, and she loved the pounding of his heart as he held her close. Unconsciously, she loved his cleanness and the fact that the adoration he gave her was fresh and just unwrapped from his youth.

But as for his ambition! What did Olive Mary know or care about the hierarchy of the Commercial Super-Electric Company? What did she know about electrical equipment, wholesale or retail, about methods of supplying electric repair service to homes; about young men who were employed in the offices of such companies, and their chances to become assistant sales manager, with the managership and even a possible partnership in the remote distance; or about the ambition which kept such young men keen and spirited?

But Cornelius did not analyze. He accepted the tribute. And the Bateses came in just then, Billy wearing his curved,

He had managed about the ring easily enough. He had a little money saved against a real emergency, and he took it out of the Building and Loan Association and exchanged it for diamonds and platinum. What there was left he transferred to a checking account, and intended to have it last through the wedding trip, with what additions his salary made to it. But it began to melt, and it worried him.

It seemed to Cornelius sometimes that he was two persons now: one the rather swagger young man who was known as Olive Tillsbury's fiancé, who stood his share of week-end expense, who paid for the supper at after-theatre parties, who rode around in five-thousand-dollar automobiles belonging to other people, and danced and ate in great houses. The other, the very ordinary young man who swung on a surface car in the morning and spent the day at the Commercial Super-Electric, listening to the complaints of ladies whose ironing machines would not work, and tried to sell electrical appliances and devices to shops and offices.

He was better acquainted with the young man of the Commercial Super-Electric than he was with Olive Tillsbury's fiancé. But he wondered sometimes if Olive was.

Things shaped themselves.

"Darling," said Olive, "if we are married during the holidays we can be all settled by the first of March. Do you realize that we've got the wedding all planned and the invitations will be out next week; but we haven't decided about our wedding trip? We'll *have* to decide

amused, and almost constant smile.

"You missed something, Alstyne," he told Cornelius. "Pommy came down with some real guns. Be great shooting over there this fall. You'll be down here a lot now, I suppose."

"I don't expect to," said Cornelius. "I can't afford much week-ending."

That was flat and short and pointed enough, but it slid off Billy without leaving any mark at all.

"How about that, Olive?" he redirected his question, with a grin that pretended to understand things.

CORNELIUS had wondered, going back to town, if there would be any opposition from Olive's parents. He was quite prepared to stand up to it if need be, and he kept assuring himself that he and Olive cared enough about each other to see any adverse arguments through. But there were none, only a few courteous questions. The Tillsburys had passed the point where ordinary intermarriage could add much to their standing in any case, and they took Cornelius quite simply.

Mr. Tillsbury, Cornelius found, had made some inquiries about him, and what he had been told seemed to have satisfied him. All the Tillsburys asked was that he should remain a healthy, decent young man of reasonably good standing. All Olive asked was that he should adore her. In return, he was to marry into the Tillsbury family, and to have Olive. It was the generous arrangement of generous people, and Cornelius knew it. But still there were times, during those next bewildering months, when he felt the control of his own life slipping out of his hands.

pretty soon because of clothes, you know."

"Clothes?"

"If we go to Bermuda, we'll want white clothes, you see—that sort of thing. If we go to New York, I want to get hotel things—dinner dresses and theatre wraps; it makes a difference."

"I see," said Cornelius. "I don't think much of the Bermuda idea, sweetheart." He was reflecting that business suits would do better in New York than on Southern steamers. "Why can't we just go off quietly into the country somewhere—where we'll be alone? You know, Olive, I can't afford much of a trip."

"You don't have to afford it at all," laughed Olive. "Didn't you know that, silly? It's to be Father's wedding present. I made him promise. He'll take care of it all."

"I see," said Cornelius, slowly.

"Won't it be wonderful?" asked Olive, with her face close to his. But for the first time Cornelius did not turn to it. He was thinking that she would not be really his, somehow, if he took her away on someone else's money. It wouldn't be like caring for her himself.

"What's the matter?"

"Nothing," he told her. It seemed so ungrateful to object. And, after all, it was the honeymoon, which was really a part of the wedding. After that, they'd settle down and adjust to simple living and begin the climb together.

"You know," said Olive, "I'm shameless. I can hardly wait to be married!"

That got him. He took her sweet face in his hands and looked at it so long and fiercely that she laughed at him.

"Neither can I. I want to get you away from everything, Olive. You seem to belong to me only once in a while. I want you entirely, free from everyone, even parents. I want you to be Olive Alstyne, and forget you ever were anyone else. I want to take care of you!"

She shook herself free, and looked at him like a delighted child planning a party.

"About an apartment," she suggested. "You know I heard we could get one in the Belvidere. Mother thought it would be wonderful. Several people we know live in that building, and it's just new—"

"My dear child, I can't afford the Belvidere!"

"Oh, this apartment is very little, and I heard it was astonishingly cheap. Let's take a look, Corny."

"But I know—"

"But looks don't cost anything," she said determinedly, "and we have to begin hunting for a place. I'm afraid you aren't very practical, Corny. I see what my job is going to be!"

So they went the next day, squired by an effusive agent who knew who Olive Tillsbury was, to see the apartment in the Belvidere. It was a strange mixture of misery and delight for Cornelius. The joy of looking into rooms, any rooms that they might be going to share together, of mutually exploring a kitchen, of looking out over a view, and imagining that it might be what they would see in the morning, was all there. But the absurdity of the place, with its rubbed cedar panelings, its French (*Continued on page 111*)

"Can I give you a lift," called Billy Bates, "or do you think this is honeysuckle lane?"

I Gave Up My Law Books For A Cook Book

By Lucy R. Tunis

"WHERE did you learn to cook so well?" asked a law-school friend who was dining with me, as she passed her plate for a second piece of my apple pie.

"In the law school, of course," I answered.

This reply seemed to startle her, for she admonished me to be serious. I said I was never more serious in my life and that I would prove it to her satisfaction.

"Shortly after our marriage, my husband and I were giving a dinner party to very kind but fastidious friends," I explained. "I was a little nervous with regard to myself as a cook, so I consulted him about the menu. He surprised me by demanding an apple pie.

"Now, I had never made any pastry; but, having passed a six-hour bar examination, which at the time had seemed impossible, I felt that a pie ought not to floor me.

"So I determined to make the pie. I attacked pie making by the only method that I knew; as if it were a legal case. I got out my cook book, made a thorough study of the question of pastry, drew a deep breath, and then followed the detailed instructions to the letter. That pie was wonderful—the only trouble was that I had not made two pies."

My friend seemed still incredulous, so I reminded her that my legally trained mind naturally loved a problem of any kind, and that unaccustomed household tasks were things to be mastered in the same way as any case in Torts or Contracts. Just as the study of Shakespeare's plays, seemingly so unrelated to law, had helped me more than anything else to approach legal problems properly, so the study of the law had helped me to approach the subject of cooking.

My friend's final remark was, "Well, who would have believed, when you were wandering about the law library, that you could one day cook a meal like this!" I knew that this had been the thought of most of my friends; in fact, perhaps the only person who never had entertained it was the man who had dared to place his future health and happiness in the hands of a woman lawyer.

Though my friend praised my food, I felt, when she said good-by, that she had never quite forgiven me for deserting our profession, that she condemned me for being so domestic. As a matter of fact, I was a most undomestic child, always wanting to be out of doors. And when I was sent seriously to school, at the age of twelve, in order to go to Vassar College, it was with difficulty that I adjusted myself to study.

As a girl, I had no experience in household affairs. I was one of four daughters; the house seemed to run by itself, and the only hitch was when periodically the servants announced their departure. Even then I never offered my services as substitute. My mind was full either of examinations to be passed or of some outdoor attraction.

Perhaps this lack of domestic instincts was what selected me out of the four daughters to carry on the legal traditions of both my father's and my mother's family. I was born with not only this legal heritage but also with a New England conscience and the highly developed sense of duty of my ancestors. So, when my father asked me to enter law school I allowed myself, with my Vassar degree as my only encouragement, to be led into what seemed to me to be a most terrifying and extremely difficult step.

When my name was still on the class roster after the first mid-year, I took heart and began to realize how much the subject interested me; I was inspired to put every effort into my attempt to justify my father's hopes, and graduate, on his thirtieth anniversary, from the same law school. This I did, and when I arrived at that day, so important to my family, it seemed to me the most natural and simple thing in the world.

I had found, to my astonishment, that apparently I had been born with a legal attitude of mind, one that could keep pace with the men who were studying with me. With this discovery I started out on my practice of law.

IN ADDITION to wanting to earn my own living in the law as a profession, I had also wanted to gain an understanding of my father's business, should it ever be required of me to take his place. This seems to be the usual point of view of most men taking up any profession or business, so in this purely personal frame of mind, I set out to establish for myself a recognized place in the legal world. I was astonished to find the way open to me on every hand. I found work in an office of men lawyers, who took me in, I knew, solely on my scholastic record. But of the real practice of law I was grossly ignorant. However, as my working knowledge increased, I was requested to appear in the probate court for the firm, in order to obtain the grant of a petition.

This was my first appearance in my own person and it was with diffidence that I stepped up to the bench. Forebodings of my probable reception in any court had been instilled in my heart by my sisters in the law. Women, I had gathered, were not popular with the courts.

The judge had retired to his own private room, into which I was ushered. He was Judge Robert Grant, a well-known novelist as well as judge, and he will probably never suspect the depth of his kindness to me. He greeted me as a human being, and engaged me in a friendly conversation. He questioned me about my selection of law as my profession, and what had been my aims and hopes. We both became so interested that, though he had said that the petition should be granted, I discovered on examining it afterward that he had forgotten to sign it. My experience was always that the novelty of my being a woman brought me great consideration and courtesy.

IN THIS first year, I was content to be learning, and did not expect to figure in Supreme Court trials until after years of work and preparation. Had anyone come to me at this time with a full-fledged case, I should have done just what Chief Justice Taft did when his first client appeared after months of waiting and hoping and preparing: I should have advised him to go to a real lawyer.

In fact, I lost my first criminal case. I came into the office one day to be told that no one was able to appear in a case that had come up for that morning, and that I was to take it. The client's name and the nature of his crime were unknown to me. I had no time to ask any questions, had anyone been about to answer them. My client was condemned; but I had not even been given time to discover what, in the face of plainest guilt, I could do for him. However, that case made me determine never again to attempt a thing unless fully prepared for any contingency.

I had taken over as much of the office work as was possible in regard to property, drawing up deeds, registering and probating, for it was a branch of law in which a woman would most readily acquire the confidence of clients. But at this time we went into the war, and one of the largest and best-known offices in Boston became willing, against all their previous prejudices, to take in a woman lawyer on the same footing as they took in men.

It was my good fortune to be selected by this firm, and I found my responsibilities greatly increased. Here was a real step ahead. In this office my duties consisted of obtaining evidence for trials and drawing up briefs on points of law for one of America's most famous legal minds, Mr. Charles F. Choate, Jr.

This was a great inspiration to me, and my interest carried me through long days and evenings, as I unearthed points of law that could help him prepare for his cases. I was very proud to be at his side in the courts while cases (*Continued on page 172*)

Lucy R. Tunis

WHEN Lucy R. Tunis decided that her husband's happiness and career meant more to her than her own career, she abandoned the law, in which she was making a fine record, and set about creating a *real* home,—and creating it with her own hands. "The most perfectly happy man," says Mrs. Tunis, "is the one who lives in a servantless house."

THE old Colonial house in Connecticut that became home when cook books took the place of law books in Mrs. Tunis's life.

Lawrence A. Downs

THE son of a section foreman, Lawrence Downs entered the railroading field as soon as he was out of college. His first job was in the engineering department of the old Vandalia Railroad. Two years later he moved to the Illinois Central, for the very good reason that somebody in this company thought his services were worth sixty dollars a month. He started out as a rodman; but before the year was up he was made instrument man, at a salary of seventy-five dollars. After this, promotions came regularly, if not with breath-taking speed. It took "Larry" Downs exactly thirty years to reach the top. Mr. Downs, who is fifty-five years old, claims that he is "just an average person." He was born in Indiana, and is a graduate of Purdue University, in the same state.

Do Your Stuff— And Keep Your Eyes Open

That is how Lawrence A. Downs climbed to the presidency of the Illinois Central Railroad—While giving his "best licks" to every job, he made sure that he never remained long in a blind alley—The seven planks in his platform of promotion

By Neil M. Clark

HE IS the easiest man in the world to work for! He insists on only one thing: You must do your stuff! And he is by all odds the fairest man I ever knew. In my judgment, Mr. Downs *never in all his life was unfair to any human being.*"

They say that a man is no hero to his private secretary, but the remarks I have just quoted constitute the verdict which one private secretary returns against his boss.

The boss in this case is Lawrence A. Downs. Six husky feet of Irishman, Mr. Downs heads an organization of some sixty thousand people, as president of one of the great railroad systems of this country; namely, the Illinois Central. Moreover, he is the hero of a career which any boy or man in this land of opportunity might well ponder seriously.

A poor boy he was, starting without friend or favor in a huge organization as a sixty-dollar-a-month rodman on an engineering corps; and he forged his way to the peak position. It has been whispered that he never did a "brilliant" thing in his life. Whether or not that is correct, it is certainly true that, year in and year out, he, with amazing steadiness, did the right thing at the right time.

When you sit across from Lawrence Downs, you look into a pair of humorous, determined, curiously unflinching blue eyes, set in rugged, powerful features. He has the look of a man who has never excused himself from labor. The firmness of his jaw is noticeable.

It is characteristic of him that thousands of railroad men, from the Lakes to the Gulf, and from the Atlantic to the valley of the Platte, know him, either personally or by reputation, as "Larry." Yet, face to face, he is "Mr. Downs." Even when he was a green boss in his middle twenties, there was that about him which commanded respect.

His career in its visible sequences is as simple as water running down-hill. He himself summed it up this way:

"Forget, once for all, the impression that there was destiny or heroics mixed up in it. That's mush! I'm an average person.

"When I was a kid out of college, I went hunting a job, as any boy does. Jobs were scarce then, because it was the year 1894, and a great panic had just swept the country. I went to work for the railroad, because the railroad could use a chap like me; and they thought I was worth about forty dollars a month.

"I stuck to railroading because I never saw a good-enough reason to think I could do better, or be happier, anywhere else."

And yet, if you are looking for the sheer romance of opportunity as it exists in these United States, it would be difficult to find a more striking example. James Downs, "Larry's" father, for forty years labored as a section foreman, bossing a crew of "jerries," drivers of spikes and setters of ties. It was this man's boy who became a railroad president!

"Larry" Downs was born in Greencastle, Indiana, fifty-five years ago, and after passing through the public schools, had a hunch to go to college and study engineering.

He was the youngest child in a family of eight, and he was the only one with a serious hankering for college. His father and elder brothers sent him. He was graduated from Purdue University in 1894. Meanwhile, in the way of a boy on the hunt for funds, he had learned how to swing a pickax and handle a spade. More than once he had spent the long summer vacation as a common laborer in his father's section crew, earning a dollar and ten cents a day.

With graduation came his first "regular" job. This was with the Vandalia Railroad, in the engineering department. The old Vandalia ran from Indianapolis to St. Louis; it was later absorbed by the Pennsylvania.

IN COLLEGE, Downs had been a popular leader in numerous activities. Among other accomplishments, he had played guard and tackle on a football team which, in those days of the flying wedge (the beef-and-murder era of the game!), was reckoned the fastest eleven west of New York State. So, in the fall of 1896, when one of the big games of the year was scheduled in St. Louis he went down to see it played. And, apparently, it was on the cards for him to strike a turn in his fortunes. He met one of his college classmates, a chap named Wallace, and the two compared notes freely.

"Wallace," Mr. Downs told me, "also was working for a railroad, the Illinois Central. I found that he was getting seventy-five dollars a month, nearly twice the forty I drew.

"'If you see an opening up there for a lad like me,' I told him, 'don't be afraid to let me know!'

"I never supposed anything further would come of it; (*Continued on page 163*)

Modesty Sometimes Ceases To Be a Virtue

"AS I went along from job to job," says "Larry" Downs, "I gradually learned that promotion was a thing I had to look for on my own hook; I couldn't leave it entirely to the boss. Get that in mind, for it's one fact that matters. Promotion isn't wholly the employer's affair—it's also a man's business to bring himself to the employer's attention, quietly but successfully, as one worthy of promotion."

I am glad that Mr. Downs used the word "quietly." Dramatic and silly methods of attracting attention frequently bring disaster to an employee whose ambition has more voltage than his judgment. Because you see no sense in being a wallflower you don't have to become a purple and prickly thistle. Midway between the two extremes lies a happy medium. Wise is the man who knows its boundaries. THE EDITOR.

Eyes

A story of the wilderness

By Herbert Ravenel Sass

ILLUSTRATED BY CHARLES LIVINGSTON BULL

YEARS ago, even before that day when Tiger Swamp first echoed to the sound of Sandy Jim Mayfield's gun, the lumbermen had spread their blight over the country. That blight would be long in passing. Not for centuries, if ever again, would the swamp be what it had been before the axmen's coming. The towering, straight-trunked cypresses were gone; gone, too, were the mighty pines which had once grown all along the swamp's edges, pines which soared sixty feet without a limb.

But the place was green again; the scars that had disfigured it were no longer visible. In fact, it was greener than it had ever been in its prime, for now that the great trees which had shaded it were no more, undergrowths of a dozen different kinds could find the sunlight they needed.

Out of these undergrowths which had come into being since the murder of the trees, out of thickets of myrtle and bay and tangles of blackberry and Cherokee rose, wild Nature laughed at the mastery of Man. He had despoiled her, had he?

STATE UNIVERSITY SYSTEM OF FLORIDA

No mysterious knowledge of those watching inimical eyes came to Sandy Jim as he drowsed in the April sunlight; and no sixth sense warned him when to the eyes already watching there was added yet another pair of hostile orbs

He had slaughtered her noblest trees, and swept away the virgin forest which she had created through long ages in this place?

Yes; he had done these things. But in doing them he had merely made Tiger Swamp a suitable habitation for her; a place of abundant coverts, and green, impenetrable refuges, where the wildest of her wild creatures could find sanctuary.

And not sanctuary only. The swamp was a fortress as well as a retreat. From its edges hostile, invisible eyes looked out at hunters who came to the swamp's margins in search of game; and from its recesses, under cover of night, those of its inhabitants who knew how to wage war in the secret, furtive way of the wild killers launched raids and forays against the neighboring farms.

ON a low pine stump near the western edge of Tiger Swamp perched an erect dun shape, a shape almost as motionless as the stump, of which it might have been a part. It had been there for more than half an hour; it had seen and heard many things. But as yet it had neither seen nor heard the two things which would have interested it most.

It did not know that two pairs of eyes were fixed upon it; that one of those pairs of eyes had never wavered in their gaze since the moment when they had seen this erect dun shape steal cautiously through the sparse grove of second-growth oaks and sweet gums which bordered the swamp at this point, and take its seat on that low pine stump, fifty yards from the swamp's margin.

Sandy Jim Mayfield believed in luck. It was a lucky day that had sent him out here to do just the thing he liked better to do than anything else in the world. The old man's thin, leathery face—sun-tanned as brown as his corduroy coat—wrinkled with satisfaction as he went back over it.

The day had started badly enough. It was spring house-cleaning time. After twenty years of wedded life in the backwoods of the low country, Sandy Jim possessed a minute and accurate knowledge of his wife's mind and personality. Spring house-cleaning always put her in a temper, and she was most dangerous when the dining-room became the object of her feather duster's attentions. This was because the sixty pairs of deer horns adorning the dingy walls of that room added greatly to her task—and it was in the dining-room that operations had started this morning.

Those branching antlers, proofs of his own prowess and the prowess of his sons, were Sandy Jim's pride. He would not have permitted their removal if kings or presidents had demanded it. But if Susan Mayfield should some day demand it, what then?

Lolling comfortably in his battered cane-bottomed chair, watching Mrs. Mayfield attack an accumulation of cobwebs dangling from the smoke-stained ceiling above the dining-room mantelpiece, he had felt vaguely apprehensive. And with some cause. For presently the little woman had turned on him.

"There's one thing yer good fer, jis' one thing only," she had said, in her high-pitched voice, which creaked like a wagon wheel. "You won't work, but yer a pretty good hunter. You kin jis' hustle out o' here an' git a deer or a turkey. I'm dead sick o' pork!" She jabbed vigorously at a soot-blackened tuft of spider web in a corner of the ceiling. "An' don't you do nothin' resky in the woods to-day! It's a Friday, an' the thirteenth!"

Sandy Jim Mayfield had listened without resentment, even with hardly concealed satisfaction. The ultimatum had not taken the form which he had feared. His horns were safe for another year.

He was, however, the slave of no woman. It was nine o'clock in the morning when his wife commanded him to go forth in quest of fresh meat. It was past noon when he slouched across the yard and out of the gate, toward the swamp—a tall, spare, loose-jointed figure in ancient corduroys and hunting boots, his shotgun under his long, lean right arm.

If Sandy Jim Mayfield believed in lucky days, he believed also in the luck of lucky places. Sitting on this stump, he had killed the greatest gobbler that had ever fallen to his gun. Sitting on this stump, he had shot down the buck whose antlers were the finest in that imposing array of deer horns bristling on his dining-room walls. Spring hunting—and it was now mid-April—called for as little expenditure of energy as possible. Sandy Jim, lazy with the languor of spring, had left his dogs at home, and had walked across a mile of lonely pine land straight to the old pine stump near the swamp's edge.

There he would sit till dusk, if necessary, his loaded double-barreled gun resting across his knees, his white head drooped forward a little between his square, high shoulders. If a deer or a turkey came to him there, Susan Mayfield would have relief from pork. Being a believer in luck, and more particularly in the luck of this spot, and knowing deer and turkeys as he did, Sandy Jim thought it more than likely that sometime during the long afternoon a deer or a turkey would come.

He waited, therefore, patiently and hopefully; basking in the warm April sunshine; hearing, and yet not hearing, the songs of the nesting birds; drowsy, yet alert; indifferent, yet eager; listening and watching silently—never suspecting that he himself was watched.

OF THE two pairs of unseen eyes that were fixed upon Sandy Jim one pair, gazing out from the edge of a small myrtle thicket between the hunter and the fringe of short canes along the swamp's margin, never strayed from that motionless, dull-brown figure on the pine stump.

Before the appearance of that figure

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

the watchful eyes in the myrtle thicket had seen and taken note of many things—towhee buntings and brown thrashers scratching amid the fallen leaves, a gray squirrel moving about the branches of a sweet gum, a big red-crested log-cockhammeringon a dead pine sapling a little way up the slope.

BUT now all these were forgotten. They saw only the form of the hunter, motionless, silent, as inconspicuous in its brown corduroys as the stump itself. And they saw him with fear and hatred; with hatred which was perhaps even more potent than their fear. If the eyes in the myrtle thicket had possessed the dread power which the ancients attributed to that fabled beast, the basilisk, Sandy Jim would have died speedily on his stump, the life burnt out of him by the intensity of their gaze.

The little creature had been lying there all the long afternoon, awaiting its mother's return from the swamp where she had gone to graze

The other pair of watching eyes, concealed in a clump of broom grass about fifteen feet from the myrtle thicket, were not less alert, not less observant, not less hostile. But they were not so intense, not so fixed and steady. There crept into them now and then an expression which might have denoted both impatience and expectancy. Unlike the eyes in the myrtle thicket, their gaze was not immovably fastened upon the hunter. From time to time they seemed to forget him momentarily, and at such times they searched eagerly all the open spaces of the wood within range of their vision.

One might have guessed that the owner of this second pair of eyes, though keenly interested in watching and studying the strange, still shape on the pine stump, was at the same time awaiting with growing impatience some tremendously important event which was due to happen soon.

If Sandy Jim had suddenly divined the nature of that expected event, if he had become aware, through some mysterious sixth sense, of the hidden hostile eyes regarding him from the myrtle thicket in front of him and from the broom grass clump a little to the left, he would not have betrayed his knowledge by any hasty movement.

Probably his own small gray-blue eyes, which were now rather dull and heavy, because he was drowsy, would have brightened suddenly. Probably his brown, leathery, hawklike face beneath its thatch of white hair would have become even more hawklike, because in moments of excitement the old hunter had a trick of contracting his nostrils in a way which made his thin hooked nose look more than ever like the beak of a striking falcon.

But he would not have been startled into any sudden motion; he would not have altered in the slightest degree the waiting game that he was playing. He would have figured the chances with lightning-like rapidity—for in problems of this sort his mind was marvelously quick—and he would have decided accurately that his best chance lay in remaining precisely where he was and in doing exactly what he was doing; namely, nothing.

BUT no mysterious knowledge of those two pairs of watching, inimical eyes came to Sandy Jim as he drowsed in the April sunlight; and no sixth sense warned him when, to the eyes already watching from concealment, there was added yet another pair of hostile orbs.

The eyes that watched from the myrtle thicket, and from the broom grass, were in front of him, between his pine stump and the swamp.

This third pair of eyes, which had now come to play a part in the drama, watched him from behind.

From the high land to the swamp-edge the ground sloped gently, and Sandy Jim's stump was about half way down the slope. On the slope itself the trees were mostly second growth; but just at the crest of the rise, some forty yards from the pine stump, stood an enormous black oak, behind whose huge trunk even the mightiest of wild beasts, or the burliest of human killers, might have lurked unseen. It was from the ambush of this gigantic black oak trunk that the third pair of eyes now studied Sandy Jim's motionless form, as the old hunter sat waiting, with that long patience the forest teaches, for the deer or the turkey whose coming he expected.

These eyes were less intense, perhaps, than those that watched from the myrtle thicket. But they were far more formidable. There was no fear in them. Instead, they were aglitter with a triumph more menacing and more sinister than hatred. They were like the eyes of one, whether beast or man, who sees his enemy at last in his power—like the eyes of an avenger to whom has come, after long waiting, the yearned-for opportunity to strike his foeman down.

THESE eyes that lurked in the ambush of the black oak trunk were larger than those in the myrtle thicket, smaller than those in the clump of broom grass; and, despite the glitter of triumph in them, they were as cold and gray as polished stone. There was in them, too, something of the eternal quality of stone. They were eyes that could wait—that could wait and watch with inexhaustible patience until their moment had come.

They would never grow weary, these eyes. Fate or chance had set an ambuscade in the woods, and one whom these eyes hated had entered that ambuscade. Soon or late the trap would be sprung. Hours might pass before the dun figure on the pine stump made the fatal move to which the eyes of stone looked forward with grim, avid expectation. But hour after hour they would await the coming of that moment. Hour after hour they would watch from their ambush, confident of triumph at the last, sure of the revenge which they desired.

The slow minutes dragged their length along. To Sandy Jim Mayfield came no premonition of peril, no subtle hint of impending tragedy. He was not the kind to whom mysterious warnings come, conveyed by influences or forces beyond human comprehension. He had only his physical senses to rely upon, and these gave him no warning. For all his seventy years, his vision was keener than that of most young men, his hearing as acute as it had ever been. But the keenest eyes cannot see that which is invisible; the sharpest ears cannot detect a presence which makes no sound.

And no sound came from the myrtle thicket, from the tall broom grass waving gently in the light breeze, from the great black oak trunk at the crest of the slope. Even the smaller folk of the woods seemed unaware of hidden presences in two of these three hiding places. A wren perched on a twig of the myrtle not six inches from the ground and sang for a quarter of an hour with scarcely a pause for breath. A cottontail came out of the swamp and nibbled contentedly at certain appetizing weed stems at the very verge of the broom grass clump.

But no bird or little beast ventured close to the black oak trunk forty yards

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

behind the stump where Mayfield sat; and a big iron-gray fox squirrel, which had been exploring the branches of the oak, now lay flattened against an upper limb, staring glassily downward, afraid to move, almost afraid to breathe.

An hour passed. It was now mid-afternoon. The dun figure on the pine stump still held almost exactly the same pose, except that the white head under the battered brown felt hat no longer sagged forward sleepily. But if Sandy Jim's drowsiness had disappeared, there was no hint of restlessness or impatience in his attitude. As the afternoon waned, the prospect of a turkey would grow less, but the prospect of a deer would improve. Most of the turkey hens were now setting, and the gobblers would seek their roosts well before sunset, but in spring, when the law forbade deer hunting, the whitetail bucks and does soon learned that they need not wait till nightfall to begin feeding.

As the shadows lengthened, old Sandy Jim would watch the swamp edge in front of him with growing expectancy, in the hope that out of the fringe of short, dense canes a buck or a doe would come to face his gun—a gun to which the law meant nothing.

OF THE three pairs of hostile eyes watching the figure of the hunter, two seemed as insensible as Sandy Jim himself to the passage of time. The eyes in the myrtle thicket had perhaps lost something of their intensity, but they never wavered in their fixed, inscrutable stare. The eyes behind the black oak trunk—those eyes which had the hardness and the eternal quality of stone—still glittered with that grim confidence, that ominous assurance of triumph which had shone in them from the beginning.

But the eyes in the clump of broom grass—the large eyes which all the while had seemed to be awaiting some eagerly desired event—appeared to have lost interest in the motionless figure on the pine stump. Their gaze roved restlessly here and there, as though searching for something as yet invisible; and more evident than ever now was that look of eagerness, of anxious expectancy, of hungry, desperate yearning for some happening long overdue.

Mayfield, had he now discovered the eyes in the broom grass clump, would not have failed to read their message correctly. He would have known precisely what it was that the owner of those eyes expected; and his own eyes, deep-set, almost hidden under white overhanging brows, would have become on the instant even more alert, even more watchful. Perhaps, reading that warning, he would have moved his right hand very slowly and cocked the right barrel of his old-fashioned hammer gun.

But the eyes in the broom grass clump remained invisible to the hunter; the gun rested across Sandy Jim's knees uncocked, its hammers down. He could not know that presently there would come a moment when his failure to cock that gun would be regretted bitterly.

Before that moment came, however, there were developments in the drama of which old Sandy Jim, unknown to himself, had become the center—this silent drama of the unseen eyes.

THE first of these developments had no apparent starting point, no visible or audible cause. To Sandy Jim's ears no sound had come except the ordinary sounds of the woods—the songs and call notes of small birds, the screaming of a soaring red-shouldered hawk, the catlike, complaining cries of a red-bellied woodpecker somewhere in the swamp. Hence it was not sound which had warned him. Nor could it have been sight. For while the myrtle thicket and the broom grass clump were in front of him and in plain view, the black oak trunk was directly behind him up (*Continued on page 74*)

The doe was trying to get behind him, but he turned as she turned, and presently she tired of the delay

Quicksand

J. F. Coleman, for thirty years an engineer in the Mississippi Valley, tells of thrilling first-hand encounters with this treacherous substance, which has destroyed mines, wrecked railway tracks, and caused entire cities to sink many feet

By George W. Gray

ON NOVEMBER 3d, 1926, fifty-two men at work in a mine in the Iron Range of Michigan paused to listen to an ominous thundering. The rocky caverns and heavy supporting timbers quivered, as under the shock of an earthquake.

Suddenly a terrific blast of air swept through the passages. Three men were descending the shaft in the elevator cage when this air current struck them like the up-rush of a volcano, and tossed the heavy cage upward.

Meanwhile, down below, the fifty-two miners were struggling with a peril more fearsome than earthquake or wind. They found themselves engulfed in a rising tide of quicksand.

Only one man escaped. When he reached the surface, after a frantic climb up the ladder of the shaft, he was near collapse. "Mud and water were right at my heels all the way up," he said. His boots were coated with gray mud. The slush rose in the shaft like the backwater from a storm sewer following a cloudburst.

Where did the quicksand come from? Investigation showed that a nearby swamp had sunk twenty feet. Some weak spot in the roof of the mine had caved in, and through that break the swamp had emptied itself. The twenty-foot depression of the swamp represented the thousands of tons of water, quicksand, and other mud that had swirled into the iron workings, shaken the solid rock, and produced that tornado-like blast of air. The sucking thud of the cave-in was heard above the ground for many miles.

This recent disaster, emphasized by the tragic loss of so many lives, calls attention to a condition in nature that most people think of as extremely abnormal and of rare occurrence.

But mining engineers and foundation engineers say that quicksand is anything but rare. It is found almost everywhere. In New England, in the far West, in the Mississippi Valley, in the South, and along the Atlantic coast, quicksand has been encountered again and again. Pockets of quicksand have been uncovered in the rocky strata of Manhattan Island on which New York's massive skyscrapers, bridges, and subways rest. Europe has its stories of the treachery of quicksand. The Bible contains references to this unstable material.

The very word is scary. It conjures up images of treacherous ground, sinking foundations, mysterious disappearances. I remember in my boyhood in Texas, the fear in which certain swimming holes and fishing places were regarded—an abandoned ford across Davidson's Creek; Scott's Spring, with its bed of gray quicksand through which clear water bubbled ceaselessly. And down by the Yegua and the Brazos were other places strictly forbidden—forbidden because of the presence of sand that seemed firm, and yet, when you stepped on it, sank and sucked you down. Such was its reputation.

There were stories of horses and cattle that had disappeared. I used to ask the men and boys who told these tales to explain how the accidents turned out: How did the animals behave in the quicksand? Did it really suck them down? Did they disappear holding their noses upward and breathing to the last inch?

No one was able to answer these questions. Each explained that he had not actually witnessed the tragedy—he had it from another.

ONE day, reading Victor Hugo's "Les Misérables," I came across that story of quicksand in the account of Jean Valjean's escape with the wounded Marius through the sewers of Paris. And there the picture was limned in every detail: the unwary traveler, the seeming-dry sand into which he walks, the increasing heaviness of his feet, the discovery that the sand is sinking deeper at each step, the attempts to turn back, the panic of desperation as he struggles to escape, the inexorable slow entombment.

"A quicksand is a sepulcher that converts itself into a tide, and ascends from the bottom of the earth toward a living man," writes Victor Hugo. "The wretch tries to sit, to lie down, to walk, to crawl. All the movements that he makes bury him. He draws himself up, and only sinks deeper. He feels himself being swallowed. He yells, implores, writhes his arms. He is in the sand up to his waist. Then the sand reaches his chest—he is but a bust. He raises his hands, groans, digs his nails into the sands, raises himself on his elbows, sobs frenziedly. But the sand mounts. It reaches his shoulders. It reaches his neck. The face alone is visible now. The mouth cries; the sand fills it, and then there is a silence. The eyes still look, but the sand closes them, and there is night. Then the forehead sinks, and a little hair waves above the sand. A hand emerges—disappears. It is a sinister effacement of a man."

A sinister portrait, too! But, after all, only fiction.

Last winter, however, in New Orleans, I talked with a man who knows quicksand by intimate personal experience—Mr. J. F. Coleman, an engineer who has been the foundation adviser on many difficult construction projects in the lower Mississippi Valley. To him, the treachery and wiles of quicksand are not a story that has been heard, but rather a story he himself has lived.

"I'm not a quicksand expert," protested Mr. Coleman, good-naturedly, as I began to ask questions on his experiences. "I don't know anybody who can qualify as an authority; and I'm sure I can't.

"Yet quicksand is something that a foundation engineer is likely to encounter almost anywhere. More especially here in the Mississippi Delta region, where our soil is all 'made' land, the result of deposits of silt by the river. Here we have quicksand as an everyday problem. I have been in the practice of engineering in New Orleans more than thirty years, and I don't know a foundation for a heavy structure put down here within that time that did not involve quicksand as a factor.

"My introduction to quicksand came in 1885, when I was nineteen years old," continued Mr. Coleman. "Of course I had heard of quicksand earlier. In my boyhood at Church Hill neighborhood, near Natchez, Mississippi, there were legends of quicksandy creeks and bayous. Many of the fords across Cole's Creek were reputed risky, and Thompson's Creek had its treacherous places where horses had been lost—so it was said. I kept clear of these places, and can't actually swear that there was any quicksand there. But they had a powerful reputation as danger spots. I suppose many parts of the country have their legendary quicksand holes, along with their 'haunted' houses and 'headless' horsemen.

"BUT in 1885 I discovered that quicksand actually exists. I was a young engineer, then employed as a level rodman, one of a squad of men who were making preliminary surveys for the Kansas City, Memphis and Birmingham Railroad (now a part of the Frisco System). In this section of western Alabama was a small creek about twelve feet wide and ordinarily not over a foot deep. We were running a survey line to get to the summit of a ridge, and were following the valley of this creek.

"My job was to go ahead and hold the rod for the level man to take his sights at, a separate sighting for each change of the elevation. Several crossings of the creek were required, to follow our survey, and I

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

didn't bother to look for fords—just waded in. I was wet anyhow; it had been raining for several days, and the stream was swollen to nearly twice its normal size.

"I had made about eight crossings of the creek without any thought of danger, when suddenly, in midstream, my footing began to sink under me. I pulled a foot out, and stepped far over, hoping to reach firm soil, but down I went again, deeper. Every movement I made seemed to carry me farther down, and presently I was up to my armpits and realized that I was in a helpless situation.

"I shouted to Foster, the level man, and he came running to see what I was holloing about. He was only three or four hundred feet away; but the underbrush which lined the banks of the stream hid me. When he drew near and saw nothing but my head and shoulders sticking above water, he grabbed up a cut sapling and pushed it out to me. I caught hold with both hands, he pulled, and in a few minutes I was out of the quicksand.

"If Foster had not been near, and if there had been no sapling or pole close at hand, I would never have got out of it. There was not much time to spare."

"Could you feel the quicksand suck you down?" I asked.

"No, it was rather a sensation of sinking—of the earth giving way beneath my feet. The suction came when I tried to pull my foot out; but as long as I did not struggle there was no feeling of being drawn into anything. I simply felt a slow descent. The feeling is different from that of struggling in water. My feet seemed heavy. Every movement was a tremendous effort. Swimming was of course impossible. My whole impression was more of being in land than in water. It was tantalizing to feel the ground simply slipping out from under me."

"Tantalizing? It must have been terrifying."

"No, the strange part of it is that I was not unnerved. It seemed the most incidental thing in the world. I went right on with my work without a pause.

"TWO years later I was working on construction with the same railroad in northern Mississippi. One afternoon, driving a horse and buggy to our camp, I had to cross the Tombigbee River at a ford. The river was only about two hundred and fifty feet wide here, but the ford was diagonal and about four hundred feet across.

"When we were near midstream the horse began to flounder, and I saw that he was in trouble. I pulled out my pocket knife and cut the traces, threw the reins over him, and got out behind and pulled the buggy away from him.

"The horse was now tossing his head, and making a great splashing in his efforts to regain his footing. I tried to help him, to get the line and lead him back to the solid bed of the ford. But it was impossible to get near him, or to control his movements. I could feel shifting sands under my feet.

"As he rapidly sank, the horse became frantic. Only his head was above water. It was terrible to see him swallowed up. He held his head up to the last. The whole episode, from the time he began to flounder until he disappeared, occupied scarcely more than five minutes."

"And was his body never found?"

"No, not a trace. He was entombed in the bed of the river. Quicksand is heavy. The lower layers of it are packed to a near-solid state. It is the agitation of the water that stirs the particles into motion and makes the sand quick. So any body that sinks into quicksand is soon covered over and held down by heavy layers of near-solid material.

"In my later engineering experience I have frequently had to remove quicksand from excavations. When it is confined, and allowed to come to rest, the water separates and rises to the top, and may be pumped off, or, if left a few days, much of the water will evaporate. The moist sand which is left is a thick, heavy, viscous material. You can shovel it with a flat spade, pile it into a wheelbarrow, dump it into great heaps. Eventually, it will flatten out, like a pile of tar in the hot sunshine. And, as the moisture evaporates, the quicksand assumes the appearance of an impalpable powder. It seems as fine as the (*Continued on page 178*)

If You Ask Me:

No man is happy until he stops thinking of himself

MANY years have I sought happiness. I found it first, perhaps, in the warmth of my mother's breast, and in the fond caress of her hands, and in the tenderness that shone in her eyes. I found it again in play; for even in the pain of defeat I knew the natural ecstasy of boyhood's games. I found it in first love; it came to me when a simple girl laid her hand upon my arm, and her braided hair, sweet with the fragrance of health, came so close to my lips that I kissed it without her knowing. And then she went from me, and happiness strayed away.

For I sought it next in remaking the lives of other men. I went forth to reform the world. I denounced the ways of mankind, and bemoaned the backwardness of my time, and talked only of glories that were past, or were to come. I wanted many laws to make life easier for me, and for youth. But the world would not listen, and I grew bitter. I gathered anecdotes of human stupidity, and heralded the absurdities and injustices of men. One day, an enemy said, "You have in yourself all the faults which you scorn in others; you, too, are capable of selfishness and greed; and the world is what it is because men are what you are."

I considered it in solitude, and found that it was true. Then it came to me that reform should begin at home; and since that day I have not had time to remake the world.

Many years I lost happiness. I sought it in knowledge, and found disillusionment. I sought it in writing, and found a weariness of the flesh. I sought it in travel, and my feet tired on the way. I sought it in wealth, and I found discord and worriment.

And then one day, at a little station out on a wooded cliff near the sea, I saw a woman waiting in a tiny car, with a child asleep in her arms. A man alighted from a train, walked to her quickly, embraced her, and kissed the child gently, careful lest he should awaken it. They drove off together to some modest home among the fields; and it seemed to me that happiness was with them.

To-day I have neglected my writing. The voice of a little girl calling to me, "Come out and play," drew me from my papers and my books. Was it not the final purpose of my toil that I should be free to frolic with her, and spend unharassed hours with the one who had given her to me? And so we walked and ran and laughed together, and fell in the tall grass, and hid among the trees; and I was young again.

Now it is evening; while I write, I hear the child's breathing as she sleeps in her cozy bed. And I know that I have found what I sought. I perceived that if I will do as well as I can the tasks for which life has made me, I shall find fulfillment, and a quiet lane of happiness for many years. Gladly I surrender myself to nature's imperative of love and parentage, trusting to her ancient wisdom, and knowing that, as Dante learned when he entered Paradise, "*La sua volontate è nostra pace*—in her will and service is our peace."

My Biggest Moments

By E. Alexander Powell

FEW of us, no matter how humdrum our lives may have been, but can recall certain incidents and episodes, perhaps quite unimportant so far as others were concerned, which gave us a distinct thrill at the time, and which, by reason of their novelty, excitement, splendor, picturesqueness, or historic significance, stand out along the road of memory like white milestones.

That I should have had rather more than my share of such memorable moments is not surprising, for the roads which I have followed in the pursuit of my profession have zigzagged up and down the earth and led me into many of its strangest corners. I have been brought into more or less intimate contact with the great and the near-great, the famous and the notorious. From a seat in the front row I have watched many of the world dramas of my time.

As I lean back in my arm chair and close my eyes, a host of figures file past me in imaginary review: Rulers, warriors, statesmen, actors, artists, athletes, scientists, explorers, stalk majestically across the boards of memory to disappear in those dark wings from which no man returns. The curtain of my remembrance rises on scenes both gay and grim—a perfumed Persian garden, a hospital ship in mid-Atlantic, a mosque above the Bosphorus, a sleepy fishing village on Cape Cod, a shell-torn town on the Isonzo, an ivy-mantled castle in the Balkans, a nomad encampment in Arabia, a glittering Paris boulevard, a German cathedral draped in black, a dirigible above the Eternal City, the Athens stadium packed with shrieking thousands, a clearing in the African bush. Each of them holds for me some poignant memory or is linked with some thrilling moment when my emotions were deeply stirred.

ONE of the earliest "big moments" of my life—and one that presaged strange experiences I was later to have—occurred when, as a boy of eleven, my father took me to hear Sir Henry M. Stanley, fresh from his explorations in the Dark Continent. I had drawn a mental picture of a slim, debonair, romantic figure, tanned by tropic suns. With the naïveté of youth I had envisaged him in the peaked white cap and linen garments made so familiar by his photographs. Instead, I saw a thick-set, broad-shouldered man with steely, dominating eyes and prematurely whitened hair, whose manner was modest and unassuming almost to the point of embarrassment. And, as though that were not disappointment enough, he wore the somber evening dress of civilization. I was sorry that I had come.

But before he had spoken a dozen sentences my initial disappointment was forgotten, lost in the glamour of the scenes he so graphically depicted, in the thrill of the astounding adventures which he so simply told. Gone now was the brilliant audience, gone the great auditorium, gone the prosaic figure on the stage. No longer was I sitting in a red-plush opera stall, surrounded by complacent, well-dressed people, but, transported to a continent half the world away, I was toiling through steaming jungles at the head of a mile-long file of naked porters . . . palavering with the chieftains of strange inland tribes . . . dynamiting the rocks which barred our passage down nameless rivers . . . fighting off savages who showered our canoes with poisoned arrows . . . chopping a laborious way through black primeval forests, where unseen perils lurked on every hand. . . . From that memorable evening, I dreamed of the

Digitized by Google

Rurales passing in review before President Diaz during his visit to Guerrero

day when I myself would traverse the Dark Continent by the trail which Stanley had blazed.

Though the Great Pathfinder had been sleeping for many years in a quiet English churchyard before circumstances enabled me to realize my dream, I had the feeling, as we pushed our way through the tangle of the Congo bush or floated down the silent, mysterious reaches of the Lualaba, that he was beside me. Nor do I expect ever to have a deeper thrill than when, at Ujiji, on the shores of Lake Tanganyika, my hammock bearers halted before an ancient mango tree—the same tree which I had heard Stanley describe a quarter of a century before. Beneath it an oblong block of cement was imbedded in the sandy soil. It bore the brief inscription: "Livingstone-Stanley, 1871."

I MUST have been about thirteen years old when, in the Adirondack Mountains of New York, I shot my first deer. And it was a proud moment for me when I left the woods the following day by the little steamer which plied along the Fulton Chain. With my rifle in my hand, and my trophy—a really fine young buck—displayed at my feet, I felt like Davy Crockett or Daniel Boone.

Awaiting the boat on the wharf of one of the numerous camps at which we touched was a group of passengers. One of them, who seemed to hold himself somewhat aloof from his companions, and by whom he was treated with marked deference, was a short, thickset, elderly man with a bushy, rapidly whitening beard, dignified and austere of manner but with very friendly eyes.

Ignoring the members of his party, he strolled aft to where I was sitting proudly conscious of the quarry at my feet, and, seating himself beside me, engaged me in conversation. I don't recall anything in particular that he said, though we discussed hunting, of course, and firearms (he explained his knowledge of them by remarking that he had been a soldier in the Civil War), and he questioned me as to my studies and my plans for the future. Just a simple, friendly chat between a small boy and a kindly old gentleman who talked the language of small boys.

While my companion was in the midst of an anecdote the steamer whistled for Old Forge and, somewhat reluctantly I thought, he rose to leave me. It never occurred to me to ask his name. As he walked down the gangplank onto the wharf I noticed that all the men lifted their hats respectfully and some of them cheered him. While this was taking place two self-important young men detached themselves from the group which surrounded him and bustled over to where I was standing. Had I been older I should have recognized them as reporters.

"Well, bub," one of them inquired patronizingly, "what did he talk to you about? Did he say anything interesting?"

"Who? The old gentleman with the beard? No, he didn't say anything much—just asked me where I shot the deer, and talked about guns an' war an' such things. Who is he anyway?"

My interrogator stared at me in blank astonishment.

"Do you mean to tell me," he demanded incredulously, "that you don't know who the man is you have been sitting beside and talking to?"

"Why should I?" I replied. "I never saw him before."

"Well, I'll be darned!" exclaimed the reporter. "That was Benjamin Harrison, President of the United States."

IT WAS my privilege to know Theodore Roosevelt well, both during his residence in the White House and afterward. It so happened that in March, 1909, I was one of his fellow-passengers aboard the "Hamburg"—he bound for the hunting grounds of Central Africa, I for Middle Asia. While we were lying at anchor off Fayal, in the Azores, he was handed a cablegram from the Duke and Duchess of Aosta inviting him to be their guest at the palace during his stop-over in Naples. I was breakfasting with the ex-President when the message was received and, after reading it, he tossed it to me across the table.

"You will accept, won't you?" I asked.

"No," he answered shortly. "I shall decline."

"But," I protested, "you would enjoy yourself at the palace, Colonel. The duke and duchess are interesting people; they've traveled a lot and shot big game all over the world, and I'm sure that you would like them."

"Yes, yes, I (*Continued on page 130*)

"The trouble is that nobody shuts the door properly. Now, watch me"

That Refrigerator Door

By Ellis Parker Butler

ILLUSTRATED BY TONY SARG

THE Edward Wimpers lived in the old and beautiful village of Flushing, on Long Island.

As a matter of fact, Flushing is a part of New York City, and one may use the address, "Flushing, Long Island," to suggest that one is one of the Long Island millionaires, or "Flushing, New York City," to suggest that one is one of the New York City millionaires. The Edward Wimpers used the simple address "Flushing, N. Y.," because they were simple, everyday people.

Mr. Wimper's office in the city was but thirty-five or thirty-seven minutes from the door of his home, according to which train he took. Mr. Wimper "usually" took the 8:03 A. M. train, which reaches the Pennsylvania Station at 8:22, thus giving him time to walk slowly to his office; but you know how these "usually" matters work out, and what Mr. Wimper actually took on most mornings was the 8:16 or the 8:24, except when he missed them and took the 8:45, which he did about twice a week.

The home owned and occupied by the Wimpers was a rather good one, with an ample yard fore and aft, shrubbery, a mortgage, gardens, taxes, and bathrooms. Prior to deducting Federal income taxes, state income taxes, real estate taxes, and any other taxes that happened to be floating around, Mr. Wimper's otherwise net income was about ten thousand dollars a year. He was in the commission business, and the family lived well enough.

There were only Mr. Wimper and his wife, the son in college—Amherst, if you please!—the daughter in high school, and the boy of ten; and they were quite happy and contented except for one thing: when one closed the door of the refrigerator the latch did not catch unless the door was slammed very hard and then held shut for an instant. Even when this was done, the door often sprang open again, letting the warm air into the refrigerator. This, of course, melted the ice more rapidly and made the ice bill larger. Some months the ice bill went as high as $4.25, and Mr. Wimper remembered a time when it had been as low as $3.10.

EACH month when Mr. Wimper received the ice bill he saw red for a moment, and felt a surge of madly unreasoning anger.

"I've told Eleanor a thousand times to please close that refrigerator door carefully, and will she? I've told the children ten thousand times to close that refrigerator door carefully, but what do they care for what I say?"

Then, waiting a moment for some of his anger to evaporate, he would take the ice bill in his hand and hunt up his wife.

"Well, I've got another ice bill."

"Oh, dear! Is it a big one?"

"It's four dollars and fifteen cents," Mr. Wimper would say accusingly. "I don't want to say anything, and of course what I do say does not seem to mean much in this house; but if you would only close that refrigerator door after you have used it, and insist that the cook close it after she has used it, and suggest to the children that they close that door after they have used it—"

"But I do, Edward, I do!" Mrs. Wimper would cry. "I don't believe the size of the ice bill is because of the door of the refrigerator at all. I believe we don't get as hard ice as we used to get."

"Now, that's nonsense!"

"But it's not fair to blame me. I've warned Maggie again and again about it, and the children. I go to the kitchen a thousand times a day to look at the refrigerator door, and it is always closed. If it isn't closed I close it. I know it must be the ice; the door is never ajar any more."

"It was ajar this evening when I came home," Mr. Wimper would say then. "I went to the kitchen especially to see. As a matter of fact, Eleanor, I have gone to the kitchen every day this past month, and I have kept a record of that refrigerator door."

Then he would draw his memorandum book from his pocket and turn the pages.

"In thirty-one days," he would say, with most irritating lack of emotion, "I have looked at that refrigerator fifty-six times, and out of those fifty-six times the refrigerator door was unlatched an exact thirty-nine times."

At this Mrs. Wimper would look exceedingly distressed.

"Oh, I wish you would get a new refrigerator!" she would say.

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"That's utter nonsense," Mr. Wimper would declare. "That is a perfectly good refrigerator."

"Then can't you do something about the latch? I should think a man could do something about the latch," Mrs. Wimper would plead.

"Very well," Mr. Wimper would say coldly. "If you will ask George to kindly put my tools back in the box when he takes them without my permission, I will do something to the latch."

EXCEPT for the latch of the door of the refrigerator the Wimpers would have been one of the happiest families in America. But Mrs. Wimper did wish they were rich enough to afford a new refrigerator. She seldom said anything about it, and she disliked to complain openly, but she saw quite clearly that this lack of money was killing their love, and that it would presently make them all miserable.

It must not be supposed that she was sorry she had had children. Her children were the dearest things in the world to her, and she was willing—as Mr. Wimper—to do without luxuries on their behalf; but she did feel that to some slight extent the children were responsible for the big ice bills. They did go to the refrigerator now and then, and, although she always tried to follow them and close the refrigerator door properly, they were careless about it, as children will be.

Mrs. Wimper could not avoid seeing that many of her friends had more adequate incomes, either adequate because the incomes were larger or adequate because there were fewer or no children. And just a little she envied those married friends who were able to buy new refrigerators when they wanted them, and who could thus live happier lives.

Now and then, on Thursdays, Mr. Wimper would come home and find Mrs. Wimper knitting in the kitchen, instead of sitting on the porch in the warm sun. She would be sitting in the kitchen rocker with one leg crossed over the other and her foot against the refrigerator door, holding the door shut. Then he would feel very sorry for her. He would kiss her.

"I am sorry, my dear," he would say then, "that I'm not making more money, so that we could afford a new refrigerator."

"That would be nice," she would say; "but if you could just fix the latch, Edward, I think it would be all right."

"The latch is all right now," he would reply. "The trouble is that nobody shuts the door properly. Now, just watch me."

He would then open the refrigerator door and close it again carefully, raising the latch with his hand and pushing it into its slot.

"There, you see!" he would exclaim triumphantly; and the door would immediately pop open.

"In thirty-one days," he would say, with most irritating lack of emotion, "I have looked at that refrigerator fifty-six times, and out of those fifty-six times the refrigerator door was unlatched an exact thirty-nine times"

Now and then, on Thursdays, Mr. Wimper would find Mrs. Wimper knitting in the kitchen instead of sitting on the porch

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"That's just the way it always does," Mrs. Wimper would say. "It never stays shut."

"If it is properly closed this door stays shut," Mr. Wimper would say grimly, and he would slam the door gently. It would immediately pop open again.

Then he would slam the door harder. It would pop open wider. Then he would draw the door well back and slam it with all his strength, and it would pop wide open.

"Somebody has been fooling with this latch," he would say. "Somebody has been slamming this door. That's not the way to close a refrigerator door. Slamming ruins any latch. What it needs now is to be filed down here, and the screws tightened here—"

Then he would get his tools from his tool box and begin on the latch. In a minute or two he would stop the work to go up-stairs and change into older clothes. By the time Mrs. Wimper had dinner ready, he would have the latch off the door and the door off the refrigerator, and the drip pan under the refrigerator would be running over, and his knees would be wet and he would have grease on his face and collar and two cuts on his thumb, and he would say he did not want any dinner.

"Oh, but, Edward!" Mrs. Wimper would say, "you must have your dinner."

So Mr. Wimper would lean the door of the refrigerator against the refrigerator, and wash up and eat his dinner, and all the while the chunk of ice in the refrigerator would be dripping its life blood away into the drip pan and from the drip pan onto the kitchen floor. After dinner, Mr. Wimper would say nothing to anybody, and would in bitter anger wrestle to get the refrigerator door screwed back onto the refrigerator and the latch screwed back onto the door. Then he would close the door gently, and it would immediately fly open again.

"Oh, dear," exclaimed Mrs. Wimper, "is it a big one?" "It's two hundred and sixteen dollars," said Mr. Wimper

In the four or five years during which the refrigerator door had been flying open in this way, Mr. Wimper had mended the latch thirty or forty times himself; but he had also had it mended. He had the plumber mend it, and at the end of seven hours' hard labor the plumber placed a drop of solder on the nose of the latch and closed the refrigerator door. The door remained closed. Then the plumber opened the door and swung it shut nonchalantly and the door remained closed. He called the cook, and she closed the door and it remained closed, and the cook called Mrs. Wimper, and she closed the door and it remained closed. Everyone was delighted.

When Mr. Wimper came home he was escorted to the kitchen triumphantly. The door of the refrigerator was standing ajar. No matter who closed the door, it jumped ajar again. The bill from the plumber was $14.75.

Mrs. Wimper paid the plumber's bill out of her housekeeping money, because she had ordered the plumber on her own initiative; but it was Mr. Wimper who paid the tinsmith who next mended the latch of the refrigerator. After that others mended the latch—the key maker mended it, a traveling scissors grinder and lawn-mower sharpener mended it, a bicycle repair man mended it, a blacksmith mended it, a furnace man mended it. Whenever Mr. Wimper could think of a new sort of metal worker, he had the latch of the refrigerator mended again. He even removed the latch and sent it to the factory and had it mended. After that the refrigerator door sprang open when anyone slammed the front door, or when anyone sat down on a chair in the living-room, or dropped a shoe in a bedroom. It opened if the cat sneezed. It opened if the canary cracked a seed.

By the time Mrs. Wimper had dinner ready he would have the door off the refrigerator

"WHEN a woman begins to lose her love for a man she first begins to find flaws in his character; when a man begins to lose his love for a woman he first begins to find flaws in her face and form."

The above epigram might have been penned by that celebrated French author and cynic, the creator of the volume "*Trois Spicules*," crowned by the Academy; but it was not, because there never was any such author, and he never wrote a work called "*Trois Spicules*." Probably "*Trois Spicules*" is not French, and probably it does not mean anything at all. Certainly the epigram given above does not mean anything. The author of it, who is writing this, can dash off similar epigrams by the thousand: none of them means anything.

The truth is that when a woman begins to lose her love for a man, it is usually because she has seen and heard him mend the latch of a refrigerator door, and a man usually begins to lose his love for a woman because she can't keep the door latched after he has mended the latch. Woman's privilege is to believe men can mend latches; man's privilege is to expect women to be able to work the latches he has mended.

The above is another epigram; it means even less than the first.

"Smells Are Surer Than Sounds And Sights"

A memory, long dormant, is quickly awakened by an odor—This fact may account for your fondness for certain perfumes and your dislike for others. What perfume is made of, how your sense of smell is affected by it, and other amazing facts about odors

By Stuart Mackenzie

"THE nose knows!" says a familiar advertising slogan. As a pair, you find those last two words rather amusing. They are like a matched team of horses: the same, yet different. But behind this team of words there is, to continue the simile, a whole cartload of interest.

Do you ever think of the immense number of things which your nose knows? Can you explain *how* your nose does know these things? For that matter, how does it know anything at all?

Shut your eyes, so that you cannot see. Have your hands tied behind your back, that you may not be tempted to touch. Yet your nose will tell you whether, for example, you are near roses or violets, onions or orange blossoms, lilies or liniment!

Your nose detects hundreds, probably thousands, of odors. What are these invisible and seemingly intangible messengers? And how does the nose receive and convey to your brain the messages they bring to you?

For answers to these and various other questions, I went to Professor Marston Taylor Bogert, of the Department of Chemistry, in Columbia University. I wanted to know *how* we smell, *what* we smell, and some of the marvelous facts about the *things* we smell.

"Tell me," I said to Doctor Bogert, "what a perfume, or an odor really is. Some people describe it as a sort of wireless message. They say that certain substances cause waves in the ether; and that our sense of smell reacts to these 'odor waves' just as our sense of sight reacts to 'light waves,' or our sense of hearing to 'sound waves.' Is that true?"

"Not in the opinion of most scientific men," said Doctor Bogert. "The theory you mention has a certain following, but the weight of evidence seems to be against it.

"When you are conscious of an odor, this is what has happened: the substance you smell has given off minute particles, some of which have reached your olfactory nerve tips. These nerve tips are in the mucous membrane which lines the upper back portion of your nasal cavity.

"When those minute particles come in contact with the hairlike tips of these nerves there is a chemical stimulus, which travels by way of certain sensory nerves to the brain. It finally arrives at the 'olfactory area,' where the message thus transmitted is, so to speak, interpreted and used, or filed for future reference."

"Do you mean that when I sniff a flower, to enjoy its fragrance, I am actually taking some of the *substance* of the flower into my nostrils?" I asked.

"Yes," he said, "that's what I mean. In the flower there is an oil which is volatile at ordinary temperatures. Particles of this volatile oil escape into the air. If your nose," he laughed, "happens to be conveniently near, you inhale some of the particles. It is an agreeable sensation; so you put your nose close to the flower, the source of supply, and sniff energetically, in order to get more particles and therefore a keener sensation.

"A GOOD many centuries ago, people hit on the idea of extracting from flowers the oils that give them their fragrance. This led to one of our great modern industries, the manufacture of perfumes. In this country alone, the noses of the nation demand, every year, one hundred million dollars' worth of sweet smells in the form of perfumes, toilet waters, and scented cosmetics, not including perfumed soaps.

"That is what we *use* here. But unfortunately we don't *make* it here; not as much of it as we should like to make. The labor question is the chief obstacle. Workmen in this country are so highly paid that we cannot compete with France, which is the great source of our natural perfumes.

"However, with true Yankee ingenuity Americans decided that if they couldn't turn the trick in one way, they would do it in another. The result is that we have turned our attention to developing substitutes for natural perfumes; that is to say, for the perfumes made from the flowers themselves. And this is one case where the substitute may be not only 'just as good' as the original product, but in many ways even better.

"This substitute for the natural perfume is the 'synthetic perfume,' and I promise that, not for the first time either, man is going to improve on nature! What he is accomplishing in this field is one of the most fascinating chapters in the whole story of chemistry."

"Is it one that only a chemist can understand?" I asked dubiously.

"Certainly not!" was the emphatic reply.

"Well, then," I said, "tell me how you can make a synthetic violet perfume."

"You've happened to pick out one of the most interesting of all flowers from the chemist's point of view," he said. "We can reproduce some of the natural perfumes exactly, because we have found the formulas which nature uses. In other cases—and the violet is one of these—we don't know the exact formula.

"You see, every odoriferous substance is a chemical compound. We can find out what the component elements are; but we don't always find out how they are put together. Hundreds of substances, each of which has its own individual odor, may be composed of the very same elements, say, carbon, oxygen, hydrogen, and nitrogen. The problem is to discover how many atoms of each element there are in any one substance, and how those atoms are tied together.

"The ways in which they can be arranged are almost infinite. There are only twenty-six letters in the alphabet, aren't there? Yet out of those twenty-six letters thousands of words have been made. It is like that with odors, except that the possibilities of variety are immeasurably greater.

"But there is still another difficulty: Even a natural perfume is a blend, made up of different odors; and nature does not always achieve a perfect combination. In a blend containing agreeable odors she sometimes includes a very disagreeable one. The chemist tries to identify the guilty member of the group. If he succeeds, he omits it from his synthetic reproduction.

"THAT isn't the only way in which we can improve on nature. As a manufacturer of perfumes, nature has troubles of its own. Flowers may be grown year after year in the very same garden; but in some years they will be sweeter than in others. Their perfume is less in poor seasons than in good ones. Not only its quantity, but also its quality is changed.

"Perfume is affected, too, by the soil in which the plants are grown. Take a rosebush, for example, and transplant it from a favorable to an unfavorable soil, and the fragrance of the blossoms will be altered. Rain and sunshine, heat and cold, and the chemical composition of the soil have a decided effect on the perfumes which nature produces. (*Continued on page 145*)

One Way To Kill Worry Is To Laugh It To Death

By Charles L. Callen

GO BACK with me to 1914, to a sanitarium in Newark, New Jersey. On one of the white iron cots of the establishment was stretched a man, a big man, who, erect, measured two inches over six feet. It was February, the hour between three and four in the morning. The man was awake, staring at the blackness of the ceiling.

Outside, in the cobble-paved street, a milkman was going from door to door. His milk bottles rattled in the carrier. The iron-shod wheels of his wagon grated against the curb as the trained horse plodded the daily route. "Giddap! Whoa!" bellowed the driver at intervals. The bottles rattled; the wheels grated; the animal's hoofs clanked on the paving.

Impatiently the man on the cot stirred, sleepless since the milk outfit had first entered the street at the far end. He put his thin hands to his ears, trying to shut out the sounds which came up through the window. Every morning, regularly at the same hour for three months, that wagon had broken his slumber. Every morning from then on he had twisted and tossed, tortured in every raw nerve by the noise, first of the wagon and rattling bottles, then of the awakening city. He had begun to dread the morning. Already, he dreaded life.

"Where's that nurse?" he groaned. "Why doesn't she come?"

The nurse never came until seven. He knew that, and the wait until seven was part of his dread. He was helpless without the nurse. She had to help him to arise, prop him between his crutches, almost carry him the several feet to his chair by the window, blanket him, ease him with pillows. Without her, he was tied to that hated white cot, to stare at the ceiling, to twist and toss, on his back, to fight the noise. His greatest desire was to be up in the chair with his back to the cot, so he could not see it. He hated the cot, as a symbol of his helplessness.

"God!" he cried. "Where is that nurse?"

But it was not yet four. The milkman whistled cheerfully; the bottles rattled accompaniment. A street car shrieked its way around a corner in the distance; a truck siren added its piercing taunt.

Suddenly the man on the cot became still.

He became as still as if Death had spoken, though he was held so only by a thought. A thought that leaped from nowhere—born, perhaps, in the milkman's merry whistle; or was it in the truck's defiant blast? Presently, by slow degrees, he turned his head until he could see in dim outline his chair. He reached out experimentally, and his fingers were able to touch the crutches at the head of the bed.

"Go on!" commanded the thought. "Help yourself! You can make it alone! Why wait for the nurse?"

Inch by inch, his teeth clenched against the pain, the man worked himself up to a sitting position. His arms were pretty good. It was his legs that handicapped him. He had been told that he would never walk again.

"*Go on!*" the inner voice decreed.

He gripped his crutches. . . .

Fainter grew the milkman's whistle down the street. The grating of the wheels, the noise of the hoofs became fainter, finally died out in the blocks beyond. The blackness of the room became a gray. A newsboy passed below, from door to door, and was gone. The sounds increased; the city was awakening. Somewhere, far off, a clock struck five. An hour had passed since the voice had bade, "Go on!"

AND the white iron cot was empty. The crippled man, who had been told he would never walk, sat in the chair by the window! Unaided, except for the inner voice, he had walked those five or six feet alone. And, all at once, in sheer triumph, he did a thing he had almost forgotten how to do. He laughed!

Looking back at it, he laughed at the empty cot which had held him, tortured, for three months. He laughed at the few feet of floor which separated the cot and his chair—feet it had taken him an hour to traverse. He laughed at the noise; at the pain aroused by his exertions. In the gray of that morning, Grant L. Bell laughed at trouble!

"Up until that morning," he told me, "trouble had me down. It had been doing all the laughing. I was a crippled wreck, a mental wreck, a business wreck. I was more than one hundred thousand dollars in debt, and without a penny to my name. I hadn't a notion of how I would pay my doctor bills, nor of what would become of my wife and two boys back home.

"Why I got up, or how, I don't know. That thought came out of the dark. Something seemed to snap, like the latch of a door being opened. For the first time, it occurred to me that I could get up alone.

"The truth, once in that chair, came as suddenly. My ailment had swelled and deformed my joints, at the hips and below. I had asked doctor after doctor the cause. They had said the cause was obscure. But, sitting in that chair, I knew it! Dread, worry, fear were the causes. They had driven me beyond endurance; they had sapped my strength, and resistance to disease. They had poisoned my system as effectively as if I had taken poison from a bottle.

"Dread, worry, fear—over the future, failure, debts, over my family—these had worn me down and smashed me. The poison of them, and medicine recognizes such a poison, had attacked my weakest physical point.

"Then it came to me there was a way to beat my trouble, and the one way left. That was to laugh at it! My fears had but created reasons for more fears. Perhaps laughter would create reasons for more laughter.

"That revelation, for such it was, broke the dam. I had not laughed a real laugh in months. That pent-up laughter came pouring out. All that I had hated and dreaded became funny. It was as if I had got up in the dead of night, tense in every nerve to confront a burglar in the house, and had discovered the terrible noise had been made by the cat!

"There, while the city was waking up, I made the most earnest resolve of my life. 'From this day on,' I said, 'come what may, I'm done with worry; I'm done with fear; I'm done with being my own worst enemy!' And from that morning I started to get better."

A month later Grant Bell went home, to Scranton, Pennsylvania. He was still a cripple; but with the aid of canes and a will he could walk. And trouble went home with him or, rather, it was lying in wait for him there.

The surety and investment company of which he was treasurer, and to which he had almost given his life to help build, was absorbed by a larger concern. The new order left him jobless as well as penniless, with that burden of debt still on him. He laughed at that trouble by launching a business of his own in the office of a friend who gave him desk room on which the rent was not due until the end of the month. This business was public accounting.

Within a week or two, while the new venture languished without clients and debts mounted, his younger boy was taken ill. At the end of a short and terrible ten days he died. By his son's fresh grave, Grant Bell once more clenched his teeth against the pain, greater than any physical torment he had suffered. He wasn't going to let it break him. It didn't!

FIVE years went by, during which the accounting business prospered. Bit by bit the debt was reduced. Bell was beginning to dream that some day he might walk caneless. Then a drunken man stumbled in the path of his oncoming automobile. The car swerved, crashed. Those legs, slowly mending, were cruelly broken and torn. Three months later,

when Grant Bell once again stood upright, he stood between crutches—for good. But he still laughed!

To-day he is forty-eight years old, and one of the best known and most successful expert accountants in the East. His accounting business, which he heads and owns, stands among the biggest in Pennsylvania. It numbers its clients from Boston to Jacksonville—and Bell is in debt to no man! On the contrary, many a crippled boy and girl, and father and mother, is indebted to him.

The National Association of Cost Accountants has honored him by election to its directorate. He is president of the Pennsylvania Appraisal Company, and of the American Coal Sales Company; a vice president of the Shamokin Anthracite Coal Company, and of the Northumberland Mining Company. A rich man, not alone in money but also in home and happiness. Because he could laugh at trouble!

He was born at Nicholson, Pennsylvania, in 1879, the eldest of five brothers and two sisters. When Bell was yet a baby, his father, who was a farmer, moved to Jermyn, a hard-coal town near Scranton, and became a contractor and builder. The boy became big, husky, active. He loved to fish, to swim, to ride horseback over the mountain roads. At fifteen, he was over six feet tall and weighed one hundred and eighty-five pounds. He could do the work of any man.

He always worked. Under his father he learned the carpenter trade, and worked as a carpenter on holidays and during vacations. The elder Bell and a partner built the first coal washery in the region, and Grant was one of the wage-earners in that. He went through public school, high school, then Wyoming Seminary. Quitting school at sixteen he became a carpenter in a planing mill, no longer a boy but a man. And trouble was in the offing: the country was in the throes of a business panic.

ONE night Grant's father came home with slow step. His head was down. There were lines about his mouth and eyes that had not been there.

"Grant, do you think you can take care of the family?" he asked. "Can you take care of it without me?"

"I think so," said Grant quietly. "But what's to become of you?"

The father pressed the boy's hand. "Son," he said, "maybe you know that for some months I've been in difficulties. Well, I have come to the end of my rope. The business is gone. By the time the debts are paid nothing will be left. This panic has wiped me out!"

He went on: "Gold has been discovered in Alaska. The newspapers are full of it. Men with the nerve to go will make fortunes there. Son, I've made up my mind. There's nothing left for me here. I'm going to Alaska—to the Klondike!"

The business and all its assets were sold. A store property belonging to the mother and from which there was a small income from rent, was all the smash left—besides some unpaid debts. The father set out for the distant gold fields. "I'll bring back a fortune!" he promised.

"Don't worry," said Grant, now seventeen, "I'll take care of things at home."

PHOTOGRAPH BY SCHRIEVER'S STUDIO, SCRANTON, PA.

Grant Bell, on a hospital cot, $100,000 in debt, learned to laugh at worry and fear. Permanently crippled five years later in an automobile accident, he none the less built up one of the largest public accounting businesses in Pennsylvania. He is also President of the Pennsylvania Appraisal Company, and a director of the National Association of Cost Accountants. "Beat worry, and you beat life," says Mr. Bell; and his wife, looking over his shoulder, agrees with him

His next younger brother was in poor health, a student in a business college. The other five children were still too young to be of any assistance—the smallest was but a baby in arms.

"No, I wasn't frightened," Mr. Bell told me. "It never occurred to me that we were facing hardship. The job was to be done, that was all. I hadn't learned the word 'fear' as yet."

He obtained work as a messenger in a Scranton bank. The position paid him twenty-five dollars a month, plus a carfare allowance of nine dollars in the form of a commutation ticket. Out of his wages he kept two dollars a month to pay for his lunches. That left twenty-three dollars a month for his mother.

"Oh, lunches were cheap then," Mr. Bell said. "I could buy a cup of coffee and a big fat sandwich for ten cents. Often I went without lunch; but don't, please don't, consider that a hardship. It really wasn't. I thought nothing of passing up my lunch. Probably I was better off without it. To this day I frequently go without lunch.

"And at home we didn't suffer. We never had been accustomed to luxury. If dinner wasn't elaborate, there was enough of it, all of the cabbage and beans we could eat. When there wasn't butter for our bread, there was ham grease, and we liked it. Plenty of other homes in Jermyn had no better, and many fared worse.

"Mother was a wonderful manager. She could take a rag and make it into a tidy pair of trousers. She could squeeze eleven mills out of every penny. Nobody 'beefed' or groaned. Used to doing without, we took things as they came. We never thought we were being ill-treated by the world, and we weren't!

"AND right there, right in that fact," Mr. Bell added earnestly, "is the secret of living happily. You can't be unhappy if your thoughts are happy! Nor can you be happy with miserable thoughts! Health, wealth, a wonderful home, and a whole stable of winning race horses can't bring happiness when you are thinking in black. Sickness, poverty, and a hovel can't bring unhappiness when you are thinking in white. You are the absolute boss of your own happiness! Nothing can rob you of happiness if you put down your foot and say, 'No!'

"'Oh, that sounds fine as talk,' you say; 'but in practice it won't work.'

"I've looked at both sides of the pancake, in practice. It does work; and, strangely, the bigger the trouble the more effectively it works. Some time ago, as expert accountant, I sat in a meeting of six men who represented five hundred thousand dollars of an eight hundred thousand dollars loss. They were men who had experienced both the boosts and the bumps of business. The loss to every one of them was serious.

"'That reminds me—' began the biggest loser, a twinkle in his eye, and he told a story.

"'Pshaw! I can beat that!' declared a second, and he told a still funnier story.

"They sat there and laughed at trouble, ignored it, left it standing at the door, hat in hand, unbidden. It knocked to enter; but they said 'No!'

"Another creditor's loss was comparatively small. It meant, or should have meant, nothing to him. He tore his hair. He dashed about wildly in circles. He made himself haggard with worry and loss of sleep.

I pointed this (*Continued on page 141*)

Do Wild Animals Think?

I have spent years in Africa studying animals, and I cannot explain their conduct by instinct alone—The wart hog has learned how to evade his pursuers; the honey badger knows how to follow the honey-guide bird, and fleeing elephants will return to help a wounded comrade. These, and other acts, convince me they can reason

By Wynant Davis Hubbard

Photographs made by Martin Johnson, in Africa. Used by courtesy of Metro-Goldwyn-Mayer pictures

NANSI! There they are. Wart hogs."

My leading tracker, Mangineera, hissed out this information. We stopped dead in our tracks. The four dog boys reached restraining hands to the heads of their dogs, quivering beside them with excitement.

Possibly the dogs already knew what we saw. We had been hunting up the wind. The sudden stop, the tenseness of the natives, and the eager whispering would have told them that something was about to happen, even if their keen noses had not picked the reeking scent of wart hogs off the hot breeze.

I moved forward stealthily. In the shallow vlei, or little valley, in front of us, five wart hogs were tearing up the soil to get at the roots of the lush grass growing rank in the damp earth. Down one would go on its knees, tearing at the dirt with its strong curved tusks, while at least one of the others stood erect, watching, its ludicrous face, with its curving white whiskers and cone-shaped warts, turning warily from side to side. Too well they knew that they were a favorite food of lions and leopards. But the grass was too short and the distance to the edge of the bush was too great for a sudden killing rush. The only animals which the wart hog had to fear were wild dogs, those tireless running wolves of Africa, and man, who kills from a distance.

Rapidly I noted the possibilities: We were in a cup among low, steep, rocky hills. The bush all around was thick and thorny. The wart hogs would run either to the right or to the left of the hill before us. Probably they would go to the right; in this direction the country looked less stony and the bush more open. I glanced at my natives. They were grinning broadly and hitching up their loin cloths and catskins. Catching wart hogs was sport. The eight dogs strained on their leashes.

"Crash!" I fired toward the wart hogs, but not at them. They whirled and tore off to the right at a tremendous trot, their long manes erect and each tail standing stiffly at right angles. Instantly the dogs were loosed. As they disappeared, yelping and barking around the shoulder of the hill, the natives and I

(At left) African cheetah, often called hunting leopard, because of the custom in India and Persia of using it when tamed to hunt buck, antelope, and other animals. It is as long as a leopard, but stands higher, because of its extraordinary length of limb. It can run for short distances at great speed, and therefore hunts by chase as well as by stealth, though it is capable of stalking game, like any of the tropical cats. The African cheetah is valued principally for its skin. (Below) Eland, the largest of the African antelopes

Two interesting photographs of African elephants, showing also the varied character of the country through which these animals roam. The Asiatic elephant shuns sunlight more than its African cousin, and is likely to keep to the deep forests and the sheltered mountain regions, from which it emerges only in the cool of night

streamed yelling across the vlei behind them.

It was hot. At eleven in the morning the temperature reaches a hundred and fifteen in the shade. Loose stones rolled under our feet as we dodged branches or made quick right-angle turns in our headlong chase. How those wart hogs could run! Ahead of us the dogs barked and yapped. Around the hill we ran down, across a dry creek bed, and up again. I thought that my chest would burst from panting and yelling. Suddenly the dogs were silent. I stopped and dashed the sweat from my face. Heaving and blowing, we stood listening. Mangineera began casting around for tracks.

A crescendo of barks, yelps, and growls sounded from the far side of the hill. Off we tore. The dogs had one of the hogs kraaled. Yelling encouragement, we rushed through the brush and thorns, and rounded a little hill to find the dogs snapping and barking around the mouth of a large ant-bear hole. Mangineera ran up to have a look down the hole, only to leap backward as subterranean rumblings and a muffled roar burst forth in his face. Our wart hog had gone to ground.

FROM many previous chases we knew the wart hog's habit of going to ground in ant-bear holes. Quickly taking a short length of heavy rope netting we spread it across the mouth of the hole. If the wart hog should try to burst out unexpectedly, he would become entangled, and we would have him. Meanwhile, we sat down for a rest and a smoke.

We waited ten minutes, and then decided to force the wart hog out of his hole. Mangineera cut a long, slender pole. With this he prodded down the hole, teasing the hog. There were rumblings and roars beneath our feet. The ground trembled and eddies of dust drifted up. Suddenly there was a rush. A gray shape shot out of the hole. The net rose in the air, and then came down with a fine wart hog boar securely tangled up in its four-inch meshes. The chase was over.

Ant-bears are numerous all over the plateau country of Central Africa. At night they wander, searching for ants. Wherever they find a likely place, they dig with their powerful claws and feet. The natives claim that even a lion is afraid to tackle ant-bears when they are in search of food. They cannot bite, as they have no teeth. But their claws, strong enough to dig through clay and dirt baked hard during six months of bone-dry weather, are weapons to be respected. The holes which ant-bears dig are about eighteen inches to two feet in diameter and they are sometimes twenty feet deep.

How wart hogs first learned that these ant-bear holes formed ideal protection I do not know. But that they have learned it is beyond question. I chased many wart hogs during my three years in Africa and, no matter how unexpectedly I came on them, never did I see them hesitate. Instantly, upon my firing a shot, or upon our presence becoming known, off the wart hogs tore. It made no difference how hard the dogs pressed them, they invariably ran as if heading for some particular spot. The remarkable point was that they were doing just that. Unless the dogs actually caught them and held them in the open, our chases always ended by the wart hog sliding backward down an ant-bear hole.

THE first time that a wart hog went to ground when I was after it, I simply thought it was a piece of good luck, as I could net the animal or dig it out at my leisure. The second time this occurred, I was more impressed. But when this grounding happened three, four, five, and six times in succession, I began to think. It seemed to me that the wart hogs of a particular lo-

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

African rhinoceros scenting an unwelcome caller. Though his eyesight is nothing to boast of, the rhinoceros possesses marvelously keen senses of smell and hearing (At left) A group of giraffe. The giraffe usually feeds on the succulent shoots and leaves of trees

cality had a pretty definite knowledge of just about where each particular ant-bear hole was.

Despite their tusks, which are very sharp and dangerous, wart hogs are comparatively incapable of defense against lions, leopards, cheetahs, or wild dogs. Although heavy and slow-looking they can run surprisingly fast and far; but wild dogs are tireless. And as they run in packs of from ten to more than a hundred dogs, a wart hog would have no chance for life unless it could completely disappear into some place where the dogs could not get at it.

WART HOGS, notwithstanding the wild dogs, natives, lions, leopards, hyenas, cheetahs, and pythons, are one of the most numerous of African animals. Memory, a sense of direction, speed, and ant-bear holes account for their survival.

Some persons might call their use of ant-bear holes instinctive rather than intelligent. Unfortunately, the question of whether or not an animal possesses intelligence can never be proved one way or the other. The most that can be accomplished is to assemble all the evidence possible, and make deductions. When all is said and done, it is only on such deductive evidence that man is believed to be intelligent. In studying animal intelligence, the biggest drawback is this: We are handicapped by having to define animal emotions in terms of human emotions and reactions.

No two persons will arrive at the same conclusions, because no two will ever interpret all actions the same way. To one person, one action will undoubtedly seem instinctive. While another will be equally positive that the action in question was performed as the result of reason.

When forced to flee, the majority of wild animals prefer to run in the direction in which the wind is blowing. By so doing, they leave less fresh scent behind them; furthermore, they always know where their pursuers are, by the smells which follow them. There are exceptions to this statement, of course. Much depends on the lay of the land, natural obstacles, and the direction from which the frightening agent has come.

Wart hogs, however, will run up-wind, down-wind, cross-wind, or they will circle. This disregard for wind shows, I think, that wart hogs often act with conscious design. That they are fully alive to what messages the wind or the faintest breeze can carry, any hunter will confirm with vigor. They are not the easiest animals to hunt. Another point in favor of intelligence is that only once in over thirty chases have I seen a hard-pressed wart hog make a mistake and try to enter too small a hole. I have, however, frequently seen them pass holes either too small or too cluttered up to be available.

There is a little animal in Africa which coöperates with a bird to secure much of its food. This is the honey badger or ratel, a low-hung, sturdy-legged creature about the size of an Aberdeen terrier. It is a savage little brute. Major Stevenson-Hamilton, director of the great Sabi game reserve in the Transvaal, tells a story of finding a seven-hundred-pound sable antelope which had been killed by a honey badger. Probably the sable had unwittingly or imperiously disturbed the little animal when it was feeding, and in a fit of rage and terror the ratel had seized its huge antagonist by the throat and had hung on until the antelope was dead.

Usually, the honey badger is harmless enough. Most of its waking hours are spent wandering over the veldt searching for grubs, insects, birds, and particularly for honey. Wild honey is plentiful in the bush veldt, but the bee's nests are hard to get at. Generally they are deep in some hole high up in an old tree, but occasionally they are built in the hard clay of an ant hill. The only way I know to find a nest is to be continually on the lookout for a hole from which and into which bees are going, or to follow the honey-guide bird.

HONEY GUIDES are black and gray-white birds about twice the size of English sparrows. Hunters detest them, because they flutter around, chirping and chattering incessantly and drawing the attention of game. When a honey guide begins flying around us while we are trying to stalk wary game, imprecations and clods of dirt and sticks fly. But it is nearly impossible to drive the little birds away. When we are not hunting, however, we are only too glad to follow them. Once a bird sees that we are following, it flies from tree to tree, chirping, whistling, and chattering with great concern. If we follow it long enough,

Digitized by Google
Original from UNIVERSITY OF FLORIDA
STATE UNIVERSITY SYSTEM OF FLORIDA

the little chatterbox will almost always lead us to a bee's nest.

The honey badger is nearly as well equipped to dig out a bee's nest as a man is. Its forefeet are armed with powerful hooked claws. Its legs are strong and short, equally good for climbing, walking, or digging. And, as an almost perfect protection, a honey badger's hide is very thick and tough, and it can withstand the stings of angry bees, even if its stiff, harsh gray and white hairs did not help to keep the bees at a distance.

Whether or not a honey guide will fly up to just any moving creature, I am not sure. I am not conscious of ever having seen one around antelope or zebra, for instance. But honey guides habitually fly up to honey badgers, for these two little creatures combine to secure the food of which they are both so fond.

Honey guides are plentiful on the veldt. If the observer remains quiet, the little bird will keep on its way, chattering coaxingly as if encouraging someone to follow. More often than not, within a few seconds a honey badger will appear, trundling along determinedly. Around logs, over stumps and through the bush it goes, uttering every now and then a rather panting, whistling chuckle. It is just as if it were trying to say: "Keep on, old chap; my legs are short, but I am coming."

When the partners eventually arrive at the bees' nest, the honey badger tears it open with his powerful claws, eating up the honey and comb. His guide receives for its share the fat white grubs which fall or squirm from the busily champing mouth of the ratel. It is a perfect partnership and, personally, I believe that the bird knows what it wants and that the ratel understands the whole proceeding.

I deduce from this that both have memory, or the bird would not be able to return to the bee's nest, nor the ratel be able to recognize his guide. I also conclude that both partners are able to reason, or there would be no object in the bird's searching out an animal capable of opening the nest which it has discovered, nor would the badger follow the honey guide on its wandering, chattering flight unless he knew that honey lay at the end of the trail.

THESE actions of bird and animal do not seem to me to be instinctive. I believe that the badger learns the value of the honey guide from observation of its parents and from experience. The same is probably true of the bird.

I have never had a young honey guide or a young ratel with which to experiment, so I cannot prove what I believe. But I have handled dozens and dozens of young wild animals and birds during my catching activities, and I know that young creatures have to be taught how and what to eat, of what to be afraid, and how to act in the presence of danger. I have seen a lioness chastise and teach a cub. I have watched natives teach a young elephant how to feed itself, and young antelopes how to eat grass. Why is it not reasonable to believe that a young honey badger learns to follow a honey guide by watching its parents do so?

He Lives On Top Of A Hill And Lets The World Go By

By Mary B. Mullett

ONE night, about three years ago, a terrific storm visited a certain section of New York State. As the crashing of the thunder made sleep impossible, people living in the farmhouses and villages got up and stood at their windows, to watch the storm wear itself out.

But when the lightning flashes had grown less vivid and less frequent, these watchers were startled by a new glare. From a ridge among the hills a pillar of fire was rising.

High above the valleys on either side, this ridge, known as Clum Hill, was visible for miles. On it were a few buildings. And to the watchers of the storm, that leaping pillar of flame could mean just one thing: the lightning had found a mark among these buildings.

As a dwelling place for human beings, Clum Hill is a lonely spot. Dense forests clothe the whole range of hills. Only at this one ridge is there a belt of cleared fields; and even this clearing is but about half a mile in width.

In that open space, criss-crossed with low stone walls, are two homes, separated by only a few hundred yards. Yet they are as unlike as if they had come together from opposite ends of the earth.

One of them seems to have been transplanted, not only from a distant country, but from a far-off time as well. There, on that rugged ridge of the New World, it stands, white and beautiful; a modern version of an ancient Greek dwelling.

Facing it is a plain old farmhouse. Its clapboards are gray with age; and its windows peer out through the leafy screen of a grapevine which has climbed to the very roof.

The house has stood there for more than a hundred years. Its present owner was born there sixty years ago. Here, too, his children were born, in the very house where his own father lived and died.

For five-score years and more, he and his people have made this an abiding place of simple, honest, industrious living. Before they came, these acres had been wrested from the wilderness by hardy and courageous pioneers. But this family, which followed in their wake, had to go on with the fight! Always the forest struggled to get back what had been torn from its grasp.

Gradually their neighbors, less hardy of spirit, gave up the other farms which had been cleared on the nearby hillside. The abandoned houses became mere heaps of débris. Little by little, the forest invaded the undefended fields. Slowly the wilderness crept in and once more took possession.

On the night of that terrific thunderstorm, but a single farm remained where once there had been a dozen. And here were only the two homes I have described: the gleaming white house, built by a New York City man as a summer residence; and the weather-beaten farmhouse where Jonas Clum maintains the last stronghold against the encroaching forest.

Across the grassy road, which winds down to the little town in the valley, stood three barns; and it was one of these buildings, fired by a bolt of lightning, that had sent the pillar of flame leaping toward the sky.

The next morning, two riders drew rein in front of the smoking ruins. They were "city folks" from a summer colony across the valley; and they had ridden over to find out what had happened on Clum Hill the night before.

It was not the first time they had been there. To every visitor in that section, Clum Hill is a sort of Mecca; not only a beauty spot itself but also a point from which to get a glorious panorama of mountains and valleys, forests and meadows, and the changing sky overhead.

Jonas Clum, a New York mountaineer

AS THEY dismounted, Mr. Clum came forward to greet them. A tall man, who wou'd be still taller if a crippled knee did not force him to limp. His eyes have the blueness and the light of a sunny sky. His blond beard, crisp and curling, is turning gray—but not willingly! He is sixty years old; yet there is so much sunshine in the man that even his hair and his beard seem to be full of it.

When Mr. Clum had given them the details of the disaster, one of his visitors asked if there was any insurance.

"Not a dollar!" he replied.

"Are you going to rebuild?" asked the man.

"Can't!" was the laconic reply. "I ain't got the money. I'll just have to cut down my farmin', I guess. If I don't keep so many cows I can git along with less hay. And if I have fewer critters and less hay, I won't need so much room for 'em."

He looked across the fields to the dark wall of the forest, where the trees seemed to stand just

The Clum homestead in the Catskills, near Haines Falls, New York. The house is more than a hundred years old

waiting for a chance to recapture their old domain. He nodded toward them.

"I've got the best of them, ever since I was a boy," he said. "But I guess I'll have to give way a little now."

His visitors exchanged glances.

"Things are about as we feared they would be," said one of them. "You make a living here—but you don't make money! And it will take money to rebuild your barn.

"What we want to explain is this: You don't realize it, but we are *in debt* to you! And we have come here as delegates from other people who feel that they, too, are in debt to you.

"We summer folks got together this morning and talked things over. We saw the fire last night and knew that it was one of your buildings, or else Mr. Blank's house," turning to the owner of the pseudo-Greek residence, who had joined the group.

"This is what we, who live over there in the summer, want to tell you," he went on. "We can't spare a single acre of these fields of yours! We love this farm! We like to look up at it. We like to come here and look down from it. When we do come here, we carry away memories which money couldn't buy."

HE LOOKED around at the smiling fields; at the barn where the hay from those fields would soon be stored; at the comfortable old house, clad not only with vines, but also with the intangible atmosphere of a home, and with the traditions of a century of labor.

"We want this farm to go on as it always has," he said. "And, just for our own pleasure, we are going to help you to rebuild your barn. We came over here to tell you that five hundred dollars was subscribed this morning by your friends across the valley."

For a moment, Mr. Clum was too taken aback to make any reply; and before he could recover himself, his neighbor from the big white house spoke up.

"I'll make good the deficit, whatever it is," he said. "Lumber is high. So is labor. But you're right! This farm stands for certain things which are worth more than money."

ON ONE of the abandoned farms near by, a barn was still standing. Its beams and timbers, hewn by hand a century ago, were almost as strong as the day they were cut; and the owner of the land willingly consented to have them used in the new structure.

An old-fashioned "bee" was arranged. The men of the neighborhood took a day off, tore down the old barn, hauled the timbers to the new location, and set up the framework. A few weeks later, there were once more three barns facing the gray farmhouse across the grassy lane.

Now I have been going to Clum Hill for ten years or more. Many a day I have eaten my luncheon under the trees that look down on the Clum farm. To me those trees had seemed kind and friendly; a great green tent where I could sit and enjoy that wonderful panorama.

Until I was told, not long ago, how the burned barn came to be rebuilt, I had not realized, except subconsciously, all that Clum Hill meant to me; all that it should mean to *you*, even though you never have seen it, and probably never *will* see it.

Most of us live in cities and towns. We work in offices and stores and factories. We buy our food at the grocery, the bakery, the market. We have forgotten the farms; forgotten our great-grandfathers, who cut those farms out of the wilderness.

And that is not all. Many of us have forgotten also the traditions of simple, honest, hardy living. We are looking for the easy way! We are motor-mad, movie-mad, jazz-mad. The farms? Oh yes! Of course we know we couldn't get along without them! But how often do we stop to think of the men and women who, year after year, carry on that human struggle against the wilderness, the prairie, and the desert?

When I had listened to the story of the burned barn, I walked up to the edge of the forest, sat down on a great rock, and looked at the cleared fields with a truer vision of their human significance. Then, with a new understanding in my heart, I went back to where Mr. Clum was at work.

He and his son, a fine, tall young man, eighteen years old, were repairing the largest and oldest barn, which had sagged at one end. They had ripped up the flooring, exposing the great square beams underneath.

"How old are those beams?" I asked.

"Older than you or I'll ever be!" he said, his blue eyes twinkling. "Them beams must be more'n one hundred and fifty years old. This barn was here when my father bought the place, and that was a century ago, or better.

"He come here, as a young man, from over in C'lumbia County. Guess they named that county after the Clums! His two brothers died there of consumption; and the doctor said my father'd die too, if he didn't get out into the wilderness. So he packed up and drove over here into the mountains.

"I GUESS he done the right thing," chuckled Mr. Clum, "for he lived to be pretty near a hundred! Don't know if he'd of died even *then*, if folks hadn't dared him to dance at a party. He got up and showed 'em he could dance as well as the best of 'em. But he ketched his heel on the zinc under the stove and that threw him. He hurt his leg; and two years afterward he died of gangrene."

"How old were you then?" I asked.

"Thirteen; and from that time to this, I've done a man's work every day, except when I was laid up from hurtin' my own leg," pointing to his crippled knee.

"How did you hurt it?" I asked.

"Oh, I cut it (*Continued on page 124*)

"Scotch Valley

A story you will never forget

By Mildred Cram

ILLUSTRATED BY W. H. D. KOERNER

Synopsis of Two Preceding Instalments

JAMES GLADDEN came home from the war pledged to find and care for the family of Fred Smith, "who had a wife and five kids and no money at all." Gladden found that to keep this pledge meant the sacrifice of his uncle's help and the postponing of all his own plans for the future. But Fred Smith had died in his place in France, and he did not waver in his purpose. He had been reared in luxury, but left penniless at his father's death. With the few hundred dollars he owned, he turned his back on all that he loved and set out at once for Scotch Valley, in California, to find the Smith family.

Scotch Valley, at last—and two Fred Smiths who had died in France! But oil had made one family the richest in the valley, and the other family was starving, so that problem was easily solved. All the desolation of Scotch Valley, under the burning summer sun, seemed to Gladden to be concentrated in the Smith ranch and the five starving, motherless youngsters he found there. They were afraid of him —Bertha, *almost* seventeen, Pete, and Henry and Lily and Nancy. They were defiant—but he stayed. Manuel, the old Mexican in whose care their mother had left them at her death months before, was dying. There was no food. The well was polluted, and the town was ten miles away.

Jim tried the Pelgram ranch—a prosperous irrigated farm—and Pelgram threw him off the place. He returned to find Manuel dead, and the children crying with grief and hunger. It was dark now, and, armed with Manuel's revolver, he went back to the Pelgrams'. Only Mrs. Pelgram was at home, a vain, silly young woman who gave him food for the children—at the price of a little flirtation, which nauseated Gladden. On the way home he was stopped by Pelgram, in a car, with other men. Shots were exchanged in the darkness, but he escaped with his food.

The next day he took the children to town, saw a lawyer, Hansen, who told him Pelgram had shut off the water from Smith's ranch as soon as Smith went to France, and was trying to starve the children out and get the property.

Gladden had no thought now of giving up the fight—still less when he met Olive Smith, daughter of the wealthy Smith family, and the loveliest girl he had ever seen. She told him that Pelgram wanted the ranch because he thought there was oil on it.

After this eventful day in town, Gladden took his new family home again, with Hansen, and the official who was to bury Manuel. He found a new problem then, because the children did not understand death, and looked to him for comfort in their grief. He did his best —but it seemed to him a very poor best!

IN THE morning, Pelgram appeared, followed at a little distance by three men. The rancher called to Gladden from across the yard:

"Good morning. Can I speak to you a moment?"

Gladden was suspicious of such friendliness; but he straightened up from his attitude of worship beside the car, and answered pleasantly that anyone could speak to him who had a civil tongue.

"I'm sorry about yesterday. I thought the old Mexican had sent for you. He was a tough character, and I can't afford to take chances."

"Why not?"

Pelgram looked surprise. "Well, we're a peaceable lot in this Valley. We do our business straight."

His hand was bandaged, Gladden observed, and with a twinge of gratification he wondered if that random shot had found a target in the dark.

"We do our business straight and in the open."

Gladden sat down on the running board and folded his arms. He found it singularly easy to dislike this man. Pelgram was too aggressively successful. He made bluff joviality his stock in trade. There was, in the dark glitter of his eyes, a look of sly ambition, the greedy ambition of an insatiable materialist.

Gladden had an unhappy faculty of see-

Digitized by Google

ing through amiable exteriors. He was not fooled by loud laughter and back-slapping. He could remember too exactly the sensation of being knocked down by this friendly giant. He could still feel the winded emptiness of his stomach. Wompff!

"You wanted to talk to me?"

"I guess it'd be better for both of us. I'll give you a square deal."

"You're after this ranch, aren't you?"

"You're right."

"You surprise me. You said yourself there isn't a drop of water."

"I've got plenty of water. The creek belongs to me. I can irrigate, and irrigate quick. The walnuts are all right, and I guess I can save the 'cots. All this place needs is water."

"Yes," Gladden said. "I know. It's a pity Fred Smith didn't think of that before he bought the property."

"Fred Smith was a fool. I warned him."

"I suppose you've heard of riparian rights?"

Pelgram laughed. "Now you're trying to bluff me! Do you suppose I ain't got a lawyer?"

"So have I."

"Look here, Mr. Gladden." Pelgram glanced over his shoulder, and the men who had been hovering in the background came up behind him. "I have witnesses to what I'm going to say: I don't know who you are, or what you're after. You may be the kids' guardian and you may not. We'll see about that. I'm willing to buy this ranch, the stand of buildings and all, for a fair sum. Five thousand in cash. It's to your advantage. The County's ready to take care of the kids. What do you say?"

Gladden seemed to consider. For the first time he was conscious of interest; he did not want to run away. Never ambitious unless threatened with failure, he saw the affair now in the light of a personal accomplishment.

"The children won't sell," he said. "Are you speaking for them?"

"Well, if you prefer, they'll speak for themselves."

Gladden called Pete. The whole troop answered. They came tearing out of the orchard like a pack of mongrel puppies answering a friendly whistle.

"We were digging a grave for Manuel," Pete explained. He caught himself up when he saw Pelgram.

"Mr. Pelgram wants to buy the ranch, Pete," Gladden said.

Pete could hate, too. He was doing it right now. He gave Pelgram a look of concentrated fury, and then turned, white and shocked, to Gladden. "Gosh, Jim, you ain't any kind of a father!"

"You shut up, Pete," Bertha said.

"I didn't say I wanted you to sell," Gladden remarked. "You tell Mr. Pelgram what you told me."

"It's our ranch!" Peter said furiously. "Ma wrote it on a piece of paper. You can't buy it. You can't take it!"

"It's our ranch!" Peter said furiously. "Ma wrote it on a piece of paper. . . . You can't buy it. You can't take it!"

Pelgram shrugged. He looked at his followers with half-closed eyes. "Subtle," Gladden thought. "He's trying to scare me. Blast me with a look!"

"I don't think things are quite straight here, Mr. Gladden. I dare say you wouldn't mind an investigation?"

"Go ahead and investigate. But clear out, now! You have your answer."

MANUEL'S grave was in the sparse shadow of the orchard. The children were digging with spoons and empty cans. It was a game. Bertha, barefooted, her hair flying, scooped up the dry earth with her hands.

"Why don't you let the others do this?" Gladden asked. "The house needs clean-

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ing. It's a mess. I can't attend to everything."

She shook her head. "I hate housework. I'd rather dig graves!"

Gladden agreed with her, but he didn't say so. Housework *ought* to do itself.

Bertha paused, and blowing her hair out of her eyes made an offer: "I'll help with the car, instead."

"That's Pete's job. Girls are supposed to do housework."

"I'd rather play."

"You'll never get anywhere," Gladden said sternly, "if you play all your life."

"I don't want to get anywhere!"

The orchard seemed to pulse and tremble in the hot light. All the leaves rattled and rustled whenever there was a stir of air, the faint breath of a wind from behind the hills. Weeds sprang thickly from the traces of an old plowing, and already the nuts had begun to fall. "Perhaps I could sell these," Gladden said to himself. He picked up one of the smooth little spheres, and, cracking it, tasted the meat. He felt the joy of a personal discovery. For this was an English walnut, and a good one.

He saw them, neatly displayed in store windows. "Gladden's Walnuts." In exclusive New York shops. With pumpkins and orange tissue paper streamers. Thanksgiving. People moving through a blurred blue twilight of soft and silent snow. Girls in fur coats. Men in mufflers. Taxis with white roofs. And Gladden's superfine California walnuts selling like hot cakes!

The apricot trees, farther on, were forlorn and barren. The ground beneath them was strewn with black, decayed fruit, pits, and leaves. Pete explained that Manuel had not attempted to pick any fruit. He was too old to do the work himself; he could not afford helpers. The crop rotted where it fell.

BEYOND, in a sort of shallow ditch, Gladden found a few lengths of iron piping. A concrete support had been blasted, and where the pipe had once passed across Pelgram's line, a heavy wire fence made further exploration impossible.

From this point you looked north along the Valley. Pelgram's fruit, converging row upon row, seemed to run forward over the little hills. Beyond, there were squares of brilliant green. Alfalfa, Pete offered, hanging on the fence and staring over.

"It looks good," Gladden said. "Green. It looks cool and alive. I'd like to wallow in it."

Pete thought this was funny. "They give it to cows!" he said.

And, still farther, skeleton towers, ten or twenty of them. "Smith's oil wells," Pete explained. A smudge of smoke hung over them. The very air about them was sultry with potent and transforming energies drawn from the earth. Already, wealth had marred the hills and stained the sky.

Sooner or later, Olive must be changed by it. It was not possible that day by day she should watch gold pumped from the ground beneath her feet, and yet remain indifferent. Those skeleton wells were symbolical: they represented the sorceries, the treacheries of life. "She may not be fine enough to resist," thought Gladden. "To stay *herself*."

It occurred to him, caught as he was in the impersonal bigness and loneliness of the landscape, that he could not love any woman less beautiful than Olive Smith. But that he could not love her, beautiful as she was, unless she learned— "But I said I wouldn't think of her. I'll need a clear head for this business!"

With Pete at his heels, he followed Pelgram's fence along the ditch, then circled back over the ranch. There were no surface indications of oil. High up, on the steep slope that Pete called the pasture, he found gypsum deposits. But these were worthless. The whole place seemed more than ever defeated, thrown out of focus by the presence on the horizon of those fabulous towers, chug-chugging, puffing, lifting bucket after bucket of wealth from the dark pockets of the earth.

Why plant trees that take so long to grow, that need so deep a drink, that can be betrayed by drought, and parasites and storms, when all you have to do is to sink a shaft, tap the hidden sources, and sit idly by while a donkey engine pumps oil? Oil worth twenty-two cents a gallon! What is a basket of apricots worth? A basket of walnuts?

And here he was, already broke.

MANUEL'S funeral, the pomp of casket and stone, priest and prayers, cost a lot. Now that it was done, the children liked Gladden better for having saved their friend for them. Daily, they laid offerings on the shallow mound in the orchard: polished stones from the river bed, bits of broken glass, birds' feathers, and flowering weeds.

Soon, perhaps, they would forget. Now, it was another game. They persisted because they had no idea what it meant.

The balance of Gladden's three hundred dollars went into supplies. He bought a few chickens, a fine lusty rooster, a goat, and a set of tools. He was certain that someone had rifled the farm, since Pete could recall things that were now nowhere to be found. Whoever it was—tramp or neighbor or fruit picker—he had taken the forks, the wheelbarrow, and the harness. The horse, Pete explained, had died from drinking poisoned water. To guard against such a fate for himself and his children, Gladden carried water from Vaccatown every other day.

The well was polluted. Lowering himself into the slimy depths, he grappled for certain proof, bringing to the surface carrion, refuse, the skull of a cow. The water level had receded, he knew, ten feet. He must go deeper, and pump with gas or electricity. He must make these acres yield grain, vegetables, trees like precious bouquets spraying from whitewashed trunks into a profuse and splendid offering of fruit.

He saw his own future go glimmering. He was not young enough to give ten years to such a task, and then turn toward a postponed creative life, a life of the mind. This meant grubbing with his hands, fighting poverty, frustration, and loneliness.

Already his palms were calloused, his skin split and stained. His back ached from unaccustomed bendings and reachings. He could feel his muscles hardening, tightening. Young as he was, he wished that he were younger, and that time still lay ahead, like an infinite ocean.

Being broke involved him in certain reticences that were not natural. He was congenitally extravagant. Poverty was a barred gate, a blank wall, a paralyzed arm. He enjoyed giving things away, particularly those things which had become necessary to his own comfort. Psychologists call this a form of conceit, a self-indulgence. To Gladden, it was one way of having a good time.

He had never found bitterness a becoming habit of mind. Now, for the first time, he was in danger of bitterness. He had always been greedy for life, without being absolutely certain what he meant by life. An accumulation of experiences, perhaps; those split half-seconds of delight that are so diverse, inexplicable and personal!

Here on this ranch, he expected to dry-rot, since there was nothing in particular to delight him, unless it was the soft, clumsy grace of the children. In watching them he lost the sense of his own identity and, instead, at the core of him realized the black stone of Adam, the inflexible kernel of manhood. He began to love them.

The house itself wasn't lovable; it was neither old nor musty. Square as a hat-box, with windows like blind eyes, it was as if it had had no part in anything that had happened beneath its roof. Gladden noticed such things because he invariably personified the inanimate. He found himself feeling sorry for run-down clocks and neglected chairs. His stepbrothers had not quite laughed this trait away.

"It isn't my house," he thought. "It's only a shelter. Four walls, and a roof to crawl under at night. But I'd like to paint it, shingle it, plant vines, build a new porch. . . ."

AT NIGHT, when the children were asleep, Gladden liked to walk back and forth in the yard. He couldn't think during the day. He wondered if parents ever think. He thanked God for sleep that silences the insatiable curiosity of children, and gives selfhood back to fathers. He liked to walk with himself and the dog in the silent darkness.

At such times, strange currents would flow past him; the secret self of the unknown land all about him. It might have been only a trick of the night, but it was like a murmur of voices, as if the hills and fields and trees were trying to make themselves understood.

He felt the magic of milky, pervasive starlight. He did not want to love California. It was not his. There was no hunger in him for alien soil. The cloudless sky was too empty; he ached for rain, puddles, fog, wind.

He was always startled out of his mood by some sound within the house: Lily sneezing, or Pete yelling in his sleep, or Henry, wakened suddenly by the compelling dark, the inimical dark, whimpering softly into his pillow. Gladden already knew these sounds by heart: the difference between Lily's sneeze and Nancy's sneeze. He knew when Pete had gone to bed with his shirt on and when, against orders, Bertha was lying awake, making rhymes.

Somehow, as soon as he crossed the threshold, they all went to sleep again. His presence drove away fear. Like a sentry on the field of battle, he sat by the kitchen table, figuring with a stub of pencil on the margins of old newspapers. Two hundred, walnuts. Five hundred, apricots. Three hundred, vegetables and strawberries.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

When Bertha emerged at last she was wearing the red dress and carrying the bundle of rags, neatly wrapped in brown paper. . . . The mysterious alchemy of clothes had transformed the skinny, pale child

But figures were no good without money and water! Day by day the supplies dwindled, while the earth cracked beneath the heat of a sky like an inverted bowl of white-hot glass.

With Hansen's help, Gladden sold the walnuts. They fetched a price that, in consideration of their excellence, seemed absurd. But any price which assured them of food was acceptable. Gladden found hunger traditionally embarrassing. He couldn't laugh it off.

He permitted himself two extravagances as soon as the check was deposited in the local bank. For one thing, he bought a cheap phonograph and about two dozen records. The dance from "Salome." Some spirituals. A record of Clement's dream aria from "Manon." The love-death from "Siegfried." And a recording of the prelude to "Parsifal." He bought everything he could find of De Luca's.

The children didn't like any of this music. They approved of Chaliapin, because he made so much noise. But "Siegfried" frightened Lily into a case of the hiccoughs, and Nancy cried all through "Depuis le Jour." "It's sour," Bertha said. "Play

I'm An Indoor Man With An Outdoor Urge

By H. I. Phillips

I'VE got an indoor pallor from sitting around reading literature about the Outdoor Man, and elbow bruises from turning the covers of books on the Great Open Spaces in a skin-tight room. Every time I read about babbling brooks and leaping cataracts, I want to go fishing; whenever I see a moose head over a fireplace, a pair of antlers over a hall mirror, or an elk's tooth over an alderman's vest, I yearn to go hunting. I never pass one of those camp equipment exhibits in a sporting-goods store window without feeling the urge to strike out and live the life of the primitive he-man. All my life I have had a craving to be one of those Vital, Virile Vigorous figures in the Mackinaw coat, holding up a 27-pound pike, or standing at "parade rest" beside a late lamented Rocky Mountain "Bighorn" that forgot to duck.

Yet to-day I am so far from realizing these ambitions that the last time a friend asked me to go bass fishing I showed up at the meeting place in a derby hat.

There are few things more pathetic than the Indoor Man with the Outdoor Urge. He is like the Florida fruit grower with an enthusiasm for fancy skating, the Venetian Grand Canal hotel proprietor whose hobby is horseback riding, or the Point Barrow Eskimo who can't enjoy any food except bananas.

My angling luck is such that I probably couldn't get a halibut out of a fish market icebox with a search warrant—but I am crazy over fishing. I am such a skillful hunter that I have never got close enough to any real game to see it through binoculars; but I will tramp across fields in search of it until the cows come home. And with my kind of shooting the cows would be lucky to get home.

I respond to the storied thrills of ski jumping and bobsledding without ever having done either, and although I can jump on my desk and start cheering whenever I read about a yachting trip, I haven't been on a small boat in years. Show me a photograph of a group of men cooking a rasher of bacon over a wood fire, and I'll react like a Texas frog in a bucket of water, despite the fact I can count on the buttons of my laced shoes the times I've camped out.

I'm the man you'll always find at the Motor Boat Show climbing up the ladders to the decks of the various craft, examining every ship from stem to stern, riddling the agent with questions, and loading up with four-color circulars.

The sixty-foot cruiser de luxe ($55,000, including a sailor hat and rubbers) attracts me like a bird-house attracts the first wren of summer. I couldn't buy the rattan furniture in it; but a man is entitled to board an expensive pleasure yacht whenever the opportunity offers, and if my chance comes only when the yacht is indoors, it's just one of life's tough breaks. This spring I spent three afternoons at the New York Motor Boat Show and, while it may have been imagination, I thought I got a deep coat of tan from sitting on the upper deck.

"Snapper Blue" time in a Connecticut harbor—and no exaggeration

THE boat supply stores also get me. A canoe will move me visibly, but a window with a dory, some portable motors, a few anchors, some ship lanterns, coils of rope, and an oil painting of Commodore Montague Wellington Hastypudding's new racing sloop will agitate me for days. I really think I buy more yachting magazines in March and April, and answer more advertisements of sail- and power-boats for sale than any other man in the country.

Every spring I resolve to buy a boat, but never quite get around to it. Last March nothing short of a 38-foot yawl would suit me. By April I was corresponding with the owner of a 25-foot catboat. In May I decided to pick up a 15-foot rowboat and get a portable engine. Then June zoomed into view, and I decided that the season was too short to bother about anything more than a surf board.

I'm a steady attendant, too, at the sportsmen's shows, and even go so far as to try to carry on a conversation about duck blinds, caribou hunts, and all that sort of thing. The annual Old Glory Sale of trotting horses is an event that lures me like a circus. I never drove a trotting horse and have never seen a Grand Circuit meeting, but to see me walking around the ring giving these trotters a critical inspection, and paying particular attention to the yearlings you'd think I was in the business.

A store window full of guns, especially if it has a couple of stuffed birds and some hunting pictures, will make me late for lunch any day.

I'LL walk a mile for a particularly good display of Cardigan jackets, "windbreakers," woodsmen's shoes, tents, cooking outfits, hunting knives, wooden ducks, fishing rods, compasses, snowshoes, skates, sleds, archery sets, skis, etc. Show me a window display of two wax figures cooking a mess of brook trout over a camp fire, and with just a little urging I'll go right in and join the other dummies at their meal.

I love the rocks and rills, the woods and templed hills. Of them I sing. But you can't land a tarpon with a ballad, or bring down a Canadian moose with a mammy song.

My ambition is to shoot big game. Not too big, of course. Maybe I should say medium-sized game. Elephants are off my list. I've fed them too many peanuts. Whenever I see one of those African hunt pictures of a mighty marksman standing over a prostrate elephant I can't get over the impression that at a signal the elephant got up and hobbled around in a circle, waving an American flag while a brass band played, "Oh, Say Can You See."

I don't care for lions, either. From all accounts a lion is very slow to get the correct idea about hunting. It never seems to grasp the hunter's viewpoint.

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Lion hunting should be taken up in one's early youth. It requires rhythm and perfect coördination of mind and body. After a lion has begun its charge is no time to hesitate, and start fumbling through the golf bag to determine whether to use a wooden club or the iron.

The author's idea of an ideal spot for a vacation

WHEN it comes to angling, I place no limit on the size of the fish. The bigger the better. Whether hunting or fishing I'd like to go on something in the nature of an expedition; something that would call for a few pack mules, several hundred pounds of provisions, and extensive equipment.

All I've ever carried on most of my fishing trips has been a can of worms, three or four sandwiches and an apple. And all the country I've hunted through has been liberally dotted with delicatessen stores and quick-lunch rooms. I've never pursued any bird or beast far enough into any woods to lose touch with the hot-coffee urns and the pie counters. In my part of the country it's almost impossible. You build a duck blind one day only to find that an enterprising caterer has opened an "all-hot" stand beside it the next.

Hunters don't get far from civilization these days, anyway. Sportsmen used to plunge deep into the virgin forests primarily to cut themselves off from civilization, to get away from the noises of the cities and towns, to find a spot where they could hear little but the whisperings of the pines and the murmurings of the hemlocks. To-day, I understand, most of the hunters who go into the woods for a prolonged stay consider a radio and loud speaker of paramount importance to the success of the trip.

They may not have got any moose, but you can bet they got all the big radio stations. That's fair enough. I went on a two-day fishing trip last year. We didn't get any bass or pike, but we got Vincent Lopez, Paul Whiteman, Galli-Curci, the Happiness Boys, and President Coolidge. We even got nibbles from a Far Western Rotary Club entertainment and banquet, and a couple of strikes from some public speaker at Fort Worth.

"Isn't it wonderful to be out here in the forest, far, far from civilization, and out of touch with everything?" asks one modern camper of another.

"It's great," answers his companion. "See if you can get the Pennsylvania Grill. They've got a snappy jazz orchestra there!"

It is said that deer have become so accustomed to radio concerts in parts of the Catskills that they file down to the summer hotels in the cool of the evenings to enjoy the programs of WEAF. Hunters tell me they lure the deer into camp in the fall with a loud speaker.

I've seen bass and pickerel caught in Conger Lake, New York, at a time when there were a dozen picnic parties camped along the banks, all filling the air with radio concerts, baseball returns, and stock market quotations. The fish in this lake are used to noise. The pond is bounded on the east by a state road, on the west by a picnic ground, on the north by a railroad line and on the south by a summer bungalow colony. A little thing like a concert by the Marine Band floating out over the water is to a Conger Lake bass like the rustle of butterfly wings. There's no doubt about it; these fish on the main motor routes have become very hard-boiled.

Talk fishing, and you hit me in my weak spot. It'll have to be a one-way conversation, however, as I have never caught anything big enough to entitle me to talk back. I have a fishing license in three states, and every spring and summer I go fishing every chance I get. Unfortunately, as far as I can determine there are no fish in those three states; but a true fisherman never takes no for an answer.

"Don't you know there are no fish in that lake?" the native will ask an angler who has been fishing there all day without a bite.

"Sure," the fisherman will reply, paraphrasing the gambler's retort to the man who asked him about the crooked roulette wheel, "but it's the only lake around this section."

The quiet of the deep woods

I OBTAINED my fishing training in Connecticut, and when you fish in that state you get so you don't expect much. Bullheads and yellow perch are the only fish there that might be called plentiful, although I have friends who swear they have caught bass, trout, and pickerel. I caught one (*Continued on page 120*)

INTERESTING PEOPLE

Joe Jones Works Magic With a Pair of Scissors

DOWN in Augusta, Georgia, there is a slender, blue-eyed boy of seventeen who is putting himself through college with a pair of scissors. His name is Joe Cranstoun Jones, and he makes silhouettes.

Joe calls this silhouette "The Outlaw." All his silhouettes are cut out free-hand, without any preliminary sketching or drawing except what goes on in his mind

His pictures are marvelously realistic reproductions of animals and outdoor life generally. They are all cut free-hand, without any preliminary sketching or drawing. Three years ago, Joe's silhouettes won a prize of fifty dollars in a nation-wide contest in which more than two thousand persons, including many recognized artists, took part. His work has already appeared in some of the best magazines, and it has drawn high praise not only from well-known critics but also from appreciative readers throughout the country. He is busy now illustrating a book for children, which will appear soon.

Joe especially delights in cutting scenes in which cowboys or jungle creatures figure. Some of his most admired groups are "Wild Horses at the Water Hole," "The Coon Hunt," "Jungle Night," and "Cowboys with Broncho." And yet Joe Jones never saw a jungle creature or a bucking broncho in all his life! Indeed, he has never seen anything that can't be seen from his bed, for Joe has not walked in twelve years.

"The best place to see beautiful things is in your mind's eye, anyway," Joe told a friend one day. "As long as pictures paint themselves there, and stories act themselves out, you don't have to worry about being entertained. And if you encourage it a little, your mind's ear will provide you with almost as much fun. Why, on the hottest day in August, I can lie here on my bed and hear the swish of rain on the roof, or maybe the beat of the waves against a cliff. It's really great fun to train your mind to do stunts for you!"

PHOTOGRAPH BY TOMMINS

Seventeen-year-old Joe Jones of Augusta, Georgia, cuts silhouettes which have appeared in leading magazines throughout the country. His favorite subjects are jungle scenes and cowboy life

When Joe was five years old, a serious illness left him without the use of his legs. At first, the doctors thought it would be a matter of a few months, or at most a year, before the boy would be able to walk and run again. In order to amuse himself while shut off from the active world of play, Joe began to cut from paper little scenes that suggested themselves to him from the stories his mother or some other member of the family read to him. From the start, these scissors-pictures showed a fine sense of drama and form.

Then one beautiful red-letter day, a circus came to town. Joe's big brother held him up to the window to watch the parade go by. There were spangly ladies on prancing ponies, lions and tigers in gilded cages, and enormous elephants swinging their trunks in the air. Banners were flying and the band was playing. Oh, it was a gorgeous parade!

When he was back in bed again, Joe asked for a pair of scissors and a piece of paper. Later, he called to his mother to look, and there across his bed marched a line of paper animals. They were in the same order as those he had seen in the procession and like them in every detail. From then on, he was chiefly interested in cutting animals and outdoor scenes.

One year dragged into three and four years, but still Joe was unable to walk. Everything that could be done was done, but nothing seemed to help. Finally, when Joe was fourteen, the doctors decided that there was a fragment of hope in an operation, followed by treatment that would mean a solid year strapped to a hospital cot.

"It will be painful," the physician told the boy, "and the chance is pretty slim. Do you want to take the chance?"

"Sure," grinned Joe, "if you will promise to leave my hands free so that I can use my scissors!"

The doctor promised, and he kept his word.

It was during the next long twelve months, while he lay on his cot in the Scottish Rite Hospital in Atlanta, that Joe began to do really serious work with his silhouettes. One of the nurses pinned some of his pictures to the walls of the reception-room down-stairs. There were many visitors to the hospital. They saw the silhouettes and asked questions. Soon there were requests from people who wanted to buy the charming scenes that Joe saw with his mind's eye while he

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

was lying imprisoned by hospital walls.

It wasn't long before Joe was kept busy cutting silhouettes for sale. He was very proud and happy because now he could earn a part of his expenses, and that would make it easier for the folks at home. And when Mrs. Pressley Walker, an Atlanta artist who had become interested in his work, sent some of his groups to a magazine which promptly sent back a fat check and a fine letter of praise for his work, Joe's joy knew no bounds.

Why, if he couldn't ever go to college and work his way through, as he had dreamed of doing some day when the stiff plaster casts were a thing of the past, he could do something else that was almost as good: He could make enough money to bring college to him! Now that he could earn his own expenses, he could take all the extension courses he wanted to take. He could go to college anywhere and everywhere!

It was about this time that he saw a notice which said that Lewis Myers and Company, manufacturers of Valparaiso, Indiana, were offering a prize of fifty dollars for the best picture of an outdoor scene.

Joe was mightily afraid that only drawings or paintings would be considered. "Still," he said to himself, "if I can cut something so clearly that *they* can see what I see, they might call a silhouette a picture!"

The boy spent hours making pictures in his mind before he even touched his scissors. Then one day he picked up a piece of paper and began to cut. The scissors flew. And presently, under the deft fingers of the boy, a gorgeous jungle scene began to grow. There was a thick undergrowth fairly bristling with the life of tiny creatures, and above a delicate tracery of vines festooned from tree to tree. There were monkeys swinging on a grapevine rope, and below on a fallen tree trunk a huge panther looked hungrily up.

Everybody in the hospital celebrated when the postman brought the letter which said that Joe had won first prize in the contest.

As for Joe—well, he was almost *too* happy. He still is, in spite of the fact that the long year strapped to a bed failed to make him walk again. For Joe has that inner vision which compensates for many things. Do not pity him because he cannot walk. He is blessed with a *spirit* that runs and leaps! MILDRED HARRINGTON

This 96-Year-Old Captain Got His First Command at 17

TO CAPTAIN ELI B. ROCKWELL, of St. Albans, Vermont, ninety-six-year-old commander of the Champlain Transportation Company's steamer "Vermont," falls the distinction of being probably the world's oldest steamboat captain in active service. To this may be added the distinction of nearly eighty years of continuous service.

Born at North Hero, Vermont, on one of the larger islands in Lake Champlain, it is not strange that Eli Rockwell should have selected the water as his means of livelihood. As one of the twelve children of Nancy and Merritt Rockwell, his ancestry is worthy of special mention.

Of hardy Scotch-English descent, his forbears can be traced to General John Stark, of Bennington Battle fame, while his paternal grandfather, Jabez Rockwell, was a soldier in the Continental Army under General Washington in the Revolutionary War. Of such stock is the dean of the world's steamboat captains.

His career as a sailor began at the age of fifteen, when he shipped as cabin boy aboard the schooner "Cynthia," at St. Johns, Quebec. His eldest brother, J. C. Rockwell, was captain of the "Cynthia" at that time and was plying his boat between St. Johns and Whitehall, New York, a distance of about one hundred and twenty-five miles. For many years, as one of the longest links of travel in the North Country, boats plied the entire length of Lake Champlain; now, however, with railroads on each shore, the steamboat route terminates at Plattsburg, New York, on the north, and at Montcalm Landing, near Ticonderoga, New York, on the south.

At the age of seventeen, two years after his apprenticeship, he became captain of the "Cynthia" when his brother was made pilot of the steamboat "Burlington," Captain Richard Sherman commanding. It was on this boat, the "Burlington," that Dickens made the trip from St. Johns to Whitehall, when he was touring this country in 1842.

Captain Eli B. Rockwell, of St. Albans, Vermont, shipped as cabin boy when he was fifteen years old. At seventeen, he was given a command, and now, at ninety-six, is still skipper on a steamer on Lake Champlain

For two years Captain Rockwell commanded the "Cynthia," and was then transferred to the navigation department of the Champlain Transportation Company, a corporation chartered by the State of Vermont and which consolidated with the original Lake Champlain Steamboat Company, in 1833. Thus, in his long term of service Captain Rockwell has practically grown up with that organization.

An amusing incident occurred during the first year of his captaincy. He had docked his boat in the dark at one of his landings, the only light available being two dim lanterns on the wharf. His boat was probably late, as the boats often were in those days, and one man, in a hurry to be off, walked directly into the lake. Captain Rockwell plunged in after him and succeeded in bringing him to safety.

That a person could spend nearly eighty years on the water and experience only one wreck seems impossible, but that is Captain Rockwell's record. In the year 1876, while the captain was asleep in his bunk on the "Champlain," the pilot of the boat drew a little off his course, and ran aground. This has been the captain's nearest approach to a shipwreck.

He came nearer disaster, however, in the year 1868, when he was pilot on board the "Adirondack." One night, with one hundred and twenty-five people on board, a fire broke out in the boiler-room, and threatened the steamer with destruction. Rushing into the burning room, Captain Rockwell realized that the small stream of water from the pump would have little effect on the flames, so he turned the stream on the hot boiler, and the live steam thus generated smothered the fire.

Captain Rockwell has greeted many prominent men on the bridges of his numerous ships, among them President Ulysses S. Grant, President William How-

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ard Taft, Ambassador Jules J. Jusserand of France, and other dignitaries.

During the past eighty years the captain has seen many changes in water navigation. It is a far cry from the schooner "Cynthia," his first command, to the "Vermont III," his present ship.

The first steamer "Vermont," built in 1808, began to operate on a regular schedule in June, 1809. Under the most favorable conditions, its speed was five miles an hour. It was scheduled to leave St. Johns at eight o'clock every Saturday morning and was due to arrive in Whitehall at midnight Sunday night, a schedule time of thirty-nine hours, but it was seldom on time.

The present steamer, "Vermont III," is a beautiful boat two hundred and fifty feet over all, capable of making sixteen miles an hour. On its present schedule it makes the round trip between Plattsburg and Montcalm Landing, a distance of about one hundred and fifty miles, between the rising and setting of the sun.

As the shores of Lake Champlain are ice-bound several months each year, the navigation season is necessarily short—usually about five months, from the first of June until the last of October. In the long winter months from November until May, while his boat is tied up or on the ways in Shelburne Harbor, Captain Rockwell lives with his daughters, in St. Albans, Vermont. There he continues to keep fit by shoveling the snow from the walks of his home and those of his neighbors.

Much of his time is spent in reading the newspapers, and any good sea story he can find. In the evening he enjoys the radio, sometimes staying up until two o'clock to get distant stations. But, in any event, he rarely sleeps later than six o'clock in the morning. WILLIAM H. MUNSON, JR.

Lilac-Time Brings Crowds of Cars to Mrs. Klager's Garden

IF YOU should go through the little town of Woodland, Washington, in the springtime, and draw up at a large old-fashioned white house with a green roof, you would see cars parked there with license plates from many parts of the United States. Their owners have come to see the sixty exquisite varieties of lilacs which Mrs. Hulda Klager has originated.

And if you went up the path in the midst of spacious lawns and well-laid-out flower beds, you would find the mistress of the place enthusiastically pointing out first this heavily laden lilac, then that one, to a delighted crowd, while Nippy, her dog, circles 'round and 'round the visitors, eager to join in the fun. Tall and well built, with a sturdy frame, black hair which belies her years—she is well past middle age—and dark eyes with a glint of humor and mellow understanding, she would receive you with just as much interest in you as you have in her and her lilacs.

"Lilacs are my particular pets," she told me, "although I've experimented with apples and dahlias and roses as well. It all started with a book, 'New Creations in Plant Life,' by Harwood, an account of the work and methods of Luther Burbank, which a friend brought to me one day when I was sick. After I had read that book, I could hardly wait to get up and try some of the experiments described there."

At that time, Mrs. Klager was a busy housewife on a dairy farm, with four children to care for, and bushels of fruit and vegetables to can and preserve. She was an active member of the grange and the church, too. But, in spite of all these duties, she found time to work with her flowers.

"I've always loved lilacs, so I had lots of them to start experimenting with. I had three fine specimens of Lemoine's, the great French plant breeder. One was a double white, another a double blue, and the third, a red purple, besides dozens of the Persian variety, of all colors. The book told about transferring the pollen of one variety to the stigma of another, in order to get seed of an entirely new kind. So I got a magnifying glass, and looked at the pistils of the blossoms, to see if they were ready for the pollen, and to make sure that some industrious bee had not already carried some pollen there. Then I used a small paint brush to dust on the pollen from the blossom I had chosen, and I tied a paper bag over the fertilized blossom to protect it until the seed had been formed.

One day, Mrs. Hulda Klager, of Woodland, Washington, read a book about Luther Burbank. Though she was a busy housewife on a dairy farm, she found time to apply his methods to her favorite lilacs, and she has produced sixty new varieties

"I tried hundreds of different combinations that first year, using the three Lemoine lilacs as the parent stock for all of them. I planted the seed I got from these unions, and tended them carefully under glass until they were large enough to go outdoors. It was between three and four years before I had blossoms, and could actually see what results I had obtained."

Mrs. Klager laughed reminiscently. "Some of them were terrible—dirty-colored blossoms, and weak and spindling plants. But one out of the lot made up for all the rest. For that was the one I call 'My Favorite,' a dark red outside, lighter inside, with petals incurving and coming out in handsome red buds.

"There were fourteen of this first lot that I saved as a basis for future interpollination. I realized then that I wanted most to get shrubs with large blossom clusters, and that the color I wanted was a deep, rich red. So I kept on selecting the ones, each year, which showed these tendencies most strikingly, and unless there was something exceptional about the others, I threw them over the fence."

Sometimes, according to Mrs. Klager, a lilac would have an exquisite color, but small blossoms or an unhealthy root system. Then she would try crossing the beautifully colored one with a shrub of more rugged habits.

Just now Mrs. Klager is working to get a true yellow lilac. Then, too, she wants to get lilacs with twelve petals to the blossom.

The people who come to Mrs. Klager's are a constant source of enjoyment to her. "Yesterday a car with an undertaker, a chief of police, an artist, and a banker drove in," she said. "Weren't they strange car-fellows? But they had in common a love for lilacs."

Mrs. Klager has sold some lilacs to nurserymen in Portland and Seattle, but most of them she sells, herself, to the people who come to her home for them.

"It's no fun for me to raise them in quantities and ship them off to town. But it *is* fun to have people come here for them, so that I can see just who are getting them. You see," she explained, "I do all the work, so why shouldn't I have all the fun I can get from my garden?"

RUTH GRAHAM CASE

He Waded Into the Everglades to Preach to Natives and Outlaws

AN ITINERANT Baptist minister, who has survived all the hardships of an early Christian missionary, follows his calling in the northern limits of the Everglades of South Florida. Before good roads penetrated this jungle, a few years ago, it was a haven for all sorts of vagabonds, escaped criminals, moonshiners, "no 'count" negroes, and Seminole Indians: a rather forbidding region of vine-wound cypress trees, tangled hammocks of tropical palms, and water oaks, and acre upon acre of black lagoons covered with water hyacinths and inhabited by alligators and water moccasins.

Into this dismal morass on the north of Lake Okeechobee, Edward M. C. Dunklin came without his family six or seven years ago, and patiently set about winning the confidence of the natives. It was no small task.

On one occasion he walked eighteen miles through the wilderness of swamps and scrub palmetto ridges to a place where the people had not heard a sermon preached by a minister of the gospel for many years. Arriving ahead of time, and before any of his congregation had gathered, he was sitting on the steps of an old ramshackle building reading his Bible, when from behind a clump of bushes some men tried to frighten him away, by throwing rocks. Instead of rebuking them, he quietly told them that they were not the first ones to try to run him off; but that he was not the running kind, and having been sent to them he was going to stay. If they wanted to kill him, he said, he could die only once, and he had no fear of death.

At the end of the service he asked for a contribution, and received thirty cents, two pieces of chewing gum, two buttons, half of match, and two bullets. The bullets were meant to show him the feelings of the natives toward him, and to serve as a warning. The judge of the county thereupon offered him a quarter for every bullet he received, and it soon became known that he did not mind receiving this free ammunition.

One year later, when he held another service at this place, he received a substantial contribution. For he had won their hearts at last.

Over many of the trails through the swamps, the missionary could not ride a horse. Frequently, when walking to some distant appointment for services, he had to remove his clothing, place it on the end of a stick, and either wade the oozing mud or swim the channels.

On one of these trips, shortly after he had passed over a muddy trail, an alligator, eleven feet four inches in length, was killed on the very path he had traversed, and at another time a second one, which measured nine feet eleven inches, was killed just after he had passed.

Time and time again, when wading or making his way through water hyacinths, "Brother" Dunklin encountered thick-bodied moccasins; but they always gave him the right of way, and he says he has never been afraid of them.

One time, weary and hungry from a long ride, he asked food for himself and his horse at a back-country home; but his host gruffly told him that it was bad enough to feed a preacher, let alone feeding his horse in addition.

To this, Mr. Dunklin gently replied, "Well, feed the horse, and let the preacher do without."

This man, together with his wife and three children, has since been baptized by Missionary Dunklin.

After preaching at a little wayside church that did not believe in contributing to the minister's needs, the missionary asked the congregation if they wanted to take up a collection, which was finally done. It consisted of two ears of corn, two pawpaws, three pumpkins, six bananas, and twenty-four limes—and three men surreptitiously gave him a dollar each, and three, a quarter each.

PHOTOGRAPH BY F. E. BRIMMER

(In oval) When Edward Dunklin first waded into the Florida Everglades to preach to the natives, he was greeted with bullets and rocks. (Above) "Brother" Dunklin before the schoolhouse where he now holds regular services

The northern limits of the Everglades were once terrorized by a notorious gang of desperadoes, every bit as dangerous as the Jesse James crowd in its heyday. Not many men outside of the immediate region cared to meet these outlaws; but Brother Dunklin completely won their confidence, and became a friend of their leader. He also became well acquainted, through his missionary work, with a woman member of the gang, who was known as the "Queen of the Everglades."

One day, about four years ago, Mr. Dunklin handed a five-dollar bill to a business man in Okeechobee, asking him to give him a check for that amount, so he could send it to his wife. This the friend was only too glad to do, and asked him how he was getting on.

"Very well," said the soft-voiced missionary, "'cepting I must raise ten dollars more to make a payment on my lot in Okeechobee. But God will take care of me."

When the friend handed over the check, there was a crisp ten-dollar bill with it.

"See," laughed the missionary, "I told you the Lord would look out for me."

To-day the results of Mr. Dunklin's untiring missionary work are everywhere in evidence, and he has had no small part in making a once lawless region one of the safest places for good settlers, who have flocked into the rich muck farming lands.

Nor have the people of Okeechobee been unmindful of his work, for they recently built for him a home on a lot that the missionary was paying for out of his meager earnings.

His fellow townsmen also bought the missionary a new automobile after good roads were built. Just recently, a developer of the Everglades paid up the mortgage on the lot where Brother Dunklin's home is located.

He is sixty-four years old, and as sound as a pine knot. FRANK E. BRIMMER

She Can Make a Lump of Butter Look Like a Garden of Flowers

MRS. ALICE M. COOKSLEY, of San Francisco, California, is advertised on the billboards of state and county fairs as "the artist extraordinary." And a very extraordinary artist she is, too, for her studio is a refrigerator, her smock is a fur coat, and her art is modeling butter into graceful and beautiful flowers.

Mrs. Cooksley was born and brought up in England. She made flowers and animals out of the dirt in her back yard, while the other children were patting together their mud pies. Her two uncles, both of them sculptors, encouraged the child's artistic attempts. When she was a little older she took a course in clay modeling in London.

Then she married and came to America, where her husband owned a creamery in Illinois. During these first few years in a strange country, she was bitterly homesick for England, and for her beautiful rose garden.

One day, while she was visiting her husband's creamery, the smell of the butter reminded her of some exhibits of cows and dogs made of butter that she had seen in London. The animals had been made on wooden forms, and were stiff and formal. But it occurred to her that she could model roses in this medium and without the forms, making the flowers natural and dainty. She asked permission to work in the creamery refrigerators at night, the only time they were not in use.

"I shall never forget those long, chilly nights," said Mrs. Cooksley. "Sometimes I worked three and four nights on one petal of one flower. My fingers became numb, my feet were frozen. And added to that was my fear that the whole experiment would be a failure. But, in spite of the discomforts, I loved the work, and I could not give it up.

"To model successfully," Mrs. Cooksley says, "you must be thoroughly acquainted with your medium." And although she knew clay, she soon discovered that she did not know butter. So she immediately set about learning all she could of her subject. She attended the State Agricultural College of Iowa, and the Illinois Agricultural College, and took courses in the dairy schools. She learned all they could teach her about the consistency of butter, the various grades, and the temperature at which she could work with it most successfully.

"But I was still a long way from getting results," she told me. "There were many lonely nights in that icy refrigerator ahead of me, nights when I must learn how to combine my practical knowledge with my artistic ability.

"Then I had to design the tools I was to work with. Being a pioneer in any field has its disadvantages. Naturally, no butter-modeling tools had been invented, and it took time and experimenting to find out just what I needed. After I had my tools manufactured and patented, I designed a glass case to work in, with a refrigerator in the center space."

Mrs. Alice M. Cooksley, of San Francisco, California, models butter into flowers, coloring them with pure food dyes. She works in a refrigerator of her own design, and has exhibited the flowers, to demonstrate pure butter for dairymen, in twelve states

Mrs. Cooksley's first exhibit was at the Panama Pacific Exposition, which was held in San Francisco in 1915. The butter flowers made a sensation; in fact, she was awarded grand prizes in the field of modeling.

Since then, Mrs. Cooksley's services have been greatly in demand. Dairymen were delighted with this unusual and attractive way of displaying their butter at fairs and dairy shows. She has exhibited her butter flowers in twelve states, and in the province of British Columbia, Canada, where she was decorated by the Royal Agricultural Society for the excellence of her exhibit.

I accompanied Mrs. Cooksley through her garden at the Western Washington Fair, Puyallup, where the State Dairymen's Association had engaged her to demonstrate their butter. As we stepped into the large glass case, I was amazed at the riot of color within. There were red roses, yellow roses, and pink roses; bright hollyhocks; a tiny bouquet of baby Cecil Brunner roses, and calla lilies, the center golden stalks so natural that they seemed to be dropping pollen on the snowy petals.

"They look good enough to *eat!*" I exclaimed.

Mrs. Cooksley smiled. "They *are*. They are made of nothing but pure butter colored with pure food coloring. You could take them off the stems and spread them on your bread."

The case in which Mrs. Cooksley works, and displays her flowers, cost five thousand dollars. It is made entirely of glass, with a refrigerator in the center. Mrs. Cooksley enters the center part, which is screened from the public, at noon, and she works there steadily until five o'clock. Then she comes out of the center into the large part of the case, where she places the butter flowers on artificial foliage. The public watches her "stem" the flowers, and all the flowers she makes during the entire fair are on display in the outside case. The artificial foliage is imported.

"I tried actually modeling the flowers before the public," Mrs. Cooksley explained, "but it was unsatisfactory. It's very tiresome, delicate work. Sometimes it takes me an entire day to model a single chrysanthemum or dahlia. I found the conversation distracted me, and the work was making me too nervous; so now I stem the flowers in front of the crowd, but that's all."

Mrs. Cooksley works in a temperature of not more than forty degrees, and usually nearer freezing. "I simply can't keep my hands and feet warm," she said, smiling; "but since so many workers starve for their art, I suppose I can freeze for mine."

Then she became serious. "Perhaps most people wouldn't think of my work as art," she said, "but it brings pleasure to many who couldn't be reached in other ways. The farm people are accustomed to handling butter, and they don't have any feeling of strangeness among my models. And I think my models give them a new sense of the beauty of the shape and color of the flowers they all know.

"To many a hard-working farm woman, butter means churning, lifting heavy milk cans, cleaning endless operators, backaches, and headaches. I would like to have it mean more to those women. I would like them to think of my flowers the next time the work seems too hard."

A woman's subtle ways of "announcing" her social position!

Refinements that truly reveal her station!

IT IS every woman's birthright to win the respect and admiration of her friends and neighbors. Her home is her palace. Her dining table especially. For here her guests and her family constantly assemble. That she greets them, at the very outset, with the cordial invitation of savory, invigorating soup, is one of the refinements accepted as a matter of course in such a home.

Those who are accustomed to the finest food and

who take keen delight in dishes of supreme flavor, realize that soup gives them a kind and a variety of enjoyment offered by no other food. The appetite is stimulated, digestion is promoted, all the meal becomes more inviting and beneficial. The result is that the service of soup has become an established custom in the better homes. And, how easy and convenient it is, with Campbell's Soups at your very elbow!

Soups made with the highest quality ingredients money can buy! Soups blended by Campbell's French chefs in kitchens equipped with every culinary device to produce the most delicious flavor! Soups available at every food store in America.

The next time you are giving a luncheon to your friends, serve Campbell's Tomato Soup. See how its bright, pretty color enlivens your dainty table. Notice how its tonic, appetizing flavor is welcomed by everybody, how it seems to "break the ice" and make your party "go".

Better still, if you serve it as a Cream of Tomato Soup in bouillon cups topped with whipped cream. So easily prepared according to the simple directions on the label. And such a pride to the hostess!

Or for the family dinner. The appetizing flavor of Campbell's Tomato Soup refreshes the appetite and gives a glow to the whole meal. 12 cents a can.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

Edgar S. Bloom Has Specialized on Straightening Out Snarls

(*Continued from page 16*)

wondering what to say. All at once I decided to say nothing; he was saying enough. So I waited. Finally, he ran out of blue words. Then I talked, a little. When I finished, he clapped me on the back and said: "'My boy, *you* are all right; but I don't care for the *blank-blank* company!'

"'Well,' I said, 'I can't go back unless you say that you are entirely satisfied with your service.'

"'All right,' he countered, 'I'll promise never to write the company another letter. Will that do?'

"He stuck to his word, and I learned an important lesson from that grievance: When a man wants to air a grievance, let him do it. He'll talk off most of his rancor!

"One night I was playing billiards at Slosson's parlors—that was my main recreation in those days; the fee was sixty cents an hour, and with a twelve-dollar-a-week salary I had to keep an eye on my time. As I watched the calculagraph—an automatic timing clock used to check the time of the players—it occurred to me that if it paid to use such a device in a small billiard parlor the machine might be used effectively in timing toll calls.

"I was convinced that I had a great idea, so I hunted up my chief the next morning and presented it.

"'Where are your facts and figures?' he asked. 'Go ahead and work it out.'

"This I proceeded to do. All underground cables which carried toll circuits from suburban New Jersey to New York City terminated at 18 Cortland Street, in what was known as the underground room. Here I set up testing apparatus which enabled me to cut in on telephone circuits to Elizabeth, Morristown, New Brunswick, Plainfield, and other suburban points.

"WITH stop watch in hand, I observed the exact time at the start and end of each conversation and the elapsed time, which I later compared with the toll ticket record made by the operator, who glanced at the clock at the beginning and end of each call. It was a dark room with a gas-laden atmosphere and anything but pleasant, but I stayed there from nine in the morning until five in the afternoon for nearly a month. I obtained data on several thousand toll calls. This enabled me to prove conclusively, at least to my own satisfaction, that the automatic timing clock should be installed without delay. I summarized results in a brief report to my chief. He read my report, and said:

"'Well, this seems to call for a more extended report.'

"It took two months to make the second report! I worked with my chief on it, and before we finished I was sorry I had ever begun. It seemed to me that I was spending my life doing picayune things. Finally, however, the job was completed. Our report was sent in to the higher authorities, and it resulted in the installation of the automatic timing clock for toll calls. The consequent saving to the telephone company through more accurate timing ran into many thousands of dollars in a few years.

"Out of my experience in gathering data for toll calls I evolved a second idea. When I was investigating complaints, it had seemed to me that the making of test calls from the homes and offices of subscribers was a slow and none too safe method of checking up on the service given by operators. I soon discovered that, after I had made a few test calls, every operator in the central office knew that a service inspector was working in that district. Further tests were, naturally, useless.

"It seemed to me that by secretly checking up operators' service in the same way that I had checked up toll calls, a much more satisfactory report could be made. This idea met with my chief's approval, and I arranged a box set with plugs that could be placed upon a desk in a private office. The observer stationed there could listen in with no chance of detection. This was the beginning of the highly efficient service-observing boards now in use through the entire Bell system."

DURING his period of service in the Traffic Department, Bloom had made two distinct contributions to the progress of telephone service. But apparently nobody saw anything unusual in his researches and reports. His salary had not been raised; there was no hint of a promotion. He came to the conclusion that he was wasting his time, and he decided to leave the company. But when Bloom told the man who had originally engaged him of his decision to leave, the superintendent of traffic suggested he might consider a transfer to another department, where the work might be more attractive to him.

"We don't want to lose you," he was assured. This had a sound of appreciation at least, so Bloom promptly asked to be put upon construction work, and he was at once transferred to that department.

"I don't want to spread an idea that I am an advocate of restlessness," he said to me, "or I may have troubles in my own company. I was simply trying to find a place where I fitted. I believe that any man ought to know when he is marking time. I had done two bits of work that I felt were worth-while, but in the main I was not using my time to advantage. And I brought that fact to the attention of the man over me. In my opinion, it is a man's duty to do this. If I had waited for someone to tell me to move, I might yet be just where I started.

"I liked construction work. It didn't amount to much at first, for I was put in to observe and finally to boss a working gang digging pole holes in the streets and laying cables."

Before long, young Bloom became the engineer of the Construction Department, and, a little later, he was also put in charge of right-of-way work, including the job of obtaining rights of way for new long-distance toll lines leading out from New York City.

At that time, the department for getting rights of way had about thirty-five men, who averaged six to eight permits a week. Bloom pored over their records, and he argued that there was something wrong in such uniform results.

He put a blind ad in a daily paper, and answered it from a hotel. The ad asked for a man who could meet property owners. A number of men applied, and Bloom selected one as his checker. The maximum pay for right-of-way men at that time was twenty-three dollars a week. But Bloom dared to put this proposition to the new man: "Come and try this for a few weeks," he urged. "I'll give you eighteen the first week, twenty-three the second, and thirty-five the end of the month, if you make good."

The man agreed to try on this basis. Then Bloom went back to the office and rigged up a blackboard as a score board. At the end of the week, he listed the men. The new man headed the list with thirty-two permits! The rest got the usual six to eight. In a few months, Bloom had reduced the number of workers to fifteen.

The office ruling had been to report at nine and at five. Bloom made these men free. "I am not going to check up on you, except for results," he informed them. "If you go to a ball game or to a horse race, instead of working, I won't know it. You need never come to the office except when you have business here. But, remember, I am going to watch results."

This was a daring innovation in administration. But Bloom had decided that a man who was to produce anything worth-while must be put on his own responsibility. He has followed this principle ever since. As he commented, "It works!"

The reorganized department continued to produce at a high level. Even with salaries doubled, the reduced force cost the company considerably less than the old, and young Bloom had made a new record with the company that didn't want to lose him. He was recognized as an organizer.

THE score board made by Bloom to record the permits of the right-of-way men marked the beginning of a definite policy on his part. A great deal of his early discontent was due to the fact that his efforts had not met with prompt recognition. He now made up his mind that men working with him would always have such recognition, and throughout the many administrative offices he has held he has stuck to that principle.

"He drives himself," said one man who has worked with him for twenty years. "But he is never too busy to tell you that a job is well done. He never forgets a man who has worked with him. And when the opportunity arrives he sees to it that a man gets his chance."

Men Are Changing

By Scores of Thousands

From old-type shaving soaps to this unique creation—

Let us send you 10-day tube to try

GENTLEMEN:

80% of the present users of Palmolive Shaving Cream once were wedded to rival preparations. Millions have discarded old-type shaving soaps for it.

We won them over by giving them liberal test tubes of this unique creation to try. Then asked them to compare with their present favorites.

Now we seek a like opportunity of proving results to you.

We believe you'll find that 5 major mistakes in shaving preparations have been corrected. And shaving thus given a new element of comfort, speed and pleasure.

These 5 advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Let us prove this

We ask your permission to prove these things—to send you a tube to try. We are masters of soap making. One of our soaps—Palmolive—is the leading toilet soap of the world. We have worked hard to excel in a Shaving Cream. We made up and tested 130 formulas before we attained our ideal.

Do us the kindness to mail this coupon, for your sake and for ours.

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILL.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. Here are new delights for every man. Please let us prove them to you. Clip the coupon now.

STATE UNIVERSITY SYSTEM OF FLORIDA

The organization of the right-of-way office confirmed the higher officials of the New York Telephone Company in their determination to keep Bloom with them. He was given further responsibilities, and this was the beginning of the plant work for which he is now famous. Telephone construction, like many mechanical comforts of this age, has grown at a pace that is breath-taking. In 1896, when Bloom entered the industry, there were about fifteen thousand telephones in New York City. To-day that number of instruments is put in in a single month. In the whole country, in 1896, there were fewer than five hundred thousand telephones in the Bell System. By 1900 that number had doubled; to-day there are over seventeen million.

Coincident with this rapid growth have come changes in methods of construction and of transmission, and operation. When Bloom came to the New York Telephone Company, experimentation was continually evolving new methods. There had been little attempt at standardization. But the time was ripe for crystallization of what had been learned. Bloom began to work in the interest of order. Young as he was, his great native ability enabled him quickly to grasp the situation, and he began to work out a basis for a definite scheme of plant engineering.

In his new office, he at once started to schedule definite steps in construction, the placing of poles, wires, conduits, methods of work, and of keeping records. For almost ten years, he worked at the task of reducing telephone construction to some form of standardization. His impatience was gone; he was at work on a man-size job that took all he had to give. In 1906 recognition came. The New York Telephone Company purchased the plants of the New York and New Jersey Telephone Company. There were two main plants—Long Island with headquarters at Brooklyn, and the section of New Jersey suburban to New York, with headquarters at Newark. Bloom went to Brooklyn first, then to Newark, and directed the work of these plants until they fitted his standard.

HE SUCCEEDED so well that two years later, when San Francisco, recovering from the earthquake of 1906, asked for a man to undertake the reorganization of the plant that served her and all California, Oregon, and Washington, Bloom was sent West to tackle the job.

Fifteen millions had been set aside for construction work, and Bloom was made General Superintendent of Plant in charge of engineering construction and maintenance. He spent seven happy months in California. In November, 1909, he returned to New York and became Superintendent of Plant of the up-state territory of the New York Telephone Company. This company had acquired the property of five telephone companies which operated throughout New York State outside of New York City and Westchester County. Welding these five separate organizations into one, standardizing their construction and maintenance methods in the interest of greater efficiency and improved service, kept him occupied until the spring of 1910, when Bloom assumed the position of Engineer of Plant Operations for the American Telephone and Telegraph Company. This office involved general supervision of plant construction and maintenance throughout the Bell System.

In the spring of 1912, on the day of his return from a vacation trip to Bermuda, he was stopped in the hall by one of the officials of the company.

"Bloom," he said, "can you go to St. Louis right away?"

"I guess so," replied Bloom reluctantly. He had married, and was nicely settled in New York.

"But the mountain wouldn't come to Mahomet, so Mahomet had to go to the mountain," Mr. Bloom said to me. "In my business experience, opportunity doesn't always fix you up with just the kind of job you want in just the place you want it. I went to St. Louis and my family moved there after me. We stayed two years."

BLOOM spent two busy years in St. Louis. This time he had another big organization problem to solve—the consolidation of four separate telephone companies operating in Missouri, Kansas, Arkansas, Texas, and Oklahoma. Each of these companies had its own group of executives and operating staffs, and these he successfully welded into a strong unit which undertook a large and comprehensive construction program covering the entire Southwest. This was the genesis of the Southwestern Bell Telephone Company. To help him in carrying out this work, he brought to St. Louis several of the men who had worked with him in Brooklyn, Newark, and New York.

"When he asked me to come," said one of them, who is now a superintendent in the New York Telephone Company, "I was cagy. I was afraid of Bloom. I had worked with him. I had my doubts as to my ability to satisfy him.

Finally, however, I got my courage up to the point of going. And I was put in charge of the plans for new buildings and new work. For two months I worked on and on, and I hardly saw Bloom. Then I got shaky. Everything I said was accepted; everything I planned went. I had never before had this much responsibility. I called Bloom on the 'phone and asked to see him.

"'Sure,' he said. 'Come right over.'

"I packed a bunch of plans under my arm with a bunch of estimates. When I entered his office, 'What's that?' he asked.

"'Well,' I said, 'no one has gone over a thing since I came, and you asked me to come here, and I thought I needed a little looking over.'

"He looked at me kindly and his eyes twinkled.

"'I'm very busy,' he said. 'I took considerable pains to pick you out to come here. I think you can do the job, and in two or three years I'll be certain whether I was right or wrong. Don't undo the bundle. I'm afraid you'll have to go along and let me find out in my own way.'

"That's Bloom."

One morning two years after Bloom had come to St. Louis, he received a long-distance call from H. B. Thayer, then vice president of the American Telephone and Telegraph Company.

"Can you go to Chicago at once? We want you to act as receiver for the Central Union Telephone Company."

"This was on Wednesday," said Mr. Bloom. "I started on Friday and ran into a blizzard. Twenty miles out of Chicago we were held up, a train ahead was derailed, and we did not know when we could get in. I wired ahead, as I was expected at court that morning to be sworn into the receivership. At eleven-thirty I got to the court-room and was sworn in.

"I went into that receivership knowing nothing about the matter, except what was common knowledge among telephone workers—that there was a stockholders' disagreement. I asked for the records. I read all Saturday, all Saturday night, all Sunday until ten that night, briefing as I read, so that I would be in a position to meet intelligently with the other receivers and the lawyers in the morning. I thought I might be there for three months. I stayed five years."

The work in Chicago, under Bloom and two other receivers, resulted in the reorganization of the Central Union Telephone Company into the Ohio Bell Telephone Company and the Indiana Bell Telephone Company, with Bloom as president, and the forming of the new Illinois Bell Telephone Company with Bloom as vice president.

In 1922, he was called to New York as a vice president of the American Telephone and Telegraph Company. Four years later, when he went to the Western Electric Company as its president, he assumed complete charge of the Hawthorne Works in Chicago. With the single exception of the Ford plant, this is the largest manufacturing unit in the world. It occupies more than one hundred buildings in an area of over two hundred acres. In normal times it employs twenty-eight thousand people; following the war, this number rose to forty-one thousand. It runs its own gas plant, railroad, newspaper, hospital, store and restaurants. Additional plants at Kearny, New Jersey, and at Philadelphia use a force of five thousand. There are distributing houses in thirty-three cities throughout the country. In 1921 the company manufactured 1,550,000 telephones, and used in making telephone cable 37,000,000,000 feet of wire.

The direction of such a company, no matter how remote the president may be from the actual manufacture, involves the understanding of an almost unlimited amount of detail.

BLOOM recognizes three factors which have helped him build his life.

"My mother was a strong character," he said. "She taught me that when I started a thing, I was bound to go through with it. The second help came from one of my college professors, Colonel Henry W. Spangler, who was one of the most remarkable men I have ever known. I learned more from him than from any other human being. He taught me to work as hard as I could with all the attention I could command, and to play the game straight. My third help I worked out myself: I leave my troubles at the office. When I stop work, I rest. I walk a good deal, four or five miles a day, and I enjoy it. I don't worry; I never did. I do the best I can, and I leave the rest where everyone has to leave it, whether he wants to or not—on the knees of the gods."

Whitman's FUSSY PACKAGE

A rich feast in nuts and chocolate

If you can distinguish between the finest chocolates carefully blended and finely milled, and the other kinds—

If you appreciate the flavor of vanilla bean, contrasted with its imitations—

If you prefer *nut centers* and *nut combinations*, and if you want your favorite assortment in a package of rich and quiet beauty, you will thank us for directing you to the Fussy Package.

There are no soft centers in the Fussy Package. It is a special assortment for those who like chocolates with hard, or "chewey" centers. It is a good example of how Whitman's Chocolates are selected and packed to suit individual tastes. Thousands already know the Fussy Chocolates as their first favorites. Hundreds of thousands more no doubt will welcome them.

Sold only in those selected stores, one in nearly every neighborhood, that combine selling fine candy with giving good service.

STEPHEN F. WHITMAN & SON, Inc., Philadelphia
New York Chicago San Francisco

The Fussy Package contains chocolate pieces enclosing Almonds, Walnuts, Filberts, Peanuts, Brazil Nuts, Pecans, Double Walnuts, Pecan Caramels, Triple Almonds, Nougat, Nut Bricklets, Nut Brittle, Almond Dates, Double Peanuts, Nougat Caramels, and Almond Caramels. Packed in boxes from half pound to five pounds.

Eyes

(Continued from page 41)

the slope, and he had never once glanced in that direction.

Nevertheless, the thing which he now did was not purposeless, not accidental. For, just before he did it, a change had come over his face, a change so slight as to be scarcely noticeable, yet definite and undoubtedly significant.

Gradually the thin nostrils above the sparse white mustache had contracted and tightened in that odd way which they had in moments of stress, accentuating the hawklike look of the lean, sun-tanned face; and at the same time a sudden light had flared momentarily in the gray-blue eyes. Then, very slowly, Sandy Jim turned his head.

Very, very slowly he turned it, inch by inch, so that the movement was barely perceptible, at the same time shifting his body slightly: and so—gradually and to all appearances very casually—his gaze described a half-circle, taking in the thinly wooded spaces to the right of him and behind.

At last his eyes rested on the trunk of the great black oak at the crest of the rise. Five feet of solid living oak stood between him and the grim watcher in that ambush; Mayfield's vision could not pierce the opaque wood and see that which lurked behind it. He saw nothing but the tree itself. Yet he looked no further. As though he had completed his survey of the space behind him and was no longer interested, his eyes traveled somewhat more quickly back across the arc of a half-circle and resumed their placid, patient scrutiny of the canes at the edge of the swamp from which he hoped a deer would presently emerge.

He had seen nothing, heard nothing. Yet, studying his deep-set eyes and hawk-like face, one would have guessed that something had been learned—something which stirred Sandy Jim with a strange excitement.

This, then, was one development in the drama of the unseen eyes. Now, as though fate had decided that events should move swiftly to a crisis, there took place another development in that drama.

TO THE three pairs of eyes which were watching Sandy Jim, a fourth pair was added. These eyes were in the swamp itself—or, rather, just at its edge—in the fringe of short, close-growing canes at which the hunter was gazing. Yet, so dense were the canes that Mayfield could not see these eyes, nor the shape to which they belonged.

That shape remained for many minutes absolutely motionless in the cover of the canes, while the eyes glared fixedly at the dun figure on the pine stump. They were eyes at once beautiful and terrible, but far more terrible than beautiful. They were even more intense than the eyes in the myrtle thicket, even more ruthless than those behind the black oak trunk. They were large, luminous, marvelously bright. Fire burned in them, yellow fire in which green lights glinted. Yet, brilliant and piercing as they were, they seemed somehow pale and cold, and they were incalculably cruel. They were eyes that could know no pity, eyes harder than stone or steel, eyes utterly savage, utterly implacable.

For nearly a quarter of an hour they remained fixed upon the form on the pine stump. Mayfield made not the slightest move. He was as still as though the deadly-cold glare of those unseen, unsuspected orbs in the canes had turned his blood to ice. As a matter of fact, he was thinking hard, thinking not about the inplacable eyes in the canes—for he was unaware of their existence—but about that which lurked in the ambush of the black oak trunk up the slope behind him.

SOME men grow restless when their brains work at utmost speed. Mayfield was of another type. In him, intense mental concentration was often accompanied by complete physical repose. If throughout his long vigil he had demonstrated his woodsman's faculty of sitting still in one spot, his stillness was now so perfect that he seemed to have become inanimate.

It was this that hastened the crisis. So inanimate did he seem that to one of the four watching him from ambush he *became* inanimate. The creature in the canes, having just come there from the inner regions of the swamp, had not seen the hunter take his seat on the pine stump; and when, after many minutes it had detected not the slightest movement, it concluded that the odd-looking, erect, dun-colored object was a projecting portion of the stump itself.

At last, therefore, the cruel eyes in the canes shifted their gaze. The shape of which they were a part moved silently, sinuously forward. Next moment the canes parted and this shape came out into the open.

Sandy Jim Mayfield saw it instantly. He saw instantly, also, that this monstrous bay lynx, one of the largest he had ever seen, had come out of the canes for a very definite purpose. He knew that the lynx's powers of scent are limited; but the whole attitude and behavior of this lynx showed him that it had scented something. Sandy Jim's perception of this fact was so instantaneous that he checked by a conscious effort of his will the slight start of surprise which the sudden appearance of the beast had occasioned.

The lynx was advancing almost directly toward him, gliding forward very slowly, its padded feet making no sound, its great bearded face hanging low. For an instant Mayfield considered the possibility that the animal was deliberately advancing upon him. Almost at once, however, he decided that the thing which the tawny killer had scented was between the lynx and himself, that his own scent had not reached the animal's nostrils. His curiosity immediately aroused, he decided to make no move for the present but to await developments.

For the moment he seemed to forget that which watched from the black oak trunk behind him. For the moment his whole attention was concentrated upon the advancing lynx; and it was in this moment that he invoked silent imprecations upon his own head because his gun lay uncocked across his knees, while his hands rested on the stump beside him. He was in plain view of the lynx, but it was evident that his stillness had deceived the animal—as stillness will deceive most wild animals—and that it did not recognize him as a man. It was certain also that even the slight movement necessary to draw back the hammer of the gun would betray him.

Slowly, stealthily, the lynx came on. Sandy Jim knew now that the thing which it had scented, the thing which it was stalking, must be hidden at the edge of the myrtle thicket in front of him. But when it had come within ten feet of the thicket, the lynx stopped.

Sandy Jim watched curiously. He judged that the beast had heard what he himself had heard—a sound in the swamp beyond the canes, a faint sound, but one which set his pulses beating faster. He knew, or thought that he knew, what that sound was; but the lynx was not so sure. It waited motionless, ears flattened, lips drawn back in a snarl revealing long, thin white fangs, its round bearded face turned a little to the right, so that its pale eyes were no longer directed toward the hunter.

For half a minute it stood thus; and in that half-minute the man's lean, long-fingered right hand moved slowly, cautiously, and drew back both hammers of his gun.

Sandy Jim's eyes watched the crouching lynx, but his ears were strained to catch again that faint sound which both he and the lynx had heard. In a moment he heard it again, and this time there was no mistaking it.

Other ears heard it also and the eyes in the broom grass clump—the large, restless eyes which all along had seemed to be waiting for some desired, overdue event—brightened suddenly. But Sandy Jim knew only that success was about to crown his vigil. A deer was coming out of the swamp, the game for which he had been waiting all the long afternoon.

SLOWLY he raised his gun until the butt rested against his shoulder. Next moment a whitetail doe stepped into view out of the fringe of canes.

Mayfield drew a careful bead as she came on. His long brown finger was crooked about the trigger. His thin keen face, pressed against the gun stock, was the face of a hunting hawk. She was within easy range. He could not miss. But moment followed moment and he did not shoot.

Even as he aimed, even as his finger touched the trigger, his face had gone pale beneath its tan. Suddenly, in the nick of time, his thoughts had leaped back to the black oak trunk on the slope behind him, and to that which waited and watched in ambush there.

Squinting along the gun barrel, he cursed silently, cursing his own folly with something resembling dismay. For a

Only in the Chrysler "50" can you obtain 50-mile-an-hour-and-more speed capacity with such smoothness;

Acceleration that whisks you from 5 to 25 miles in 8 seconds;

Economy of 25 miles to the gallon;

Handling ease totally unlike any previous experience;

Truly full-sized comfort with ample capacity for all passengers;

Luxury of mohair plush upholstering;

Distinctive Chrysler smartness and beauty of body line and coloring;

Combined with the durability and long life assured by the engineering genius and precision manufacturing embodied in the Chrysler plan of Standardized Quality.

You owe it to yourself to see the "50".

Ride in it—not merely a perfunctory demonstration, for your nearest Chrysler dealer is eager to give you a *real* test, you to select the route and do the driving, if you wish.

Then *and only then* will you be able to appreciate that nowhere else at $750 can you obtain the same degree of performance, luxury and comfort that you buy in the Chrysler "50".

CHRYSLER "50"

Coupe, $750; Coach, $780; Roadster (with rumble seat), $795; Sedan, $830; f. o. b. Detroit, subject to current Federal excise tax ✦ ✦ ✦ *Chrysler dealers are in a position to extend the convenience of time payments. moment he was shaken. The trap had all but closed upon him. He had been very near to the disaster which he dreaded most.

Very slowly he lowered his gun barrel slightly, and sat watching. So gradual was the movement that the doe did not see it, while the head of the crouching lynx was still turned the other way, facing the newcomer. So, for a half-minute he waited, and behind the black oak the stern eyes which had been watching there still watched, ablaze now with fierce expectancy, sure that within another fraction of time the trap would be sprung.

Suddenly Sandy Jim's eyes widened. The doe had taken a mighty leap forward. She was flying up the slope now in long bounds, heading straight toward him—and straight toward the lynx, fifty feet in front of him. Amazed, Mayfield watched her. She must have scented the lynx by now, yet she came straight on. Sandy Jim saw the light in her eyes, the bristling hair on her neck, and in a flash the truth came to him: This doe was a mother racing to the rescue of her fawn, hidden there in the clump of broom grass.

The doe's last long forward bound carried her to the edge of the broom grass, and for a tenth of a second she paused to nuzzle something that lay there. Then, stiff-legged, her head high, her neck arched, she bounded sideways toward the lynx.

ONCE Sandy Jim Mayfield had seen a whitetail buck cut a rattlesnake to pieces in the woods. He knew the deadly swiftness of the rattler's stroke, the incredible quickness with which that spear-shaped head could deliver its lethal thrust. But he had learned on that occasion that the rattler's quickness is as nothing compared with the quickness of the whitetail deer, and that even the poisoned fangs of the king of serpents cannot avail against the whitetail's flint-edged hoofs.

That had been a great fight. This was to be a shorter but a more spectacular one. Again, in his absorption in this lesser drama, Mayfield seemed to forget the drama of which he himself was the center, to forget the ruthless eyes watching from the ambush of the black oak trunk behind him. He sat in plain view on the pine stump, but the combatants were so intent upon their battle that neither saw him. Almost before he knew it, the doe leaped to the attack. But all the big cats are marvelously quick, and the bay lynx is quick as light. When the doe's sharp hoofs came down, the lynx was not there.

So swiftly that Sandy Jim's eyes could not follow the motion, the lithe, tawny cat had leaped three feet to the right. Another short leap would have carried him into the myrtle thicket, but instead he bounded back into the open. Probably he had not grasped the significance of what was happening. Occasionally some big buck had displayed a certain arrogance toward him, but in general he had found the deer, especially the does, a timid folk. He did not know that a fawn lay hidden in the clump of broom grass; and he had never before fallen foul of a doe defending her young.

In a moment he had cause to regret his rashness. Stiff-legged, prancing daintily like a dancer, the doe circled him, while he crouched snarling, showing all his pointed white teeth, his bristling back bent like a bow, one keen-clawed forepaw lifted, ready to strike. The doe was trying to get behind him, but he turned as she turned, and presently she tired of the delay.

He knew when the blow was coming but he did not know exactly where. This time the doe seemed to guess the direction in which he would leap to avoid that blow. Suddenly she bounded high, her long slim legs straightened beneath her; and this time, as the lynx leaped from under her, he leaped almost into the path of those descending hoofs, and one of them ripped a long gash in his hind quarter.

SNARLING with pain and rage, he whirled in the air, his long body bending as though made of rubber. More swiftly than a boxer's fist, his big right paw, bristling with curved retractile claws, swished downward and across, raking the skin from the doe's slim foreleg. It was a powerful blow, and the doe, thrown off her balance, nearly lost her footing. But the wound which the lynx had dealt was slight compared with the one which he had received. His right hind quarter was streaming blood, and the pain of it burnt like fire.

That pain took the heart out of him. The doe was circling him again, dancing around him in that odd, mincing, stiff-legged way, head high, ears flattened, tail erect. He saw her muscles tighten, knew that another attack was coming. With one last savage snarl, he sprang six feet to the left, and vanished in the thicket.

Immediately the doe turned, walked to the broom grass clump, and stood with lowered head, caressing her fawn.

Mayfield could not see the fawn from where he sat; but minutes ago he had learned from the doe's actions that the little creature was there in the broom grass, that it had been lying there unknown to him all the long afternoon, awaiting its mother's return from the swamp, where she had gone to graze. There was no sentiment in Sandy Jim. He had killed scores of deer, in season and out. He could kill this one without a twinge of conscience.

He raised the gun slowly. Deliberately he sighted, aiming at a point just behind the doe's shoulder. Longingly, lovingly his finger caressed the trigger. Into the grim eyes watching from the black oak trunk on the slope behind him leaped a light of exultant joy.

A long stalk was over. Sandy Jim Mayfield's fate was about to overtake him at last.

Two minutes later, Sandy Jim reared his long, lank form from the pine stump where he had sat so long and so patiently. He was not in a pleasant mood. To gaze along his gun barrel at that doe, and refrain from pulling the trigger, had imposed upon him a terrible strain. He had been rash, perhaps, in exposing himself to it, but there had been a reason. The ordeal had lasted nearly a full minute, and it had been almost more than the old hunter could stand. Again and again he had all but pressed the trigger. He had been thankful when at last, the doe, having recovered somewhat from the excitement of her battle with the lynx, scented him and made off unwillingly into the swamp.

Sandy Jim walked to the broom grass clump and found the fawn. He searched the ground under the edges of the myrtle thicket and discovered what it was that the lynx had been stalking—a wild turkey hen sitting on her eggs, gazing up at him with hostile, intense, unwavering orbs. Then he shouldered his gun and started homeward.

Before him at the top of the rise loomed the massive trunk of the great black oak which had played so singular a part in the afternoon's events. Mayfield knew that the eyes which had watched him from behind that oak still waited there. Yet he walked straight toward the tree, his gun slung carelessly across his shoulder. Only the odd contraction of the thin nostrils above his white mustache revealed his foreknowledge of a crisis yet to come.

He was abreast of the black oak, even a step or two beyond it, when he stopped short and turned his head quickly.

"Why, hello, Sam Woodfin!" he exclaimed.

The man who stood behind the black oak, a big man, bushy-browed, clad in corduroys and hunting boots, a rifle balanced in his right hand, glared at the hunter sternly out of stony gray eyes. On his shirt, under the flap of his coat, gleamed a game warden's badge. With an effort he spoke calmly.

"Mayfield," he said, "you don't like me and I don't like you, and some day I'm going to get you for killing deer out o' season. But there's one or two things I want to ask you. When did you learn that I was watching you from behind this oak?"

Mayfield seemed to consider.

"'Bout a half-hour befo' that doe come out o' the swamp," he answered.

"How'd you spot me?"

Sandy Jim appeared to ignore this second question. "Ain't it funny, Sam," he said, in a tone of utmost friendliness, "what little things makes a difference? I was thinkin' about it while I was settin' down yunder by the swamp observin' natur' an' listenin' to the birds a-singin'."

"WHAT'S that got to do with what I'm asking you?" growled the game warden.

"Well, you see, Sam, it's like this: I'm a old hound, but I got a pretty good nose. I don't smoke myself, but I kin smell a pipe 'most a hundred yards ef the wind's right. When I got a whiff of home-growed tobacco 'bout three quarters of an hour ago, I knowed that either you er Pete Mason was a little way up the wind from me. There's only two men in this part o' the country that smokes tobacco in its natural state—an' Pete ain't in the habit of snoopin' around in the woods!"

Warden Sam Woodfin seemed to have lost the power of speech, but Sandy Jim continued earnestly, wagging his head:

"It's a bad thing, Sam, tobacco. An' it interferes with business. Ef it hadn't been fer that smoke a while ago, you'd have got the proof on old Jim Mayfield, who yer been tryin' to ketch fer two years an' more!"

Again the old man shook his head mournfully.

"She was a fine doe, Sam," he said, "an' I had her right at the end o' my gun. I shore hated to let her go!"

Your Own Good Judgment Tells You:

"WATCH ALL YOUR INVESTMENT"

In that quiet hour when the hustle of the day is over and the last clerk has said "good night", does the wraith of your own Good Judgment ever come to you and say:

"My friend, that cash that you count and balance daily — which you guard so carefully against mismanagement and theft is only 5% of your working capital . . . Are you watching the remaining 95%?

"The money invested in customers' accounts represents approximately 20%. Can you tell me this minute how much each customer owes and the total outstanding? Do you get a trial balance daily? Are statements mailed promptly? Do collections keep pace with sales?

"Yet cash and accounts receivable are only one quarter of your working capital. There is another single asset three times as large, three times as important — the merchandise upon your shelves. It represents probably 75% of your total investment.

"Mere good business demands that you know each day how large this merchandise investment is—whether sales are falling behind purchases—whether costly items are standing idle while new stock is moving. Not to know is dangerous.

"Why not watch *all* of your investment? Don't claim that this will take too much of your time or call for extra help. Listen to me —your own Good Judgment! The local Burroughs man has a simple plan which will give you the vital figure-facts of your business every day — in less time—with less labor — and at lower cost. Call him now!"

Keep your face fit with *Williams*

"Just look at the fine skins of the men who shave with Williams!"

Many a man has said that. And with truth.

The Williams lather makes an *easy* job of shaving because it softens thoroughly.

It makes a *smooth* job because it lubricates beautifully.

Best of all, when you're done your face is FIT! The rich, mild, absolutely pure Williams lather tones up the pores, invigorates the whole face tissue, leaves a healthy bloom. Not only for ease in shaving but also for face health and face fitness, there is nothing like a daily treatment of Williams lather.

87 years of intensive, specialized study of lather, beard and skin have gone into every tube of it.

Perhaps that's in the drug clerk's mind when he says, *"Oh, yes . . . but they all come back to Williams!"*

Williams Shaving Cream

Afterwards a dash of Aqua Velva. A FREE sample of this, too, if you say so. Ask Dept. 17.

TWO SIZES — 35c and 50c

Six Ways to Make a Billion Dollars

(*Continued from page 15*)

with irresistible power. Why has this power been wasted, while men dig into the earth for coal and put wheels under puny waterfalls?

Not altogether for lack of human effort, for since the day that King Canute failed to make the tide obey him, hundreds of patents have been taken out for tide-machines.

More than that, many of the devices thus patented work—after a fashion. There is a small tide machine in the river Thames near London to-day that has been in operation for over a hundred and thirty years.

The feasibility of harnessing the tides at certain places is so well understood that the French Government has under way a project to develop a 5,000 horse-power plant near Brest. England contemplates a $150,000,000 development in the Severn estuary; and the State of Maine last year ratified a bill to develop tidal power in the Bay of Fundy, to cost $100,000,000, which is expected annually to produce the equivalent of power from ten million dollars' worth of coal.

In the tide-reservoir systems as contemplated in the Bay of Fundy and elsewhere, the gates are shut after the water has flowed in, and power is gained by letting the water flow out, operating turbine wheels meanwhile, as the tide recedes. Part of the power thus gained may be used to pump some of the basin water into higher reservoirs, to be used to operate other turbines as it flows back again.

ALL this might seem to suggest that the problem of tidal power had been solved. Far from it. These installations, however successful, will represent only a crude beginning. In fact, the principle of operation is no different from the primitive tide-machine installed in the Thames in 1790.

Of course interesting details of modern engineering will be involved; but the "basin" system that is to be utilized is available on a large scale only where the tides average at least ten feet. There are but few places along the coasts of our entire continent where tidal plants of this character could be economically installed.

Now, the tidal machine that I have in mind calls for something quite different from this. It must utilize tides that rise only four or five feet, and it must be available along every shore, in every harbor. It should be adjustable to every floating wharf and to every ship that docks.

Consider the conditions: The "Leviathan," let us say, with displacement of not far from sixty-five thousand tons, is at her dock in the North River. Twice each day her enormous bulk is lifted, with the average tide, about four and a half feet, and allowed to settle back again. If she is docked for five days, she has been lifted forty-five feet into the air—and allowed to drop from that height. And this is equivalent to the hoisting of one thousand tons of metal to more than half a mile, and dropping it from that altitude.

Now, here's something to reflect about:

Ford economy still greater

How smoother starts make your Ford even easier to run

A FEW years ago you may have used your Ford but two or three days a week. That period of automobile history is gone forever. Now, you drive the Ford every day. You want your Ford ready at all times.

Frequent transmission band replacements or carbon removals are nuisances, as well as expensive. They deprive you of your car, perhaps when you most need it.

Gargoyle Mobiloil "E" has always been noted for its ability to cut operating costs. But Mobiloil "E," as made today, is even more economical to use.

After 5 years

After 5 years of study and experiment, the Mobiloil engineers and chemists found a way to provide velvet-smooth Ford starts and stops *without adding to carbon deposit or valve troubles.*

Through an outstanding improvement in Mobiloil "E," they gave it the ability to keep transmission bands soft at all times—with no lessening of the other desirable qualities that had always been found in this specialized Ford engine lubricant.

This new smoothness in starting is not merely added pleasure in driving. It is definite evidence of less wear. It cuts down greatly the wear on bands and the need for replacement.

Now you can get smooth starting at all times. And you can confidently expect the same marked freedom from carbon which has always followed the use of Mobiloil "E."

Cheap Lubrication

Mobiloil "E" has never claimed to be a *cheap oil.* It costs a few cents more than ordinary oils—30c a quart. But Mobiloil "E," through many economies, cuts your Ford costs per mile and per year.

Mobiloil "E" meets every Ford requirement with an engineering margin of safety.

It gives full power on the hills. It conserves gasoline. It burns clean, thus assuring clean spark plugs and free-working valves.

Fill your Ford crankcase with one gallon of the new Mobiloil "E" from a sealed one-gallon can, or reliable Mobiloil dealers can supply you by the quart.

The new smoothness of operation will be immediately apparent. And the saving in band replacements and carbon removals will more than take care of the slightly higher price of Mobiloil.

If your present oil has been used 500 miles or more, you owe it to your Ford to try the new Mobiloil "E" right now.

GARGOYLE

Mobiloil "E" *for* Fords

PHOTOGRAPH OF A SANE MAN PHONING TO HIS DENTIST

"Just want you to look them over, Doctor. Nothing wrong, I think. I've kept them...

CLEAN"

HE is not scared. His sound sense tells him to see his dentist twice a year—and in the meantime, he keeps his teeth *clean*.

The same good sense tells him to buy a dentifrice for the purpose of keeping teeth, gums, and mouth *clean*—not to cure some frightful or imaginary disease of teeth or gums.

Since boyhood he has known that the surest way to healthy teeth and strong teeth is *clean* teeth. When he chooses his dentifrice he selects one made to clean—one made with the sole purpose of cleaning, and cleaning better.

Most people use the same dentifrice he uses. Most dentists recommend that same dentifrice. It is Colgate's Ribbon Dental Cream—designed by Colgate & Company for the express purpose of doing the one thing that leading dental authorities agree a dentifrice must do.

Ribbon Dental Cream is made to clean teeth, and it cleans them better by the following method: As you brush, it breaks into a sparkling, bubbling foam; in this foam is calcium carbonate, a finely ground powder which loosens clinging food particles, and polishes all tooth surfaces. Next, this foam, in a detergent, washing wave, sweeps over teeth, tongue, gums, washing all surfaces, removing the very causes of tooth decay.

Colgate's attempts to do no more than clean, because dentists say that a dentifrice *should* do no more. Rely on your dentist to cure—rely on Colgate's to clean.

Colgate & Co
Est. 1806

FREE to the readers of this publication—a sample of the dentifrice most Americans use

COLGATE & CO., Dept. 200-G, 595 Fifth Ave., N. Y.

City _____ State _____

In Canada, Colgate & Co., Ltd., 72 St. Ambroise St., Montreal

The "Leviathan" alongside her pier, occupies only one hundred feet of shore line; the coast of Manhattan Island stretches mile after mile, so it is clear that millions of horse-power go unbridled along this water front, to say nothing of the waste along the far greater stretches of the harbor as a whole.

What manner of tide machine could be devised to make this colossal power usable? In general terms, the answer is simple: What is required is an apparatus that can transform the *energy* of the slowly moving tides into a form that could be stored and accumulated, or transmitted, for practical working use.

Of course, gigantic pistons, geared to wheels, could readily enough be attached to floating docks, or ships in harbor; or friction devices could be made to turn this mass motion, caused by the tides, into heat. But a storage vault for the heat is quite lacking; and storage vaults for electricity are costly and inefficient.

Compressed-air systems have been tested, but can hardly be made available on a large commercial scale. A slow-motion electric generator, in combination with a cheap and really efficient electric storage-battery system, is perhaps the clue to your billion-dollar opportunity.

INCIDENTALLY, the perfected storage battery would have many and obvious uses for the storage of power generated by other forms of prime movers. One of the greatest problems of every public utility power plant is to meet the fluctuating demand for the current it supplies—since the current must be used in the very moment of its production. Your perfected storage battery will be welcomed by generating plants that now produce and distribute annually no less than sixty-six billion kilowatt hours of electrical power.

But even that, in the present view, is only incidental. Your real opportunity lies in the development of a *new* motive force, in large measure to *supplant* the power systems of to-day, rather than to aid them. When costly coal is burned to generate electricity, 84 per cent of its potential power is lost; and the incandescent-light bulb wastes 95 per cent of the residual power that comes to it.

Waterfalls are limited in number and in power. All told, if developed fully, they would supply but a fraction of the electric power required.

The big modern power plants are being built at the mouths of the coal mines, and the power there wastefully produced is wastefully transmitted hundreds of miles to the seaboards, where incalculable and inexhaustible supplies of energy go absolutely to waste with every oscillation of the tides.

All this will be changed when the problem of a really effective tide machine is solved. You need not be a seaside dweller to tackle the problem. The secret may just as well be sought in a workshop a thousand miles away from salt water. When it is found, and not before, water in motion will outrival coal as a source of working power.

And you, whose invention thus dethrones the master heat-giver and offers cheap power to every seaboard city from the waters of its own harbor, may rest well assured that none will begrudge you the promised billion.

Water—$10 a Glass

© 1927. M. L. I. Co.

"*YOUR trip evidently did you a world of good. What happened?*"

"*Big specialist ordered me abroad to a water-cure place to drink water—lots of it—no medicine—just water. I drank gallons and gallons during the weeks I was there. Counting steamers, railroads, hotels and doctors, that water must have cost $10 a glass but it was worth every penny. It worked miracles for me. What are you laughing at?*"

"*Laughing at the price you rich men pay for miracles. While you were away my doctor ordered me to drink water, too. Lots of it—8 glasses every day. Told me to have my prescription filled straight from our own faucet. And I never felt better in my life.*"

IT is a curious fact that some people cannot be made to realize the value of drinking water freely unless they pay a big price for it. Many famous health-resorts have built their reputations by making popular the habit of drinking water in generous quantities rather than on the medicinal quality of their mineral springs. And pure water—drunk as regularly at home as it is taken at the spas—will often produce health "miracles". Nowadays good doctors agree that almost everybody, except those who need a specially selected diet, should drink water regularly—one glass before breakfast, one in the forenoon, one in the afternoon, one before going to bed, and one with each meal—six to eight glasses of water a day.

The doctors say, also, that more than two-thirds of the weight of the body is water, that water forms the bulk of the blood, and that three quarts of water a day are needed for the body's daily necessities. If the blood does not get the water it needs—either as a beverage or in food—it will absorb water from the tissues of the body and be overloaded with harmful waste products as well.

Poisons, produced by our organs in the business of living, are eliminated largely by means of the water we drink. If too little is taken, they tend to remain in the body.

This summer you probably will be motoring, hiking, or camping out in the country. Take care that the water you drink is pure. Sometimes those cool and inviting brooks, springs and old wells carry deadly typhoid germs.

To be safe, before your summer trips begin, make an appointment with your doctor for inoculation against typhoid fever. It is a simple matter and gives immunity for two or three years.

To keep in the best physical trim at home or abroad, drink plenty of Nature's marvelous health-giver—pure water.

Medical experts warn us that those who neglect to drink sufficient water will eventually pay the penalty. Symptoms of digestive disturbance, headaches, muscular and neuralgic pains, dullness, inertia and intestinal stasis—may result from drinking too little water.

Metropolitan Life statisticians report that while typhoid scourges have practically disappeared in large cities and in other places where the water supply is protected, typhoid is still a menace in many rural areas and wherever the water becomes contaminated.

Typhoid can be stamped out. Send for the Metropolitan Life Insurance Company's free booklet "The Conquest of Typhoid Fever". Learn how to protect yourself and your family from water which may be unsafe.

"Small-bubble lather" soaks whiskers soft

Seeps 'way down where hairs sprout from skin . . . softens them at base . . . razor zips through

"SMALL bubbles" explains the difference between Colgate lather and other lathers. Colgate's tiny bubbles teem with water. Their small size lets them filter down to the beard-base, as shown by lather pictures at the right.

How "small bubble" lather works: The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up and floats away the oil film that covers each hair.

2. With the oil film gone, millions of tiny, water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. Every hair is cut close and clean.

ORDINARY LATHER

This lather-picture (greatly magnified) of ordinary shaving cream shows how large, air-filled bubbles fail to get down to the base of the beard, and how they hold air instead of water against whiskers.

COLGATE LATHER

This picture of Colgate lather shows how myriads of tiny, moisture-laden bubbles hold water, not air, in direct contact with the base of the beard, thus softening every whisker right where the razor works.

A WEEK'S SHAVES — FREE

Try this unique "small-bubble" lather at our expense. The coupon below will bring a generous trial-size tube — free.

EXTRA DIVIDEND. We will also include a sample box of Colgate's Talc for Men — the new after-shave powder that *keeps* your face looking freshly shaved.

Colgate & Co. Est. 1806

SOFTENS THE BEARD AT THE BASE

The One-Way Heat Problem: Meantime, it is not impossible that coal, as a heat giver, or motive force, may be challenged successfully from a quite different quarter. If a material could be found, or developed, that would transmit heat in one direction only, the challenge would be mandatory. That statement reveals the next billion-dollar opportunity I wish to bring to your attention.

A one-way-heat material! That, you say, is a pipe dream, as it would be a substance having attributes of the miraculous.

Let's get back to our glass of water for experimental purposes. Suppose your tumbler were made of such material, transmitting heat inward. Cover it tightly, and the water will boil presently as it stands there on the table. It would still boil—though not so soon, if you had packed the tumbler in ice.

Now, pour the boiling water into another receptacle of the same material, but reversed, so that the heat travels only outward. Put this receptacle of boiling water over the fire, if you wish. That will not keep it from freezing, ultimately.

Boiling water on ice and freezing it over the fire would be novel experiences. Yet that could happen, if you invented a one-way-heating substance!

Just think of its uses: You could cover your walls with it and your house will be cool in summer. With the material reversed, it will heat itself in winter, regardless of outside weather—quite without fuel. No sudden changes, but a gradual and cumulative effect.

Receptacles made of this material would serve either for fireless cookers or ice-cream freezers. Incandescent light bulbs would need no electricity if made of one-way-heat glass. Though glowing with light, they would be perfectly cool to the touch; yet a metallic rod, blown into the bulb (which incidentally need not be a vacuum), might be exteriorly attached to an otherwise fuelless grid. Holding the bulb in your hand, you could use the metal for a soldering iron.

Here, among other things, would be one solution of the problem of cold light. The light-giving substance would not be cold, of course; but its heat would be shut in.

Is any such magic one-way-heat material known? Of course not. I am suggesting that you make a billion dollars by inventing such a material. Conceivably, it might be done by the electric or magnetic treatment of some material—or of many materials, so as to make the substance transmit heat in one direction or the opposite, alternately, at will of the manipulator, as we can reverse the flow of an electric current.

On a larger scale, the material would serve to make a steam boiler, for example, that would operate without a furnace, actuated only by heat from the atmosphere; accentuated, if conditions permitted, by direct rays of the sun.

Do you see the billion dollars in such a material? In this country alone, it would supplant half a billion tons of coal.

THE clues? They bristle in any modern presentation of the interrelations of energy and matter. Heat may be regarded as the basic, primordial energy, which manifests itself as static electricity and magnetism in the intimate relations of protons and electrons; as chemical affinity in the

Take it with you— and *prevent* sunburn!

Buy Hinds Cream in the 50c and $1.00 sizes. You get more at less cost.

WHEN packing for a trip, slip into your bag Hinds Honey & Almond Cream—as a wise precaution against sunburn and windburn.

It's the hot summer sun which does the damage. It parches the skin—freckles and burns it unmercifully.

Always, *before* going outdoors, pat Hinds Cream on your face, your neck, arms and hands. Powder thickly over it. Then your skin won't get sunburned. Because Hinds Cream, with powder over it, prevents sunburn. *Keeps* the skin soft and fresh—no matter how hot the sun. Hinds Cream also cools and soothes a skin already sunburned.

And it's especially good as a powder base. Try it and see how it keeps the powder on for hours.

Try Hinds Cream. We'll send you a sample bottle. Just fill in the coupon below and mail it today.

HINDS
Honey & Almond
CREAM
REG U S. PAT OFF

Try HINDS CREAM

Prevents windburn	Makes powder cling to face
Prevents chapping	Smooths "catchy fingers"
Softens skin	After shaving
Protects skin	Protects against alkali
Cleanses skin	Protects from hard water
Soothes skin	For children's skin
Softens cuticle	Makes enlarged pores normal

LEHN & FINK, INC., *Sole Distributors*

Public Address System

By-products of your telephone

THE microphone, familiar to the radio world, has been called "younger brother of the telephone." It is but one of a family of products which owe their existence to the communication system engineers and to the men who made your telephone at Western Electric.

Forty-five years' experience as manufacturers for the Bell System has brought not only a telephone that is the world's standard, but also a Vitaphone to give a voice to the motion picture screen; an Audiometer to test the hearing with accuracy never before possible; an Audiphone which gives new aid to the hard of hearing; an Electrical Stethoscope to amplify the faintest heart sounds; a Public Address System to carry a speaker's voice to crowds of thousands and tens of thousands.

Making telephones that are the world's standard, Western Electric has now broadened its field of activity to include the manufacture of many other types of equipment to communicate sound, and in so doing has immeasurably broadened its opportunity to serve.

interplay of atoms; as "temperature" in the interplay of molecules.

We may measure all energies in terms of heat; and discuss heat in terms of matter. Professor Eddington tells us quite casually that the sun is giving out 120 billion *tons* of heat annually. (Incidentally, it is heat liberated by the hydrogen-helium process.) Another physicist suggests that sunlight perhaps creates 80,000 tons of matter (protons and electrons) annually here at the earth's surface.

Sir J. J. Thomson, discoverer of the electron, conceives that energy which is the equivalent of heat may be transmitted in a solid by the sliding of chains of electrons between rows of atoms arranged in the form of a lattice of crystal-like structure. Might not the direction of such "sliding" be controlled, as we control the electron-flight we call an electric current?

The fact that the "crystal detector" of the simplest radio receiver appears to let energy through in certain planes, and in one direction only, offers a worth-while clue.

A dozen years or so ago, a schoolboy in Yonkers observed certain curious fluctuations in the receiving power of his homemade wireless apparatus. He induced a relative to bear the expense of taking out a patent on the improved circuit he was led to devise. A few years later, the lad was famous as Major Armstrong, discoverer of the "feed-back" circuit; and it was currently reported that his first royalty check, after his boyhood patent had been validated in the courts, was for a half-million dollars.

I, for one, shall not be surprised if some lad who to-day is similarly experimenting with a homemade radio set should ferret out a relation between electric currents and heat transmission that eventuates in the discovery of a one-way-heat material or method, the basic patent on which outvalues all the radio patents in existence, a hundred to one.

A pipe dream! All great inventions were pipe dreams at first.

Factory-made Gold: Meantime, there are other possibilities, quite different, but no less alluring, for which the study of your radio apparatus might put you in training. The making of a billion dollars' worth or so of the most merchantable of all commodities, gold itself, is among them. For the old problem of the alchemists is no longer a scientific heresy.

On the contrary, the newest discoveries in physics make it clear that the creation of gold by transmutation is theoretically possible, even probable. Moreover, they reveal the precise changes by which allied elements, notably mercury, thallium, and lead, might be transformed into gold.

Large atoms are built up, it appears, chiefly of helium atoms, but these in turn, as we know, are made of hydrogen atoms, each of which consists solely of one proton and one electron. In the last analysis, then, atoms may be considered as made solely of protons and electrons.

Atoms are built on the same plan—a nucleus and an orbital region. All the protons are in the nucleus, and about half of these (in large atoms many more than half) are closely bound with electron mates. It helps one better to visualize the conditions if one thinks of these as married protons, living with their wives at the heart of the atomic colony.

Your pipe can be a cheer . . or a chore!

IT DEPENDS on what you feed it. Put it on a regular ration of Prince Albert and it will yield you pleasure, without stint or limit. "Never," you will say, "has the old pipe tasted so good." There isn't the ghost of a doubt about it. Just try it!

As you open the tidy red tin, close your eyes and drink-in that rich, rare aroma. You can hardly wait to get the taste of tobacco that smells as good as that. Then the big moment: You load up and light up. That's Prince Albert, Men, prime favorite of veteran smokers.

Cool as a magistrate fixing a fine. Sweet as the news that you won't have to pay it. Mild as a wifely rebuke for having spent too much on her birthday present. Mild, yet with that full tobacco body that satisfies your smoke-taste to the limit. A smoke!

Buy yourself a tidy red tin of P. A. and give your pipe a chance to deliver capacity joy. No matter how settled you appear to be on a smoke-program, try Prince Albert. Millions of pipe-happy men declare that no other tobacco is like it. You'll say so.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—the national joy smoke!

"What's the big secret, Dad —a new razor?"
"No!—
Mennen Shaving Cream"

You *feel* the difference -- others *see* it

More men buy Mennen—the Improved Shaving Cream—on the enthusiastic recommendation of their friends than in the case of all other shaving accessories combined. To know the reason for this enthusiasm, you must try Mennen *dermutation*—therefore a Mennen shave.

Mennen *dermutation* goes into action the instant you start lathering.

Mennen *dermutation* does even more. It flattens the tiny "mounds" around each hair so that your razor glides smoothly over the face without nicking the skin. That's why there's no smarting and soreness after a Mennen shave.

Mennen soothes, tones up and conditions the skin *after* shaving. Your complexion is clearer and healthier. You feel the difference —others see it.

Buy a tube of Mennen on your way home tonight. If it does not give you the quickest, smoothest, most luxurious shave in your experience—if your face doesn't feel better and look better—we'll return what you paid for the tube.

Now that you've had a taste of real shaving luxury, you'll want a *super* luxury—Mennen Skin Balm *after* shaving. Gives a cool, pleasant tingle—is mildly antiseptic—and has a clean, masculine fragrance. 50c for a big tube.

Mennen Talcum for Men, the perfect finish for a perfect shave, removes the shine, but doesn't show. Tinted to match the skin. Fine, too, for "all-over" use on hot days and after a bath. 25c a can at any drug store.

Jim Henry
(Mennen Salesman)

MENNEN

The Improved

SHAVING CREAM

The remaining protons, unmated, may be thought of as a colony of bachelor protons, surrounding the married quarters. The number of bachelor protons in any atom determines absolutely the rank of the element, and, with that, the physical and chemical properties it presents.

For each bachelor proton, there is one spinster electron in the outer orbit, circling at a distance, in a course of prescribed character, like the orbits of the earth and the other planets about the sun. One or more of these spinster orbital electrons may be temporarily driven outside its atomic orbit without changing the essential character of the atom.

But if a bachelor proton moves out of his colony there is the very dickens to pay.

To illustrate: There are exactly eighty bachelor protons in the nuclear colony of every mercury atom in the world. Now, the residents of the married colony may vary to the extent of at least six couples without affecting the atomic status. But the loss of a single bachelor proton would change the mercury atom into gold; for any atom with seventy-nine bachelor protons is the royal metal, and none other.

But note this curious yet easily explicable anomaly: whereas, one or more mated couples might migrate from the married colony without changing the atomic status, yet the defection of one mated electron would be disastrous to the atomic autonomy—for the reason that the deserted husband would immediately move out to the bachelor colony, and thus add one to that company. The erstwhile mercury atom, with eighty-one bachelor protons on guard, changes into thallium.

On the other hand, a similar marital misadventure in a gold colony will at once demote the gold atom into a mercury atom.

Yet another way in which a mercury atom might be transformed into a gold atom would be by having a wandering spinster electron fly comet-wise near enough the nucleus to be seized on by a bachelor proton. After such marriage by capture, the newly-wedded pair would shift, naturally, to the married quarters, leaving only seventy-nine bachelors on guard—and thus again our mercury atom becomes gold.

THIS by no means exhausts the atomic possibilities. If you could persuade uranium lead to throw out an electron from its nucleus, to be followed by two helium nuclei, the lead would be transformed into pure gold.

Or perhaps you might prefer to make the assault from the other side, attempting to build up a smaller atom into gold, instead of tearing down a larger one. Conceivably, an iridium atom, in a helium atmosphere, amidst a tornado of electrons might have its magnetic conditions so disturbed that a helium nucleus would be swept into the iridium nucleus. Presto! No longer iridium, with seventy-seven bachelor protons, but gold, the royal metal; since the helium nucleus carried the two necessary bachelor protons that turned the trick.

Conceivably, whatever the other conditions, some catalytic agent must appear on the scene to cause the new chemical to combine and exercise the strangely persuasive influence of its kind. Some amateur radio-telegrapher, experimenting with high-frequency currents in various media,

A Simpler and Different

Electric Refrigerator

The Creation of General Electric

GE Refrigerator

HERE is a new development in electric refrigerators for the home that every person interested in a refrigerator will want to see —the creation of General Electric.

It marks an entirely new conception of electric refrigeration. It marks an entirely *new* type of icing unit—a type unlike any other you have ever seen.

The entire mechanism of the General Electric Icing Unit is housed on top of the cabinet in one hermetically sealed casing. (Note illustration.) That is *all* the mechanism—none below the box. None in the basement. There are no pipes, no drains, no attachments.

All bulky machinery is eliminated —virtually all servicing. Operating automatically, you need never touch it—never oil it. Current consumption is reduced to a minimum.

The result of fifteen years of intensive research

This new-day refrigerator embodies the best thought of the leading electrical research organization of the world.

It has reduced electric refrigeration to a point of *simplicity* which makes it almost as easy to operate as an electric fan—and almost as portable. You may place it anywhere—move it anywhere. Just plug it into any electric outlet and it starts.

The General Electric Refrigerator —designed to accommodate this revolutionary icing unit—has distinct advantages. It can be installed anywhere. It maintains a most uniform temperature. It needs no attention. It is unusually quiet. It is always clean because the circulation of air through the coils drives dust away—preventing it from settling.

You will want to see this refrigerator. But, meanwhile, send for booklet No. 7-A which tells all about it, including the various sizes which are available.

More Deliveries
—*and at less cost!*

BUSINESS houses in 43 lines of trade have adopted this quicker, more economical, more efficient delivery equipment. The Harley-Davidson Package Truck is "first through traffic"—dependable—amazingly inexpensive in operating cost—can always be nosed into a small space at the point of delivery.

Use this time-saving, money-saving delivery for extending your trading radius, increasing phone orders, building customer goodwill. From an advertising standpoint alone this type of delivery service will be a big asset to your business. It attracts favorable attention everywhere.

Let your local Harley-Davidson dealer show you how the Harley-Davidson Package Truck is building trade and cutting costs for others in your line of business.

Mail the coupon for illustrated literature, prices and details.

might accidentally discover such an agent, as Perkins discovered the secret of analine dyes when a student, while trying to make synthetic quinine; or as Nobel discovered the way to make dynamite, through the chance observation of the dripping of a few drops of carelessly spilled collodion on the clay floor of his workshop.

Each of these casual discoveries led to a billion-dollar industry. But these industries had to be slowly developed. Salesmanship was required to back the genius of invention.

With factory-made gold, the case would be quite different. You need but cart your manufactured gold to the mint, and by the process of stamping it becomes money.

As a matter of fact, it isn't necessary that you manufacture your gold or turn it into money. It will quite suffice to have discovered a method by which it *can* be manufactured, at a cost significantly less than the cost of mining natural gold. Prove that you can do this, and any European government will gladly give you a billion for your secret. War debts would no longer be a bugaboo to any nation that could make cheap factory gold.

But you don't have to go so far afield. Uncle Sam could use more than nineteen billion dollars' worth of gold to advantage, to retire his I O U's—to say nothing of the various state and municipal governments that have outstanding bonds to the tune of another ten billions.

No, you need not worry about the selling end of the proposition, when what you have to offer is the secret of making a factory into a literal gold mine.

Of course all governments will abandon gold as the standard yardstick of values as rapidly as legislatures can be induced to function, after factory gold has flooded the market. But no such radical change as that can be achieved except by slow stages. You will have had your billion, and will have converted it into real property, long before the smash comes.

Digging for Heat: It seems rather like an anti-climax to turn from atom juggling to work with even a glorified pick and shovel. But there is one other billion-dollar opportunity so alluring that I must refer to it, even though it concerns so prosaic a theme as the digging of a hole in the ground.

I refer to the project of tapping the inexhaustible supply of heat that awaits release from the depths of the earth's crust.

Everyone knows that the heat is there; but no one hitherto has shown us how to get in touch with it, and let it do the major part of the world's work, as it well might.

We laboriously dig or bore into the shell of the earth to get a limited supply of fuel. If we were to bore a little deeper, we might tap an inexhaustible supply of heat.

Only a few thousand yards below the surface, the earth's interior is everywhere a caldron of fire, or its equivalent. Mostly solid stone, no doubt; but stone so hot that it would turn water instantly into steam.

Fortunately, our oceans are now blanketed from this furnace, else the earth would be uninhabitable. But here and there a leak occurs, as witness hot springs, spouting geysers, and volcanoes in action. The five-mile plume of steam that occasionally hangs above old Vesuvius sig-

The Croix de Guerre of American Achievement

A Democracy's Decoration for Distinguished Merit

You will see this emblem only on jewelry stores of character

THE GRUEN PENTAGON

No king created it. No parliament commissioned its design. No government committee has accorded it official designation.

It simply happens in the course of everyday American activity that individuals desire to honor one of their number, and that in seeking a tribute worthy of distinguished merit, they select the Gruen Pentagon.

Certainly, nothing could be more democratic than this unofficial adoption of America's accepted presentation watch.

For the Gruen Pentagon has become that as authentically as if it were solemnly appointed for the purpose. Hundreds of organizations in American commerce, industry and politics have recognized it.

By sheer frequency of individual selection, the Gruen Pentagon has won the title so aptly applied to it—the Croix de Guerre of American Achievement.

Who first called it that we, its makers, have never known. The only explanation we can offer of how the Pentagon has won its present standing lies in the particular qualities of the watch itself.

It is, first of all, unique. Its patented shape identifies it immediately wherever it is worn.

But its five gracefully rounded sides give it more than beauty and distinctiveness.

The Pentagon can not tip over in the pocket. Keeping the upright position at all times permits its finely finished parts to operate with greater uniformity, hence with more constant accuracy.

The Gruen *Precision* movement, too, which is used in every Gruen Pentagon, represents the Guild's highest standard of timekeeping excellence.

For the retiring official, for the fellow-worker who has won promotion, for the valued employe who is passing a milestone, for the son who has won academic honors, the Gruen Pentagon is now widely recognized as the logical tribute.

The Gruen jeweler nearest you, always one of the very best in your community, can show you the Gruen Pentagon pictured here, as well as many others, ranging in price from $2500 to $75—including the Paladin model at $250.

Consult him about the details of the presentation. He can give you valuable help.

PRECISION

Trade Mark Reg.

Every Pentagon carries this GRUEN pledge mark, placed only upon watches of finer quality, accuracy and finish. Made only in the Precision workshop

Among prominent persons who have been presented with the Gruen Pentagon:

General John J. Pershing
Hon. John W. Davis
Admiral W. S. Benson
Hon. James M. Cox
Mr. Martin Edward Trapp
Mr. Claude H. Foster
Mr. Joseph W. Martin, Jr.
Mr. Frederick T. Steinway
Justice Samuel J. Harris
Mr. Howard Wurlitzer
Mr. C. W. Nash

There's a refreshing deliciousness in their piquant tang!

THESE sizzling summer days, what a blessed relief it is to steal away for a cold bottle of your favorite carbonated beverage. The tingling *tang* of these delicious drinks brings an instant supply of new energy. And they *satisfy* thirst in a really delightful way.

SPONSORED BY

There's a BOTTLER *in your town*

Bottled Carbonated Beverages

These taste-tempting drinks also are known by less formal names . . . *tonics* in New England . . . *soda water* in Dixie . . . *soda pop* in the Mid West . . . *soft drinks* in the Far West . . . and we all know the *ginger ales*. Call them what you will, but drink your fill—they're good and good for you!

nals a billion-dollar opportunity to all the world.

Why has this opportunity been so long neglected? Chiefly, I suspect, because the supply of coal was nearer to hand. Maybe, if our periodical coal strikes had been longer and more effective, Old Mother Necessity would have taken a hand, and before now the coal mines would have been as much out of date as windmills and overshot water-wheels.

To-day men scramble for possession of million-dollar mines and oil wells, and quite ignore the billion-dollar furnace that lies beneath the meanest acre of the earth's surface—just as formerly they scrambled for million-dollar gold mines, and neglected the billion-dollar aluminum deposits right beneath their very feet.

Incidentally, the efforts of others to gain a lesser prize give clues to this greater prize. In digging for oil, men have developed tools and methods that have carried them halfway toward your goal.

The most successful oil drill has bored a hole to the depth of 7,745 feet. You have but to perfect a method of boring, say, twice as deep, and the world is your orange.

WHEN you "strike heat," you will tap a gusher potentially worth all the oil wells plus all the coal mines of the world. The first spout of steam from your heat well will signal a new economic era.

Oil wells that produced thirty-one billion gallons of fuel oil in this country alone last year, and coal mines, with an output of more than half a billion tons, will be potentially as much out of date as peat beds.

You may drive your heat well in the handiest corner of your back yard, wherever you live—and the cars of millionaire manufacturers or their representatives will block the highways as they crowd to your door to bid for the right to use your method.

Yours is the secret of inexhaustible power, with no cost beyond that of first installation—a discovery that may well cut the cost of production in half for a thousand important industries; that may shift whole populations to new manufacturing centers, give the labor world a four-hour day and four-day week, and bring mankind a long step nearer the industrial millennium.

Let us pause on that note. After all, what is mere money, compared with the contribution to human health and happiness that such a discovery connotes? Look at the matter in that light, and no mischance could rob you of your reward.

If your basic patents held, you would be sure enough of the billion dollars. But, in any event, you could count yourself, in the coin of human gratitude, at least a trillionaire.

"MARVELS OF THE MOON" is the title of an interview with Professor William H. Pickering, who is one of the foremost astronomers of the day. In this article, appearing next month, scientific facts are linked with alluring astronomical speculation. Is there life on the moon? Does the moon affect our climate, our crops, our health? When will the moon occupy one fixed place in our sky, and be visible only from one side of the earth?

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Your Family Tree

(*Continued from page 25*)

reached. His era is usually a sticking point, as before the latter part of the ninth century few people had last names.

If there were two men named John in the same neighborhood, and one of them lived at the foot of a hill and the other next to a church, they were spoken of as "John Under-hill" and "John Church."

That is where many of our modern family names started; such as Hill, Underhill, Church, Pond, Rivers, Lake, Wood, Mills, Brook, Lea (or Lee or Leigh), Forrest, Stone, and so on.

Other folk were known from their trades—such as carpenter, fisher, miller, wheeler, tailor, and the like. Because so many were makers or artificers of various commodities—blacksmiths, goldsmiths, silversmiths, tinsmiths—more people were called "Smith" than any other one name.

Again, sons were saddled with the names of their fathers, along with their own, to distinguish them from other lads of the same given name; as Robertson, Johnson, Jackson, Wilson; meaning son of Robert, son of John, son of Jack, son of Will. Others took their names from their towns or cities.

Before last names became a national custom, the tracing of pedigrees was possible only in families whose titles or fortunes made it necessary to keep such pedigrees straight.

Now, what does the whole thing amount to? What is gained by going back in an unbroken line to such-and-such a medieval hero or monarch? I have tried to prove that nearly everyone alive in America to-day has as much claim as has anyone else to call himself or herself a direct descendant of William the Conqueror or of Charlemagne or of any other ancient celebrity.

But, even if a chosen few persons only could claim it and if the rest of us could not, what advantages would those few select boasters have over you and me?

Said cranky old King James First, of England (who may have been an ancestor of yours), as he scribbled his signature to a courtier's "patent of nobility":

"Any monarch can make a Nobleman. But only God can make a Gentleman."

I HAVE sifted the whole thing down, perhaps correctly, perhaps not, to the following handful of conclusions:

If it is a fact that in you is one forty-millionth of some great man or woman of bygone days, the only advantage I can see that it gives you is something high to aim for in your own character and achievements.

Charlemagne was my ancestor? Very good. Then it is up to me to shape my life in such a way as to carry on the torch of his greatness as far and as loftily as I can, so that those who come after me will be able to look back on something splendidly worthwhile in character or in fame, which shall incite them, in turn, to great deeds.

It is my duty to live up to all that was best in him; so that his good qualities shall be the heritage of my grandchildren in much more than one forty-millionth degree.

"—the candy dentists recommend"

Safe for tiny teeth

"This is the kind of candy I like my own children to have," the dentist told the mother.

"These little Life Saver mints are much better for tiny tots. Try the Wint-O-Green flavor. Children love it."

* * *

Every growing child craves sweets. Active little bodies demand sugar. But children's candy must be pure—and they should not overeat.

Life Savers, the little candy mints with the hole (life saver shape) answer this problem in just the right way. They are china-hard and deliciously flavored.

This means that Life Savers are eaten slowly. Children suck them to make these wonderful flavors last longer. Little tummies are not upset. And Life Savers are kind to tiny teeth.

They're safe and wholesome. You may conscientiously be generous with Life Savers for they are the ideal candy for little folks.

Six flavors are displayed at all good stores: Pep-O-Mint, Wint-O-Green, Cinn-O-Mon, Lic-O-Rice, Cl-O-Ve, and Vi-O-Let. Five cents a package.

Good for little tummies

P. S. **Have you tried LIFE SAVER FRUIT DROPS? Three refreshing flavors—Orange, Lemon and Lime. 5c a package.**

Safe for tiny teeth

Pipe Smoker Finds the Right Tobacco for the Tropics

Evidently, one of the problems of pipe smokers who live in the tropics is to find a tobacco that high temperature will not spoil.

Mr. R. G. Rigg of Colombia, S. A., was happy to find that he could enjoy in South America the same tobacco that had been his favorite since 1908, when he lived in Iowa.

Read his letter:

October 6, 1926

Larus & Bro. Co.
Richmond, Va., U. S. A.
Gentlemen:

Most all well-known tobaccos smoke well in a cold or temperate climate, but very few in a tropical climate. They are mostly too heavy, don't seem to be blended right—at least that is my opinion gained from practical experience.

However, Edgeworth is the same in any climate. Again that is my opinion gained by practical experience.

I cannot get the same pleasure out of any brand of tobacco that I can out of Edgeworth, and I have tried many—and paid fancy prices too. It costs real money to smoke imported tobaccos here; the import duty is very high.

Anyway, we cannot have everything we would like in these countries, so we hold on to all the little pleasures possible. Now you know why I smoke Edgeworth.

Yours respectfully,
R. G. RIGG,
Cartagena, Colombia, S. A.

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 256 meters.

If Charlemagne was also immoral and a tyrant and a super-trickster (which he was), let me strive with all my might to root those rotten inheritances out of my own nature.

If enough of us would do that, and for a long enough time, then assuredly ancestry would be something justly worth bragging about. We should not need to *claim* descent from great men. Our very lives would prove our lineage to all the world.

On the other hand, if I cannot prove my descent from anyone better than a drunken wharf-rat, I think it is in my power—if I try hard enough—to rise far above my inherited defects, and to accumulate a bright mass of qualities as a memory and an active force to pass on to the next in line—to eradicate the worthless tendencies he handed down to me and, in their place, to leave to my descendants a golden heritage of character.

FOR many years I have been a breeder of pedigreed collie dogs. By actual experiment, I have proved that I can develop dogs which have less and less of their ancestors' bad traits, and more and more of their good ones. If that can be done with dogs, it ought to be a hundred times easier for intelligent and inspired humans to do it.

If you had a weak and sickly ancestor, the chances are that he may have left you a slight predilection toward weakness and sickliness.

Nineteen times out of twenty that predilection can be overcome, and in its place you can leave your grandchildren somewhat more of a tendency to ruggedness, which they, in turn, can develop still further for those who are to follow them. It is so in mental or moral qualities, as well.

Theodore Roosevelt was a puny lad, scourged by ill health. It was a heritage. He fought against it savagely until he had built up his fragile constitution into iron-and-whalebone ruggedness—a quality that his children also have.

My own grandfather inherited from his father a giant strength and a wonderful constitution. An accident and a long illness left him a supposedly helpless invalid. His doctor called, one day, to minister to his half-helpless patient. He found two men-servants lifting the invalid onto a saddle horse. To the physician's amazed protests, my grandfather said:

"The outside of a horse is the best tonic for the inside of a man. I've robbed my future children of their right to health. I'm going to start, now, paying them back. I am going to make myself not only a well man but a strong man."

As he spoke, he fell from his horse in a dead faint. But, to the horror of his doctor, he tried the same experiment next day; and so on, until he was once more sound and athletic.

That was a heroic remedy, of course; and perhaps it was rashly foolish. But it is an interesting fact that he left ruggedly powerful sons and grandsons, who carried on the torch his shaky hand had lighted.

That kind of thing, I believe, is the only actual gain in having had illustrious ancestors. The old slogan, "Blood will tell!" is true; but bad blood tells as true a tale as does good blood.

It is only when each successive generation carries on the torch that good blood can be made to "tell." And bad blood can be eradicated.

In olden days, family traditions were passed along from father to son for centuries. These traditions can be summed up in the hackneyed motto:

"Noblesse oblige."

For instance, children of certain families were taught that honor and honesty, clean-living and generosity were ancestral heirlooms of their line, and that a low or dishonorable deed could not be committed by any of them, through sheer family pride.

Others were told that their forefathers were warriors or mighty hunters, and that the torch of a clean, athletic physique must be passed along.

It was such families which justified the theory that "blood will tell." However, there were folk then, as now, who had no such exalted family traditions—indeed who had no traditions at all—and yet whose own self-respect forced them to make the best of themselves.

The proudest and oldest hero blood of all France's nobility was represented among the officers who led the terrible cavalry charge through a blinding snowstorm, at Eylau, in 1807. But, five lengths ahead of the bravest of them charged a man who had begun life as a stable boy.

His father also had begun life the same way, but had worked his way up until he became an innkeeper. The son, Joachim Murat, forced himself upward until he became a marshal of France and king of Naples.

By his flaming courage and his unbacked personal ability, Murat rose. This "ancestorless man" outdid in valor the nobles who traced their lineage back a thousand years, and in whom was the many-generation tradition of dauntless bravery.

BUT the man to whom the major credit belonged for the victory of Eylau, by the way, was the self-educated son of a village barrel maker, Michel Ney, who became Prince of the Moskva and Napoleon's foremost marshal.

On the other hand, in an earlier century, there was Sir Philip Sidney, aristocrat of the aristocrats, and scion of an endless line of English nobles.

As he was going into battle, Sidney noticed that a fellow officer had lost some of his armor. Instantly, he stripped off his own armor and forced the less fortunate man to wear it.

Unprotected, Sidney was struck by a bullet from which his discarded armor would have guarded him. He lay dying on the battlefield, in the agonies of thirst.

A cup of water was brought to him. He was about to drink it eagerly, when he saw a wounded soldier, near by, who was gazing at the water as a famished dog might look at a bone. Sidney handed the cup to the sufferer, saying:

"Your need is greater than mine."

Thus, once again, ancient family traditions of courtesy and self-sacrifice were justified.

Lasting greatness is not bred in a single generation but only by the long and unremitting carrying on of the torch. In every walk of life, and in every century, there are thousands of mediocre folk and nonentities to every one illustrious man or woman. The torch has not been carried

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

forward steadily enough nor by a sufficient number of persons.

It is not an impossible thing, surely, for us to try to lift the torch just an inch or two higher than did the hand which last let it fall; or at least to live up to, in some measure, the examples of goodness or greatness bequeathed to us; or to rout out a few of the defects which came down to us along with these good traits.

This is not visionary idealism, but sound logic and simple sense. Also, it is all the practical good that any of us can hope to gain from the knowledge that we are descended from a mighty ancestor.

If a self-willed nonentity boasts, "My grandfather was a United States senator," or, "My great-grandfather was one of the generals who fought at Washington's side to make America a free country," it is as ignoble as to admit:

"My grandparents made themselves millionaires. But I have not bothered to hang onto such of their wealth as came down to me; nor to use any of my inherited talents to keep myself out of the failure class."

Ancestors are fine things—but only as examples, good or bad. It is perhaps the grandest of all ambitions, to decree:

"I had no ancestors to boast of, but you can bet my descendants will have!

"Even the far descendants, who may never happen to hear about me, are going to be better and wiser and stronger because I built up my mind and my body and my character so strongly that some of my excellences are *bound* to pass on to future generations!"

The Sea is a Hard Master

(*Continued from page 28*)

her counter before the middle watch was done. Farther in, the ice floes began to climb up on the beach from the pressure of the gale. Pretty soon, pack pressure carried the "Huntsman" into shoal water, where she grounded. The next thing the poor devils aboard her knew was that the ice had sheared her hull off right at the water line. They clung to the wreckage, but it was too late. Fingers of the ice and sea clutched at their ankles and pulled them right off to their deaths.

When dawn broke Uncle Isaac climbed out to the Point for a look. He was awfully worried about the "Huntsman," which was commanded by an old friend of his. When he saw no sign of her, he knew the worst had happened.

Suddenly, he thought he saw something on a rock that was uncovered at low tide about five miles from shore. With his glasses he made out the figure of a man clinging there. It took us all day to get that man. He had both legs broken, and was close to death from exposure and agony from his injuries; but he lived. He was the only survivor of the good ship "Huntsman."

In 1897 I got started on Arctic work. Since then I have kept on expeditioning two seasons out of three. This was natural, because the Bartletts of Brigus have been sailing Down-North for nearly one hundred years. It was a Bartlett who

To Men ....

who think their faces are clean

This cream goes into a clean-shaven face pink--and comes out a dingy grey

PORE-DIRT is in *every* face. It greys the cleanest complexion. It defies the daily wash, so that you think your face is clean when it isn't!

Where does it come from? Dusty roads, soot-belching chimneys, passing motors—the air teems with millions of minute particles of grime.

These particles are so small you can't see them. They are smaller than the skin pores; they get packed under the skin. There they hide, laughing at the wash cloth that cleans only skin surface.

If pore-dirt is allowed to remain too long, a blackhead results. But generally it merely greys your skin, gives it a sallow look as though you had been up late the night before.

Highly magnified cross-section of the skin showing how pore-dirt becomes imbedded in the pore. Surface washing cannot remove it.

The pore after Pompeian Massage Cream has cleansed it. The cream first loosens pore-dirt and then rolls the dirt out on the face.

"Unwashable dirt," cosmeticians call it. But a minute's massage with Pompeian Massage Cream rolls every bit of it free.

Goes in PINK and rolls out a dingy GREY! Try it!!

Prove to yourself that Pompeian Massage Cream begins to clean where ordinary cleansing stops. First wash your face and hands as clean as you can.

Then scoop a little cream from the jar and massage it into your face. Keep on rubbing until the cream rolls out of your skin in tiny pellets.

Note this amazing thing—the cream that went into the skin a clean pink rolls out a dingy grey. The grimed-in dirt is now removed. Your pores can once more fully breathe. Your skin quickly responds to the invigorating massage.

Your face looks, feels, and *is* really clean!

FREE test convinces thousands. Test the benefits of Pompeian Massage Cream on your face — FREE. Fill in the coupon and mail it to us — right now while you are reading this magazine.

POMPEIAN MASSAGE CREAM

Pompeian Laboratories, Dept. 300 G
595 Fifth Avenue, New York City

Gentlemen:

Please send me a generous trial tube of Pompeian Massage Cream . . . enough for three facial massages.

She came down the gang-way a picture of health

THERE she was, radiant and refreshed, a "new" woman after a month at a European Spa, drinking its saline waters.

To the great saline springs of the Continent—Vichy and Carlsbad, Aix or Weisbaden—doctors from all over the world send their wealthy patients. Here a variety of ailments are treated, and good results are obtained in all for a very simple reason—

There is nothing like a saline solution to wash away the poisons of waste which too civilized people accumulate within themselves—the self-poisoning (Auto-Intoxication) which causes not only headaches and bad complexions, stomach derangements and acid conditions, but also rheumatism, nervous disorders, and a host of other ills.

Sal Hepatica, the standard effervescent saline, effects the same benefits as the "cure" at the famous saline springs. Like these health-giving waters, Sal Hepatica effectively clears away the stoppage that is so often the real cause of bad complexion, headaches, lethargy and similar ills.

Promptly and safely, Sal Hepatica flushes away waste products, neutralizes acidity and corrects self-poisoning.

At the first sign that waste products are not being thoroughly and regularly eliminated, take Sal Hepatica. Its use is the approved way to relieve the many ills traceable to intestinal stoppage.

Dissolved in a glass of water, Sal Hepatica makes a palatable, refreshing drink. It may be taken on arising, or, if you prefer, half an hour before any meal.

Send for our booklet which explains more fully the benefits of Sal Hepatica.

worked Doctor Kane's famous vessel north, in the fifties. And it was myself, master of the "Roosevelt," that marched to within a hundred miles of the North Pole, in April, 1909.

A good many of my friends have thought I ought to be angry at Peary for not taking me to the Pole with him. But I think he did exactly right. I was not then a naturalized American, as I am now. And after Peary's terrible struggle to reach the top of the world, it seemed right that he should want only Americans to put up the Stars and Stripes when he got there.

Since that time I have commanded the ill-fated "Karluk" expedition; I took the "Neptune" north to the rescue of MacMillan, Fitzhugh Green, and other members of the Crocker Land Expedition; and only last summer I was wrecked off the Greenland coast in the schooner "Morrissey" of the Putnam Expedition.

I THINK the most grievous shipwreck I was ever a party to, was that of the steamer "Karluk." Her destruction caused me and my men to walk hand in hand with death for many weeks.

It was in the summer of 1913 that I went north as master of the "Karluk," the flagship of the Canadian Arctic Expedition. We had a noble band of scientists aboard. It looked to me as if we were headed for a fine big circus along the Alaskan coast.

There was a circus all right, but the ice pack cracked the whip—and incidentally the "Karluk." Just east of Point Barrow she got blown out to sea among the floes by a howling sou'wester. First thing we knew, we were jammed up in the ice.

We drifted west. Knowing something about ice, I figured the ship was a goner. The sun left us and it got cold. You'd have to play around in that white desert for a while to know how fearfully cold it could get. Old Klondike miners used to say that a loud crackle rent the air when they spat. We were just about that cold. I guess it was sixty below zero.

On New Year's Day we were all huddled below around the little stove. Suddenly, there was a rumbling noise. As near as I can describe it, it was like the singing you hear along telegraph wires on a windy night in the country. This meant pressure. With the pressure came an easterly gale. It lasted for ten days. At five o'clock on the morning of the tenth I was roused out of a sound sleep by a loud report like a rifle shot. A tremor ran through the ship. I threw on my parka and hopped up on deck.

All that day the poor old "Karluk" struggled in the death grip of the ice pack. At half past seven that evening I heard a splitting and crashing below me. The engineer and I ran to a hatch and held a lantern down into the hold. We could see water rushing into the old girl.

I hurried back on deck and ordered all hands to abandon ship. There was no confusion. Our food and ammunition were already on the ice, as we had built an emergency house of provision boxes near by. I sent an Eskimo woman to start a fire in the little stove we had placed there when we knew we'd have to abandon ship.

Then, all at once, I had a feeling that I wanted to be alone with the old ship during her last hours, so I sent all my men to the house.

I went down into the cabin, and sat and thought about what the "Karluk" had been through. There was a phonograph on board and about a hundred and fifty records. With the cracking of timbers and the rushing of waters around me I played tune after tune. As I played the records, I threw them into the stove.

When I came to Chopin's "Funeral March" I laid it aside. I knew I would soon need it. About an hour or so later the ship began to settle in earnest. Pretty soon the lower decks were awash. Putting the "Funeral March" on, I started the machine. When the water came rippling along the upper deck and into the hatch I ran up and stood on the rail. She took a header, and when the rail was level with the ice I stepped off. I turned and looked at her as she went down by her head into thirty-eight fathoms of water. I could hear the phonograph in the galley sending out the strains of the "Funeral March." Pushing my hood back I bared my head and said, "Good-by, old girl."

I LEFT the survivors of the wrecked "Karluk" marooned on Wrangell Island, and started back across the ice to Nome in the bitterly cold weather, so as to send a relief party after my men before they froze or starved to death.

I had with me forty-five dollars, which a friend of mine had loaned me some time before. This money had to get me back to civilization.

When I reached the desolate Siberian coast I got hold of one of the natives and told him I wanted to go east toward East Cape, where I might cross to Alaska.

"How much you pay me?" asked the native.

I figured it was pretty important that I hurry. So I said, "Forty dollars."

Right away I saw I had made a mistake. If I had been a business man, I would have said twenty dollars. I could tell this by the look in the fellow's face. He was used to trading fox skins and knew how a bargain should be made, each party beating the other party up or down. And here I had gone and left myself only five dollars leeway.

"Show me money," said the native.

But I had my dander up by this time. "No, by golly!" I said.

He said, "Maybe no got him."

I said, "You bring me to East Cape, me give you forty dollars."

Well, we kept this up for about two hours. Then he sort of got hoarse from yelling at me. I was hoarse too. But we were still at forty dollars, so he decided to take me. We traveled by dog sledge over the rough ice. It was hard work and the weather was cold. But we kept warm arguing about that forty dollars. Part of the time we would argue whether it was the right price or not. Part of the time we would argue whether I had it or not. When the native wasn't looking, I'd count it to make sure.

We went along this way for about a week. There was hardly anything to eat, and my feet were all played out. My guide seemed to be getting worried. I couldn't tell whether he was worrying about the forty dollars or about the danger of our not getting to East Cape.

My fears were realized when he came to me and said, "I go home."

"How about the forty dollars?"

Your Mistakes in English STAND OUT!

YOU can not hide your mistakes in English—they stand out sharply, giving others an unfortunate impression of you. You may not make such glaring errors as "He don't," "You was," "I ain't." But perhaps you may make other mistakes which offend the ears of cultured people, and cause them to judge you unfairly.

No one will correct *your* mistakes in English. People are too polite. They fear you will feel insulted, and unconsciously you keep on making the same mistakes. And, though you may think your English is good, it may be dotted with errors which *others* notice, and which destroy many of your opportunities for advancement.

What Can You Do?

For many years Sherwin Cody studied the problem of creating *the habit* of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day.

Under old methods rules are memorized, but correct habits are not formed. Soon the rules themselves are forgotten. The new Sherwin Cody method provides, on the contrary, *for the formation of correct habits* by constantly calling attention only to the *mistakes you make*—and then showing you the right way, so that correct English soon becomes "second nature." Already over 50,000 people have used this method with the most marked results.

FREE Book on English

A command of polished and effective English denotes education and culture. It wins friends and favorably impresses those with whom you come in contact. Now, in only 15 minutes a day — in your own home — you can actually see yourself improve by using Mr. Cody's "100% Self-Correcting Method."

A new book explaining Mr. Cody's invention is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if your vocabulary is limited, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now.

He said he had been thinking things over, and decided that he had a lot of deer skins back in the country that he had better get. He confessed that he knew forty dollars was too high a price in that part of the world for the job he had undertaken. He added he knew that if I got to a place where I could talk to some white man about it, I would find this out and refuse to pay.

The funny part about it was that when we came to a stopping place that night at another native hotel, my guide came to me and said, "Me want money now."

That made me mad. I yelled right back at him, "Not a cent!"

Well, we argued back and forth, he in his language and I in mine just as loud as we could shout. Finally, I decided I would be a good sport, and I gave him five dollars on account.

I then showed him the four ten-dollar gold pieces I had, besides. But that guide was so scared that when I got in touch with civilization I would find out he'd tried to cheat me, that he vamoosed with the five dollars. I never saw him again.

I made a thousand miles on this trip, and in the spring, when the ice broke up I had a relief ship go out for the men on Wrangell Island, who were too weak to get back to civilization as I had done.

DESPITE my many harrowing experiences in shipwrecks and in the Far North, some of my closest shaves of recent years have been aboard ships that weren't in trouble at all.

Sooner or later, a sailorman has to know how to handle himself after he falls overboard. The great danger is not being seen. Many a good sailorman has disappeared off his ship when nobody happened to be looking. I can imagine his feelings when he sees her sailing away, leaving him to the sharks.

A funny thing happened to me one day. Just before Christmas when I was mate in a barkentine, we sailed out of Sydney, Cape Breton, in a stiff northwester and the thermometer almost down to zero. In heaving up the anchor the fluke became caught in the ship's forefoot. We couldn't get it free. So I had a block put at the end of the bowsprit, a line rove through it and made fast to the anchor. The weather was so nasty and cold that none of us was very spry. I climbed down on a back rope and stood on the anchor's ring. First thing I knew, I lost my balance and tumbled off into the sea. As I was all snarled up in oilskins and pilot suit I was in no condition to swim.

By luck, the starboard fore brace happened to be hanging over the side and the ship was listed a little that way. I grabbed the rope and went up like a monkey, glad of the exercise after the shock of the icy water. In about six seconds I was sitting on the topgallant forecastle. Just then a cry broke out in the well deck amidship, "*Man overboard. The mate's gone over the side!*"

When the excitement started up I waited a bit. Then, just when all hands were figuring I'd drowned, I let out a yell: "*Yes, but I'm back again! Now, turn to, you cockeyed loafers!*"

As sailors are a pretty superstitious crowd, a disaster like a man disappearing over the side means to them Divine punishment.

WHILE I'm on it, let me say that superstition is one of the worst things among sailor-folk. It nearly did for a great friend of my family's, a Captain Halfyard, of Western Bay, near where we live.

The fall work was just over and Captain Halfyard sailed from St. Johns for home, where he was going to spend Christmas. My uncle John left the same December afternoon, a few hours later.

Next day a visitor to Western Bay would have seen a sad-looking group gathered around Captain Halfyard's house. Crape was on the door. His ship had just come in and reported that he had fallen overboard in the midst of a gale off Cape Conception. The poor widow and children were crushed with grief. They had looked forward to a happy Christmas. Now Death had put his black hand on their celebration.

Right about this time Uncle John's vessel came in. He had a dory already over the side, and hurried ashore. He ran all the way from the landing to the widow's house.

When he reached the edge of the mourning crowd, he filled his lungs and holloed as loud as he could, "*Captain Halfyard is alive!*"

There was wild excitement. And while the village wept for joy Uncle John explained things. It seemed his lookout had heard a "spirit" in the mid-watch of the night before. Luckily, Uncle John happened to be on deck at that moment, and he didn't think it was a spirit. He had the helm put down and nosed his vessel up in the direction of the "spirit." Five minutes later he pulled Captain Halfyard out of the sea, a pretty cold and tired ghost, but a very solid one.

Imagine the vitality of a man overboard during December in the North Atlantic, swimming around for nearly four hours in gale and blizzard without even a life preserver to hold him up!

When I told a writer friend of mine I'd never marry, because I loved the sea, he said:

"You don't really love it. It's a kind of insanity you fellows get, wanting to be wet and cold and ill-fed. When you say you love it and talk about the romance, it's all bosh!"

My friend was wrong. The mariner's life is just as full of adventure and romance as story writers and poets make it out to be. More so. In fact, sometimes I think a man who's been to sea all his life is far luckier than the landlubber.

But the sea is a hard master, and that's no mistake. Just ask any seafaring man.

AS A COWBOY ADVENTURER, participating in the famous Oklahoma run of 1889, John Noble (Wichita Bill) dreamed under the stars of a career as a painter, a dream that was realized when Paris and London recognized his genius. But in spite of this recognition he worked on for twenty years almost unknown at home. Isolated! Exiled! Next month you will read the story of his ultimate triumph in this country. To-day his pictures are sought after by collectors and museums the world over.

King of the Sand-Lots

(*Continued from page 19*)

in Providence that year and had been the daddy of a boy, you wouldn't long have been in ignorance of the league. It was the particular sensation of boydom. Every boy not in the league wanted to get there. Every boy who was "in" was a neighborhood hero. And at your dinner table, on the sand-lots, wherever boys met, you would have heard some new expressions from your boy: "You've got to *live* clean! You've got to *play* clean! You've got to be on the square!" And if you had asked who said that, the answer would have been, "Tim O'Neil!"

Tim was the self-appointed organizer and president of that boys' league, the grand arbiter of all disputes, the crowned and accepted King of the Sand-Lots!

The marvelous thing about the league, however, and about the other leagues of similar kind which rapidly followed it, was the absolute lack of connection with any agency other than Tim. The movement was without backing in the usual sense: no civic body, lodge, or school was sponsoring it. There was no philanthropy connected with it, no "uplift" committee; it hadn't even a regular headquarters.

A second league was formed, a third, a fourth. To-day there are six of these Tim O'Neil leagues, as they are called, comprised of forty-eight teams and seven hundred and fifty contracted players, whose ages range from fifteen up to twenty-three. There is nothing like it elsewhere in the country. From two to five thousand spectators turn out to the games. The leagues are entirely self-supporting, independent, self-governed, and in their ranks are some of the finest amateur ball players in the country. From them have graduated some of our leading professionals.

Yes, and more than professional ball players have graduated over these twenty years since Tim O'Neil first called, "Play ball!" A former governor of the state, the present mayor of the city, judges, lawyers, doctors, ministers, leaders in finance and business, are former Tim O'Neil ball players. To-day you will find Tim's boys making good in every walk of life, not only in Providence but elsewhere as well. Of course many of them would have made good anyway; but there is no doubt that Tim's "Live clean! Play clean! Be on the square!" has carried from out the sand-lots like a ripple in a calm pool. It has helped make preachers and millionaires.

TO-DAY, in Providence—and on all sides I heard this—Tim O'Neil's word about a boy is better than a bond. "He won't do it again, Judge. It's the last time this boy will be in trouble," and you can stake your last lone dollar on that boy. In twenty years not *one* boy for whom Tim has "stood up" has failed him!

He has reunited homes, taken understanding into homes where it was needed, set the runaway boy right again, made gutter-snipes into citizens of whom old Providence is proud. Many a big city's elaborate recreational and welfare program on which fortunes have been spent has done less than Tim on nothing.

And Tim—in all of these years his only reward has been the glory. He is still "just Tim."

Yet Tim O'Neil was pointed out to me as one of the richest men in Providence, or, as the editor put it, "in America"!

So, at No. 185 Eddy Street, in the tiny cubby-hole off the shop which does duty as an office, by a little battered and ancient desk, freshly dusted and put in order, I sat down to talk with Tim O'Neil, King of the Providence Sand-Lots. A black-and-white cat dozed in a nearby chair, Tim's coat as its bed. Tim was in shirt sleeves.

There was a twinkle in his eye as he regarded the desk, its brand-new blotter and perfect order. "That was my sister's idea," he smiled, "of getting me ready for this occasion. It's the first new blotter I've had in ten years."

TIM is slender, straight, clean-cut, and clean-shaven. When he was fourteen, he told me, he had joined a total abstinence society, to which two of his brothers also belonged. "We took the pledge then," he said, "not to drink. We've all kept the pledge, and been no worse for it."

And Tim was born in "Dog Town," now South Providence, where a "regular guy" was supposed to fight and "hit the booze."

There were seven children, among whom Tim stood fifth. His father was a machinist, and the whole family worked. Tim carried papers, went to church, swam in the bay, got into fights, and played baseball on the vacant lot across the street.

"Of course," Tim explained, "in those days we had no regular ball teams. The fellow who owned the bat was always captain, and a fifty-cent ball was 'swell.' We didn't always have a regular bat, and many a time I rummaged through the town dump for old kid gloves which could be made into baseball gloves.

"Usually, before the game got started, there'd have to be a fight to get the lot. Then, with the score tied, the bases full, and our best batter coming up, somebody would make a bad throw and bust a window. That meant we'd have to run for it. You'd be surprised how good a runner I became. In fact, I became a better runner than a ball player."

At thirteen years old, Tim was an errand boy in the down-town manufacturing jewelry center, earning his three dollars a week, but still carrying papers before reporting for work. He wasn't a model errand boy. Often he was gone an hour when the boss expected him back in ten minutes.

"You see," smiled Tim, "I'd start off with the best of intentions, meet another boy on the way, get to talking, and time'd fly before we knew it. Maybe a game of marbles would be to blame. Maybe we'd get to talking baseball. Once in a great while we'd steal a swim. But, darn it," he exploded, "*all* boys are like that. It isn't badness or laziness; it's just plain boy.

"The trouble with us older folks," he continued, and now there was a snap in his eyes, "is that we're too quick to forget our own boyhood. In blowing about what 'good boys' *we* were, we forget all about

America's Great Band Leader Glorifies The Harmonica

LIEUTENANT COMMANDER JOHN PHILIP SOUSA, noted composer of so many of America's favorite marches, has this to say of the harmonica:

"I am a great advocate of the Harmonica and especially endorse the Harmonica Bands which are winning sweeping popularity in the East. Mastery of the Harmonica lays the foundation for a musical career."

The harmonica is the easiest, surest, pleasantest introduction to musical appreciation and performance. It forms part of the music curriculum in public and private schools of numerous cities—and has been enthusiastically endorsed by leaders of thought as an important factor in musical education.

The NEW Way to Learn

A special orthophonic Victor Record (No. 20377) "How to Play the Harmonica" is now available for those who wish to learn by listening to the living voice of the instructor, and following the notes as they are sounded on his harmonica. Illustrated instruction sheet also included. Reverse side reproduces "Old Black Joe" as rendered on harmonica with piano accompaniment. At all dealers selling Victor Records, complete 75c.

FREE Instruction Book

Anyone can learn to play the harmonica by following the clear, simple, illustrated instructions given in our booklet "How to Play the Harmonica." Free at your dealer's—or write to

Better

FOR YOUR CAR ON TOUR

Your enjoyment on tour this summer will be made more certain if you install a set of dependable Champion Spark Plugs before you start. Your car will perform better under all driving conditions, because every dependable Champion Spark Plug is of two-piece gas-tight construction, with sillimanite insulators and special analysis electrodes. That is why two out of three motorists the world over buy Champions regularly.

Car manufacturers recommend, and hundreds of thousands of motorists are changing spark plugs every 10,000 miles to insure better and more economical car operation. This is true, even of Champions, in spite of their world-wide reputation for remarkable long life.

***Champion*— for trucks, tractors and cars other than Fords—and for all stationary engines — packed in the Blue Box 75¢**

***Champion X* —Exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢**

the faults we had and the mischief we got into. Well, maybe we were good; but we were just a little bad, too. I've known many boys in my time, but I've yet to find one whom the Lord made all good. And," Tim said it softly, "I've yet to find a boy whom the Lord made *all bad!*

"'There isn't a particle of good in that boy,' one boss told me. 'He's always some place he shouldn't be and doing something he shouldn't do. He smokes cigarettes and shoots craps, and loafs on the job. He is absolutely worthless to me.'

"And then he started to tell me the kind of boy *he* had been. 'Why,' he said, 'when *I* was a kid, I got up at five in the morning, milked five cows, fed the pigs and the horses, and did a dozen other chores before breakfast. If I didn't do it, I got a thrashing. After breakfast I walked three miles to school.'

"'Always get to school on time,' I asked. 'Didn't you ever stop to pick a few chestnuts? How about the times you never got to school at all, but got your learning that day over on the ice pond?'

"HE FROWNED, scratched his head, then gave up with a laugh. 'You've got me, Tim,' he said. 'I guess I wasn't such a good boy, after all. I'll admit further that I smoked corn-silk cigarettes behind the barn and secretly owned a game-cock. I'll give the boy another chance, provided you have a talk with him.' That boy to-day is a sales manager and one of the most active members of his church."

And Tim went on:

"When I was eighteen or nineteen years old, I got somehow to teaching Sunday-school over at the State Reform School at Sockenosset, which was about six miles from where we lived. My class, all boys, was held in the afternoon. The first question they'd ask me when the lesson was over—I could see them itching to come to it—was, 'Hey, what are the scores?'

"If it was winter, they'd want to know football scores; if spring, summer or fall, baseball scores. But their main interest was baseball, and big-league baseball above all else.

"'Do you think the Giants'll win?' one youngster would pipe up. 'Aw, the Pirates are gonna win!' would put in another. . . . 'How many hits did Wagner get?' . . . 'Did Rube Waddell pitch?' . . . 'Tell us about Eddie Plank?' They'd keep firing questions at me for an hour.

"I was as big a baseball 'bug' as they were. Every American boy *is* a baseball 'bug.' If he isn't, it's no job at all to make him into one. There isn't a game in this world which strikes truer to the hearts of American boyhood than baseball. Football, basketball, hockey, soccer—they just fill in the year until baseball season comes around again.

If you don't believe that, ask your boy who he'd like to be, President of the United States or Babe Ruth. I'll bet his answer will be 'Babe Ruth' every time!

"We didn't have the Babe as a hero when I was teaching Sunday-school out at Sockenosset. But we had heroes who were just as big in those boys' eyes and hearts. And the men on top wearing the laurels were the clean livers, the clean players, the chaps who could lose to-day with a grin, and go back to-morrow to win.

"'I'd rather be Christy Mathewson than any man on earth,' said a boy wistfully one day.

"He was there as an incorrigible. He wouldn't go to school. He ran away from home and stayed out all night, loafing in pool-rooms.

"'Well, kid,' I said, taking him by the shoulder, 'maybe you can be another Christy Mathewson if you make up your mind to it. Now, Christy went to school. He went to college. While the other fellows were shooting pool and smoking cigarettes, Christy was out on the ball field learning to twist 'em over the plate. He was turning in at nine o'clock, to get a good night's sleep. He was keeping shy of booze and bad company. 'What do you like best about Christy?' I asked him.

"'He's the cleanest player in the game.'

"'That's it,' I said; 'he's clean straight through. Nothing brassy about him, but all gold. And I'll bet he's just as clean and square with his father and mother. I'll bet he was just as clean and square with his teachers at school.'

"The kid didn't become a second Christy Mathewson; but he became a man you'd be proud to know—clean and square. Chalk that up to the credit of baseball.

"Boys were in the reform school there for stealing apples. They were in there for playing hookey, and bustin' windows, and going in swimming without any bathing suits. I began to wonder how I had escaped getting in there myself. Probably my legs were all that had saved me.

"'Why,' I said to myself, 'these aren't bad boys. They're chock full of good. Trouble is, folks have seen only their faults; they haven't given the good in 'em a chance to come to the top.'

"And, little by little, I began to realize what to me seemed a pretty big thing. It was that the easiest way to get to a boy's head was through his heart—through his heart's greatest interest. I didn't have to hesitate over what that interest was. It was baseball. And," added Tim, grinning from ear to ear, "that was right down my alley! I liked baseball better than corned beef and cabbage."

ABOUT this time Tim was learning the trade of jewelry making, and going to night school to get a little more education. But pass over that as incidental. He organized and became the manager of a boys' baseball team which won the state championship. He joined the military organization known as the Providence Cadets, learned to drill, and became a captain. Also, he became drillmaster for the boys of the Rhode Island Catholic Asylum.

Like a scholar studies his books, Tim studied boys—the boys of his home neighborhood, those of the shops and offices in the jewelry district, boys, wherever he met them. If there was an argument as to whether John McGraw was a better manager than Connie Mack, Tim was the authority the boys came to for settlement. When a youngster became unruly, the adviser called into family council was Tim.

Nowadays, men and women interested in boys go to college and study psychology, social science, and what not, to learn how a boy's mind ticks. Tim was too busy earning a living for college, so, for his textbooks he went to life itself. His

Automobiles have improved

but—

what about gasoline?

IT IS a far cry from the "horseless buggy" of yesterday to the automobile of today. But the first cars and the latest cars are alike in one fundamental respect: *both depend on gasoline for fuel.*

Gasoline is not a perfect fuel. It has always had one inherent fault. It explodes too quickly ("knocks") as temperature and compression increase.

Carbon increases both temperature and compression beyond the point at which the present day automobile is designed to operate efficiently on regular gasoline. And the full efficiency of the modern motor car and its continued development have both depended upon the discovery of a "*knockless*" *fuel.*

After eight years of experiment, General Motors Research Laboratories developed Ethyl brand of anti-knock compound, a chemical ingredient which leading oil companies are mixing with their regular gasoline to form *Ethyl Gasoline.*

Ethyl Gasoline is *the* efficient fuel for automobiles of today and tomorrow. This super-gasoline will give your engine a performance such as you have never known. It is available throughout the United States and Canada and is sold at pumps which display the "ETHYL" trademark. Try it today.

problems were those of the sand-lots, of the home on the back streets, and sometimes of the police court. He wasn't a front door and parlor caller, but the kitchen way in—the boys' way—was always wide open to Tim without the ceremony of knocking.

For six, eight, ten years he held himself to this job of learning boys. His whole spare time was given over to it. Not once but many times on a wintry night he was called from bed to serve. A boy had not come home yet, and a mother or a father was worried. "Can you find him, Tim?" was the plea. Tim always could.

And all the time, in the back of his mind and heart, he was turning over his great idea, the idea of a Kingdom of the Sand-Lots! The idea of a Big League of Boydom! Every now and then, in a circle of boys, he would let drop some hint of his thoughts, bits of judicious propaganda to "get the kids thinking."

"Sure," he'd say, in response to wide-eyed inquiries, "sure, you fellows could have a league, an' uniforms, real balls, bats, contracts, regular scheduled games, just like the big leagues."

"Who'd buy the stuff, Tim?"

"Aren't most of you working? Couldn't you take up collections from the folks who come to see the games? Of course you'd have to do it right. You'd have to be on the level. You'd have to play real ball, an' play it hard."

"Say, Tim," a youngster blurted one night, "why don't *you* start our league? You know all the fellows. We'll do just as you say."

AND that night Providence's first amateur baseball league was born and a king crowned whose sway was to be more absolute than that of any Old World czar. The laws he laid down were iron-clad and riveted:

Players were to be selected by merit only.

They had to "keep fit."

They had to recognize the authority of umpire, manager, and president, and the last named was the court of last resort.

They had to stand by their contracts, keep their word.

They had to live clean, play clean, and be on the square!

"There's going to be no grand-stand players in this league," declared Tim. "We're going to have only team players. If you're going to school, you've got to keep up in your studies; you can't be 'in bad' at school and 'in right' here.

"There's going to be no fighting, nor gambling, nor tough talking. The kid who can't be on the level and clean will be done before he starts. And we don't want quitters and fellows who can't take the gaff of defeat. You've got to learn how to lose, as well as how to win; and to win without getting swelled heads.

"Now, fellows," he concluded, "some of you are going to make mistakes, for none of us is perfect. If you do make a mistake, come to me. If you pull something crooked, though that's something I don't expect you to do, come to me. I don't care what you do or how bad it is, or how bad others think it is, come to me and tell me the truth. I won't kick you out; but I'll try to show you how the crooked stuff hurts you and your future many times more than it hurts anyone else. I'll try to show you how it pays to be square, and how you can be square.

"If you get discouraged; if everything and every person in this world seems against you; if everything you do goes wrong and every friend you think you have turns bad—don't quit, fellows! Come to me!"

Yes, the boys of the Providence sand-lots crowned a king that night, and no king by divine right ever sat on a firmer throne.

THE first league, founded twenty-three years ago, was named the Providence Amateurs. Most of the boys were between fifteen and seventeen years old. Tim went about and talked to the heads of industries and to owners of vacant land, and obtained playing fields. Some of them, in addition to loaning their fields, wanted to give money.

"No," said Tim, "the boys have got to find their own money. Each team is responsible for its own expenses. That'll teach them the worth of money and responsibility."

During the twenty-three years he has been in this boy-and-baseball business, Tim has not accepted one gift for any of these leagues of his. At big games score cards are handed to spectators. Advertising on the cards pays for their printing. If the spectators wish to pay for the cards, all right; if they don't, they are just as welcome to see the game. There is no soliciting of funds, nor begging.

From the very first, the league was a success, and such a success that Tim found himself overwhelmed. He had only one league and eight teams, with places for about one hundred boys. A thousand youngsters were clamoring for admission. The demand was immediate for a second league.

"We couldn't start a second league," said Tim, "because we hadn't fields enough. Besides, I wanted to be sure, before undertaking more, that the public was really with us."

Then, at the end of the first season or two, a new difficulty arose which made a second league even more imperative. The older players of the Providence Amateurs, upon reaching the age limit Tim had set, shouted protests to the heavens. They didn't want to quit the league. They demanded that Tim increase the age limit.

The clamor of the younger boys for a league, and that of the older boys against leaving, and the coöperation of the city of Providence in providing playing fields, gradually resulted in the formation of the present six leagues.

Each league has its players graduated according to age. The Providence Amateurs, being the oldest league, has the oldest players, with no official age limit. Actually, there is a limit of about twenty-three years of age. The second league is the Independent, with an age limit of twenty-two; next, the Melrose, with a limit of twenty. Then is the Circuit, whose limit is nineteen; and the Providence Junior League, and the City Junior League, each with age limits of eighteen. Some boys in the latter two leagues are as young as fifteen.

A boy wins a place in the City Junior League, say, at sixteen. If his playing ability warrants it, he may go up to an older league and remain there until he at-

Now an even greater ESSEX *Super-Six*

Riding is like *flying*

Here is an unprecedented thing to do.

Essex Super-Six is the outstanding success of the year. Its sales have topped all records. Its popularity with thousands and tens of thousands of owners has made it the most brilliant accomplishment the industry has known.

But Essex engineers have now created an even greater and finer Essex Super-Six. So startling are its advantages that at the height of the selling season, with the market stripped of Essex cars and thousands of unfilled orders on hand, we interrupted production to give buyers a greater and finer value.

Dealers are now showing the finest Essex value of all time. Though factory production is the largest in our history and has recently been greatly increased, your promptness in ordering alone can insure delivery ahead of the multiplying thousands who want this new Essex.

BEST FOR 4-WHEEL BRAKES

Why? Uniform Gripping Power

WHILE automotive engineers were working on the four-wheel brake, Thermoid engineers were working on a four-wheel brake lining. The new improved Thermoid Hydraulic Compressed Brake Lining is the result.

Today, practically all automoti ve engineers agree on hydraulic compressed as the ideal type of lining for four-wheel brakes, due to its uniform gripping power at all times. And certainly uniform gripping power is an advantage on two-wheel brakes.

Have your next re-lining job done at a Thermoid Service Station. There you will be sure of the best in brake lining, at a *fair* price and what is just as important—*expert* workmanship at the right price, too.

THERMOID Hydraulic Compressed and Thermoid Interwoven Brake Linings are sold to the car owner at list prices much lower than the old high list prices.

Ask Your Thermoid Service Station, or write us, as to the cost of Thermoid Brake Lining for your car as compared with other linings. You will be surprised at the saving.

tains the age limit or a higher league drafts him. But he can't return to the City Junior, or any league below him, once he exceeds that league's age limit.

Fathers who played with Tim's Providence Amateurs twenty years ago, to-day have sons in his leagues. Each year Tim's graduates have been going out into the world, until to-day you'll find them in every Providence shop and office. While below the youngest leagues is an army of youngsters striving, training, preparing for the day of their "try out." No other city in the land has such an all-inclusive, far-reaching organization.

That editor told me: "There are a dozen of the best lawyers in Providence ready, if Tim says so, to defend any one of his boys without exacting one penny fee. There are scores of business men ready night or day to go down into their pockets at Tim's word of a boy or a family in need, or to make a place for a boy if he needs work. There is no mystery about this; these men are Tim's old ball players. Their faith in Tim has grown with the years."

Several years ago two boys got into serious trouble. Their names were on the front pages of the papers. They were headed straight for the penitentiary, according to the evidence at hand. The man they sent for was Tim. The world had turned against them; but not Tim.

Quietly he made his own investigation. The boys weren't bad. They had never been in trouble before. This was their first slip, and in the blackness of the evidence Tim found extenuating circumstances. The "crime," after all, was only "boy work." No real harm had been done, though the law had been violated.

At once several lawyers offered to defend the boys. "No," said Tim, "they've broken the law. They must plead guilty. They must admit their wrong before they can go right."

But when they stood up in court, heads down and tears in their eyes, Tim stood up with them. He told the judge the facts.

"They'll make good for what they've done," Tim promised. "You won't have to send them to jail for that. They've done their last wrong deed and you'll never see them here again. I'll be responsible for them, if you let them go."

And because Tim O'Neil's word, once given, never has been broken; because no boy whom he has sponsored ever has failed him, the two youths were paroled in his custody.

"THAT day," Tim told me, "I staked only my honor and reputation. To-day I'd stake my life, if need be, on either of those boys. There are no cleaner, squarer, more honorable boys in Providence.

"Do a little for a boy," he went on, "and he'll do a lot for you. The secret of winning boys is in doing that little. A boy is proud, and he's sensitive too; and he's loyal to his pals. I try to be his pal.

"No matter how bad a boy looks, I hunt for the good in him. Then I slap him on the back and let him *know* I see the good. There is no surer way of hurting a boy than by making him feel he doesn't amount to anything. Make him think he is somebody, and he'll go out and lick the world to prove it.

"I've never bawled out a boy. I've never criticized one. I've never told a kid

1 FLAT BAND METHOD
2 SPRAYED RUBBER
3 WEB CORD

United States Rubber Company

Trade US Mark

How does the Flat Band Method build longer wear into United States Tires?

THE Flat Band Method, invented and patented by the United States Rubber Company, puts longer wear into a tire because it is the most precise method of tire building ever developed.

It is comparable to the exact engineering practice of bridge design and construction. Just as the position, length and load of each cable in a bridge are calculated and fixed *in advance*, so with the cords in a United States Tire.

By the Flat Band Method the plies are laid *without tension*. The length of each cord is precisely right. The relation of the cords, one to another, is *exact*.

The result is a tire in which *uniform* tension and strength of every cord are assured. The load is *equalized* all around. Longer wear follows.

that he's rotten to the core and ought to be ashamed of himself. I play to his *good*, to his loyalty, and to his pride! There's nothing greater and finer than a real boy's pride.

"There was one boy who had started with my youngest league. Call him Jimmy Moore, though his real name wasn't that. He was a handsome youngster, smart as they come, and a born ball player. Every time Jimmy came up to bat he got a hand.

"He went up into the bigger leagues, then to college. And in college he began to strut a bit, to wear fine clothes, and to spill some red paint. He was beginning to feel pretty cocky about himself, made nasty remarks to his teachers, neglected his studies, and stepped pretty high. Next summer, when he came back to play with his league, the place was hardly big enough to hold him. He bullied the umpires and sneered at the town boys. When it got too bad I had his manager tell him I wanted to see him.

"That night Jimmy came in, tossed his hat into the window, and swaggered to a chair. I was sitting at my desk, and I kept right on working. After five or ten minutes I heard him begin to fidget a little, but I never looked up from my work. Another ten minutes passed.

"'Say, Tim,' he burst out, 'I thought you wanted to see me!'

"For the first time I looked at him. 'No, son,' I said, 'I don't want to see you. The boy I sent for was Jimmy Moore.'

"'But I'm Jimmy Moore,' he protested.

"'Not the Jimmy Moore I know,' I said. 'The Jimmy I sent for is a chap I haven't seen for two years.'

"'I'm Jimmy, and you know it,' he said.

"'No,' I told him; 'the Jimmy Moore I knew was one of the finest little kids on the ball lots. He was always on the square, in the game because he loved it, and, no matter how things went, he never beefed. He never played to the grandstands, nor thought he was bigger or better than the poorest tyke on his street. Maybe he was a little better, but Jimmy never showed it. He was too much of a gentleman to be priggish, and too much of a square-shooter to get a swelled head.'

"He wasn't looking at me now. He was looking at the floor. 'Kid,' I said, 'you say you're Jimmy Moore, the Jimmy I always knew. Then *be* Jimmy! There wasn't a finer, more popular boy in this town. No boy was better liked and admired. As an old friend of Jimmy's I'd like to see him again.'

"'You're seeing him now, Tim,' he said.

"And I was. The old Jimmy was back.

"IT ISN'T so much what you say, but how you say it, and to what trait of the boy you appeal, that counts. Folks wonder why boys will go straight for me after I get them out of trouble. A big reason is their loyalty to other boys, and gratitude.

"You see, this thing has been sort of an endless chain. The first boy for whom I went to bat in trouble made good. That was in my favor when I stood up for the second boy. The second boy making good, made it still easier for the third. Now I can say, 'Kid, every boy before you has made good. That makes it easier for you. You can't spoil the record, and make it tough for the next boy. You can't take from him the chance these others have made for you.'

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"More than one boy has told me, 'Tim, you're the first person who ever took any interest in me. All the Old Man has ever done was to pick on me and call me good-for-nothing.'

"It isn't because the father doesn't love the boy, but because he doesn't understand him. He has forgotten that he, too, was once a boy.

"One father told me, when I argued this, that his boy hated him. 'I'd cut off my right arm for him,' he said, 'and yet actual hatred of me is back of his every movement.'

"An hour before, the boy had told me the identical thing about his father. They were that far apart, actually strangers to each other.

"I stood them up together. I made them repeat as man to boy, and as boy to man, what they had told me. Each choked it out like a kid up before the teacher. Then I slipped away. A little later when I came back, the father dabbed quickly at his eyes, and the kid dabbed at his. Then all three of us started to laugh."

And here Tim, King of the Sand-Lots, leaned over the little desk with its brand-new blotter and freshly dusted surface. "Tell me," he earnestly demanded, "why should an umpire be needed to settle a simple case like that?"

"ONE THIRD of the sons of preachers remain obscure, one third achieve mediocre success, the other third rule the world," says Bruce Barton, next month, in "There Will Always Be Something New to Do." In the last-mentioned class is Merlin H. Aylesworth, president of the National Broadcasting Company, and the most important man in radio entertainment to-day. This article gives not only a bird's-eye view of the radio industry but it also sheds a bright light on the scope of the work of the National Broadcasting Company, which linked up forty-three stations for President Coolidge's speech, and now spends two million dollars yearly for talent alone.

The Man Who Wouldn't Live on His Wife's Money

INDEPENDENCE DAY

One hundred fifty-one years ago, fifty-six men with vision affixed their signatures to a famous document in the shadow of the Liberty Bell in Philadelphia. It was a country's declaration of independence.

Today thousands of other men with vision are affixing signatures to documents that are also declarations of independence. They are applications for Old Age Endowment Insurance — insurance that is planned to mature in those autumn days of life when the average man *can't* be independent unless a life insurance income makes him so.

"Seven Keys to Contentment" is the name of an interesting book which explains Provident Mutual Old Age Endowment Policies and tells of six other ways in which life insurance may help YOU in solving your financial problems. It will be mailed to you without cost if you will fill in and mail the coupon below. Send for it today.

conclusion that I'm offering you the greatest bargain—"

Cornelius walked Olive away toward the elevator. They were having tea together, and neither of them talked much until they got in the corner behind the palms, where the isolation was almost complete.

"That really was a bargain," said Olive. "And—didn't it make things seem real? To think that we are choosing a place to live? By ourselves?"

CORNELIUS regarded her. She had on a soft black coat and another thimble of a hat, black, and turned back with a twist from her dominant young forehead.

"What did that hat cost?" he asked.

She looked surprised, and put one hand up to it, wondering which one she had on.

"This thing? I don't remember exactly. Not much. Eighteen or twenty dollars, or something like that. It was pretty cheap."

"And your coat?"

"The coat's rather a darling, really. It was something over two hundred or thereabouts. Figuring out how much I'm worth as I stand?"

"How many coats and hats like that do you suppose I can buy you?"

"You won't have to buy me any—not for a long time. Believe me, I'm going to stock up. I know what you're thinking—that I'm extravagant. But you know I'm not. I don't care for clothes—just a few simple things. And as for that apartment, it was just big enough for us. Not a bit of waste space."

"It wasn't the size. It was the price."

"If I spoke to Mother or took her to see it, I don't see why she shouldn't give us the lease for a year. I'm sure if I asked her—"

She stopped, astonished at Cornelius. His face was a funny color.

"No. I'll pay the rent of the place I live in, myself!"

"What a temper you have!" said Olive. "Honestly, you scare me stiff when your eyes wobble at me like that. All right. I won't. If you can find anything cheaper, or a better bargain, just show me!"

She ended triumphantly. Cornelius was beginning to find that Olive Mary was used to being triumphant in conclusion.

"I can find lots of cheaper things."

"Yes, but what will they be like? Cheap apartments always either are dark or in the wrong end of town, or something like that. Of course rents are awful; but everyone has to pay them!"

It was becoming clear to him that it had never occurred to Olive that it might be necessary to live in the wrong end of town, or to sacrifice any degree of light or air. There were certain things that were out of her range.

He was silent.

"Cornelius, you've got a grouch," she said; and then, as his face did not lighten, her voice changed, "Cornelius, you're not really off me? You do love me, don't you?"

There was no mistaking her tone when she asked him that. It had all sorts of lights and shadows in it, tremors and braveries. He met her eyes gravely.

"I do, you know," he said simply. "I almost wish, for your sake, I didn't. Or that you didn't care. Because I really am just a poor young man, Olive."

"Oh, foolish Cornelius, do you think

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

I care?" she asked softly, "I don't care any more about money than that!" She snapped two white fingers together, and Cornelius, watching them, wondered how he could ask hands like that to work about an apartment, to do common things, like carrying dishes and making beds, such as he had seen his mother's hands do.

They saw other apartments in the days that followed. "Hunting for our cottage," Olive called it gayly. There was one day when Cornelius, having figured out on paper what he could pay in rent, what he should pay, asked the agent to show him apartments at that price.

They were strange places to take Olive Mary into. She wore a fur coat that day, a coat of soft dyed caracul, and as she poked into dark living-rooms and dingy dining-rooms, or kitchens with traces of previous occupancy upon them, Cornelius felt his heart go down further and further. Even he could see the unfitness of places like this for Olive. And she grew rather quiet.

"You see," she said, as they went down the street after inspecting an apartment with such thin floors that they could hear the baby beneath and the phonograph above, "I don't think our things would fit in a place like that. I have my own piano. It would simply be too big for the living-room. And the set Mother wants to give me for the dining-room would be utterly out of the question with that built-in oak sideboard." She paused, and then went on a little timidly, for Olive Mary: "I admire your independence and all that, darling, but you know Mother would really like to take care of us for a year that way. Lots of people's fathers and mothers do it. And money isn't very important, it seems to me, when you care for each other, and in a year or two you'll be making a lot of money."

"But, sweetheart, I won't. Not as you think of money. I'll be getting a raise, I suppose. But it's not like a quick fortune. My business success means years of building, and getting more valuable, and buying stock when I can afford it, and other things you wouldn't understand. What I mean is, there aren't any chances of fairy-tale fortunes. Do you see?"

"I know you're awfully clever, and that's the main thing," said Olive. "Outside of the fact that I adore your stern and Puritan profile! But you ought to realize that you're marrying me, and, after all, I've got some claim on my parents. They ought to do something for me if they don't have to shelter me any longer or buy my food or anything."

SHE spoke with a certain touch of reasonableness that made Cornelius wonder if there wasn't something in what she said. He was about to answer when they heard the bleat of a horn, and Billy Bates bore down on them.

"Can I give you a lift?" he called. "Or do you think this is honeysuckle lane?"

He broke the spell. They had almost felt that it was.

"Come on," said Olive. "I am going to be late, Corny. Let him take me home, anyway. We'll drop you on the way."

"Sure," said Billy. "I'm a grand taxi driver. I've been taking Nita all over town, then I took her mother home. Thinking of getting a license."

"Isn't this a new car?" asked Olive.

Dandruff . . . baldness

—*their* 9 in 10 *relationship*

How would you look if you were bald? Here the artist shows a young man as he is and as he would be without his hair.

A pine-tar method to promote hair health

THE "normal" scalp is about as rare as the "average" man.

Scalp specialists tell us that most men are in some degree troubled with *dandruff*. And baldness traces back to dandruff, 9 times out of 10!

To correct dandruff and thus hold baldness in check, your scalp of course needs special care. A special soap is advisable—a soap, like Packer's Tar Soap, made especially for the hair and scalp.

How pine tar helps

Packer's contains *pine tar*. Practically every well known authority recommends *pine tar* soap for shampooing, in the treatment of common hair and scalp ills—especially dandruff. And leading physicians for over 50 years have been prescribing Packer's Tar Soap in the care of the hair, scalp and skin.

The following dandruff treatment lets your scalp enjoy all the soothing, healing properties of the Packer *pine tar* lather. It clears the gland openings; helps them to perform all their normal duties. It helps start the scalp toward renewed health.

The Packer Method

When you wash your hair, do this: Wet the hair with warm water, apply Packer's Tar Soap and pile up the rich, piney lather. With the finger-tips massage three minutes. Rinse. Lather again, repeat the massage, then rinse thoroughly.

In severe cases of dandruff, repeat this every other day for one or two weeks. (In milder cases, every third or fourth day may be sufficient.) Gradually decrease the frequency of the shampoos as your scalp clears. Then *keep up* the treatments regularly once a week to prevent the dandruff from coming back.

In most cases, this simple method will soon rid your scalp of dandruff and restore your hair's normal, healthy vitality.

Send 10c for Sample and Manual

For 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book has recently been re-edited to present the most scientific thought on the care of the hair. It contains dozens of authoritative suggestions for keeping your hair healthy and young-looking. Fill in the coupon, clip and mail today.

THE PACKER MFG. CO., INC., Dept. 6-G
Box 85, G. P. O., New York, N. Y.
I enclose 10c. Please send me sample half-cake of Packer's Tar Soap and your Manual, "The Care of the Hair."

Accommodates the Standard Size Cake of Ice

Let your Gurney dealer show you the Gurney ice chamber. Standard size ice cakes slide into it without squeezing, chipping, or mussing up the floor. All models built for outside icing. With the Gurney, you are equipped for 100% refrigeration. Always plenty of ice for any occasion. Convenient provision chambers; space for a full quart milk bottle or water pitcher.

The Gurney saves you money when you buy it, lasts for years without replacement. Economical on ice.

Athermos — *All Steel*

A life-time steel case. Exterior in beautiful plain designs, finished in white or pearl gray enamel. Insulated with pure cork board.

Write for new booklet, "Modern Refrigeration," and name of Gurney dealer in your city.

GURNEY REFRIGERATOR CO.

Gurney
REFRIGERATORS

"It certainly is. Every improvement except bail thrown in. Isn't it a wonder? Nita and I bought it last week."

Cornelius looked at Billy Bates. He was sitting there snugly in the driver's seat, wrapped in a fur coat, and he seemed very affluent and care free. But he gave Cornelius a strange feeling of disgust. Everyone in town who knew Billy Bates knew he hadn't done a stroke of serious work since he married Nita. He drove cars, played chauffeur now and then, went to week-end parties—all as Nita's husband. That was all he was, no matter how he might look to the men on the street who were carrying home packages of meat for supper. He was Nita's husband, and nothing more.

"We've been hunting for our cottage," said Olive, "and it's terribly discouraging. Rents are so high."

"Can't you get a house for a wedding present?" asked Billy, and winked gayly back at her. "Better drop a line to Santa Claus, or whoever looks after wedding presents in your family."

"Maybe I will."

Cornelius said nothing. He merely told Billy where to drop him, and got off a block from his boarding-house, so they wouldn't go out of their way. He walked toward the place where he lived, and went half a block past it before he realized where he was. And, more than ever before, he realized the impasse of the situation he was in. Billy Bates seemed to be grinning it at him and Olive smiling it at him, and together they were riding him down, with all those ambitions it had been such fun to wake up to in the morning, all the things that put zest into living.

THERE was one thing he could do. He could write a note to Olive and call everything off. Perhaps he could make her see that, for her sake even more than his own, he couldn't take her love and drag it through the kind of marriage they were apparently headed for, which would destroy his own self-respect and blunt hers.

He took out his pen, but it would not coöperate. It insisted on drawing little sketches of Olive's face instead, and topping them with little thimbles of hats. He knew about those hats now. They had no relation to economy. He saw how the country idyll had deluded him, and how everything that he had taken for simplicity was also the zenith of luxury and expensive living.

For a long time Cornelius sat there, a very haggard look on his face, making his little sketches and watching what seemed to be himself crumbling away before his eyes, as he fumbled with hopes. There seemed to be no way out.

Morning brought Sunday; but Cornelius could neither lie in bed, nor interest himself in the newspapers in the boarding-house parlor. He had breakfast, and then the sun, shining on a clear cold day outside, drew him out. He walked through the district of boarding-houses and apartments where he lived, through the city, and out toward the West Side, taking that direction because he did not want to meet people whom he knew. Olive lived, as all of Olive's kind of people did, on the East Side. He found himself before long clearing the outskirts of the business places and coming into a suburb.

It was a flat, new little suburb, gleaming with fresh timber and clean stucco, with commonplace little bungalows grown up everywhere like cheery mushrooms. The sidewalks were new cement, the trees were only sapling elms stuck in the ground at intervals.

A street car rattled noisily through the main street every few minutes, and young men in shirt sleeves were putting up storm windows for the winter or washing small cars. It was altogether a lively place. Cornelius felt vaguely more cheerful.

For sale and for rent signs peppered the streets. Cornelius stopped and looked idly at a little white cottage set on a fifty-foot lot between two others. It was very neat and new, and he wondered why that place stood empty.

"Would you like to see the house?" asked someone at his elbow, and he saw a young man about his own age, obviously an agent on the lookout for house-hunters.

"Oh no," said Cornelius; "just walking by."

"Glad to show you around if you're interested. No harm in looking. Best little place you ever saw," said the agent blithely.

Cornelius hesitated for the fraction of an instant, and the agent was on him like a wolf. He insisted on showing Cornelius the house, and led him up to it, swinging the thin little front door open with a flourish.

IT WAS a box of a place. Small trim rooms, painted freshly, offered themselves as a kitchen, living-room, and what the agent said was a breakfast nook. There was a miniature staircase, a couple of bedrooms above, an ironing board that let down neatly, a basement with a new furnace in it.

From the kitchen window Cornelius looked square into the kitchen opposite, where a fat baby sat in a high-chair and gazed admiringly on life.

"Who lives around here?" he asked.

"Young people—finest people you ever saw—honeymooners, newly-weds. Fine air, good commuting, street car every ten minutes, simply can't be beat. There are garages across the street for rent—community garages. In the summer, it's an awfully pretty little place. And the price is only five thousand. Five hundred down, and the balance like rent, fifty a month. Anyone can carry it, on a salary, you know. And then you've got something. This suburb's coming on. You're never going to sell for less than you pay." He went on with a flood of arguments.

Cornelius was noting the newness of everything, the freshness, and a sense of venture crept into him.

"If I were interested whom should I see?"

"See me—right now."

"Oh well, I suppose this thing will be open for a while—"

"Don't you fool yourself," said the agent. "It's just been finished. It'll sell before sundown."

It seemed altogether likely to Cornelius. He felt impulsively in his pocket for card and checkbook. It was just about what he could swing. It was what he ought to swing at his age. It was his own speed.

"All right," he said, "I'll buy it. We'll fix it up to-morrow, and in the meantime I'll give you a check to hold it."

"Now you're talking," said the agent.

Where does he get his disposition?

From his Mother?
From his Father?

"PERHAPS" *says Science* . . ."BUT ALSO FROM HIS FOOD"

Science speaking:

"In a poorly nourished child, unfortunate personality traits develop, such as self-centeredness, shyness, lack of confidence, selfishness, jealousy, depression and self-pity".

WM. R. P. EMERSON, M.D.

"When properly nourished, the harmony of all the body will be so great and abiding that it will express itself in a happy and jolly disposition". G. F. ALSOP, M.D.

"Do you know that the so-called 'problem' children, who can disrupt entire families, may be the result of nervous and glandular systems that have become unstable *because starved for proper food*"? LULU HUNT PETERS, M.D.

Grape-Nuts is one of the Post Health Products which include also Instant Postum, Postum Cereal, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate.

Post Health Products

READ the quotations given at the left. They show you that balanced diet is essential to the *happiness*, as well as the health, of your children.

Grape-Nuts is a delicious food that simplifies the task of arranging a balanced daily diet. Made from wheat and malted barley, it supplies dextrins, maltose and other carbohydrates for heat and energy; iron for the blood; phosphorus for teeth and bones; proteins for muscle and body-building; and the essential vitamin-B, a builder of appetite. Eaten with milk or cream, Grape-Nuts is an admirably balanced ration.

Grape-Nuts is prepared by a special baking process that brings out the nut-like flavor to perfection, makes the food easy to digest and makes it *crisp*. Your dentist will tell you how important this crispness is for children. It gives their teeth and gums the exercise they need for proper development and lasting health and beauty.

Try Grape-Nuts tomorrow. Your grocer sells it—or you may wish to accept the following offer:

Two servings of Grape-Nuts, free . . . and two interesting booklets

Mail the coupon below and we will send you two individual packages of Grape-Nuts, free, and two booklets—"The Effect of Food Upon Your Children's Lives" and "A Book of Better Breakfasts." Both are of vital interest to mothers.

This tooth brush *reaches every tooth* every time you brush

TO keep all your teeth, brush them all. Here is one tooth brush that reaches every tooth.

The Pro-phy-lac-tic Brush is sold in three sizes in the U. S., Can., and all over the world. Prices in U. S. and Can.: Pro-phy-lac-tic Adult, 50c; Pro-phy-lac-tic Small, 40c; Pro-phy-lac-tic Baby, 25c. Made in three bristle textures—hard, medium, soft—white or colored transparent handles—red, green, orange. For those who prefer a larger bristle surface, we make the Four-Row Pro-phy-lac-tic. Price 60 cents. Pro-phy-lac-tic Brush Co., Florence, Mass.

"And, believe me, you've got a good buy!"

Cornelius tried to remember that, later in the afternoon, when Olive whispered, temptingly close to him, "I spoke to Mother about the apartment, and of course she says she expects to help. I know she'll take care of all that, Corny; and there's no reason why she shouldn't."

He made two attempts to tell her:

"I think I've found something else you'd like."

"Have you really? Where?"

He didn't tell her. He evaded, promising to take her to the place.

He paid for it next day, at least paid enough to make it his temporarily, and went out after work to unlock the door and look at it all again. It was even smaller than he remembered, and very empty; but it seemed friendly, as if it already knew that it belonged to him. Cornelius, who had lived in boarding-houses for five years and in college rooms before that, did not know quite why he felt so strangely content in the vacant rooms. He did not recognize the sense of home.

But there was Olive Mary. There were wedding presents coming in now, for the invitations were already out. Such things as Olive Mary got in tribute! A rare old Spanish desk, thin Oriental rugs, silver dishes without number, lamps—even books. She would show them to Cornelius, and Cornelius, thinking of the cottage out in Shore Park, felt stranger and stranger. Yet still he had not told her. He evaded. He was busy. They'd go see the place he had in mind to-morrow, and then the day after that. Until there came a day when Cornelius knew that he could put it off no longer. For in a week they were to be married.

He had sent a ton of coal out to the cottage and built a fire in the furnace that noon, enormously proud of his victory over drafts and furnace doors. The few things he had had in storage since his mother died were already there, too. He had kept only those things which had been in the Alstyne family for a long while, all the time the family grew poorer and poorer—a few pieces of mahogany, a portrait or two, the low rocker that his mother always sat in. They did not fill up the rooms, but they seemed to be at ease there.

When he went out at noon, Cornelius had thought of something else. He had bought roses and they stood on the tilt-top table which had come out of storage, stuck in a milk bottle which he had borrowed from the neighbor on the left, the mother of the fat baby.

"WE DON'T need your car," he told Olive, when he met her. "Let's just go by ourselves. We may want to hunt around. We can take a street car, and the agent has given me the keys."

"Street car?"

"Yes. It goes close to this place."

"You're terribly mysterious," said Olive. "Now, mind you, if I don't like this place we don't live in it."

"No—we won't," agreed Cornelius, with a funny accent on the we.

"Am I nice-looking to-day, Corny? I've got some trousseau on."

She was more than nice-looking. She stood out in the street car against the background of imperfectly assembled clothes, of worn clothes, like someone who did not in the least belong there. Her coat was plain and straight, her hat untrimmed; but her purse was gold, and her oxfords had been cut by a master's hand.

Cornelius reflected, as he looked at her, that her clothes probably were worth that minute more than the house he proposed to put her in. He was unlike himself, distraught, and his hands fidgeted. Olive didn't seem natural in the least, and his relationship to her extraordinarily unnatural. And, strangely, he was almost jealous for the little house and what she might think of it.

IT WAS nearly dark when they got off the car in Shore Park. Olive did not say anything. She looked around her at the little houses, flat against the barren landscape, and at Cornelius, who avoided her eyes and kept talking of a totally unrelated subject. Olive Mary's chin went up and her lips set together a little. And as he guided her down the block, and up the tiny strip of cement, her chin went higher yet.

"You see," said Cornelius cheerily, "it's a very graceful door, really. You don't often find doors with such nice lines."

She looked at it, and it became a slab of painted pine. He fitted the key into the lock and swung the door open.

Olive looked around mercilessly. She didn't have to take many steps to see all the down-stairs, but she stood quite still in the tiny hallway. The staircase ran up at the left. The little plastered nook for the telephone was on the right.

"You're quite mad, Cornelius," she said. "We can't live in a place like this. You don't think we could live in Shore Park!"

"Lots of people do. Young men like me," he told her quietly. "I can pay for this. In fact, I am paying for it. It's mine."

She turned on him angrily.

"You haven't bought this dump!"

Cornelius stiffened. It wasn't him she seemed to hit, so much as the kindly little house that had been so friendly to him.

"It's my home," he said coldly. "It's where I'm going to live. I'm the sort of person who can afford a place like this. If you don't want to marry me, you needn't. But if you do marry me, you marry me, just as I am, with what I can give you."

"You think I'd live here?" she asked.

"I didn't know. I wondered. I only know that I won't live in any place your parents pay for. I want to be married as a husband, Olive—or not at all. If you care to look around, the place is at your disposal. If you don't, I'll take you back to your house. I've shown you what I could give you. It's small. There's no room for a maid. But I wouldn't let you work too hard. It's near to commonplace neighbors; but it's not as near as you would be in an apartment to people of any kind who could afford the rent. It's my home. The best I have. And I've got to look at the furnace before this place burns up," he added abruptly.

Olive saw him go, heard him clumping down wooden stairs somewhere into a cellar, and she gazed around her in a kind of panic, tears tight in her throat. It was unimaginable, this tawdry little house,

Digitized by Google
STATE UNIVERSITY SYSTEM OF FLORIDA

this cheap suburb! What insolence to think he could put a thing like this over, to dream she'd live in such a place!

She drew the expertly tailored coat close about her, with one of those patrician gestures which were as natural to her as impossible to most girls, and went to the front door. Let him have his little shack, then, if he liked it so much! She was through with him, after this humiliation. The tears swelled and grew violent in her throat as she opened the door and looked out on the silent little street.

Up and down its length she gazed at it. It was incredibly strange to be here. Yet everything had suddenly become strange. Her father's house seemed incalculably distant, remote and uncomforting. She didn't want to go back there alone, have them ask her, be forced to tell them.

FORGETTING the open door, she turned back into the living-room, where Cornelius had switched the light on. She must reason him out of this nonsense.

Through the glaze of angry tears the odd setting of the room came to her: the old pieces of furniture standing about stiffly, and yet with a curious air of familiarity. The odor of roses arrested her, and as she turned she saw them spreading gloriously from the stem of the milk bottle.

Suddenly, a strange feeling of pride came over her; but it was not the kind common to Olive Mary. Not the consciousness of being a Tillsbury, but that proud glow which comes only to women who are cared for because they are beloved. All her life, people had taken care of Olive Mary in luxury, and yet never like this—not with this sense of her glory, as the roses showed; not with this eagerness to work for her warmth, her shelter.

Money had come easily to the Tillsburys for several generations, but Olive Mary was no fool, and she knew it had not come easily here. Spreading over her discomfiture and the humiliation of the little house came the erasing sense that this was her own, this, and all it stood for, a home born of personal love for her, raw, unfledged, needing care and needing her.

It was a strange moment for Olive Mary. She had a sense of the grimness of Cornelius's mouth as she heard him shaking the furnace below, and she knew that he did not intend to change his mind. Or, if he did, if she could make him, he would not forgive her for that. Perhaps he shouldn't—

The room did its best to explain, talking its own simple language, trying to welcome her with its used, much-loved furniture, and the scent of its roses. And Olive Mary stood very gravely in the middle of it, until the splendid sureness which had come to them in the woods seemed to sweep over her again.

Then she knew. This was Cornelius's house, and therefore hers. Instinctively, she felt the draft from the opened front door, and shut it. Then she went through the dark kitchen, and as she was fumbling for the switch she saw through the lighted window of her neighbor's house the fat baby in his high-chair, pounding a welcome with his spoon. With a queer, unsteady smile, and her head up, Olive Mary Tillsbury looked for the door to the cellar stairs.

Removing film on teeth is accorded high importance by the modern dentist. So Pepsodent is chosen for its unique therapeutic and prophylactic qualities.

Keep Film Off Your Teeth

Thus the price of teeth like pearls, is regular film removal in this way

Send Coupon for 10-Day Tube Free

TEETH and gums are imperiled, say many authorities, by a film that forms on teeth.

Ordinary brushing having failed to combat it effectively, a new way in tooth cleansing has been advised. A way that differs in formula and effect from previous methods. These are embodied in the special film-removing dentifrice Pepsodent.

Now an effective film combatant

By running your tongue across your teeth, you will feel a film; a slippery sort of coating. Ordinary brushing does not remove it.

Film absorbs discolorations from food, smoking, etc. That is why, according to leading dental opinion, teeth look dingy and "off color."

Film clings to teeth, gets into crevices and stays. It invites and breeds the germs of decay. And that is why it is judged so grave a danger to the teeth by authorities.

Film is the basis of tartar. And tartar, with germs, is the chief cause of pyorrhea. That is why regular film removal is urged as probably first in correct gum protection.

Most dental authorities urgently advise thorough film removal at least twice each day. That is every morning and every night.

For that purpose, obtain Pepsodent, the special film-removing dentifrice which leading dental authorities favor. Different from any other tooth paste.

Pepsodent curdles the film, then removes it; then polishes the teeth in gentle safety to enamel. It combats the acids of decay and scientifically firms the gums. It multiplies the alkalinity of the saliva. And meets, thus, in all ways, the exactments of modern dental science.

On dental advice, people are adopting this new way of tooth cleansing. Obtain Pepsodent, the quality dentifrice, at drug stores. Two months' supply at a moderate price—or send coupon for 10-day tube. Use twice every day. See your dentist twice each year. Make both a habit.

The Quality Dentifrice—Removes Film from Teeth

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

SHERWIN-WILLIAMS

There's a *joker* in the *cheap* paint can!

WHEN you are tempted by a "low price" and alluring promises to use "cheap" paint on your house—STOP! There's a joker in every can.

It may *look* like paint. It may *smell* like paint. But if it sells at a "cheap" price you can decide that it is made of poor or skimpy materials. And a *poor paint* is the most *costly* paint you can put on your house.

Let the "formula" prove it

There is one way to prove that a "low price" house paint is merely an inferior paint. Insist upon seeing the formula, either on the can or in the literature. Then compare it with the formula of fine old SWP which you will always find openly printed on every can.

Note the big percentage of *White Lead Carbonate* and *White Lead Sulphate* used in SWP Outside Gloss White House Paint.

White lead should be the *basic* ingredient of all white paint and light tints. It is to these paints exactly what flour is to bread.

See how much less of this basic ingredient is used in the average "cheap" white paint.

Zinc oxide, another costly pigment, is the next essential ingredient. A liberal percentage of zinc oxide combined with a large amount of white lead makes for a *balanced formula*—such as the formula of SWP Outside Gloss White House Paint. It assures a finish of superior wearing quality.

More than 90% of the pigment content of SWP Outside Gloss White is made up of these two important ingredients—white lead and zinc oxide.

In the majority of "cheap" white paints you will find only *50% or less.*

It is the liberal quantity of this expensive basic material in every can of SWP Outside Gloss White that gives this fine old paint its remarkable covering capacity.

In the darker colors like browns and greens, the "*balanced formula*" of SWP is even more important. Naturally, these dark

THE FINEST HOUSE PAINT THAT MONEY CAN BUY

HOUSE PAINT

colors can contain little, if any, opaque white pigment such as white lead or zinc oxide.

Sherwin-Williams have the pick of the world's colors. Sherwin-Williams Dry Color Works produce practically everything except the natural earth and mineral colors. That is why SWP colors are so rich, so permanent and so true to character.

Greater durability of the paint film on your house is assured by SWP due to the use of a specially treated, pure linseed oil—made in Sherwin-Williams' own linseed oil plant.

Prepared house paint—*at its best.*

SWP *costs you less*

One evidence of quality in a house paint is the way it *hides the surface* and the *area it covers.*

A gallon of fine old SWP will properly cover 360 square feet (two coats). A gallon of "cheap" paint will cover *only* 250 *square feet* (two coats)—110 square feet (two coats) *less* than SWP House Paint!

That is one side of the joker in the "cheap" paint can.

Where only seven gallons of SWP will finish the average house, *eleven* gallons of "low price" paint, if not more, are needed.

SWP costs more per gallon. But it covers *much more area.* By the job it costs no more, often *less,* than *cheap* paint.

Which would you rather use?

Outwears "cheap" paint

Being made of best quality materials, SWP dries to a tough, elastic, glossy finish. There is no chipping, cracking or peeling. It weathers slowly. Lasts usually for five years. When repainting *is* needed, you save paint, time and money *because the SWP surface is in proper condition.*

A "cheap" paint frequently chips, cracks, peels and fades in a year or so.

It gives an inferior finish—and a much shorter life than good house paint.

Repainting is frequent and costs more for paint and labor because the old paint has to be burnt or scraped off every time.

That is the *other side* of the *joker* in the "cheap" paint can.

SWP *beauty!*

With fine old SWP you always get a beautiful paint job. Your house looks like new.

The colors are especially rich—with a sheen like fine old pottery.

And they are weather-fast—slow to fade.

Even after several years of exposure, a washing with plain soap and water will bring out their beauty almost like new. Contrast this with cheap colors that look dull and wishy-washy almost in no time.

Which would you rather have—when SWP is guaranteed to cost less per job and much less per year?

Trade Mark Registered

Call at "Paint Headquarters" and save money

SWP House Paint is sold the world over by thousands of dependable SWP dealers. Each one is "Paint Headquarters" in his locality. There is one near you.

Before you let "cheap" paint blind you to real economy, get his advice on your paint problem.

He will estimate your requirements in SWP. Compare it with the cost of "cheap" paint. Then decide.

If you want literature, color cards, a copy of the famous SWP Household Painting Guide, help on a decorative scheme, write us.

Don't let trouble *trouble* you—

The toughest bunkers and deepest sand traps all look alike to Grand Slam No. 8, a perfectly balanced trouble iron that "digs 'em out and stops 'em dead."

Trouble needn't trouble you—whether you are in a trap, have a long iron shot to make down the fairway or a delicate chip shot to get on the green. With Grand Slams in your bag you are prepared to meet any golfing situation. There is a perfectly designed and constructed club for every shot. A famous Scotch clubsmith designed Grand Slams and players throughout America have tested and found them right.

Grand Slam wood clubs with steel and hickory shafts cost from $7.00 to $12.50; the irons are $5.00 each, $2.00 additional with steel shafts. Write for our interesting catalog, "Happier Golf."

I'm an Indoor Man With an Outdoor Urge

(*Continued from page 63*)

bass there last summer; but I was really asleep in the boat at the time and was trolling for pickerel with a pork rind spinner, so it should be put down in the books as an error for the bass.

The average Connecticut fisherman gets as much satisfaction out of a mess of three bullheads as a Florida angler gets out of a tarpon. He has to.

Nutmeg State anglers who live near the coast do most of their fishing in Long Island Sound. This explains why they are such a patient, tenacious, doggedly resolute and stolidly resigned people. Nobody could fish in Long Island Sound—west of New London at any rate—and develop any tendency to become turbulent, wildly excitable, or deliriously enthusiastic.

Blackfish are the only fish of any size caught there, and the rule is to go for them as soon as the apple trees have blossomed. There is no zest for me in blackfishing, anyhow, I would just as soon pull up a horse collar. The fishing that Connecticut Waltons regard as really good fun comes late in the summer with the arrival of snapper blues.

To get a kick out of fishing for snapper blues you've got to be a man who is easily satisfied. They are no fish for the angler whose fishing requirements exceed those afforded by the humble sardine.

These snapper blues are infant bluefish. When they first appear in August they are about the size of goldfish. When the run reaches its height in September, they have attained a length of about seven inches, and Connecticut fishermen refer to them with gusto as being "whoppers."

Last year I went out in a boat off what is known as "The Gulf" in Milford Harbor nearly every day from August 12th to September 7th, and fished most of the day. My total catch for the season was eleven snappers (with a maximum length of five inches); one eel, and two "skatefish." It was an off season. In a good season I might have landed an additional skatefish.

THIS year will find me back, very likely, for more. These snappers don't amount to much, even if you get them; but what I like about them is their frankness and sociability. They swim in schools close to the surface of the water, which I consider mighty considerate of them. But the mere fact they are on the job means nothing. I have fished for hours without getting a bite, although they were running circles all around the boat. Still, when I'm fishing I like the company of fish. It's good to know they're present. Fishing becomes unbearable to me only when I can't get the slightest idea whether there are any fish within miles of my line.

Last season, I took a fellow hotel guest fishing for snappers. After three hours he pulled in one about four inches long. He regarded it curiously.

"What's this?" he asked.

"That's a snapper," I informed him. "They're getting to be pretty good-sized. Last week they were running quite small."

He gave me a look of disgust, threw the fish back into the glittering waters, and began taking his pole apart.

"Let's go deer hunting to-morrow," he suggested. "We might get a few field mice."

That remark annoyed me. It made me think that, after all, I shouldn't go on forever being contented with demi-tasse fish. Every fisherman should have at least one big fish about which to boast.

"Why don't you go out for cod?" asked a friend about a month later.

"How do you go out for them?" I asked.

The idea of catching a codfish appealed to me strongly, and brought to mind that old trademark of a certain tonic depicting an old salt struggling home with a giant cod on his back.

"Take one of the fishing boats," he explained.

"What equipment do I need?"

"What have you got?"

"Nothing."

"You don't need anything," he explained. "The skippers on those boats will fit you out with everything from line and hook to pole, bait and gaff. If you don't catch a cod they'll sell you one."

THE next morning I showed up at the pier at daybreak. Loud-voiced ballyhoo men for each of the forty or fifty boats were out on the sidewalk buttonholing prospective customers. Sleepy-eyed fishermen were flocking to the piers by the thousands. It had all the aspects of a subway rush.

"Now, get aboard and grab your space," instructed the captain as I selected my vessel. "And when you grab it, stick to it." I found the warning well given. A "space" is just room enough against the rail for a man to stand, and there were only a few spaces left. I edged in between an insurance agent dressed like a man going to a business conference and a fat man in an oilskin suit who turned out to be a pie baker.

There was very little elbow room. The baker explained to me that on these fishing boats the congestion is so great that the form used for fishing is very similar to the form used by a golfer when putting. It has to be. It is entirely a wrist motion.

At least two men were on my feet all the time. Before the ship had left the dock I was covered with elbow bruises. Shouts of "Move over!" "Quit your shovin'!" and, "You'll poke who in the eye?" arose from various parts of the deck. Here and there a fight broke out.

"This is no rough-house," rebuked the skipper from the pilot house. "Youse'll act like gentlemen, or we'll put back and call a cop!"

When the fishing banks were reached there was a rush to get the lines over.

"Wait'll I anchor," bawled the skipper, "if you don't wanta lose your lines in the rocks! I'll give the signal to cast over."

After a time he blew the whistle. Four hundred sinkers hit the sea as one. A few more fights broke out. Somebody in the

Old Briar

TOBACCO

"THE BEST PIPE SMOKE EVER MADE!"

A VAST MULTITUDE OF PIPE SMOKERS instantly welcomed and praised Old Briar. Thousands upon thousands claim Old Briar to be "the best pipe smoke ever made."

The additional enjoyment, satisfaction and pipe comfort you get out of a pipeful of Old Briar costs but a fraction of a cent more than ordinary tobaccos.

Light up your pipeful of Old Briar. Let the ripe fragrance of Old Briar creep up your pipe's stem. Enjoy every bit of its full, pleasant aroma — its rich body — its extra smoothness. Notice how mild and cool it is — how completely satisfying. Then you will know why this wonderful tobacco continues to win the praise of pipe smokers everywhere.

Generations of tobacco culture, years of selecting and of testing the finest leaf tobacco, of scientific mellowing and blending, have gone into the perfecting of Old Briar. IT ALL SHOWS UP IN THE SMOKE.

TO DEALERS: Old Briar is sold in Pocket packages at 25c and Humidor boxes at 50c, $1.00 and $2.00. If your jobber has not supplied you, write us and we will send you a supply by prepaid Parcel Post at regular Dealers' prices.

IF YOUR DEALER DOES NOT HAVE OLD BRIAR

Tear out this coupon and mail to:
United States Tobacco Co., Richmond, Va. U.S.A.

SPECIAL OFFER: To make your first meeting with Old Briar an occasion for utmost satisfaction, we will mail you on receipt of this coupon . . . . . the regular Old Briar 50c humidor box. In addition, we will include one 25c pocket package of Old Briar — extra — if you include your dealer's name. Send no money, but pay the postman 50c when he delivers your order. Tear out the coupon, now, while it's handy!

6 REASONS WHY
You Should Have This

Majestic
UNDERGROUND GARBAGE RECEIVER

YOU should have this modern solution of your garbage problem for the six definite reasons displayed above. The Majestic puts your garbage can underground—away from disease bearing flies and prowling animals. A convenience worth far more than its moderate cost. Sold by hardware and department stores. Write for full information and your dealer's name.

ANOTHER NEW CONVENIENCE

***A new convenience* that costs but little—the Majestic Milk and Package Receiver. It receives deliveries from the outside—you remove them from within at your convenience. Saves steps—protects from annoyance, intrusion and theft. Outside door locks automatically when closed. Easily installed in old or new homes.**

Write for catalog describing Majestic Underground Garbage Receivers, Milk and Package Receivers, and many other Majestic Quality Products you will want in your home.

THE MAJESTIC COMPANY
1200 Erie Street, Huntington, Ind.
The Galt Stove & Furnace Co., Ltd., Galt, Ontario

stern hit a companion in the nose. He charged the man with taking his watch out of his vest. The man said it was a mistake; that they were crammed so close together he thought he had put his hand into his own vest.

I could see the logic of his defense, for at that moment I discovered that I was fishing with the pole that belonged to the man next to me, and that he was holding mine. Once I backed out of line to get some bait, and it was fully twenty minutes before I could squeeze into my allotted space again.

I got a terrific bite soon after casting over, and hauled in the biggest fish I had ever seen. It seemed to me it must have weighed fifteen pounds in its bare fins. By the time I had hauled it up it had become entangled in the lines of half a dozen other fishermen, and as it neared the railing two dozen hands reached out and fought for it. There is honor among thieves, but not among some fishermen. When I last saw that cod it was disappearing into the bag of a hard-looking customer six spaces down the line.

"If I hadn't been watching you, you'd have swiped that one on me," he leered. "I just got it in time!"

He almost made me believe that perhaps it was his fish, after all. A little later I pulled in another; but a man with a long reach several spaces aft got it, and accused me of snarling up his line. Honesty is the best policy, but it gathers no cod.

BY THAT time I began to get the idea: On these boats nothing comes to him who waits. Whenever one man hauls in a fish, he drags up from three to six other lines, and in the confusion it's the early burglar that gets the cod. Inside of two hours I had a half-dozen of the finest cod ever caught on some other man's hook.

By early afternoon I had perfected my technique to a point where I could bag a cod as fast as the men on either side of me could catch it. The motto of that fishing party was, "There are just as good fish in the sea as ever were stolen!"

Everything went, including the huddle, the forward pass, the straight-arm, and the use of spiked shoes. Never again will anybody tell me ice hockey is the roughest of sports. Those Sunday fishing boats have everything hockey has, except a referee.

At the conclusion of the trip a cash pool was given to the fisherman who had caught, snatched, or embezzled the largest fish. It was a close contest this day between three men, two of whom were detected shoving heavy lead sinkers down the throat of the fish in an effort to make it a sure thing when the man with the scales came around.

Yes, I have done some fresh-water fishing too. I am taking it up in a serious way. Three years ago I thought all fish were caught with worms or live bait. The first time I went fresh-water fishing and my companion opened a box full of "plugs" I thought he was exhibiting a spring showing of Christmas-tree ornaments.

He brought forth a thingumabob that looked like a wooden grip from a pair of bicycle handle bars. On one end of it was something resembling a collection of old coins. On the other was what I took to be a watch fob, a suspender buckle and a red feather. Dangling from various parts of the chassis were a half-dozen hooks.

"What is that?" I asked him.

"That's a plug," he replied.

"What are you plugging?" I asked.

"That's what we ought to get bass with to-day," he insisted, referring to it affectionately as his "Weebish, Miggle-thorpe and Gillyhead No. 23, buck-tail spinner," or something of the kind.

"If you ever hit 'em with that thing you ought to get 'em," I agreed.

"My boy," he explained, "you don't hit 'em with this. The bass sees it and goes for it."

"If he does, he's crazy," I insisted.

He showed me a few dozen other "plugs" and "lures," explaining that one would work when another wouldn't, and that you had to keep trying them out. It seemed to me that a fish that would bite at such hardware would be an easy mark for any man smart enough to fish with a key ring, an identification disk, an egg beater, a stuffed canary, and a fur glove.

Later, it was explained to me that bass do not strike at the hardware in the idea they are grabbing a full course dinner, but strike in anger. When this old curiosity shop lands near a bass among the lily pads, the bass resents it, and I don't blame him. His one idea is to get it out of the way, and he snaps at it, so my companion said. I don't know yet whether this is true or not. Plug fishing grew on me, however, and now I have a case full of curious contraptions, which I cart with me on all fresh-water fishing trips.

A man who would tote around the paraphernalia I do deserves to get a fish some day—and some day I think I may. The first three years are evidently the hardest.

WHEN the Urge To Be an Outdoor Man hits you it hits you all over.

Just now, I have an enthusiasm for bird dogs. At the dog show I'm the feller that hangs around the kennels with the setters and pointers. I never owned a bird dog in my life, and wouldn't know what to do with one if I did, but I like 'em.

I'm a hunting and fishing magazine addict, and read all the advertisements that read:

Come to Spruce County this Month, and Let Us Show You Forest Haunts for Moose, Deer, Elk, Wild Turkey and Other Game. The Sportsman's Paradise.

One like the following will keep me awake all night:

Special Opportunity: Join the Minnejawc Hunting Club. In Old Mexico Near the Texas Border in the Heart of the Carmen Mountains! Big game, 126,000 acres. Bear, deer, Mexican lions, wild cats, cougars. Six hundred miles of running, plunging mountain streams alive with game fish.

Oh, man!

Recently, I saw an advertisement that said "Moose, Caribou, and Bear. Shots at Bear Guaranteed!"

That's carrying the service idea too far. It's always seemed to me I'd like a shot at a bear; but all the bears I've ever seen have been on bicycles in circuses. They probably are something else again in the great open spaces. And that guarantee stuff is disconcerting. I want to take my bear shots or not, as I see fit.

LONGVIEW, Washington, the new industrial city of the Pacific Northwest, impresses business men.

Why?

1st: Longview is **located on the deep Columbia River with its ocean-going traffic; only 50 miles from the Pacific Ocean; served by three great trans-continental railways; giving access to all the markets of the world.**

2nd: **An abundance of raw materials capable of supporting a variety of industries.**

3rd: **Living conditions unsurpassed anywhere; a city of beauty; school equipment equal to that of cities of 100,000 or more; churches; public library; complete recreational facilities; even climate, permitting year-around operations.**

4th: **A high type of citizenship being attracted by such living conditions.**

Longview has **had many prominent visitors. Below is shown briefly the nature of the comments of the men listed above. Write for their complete statements and receive in addition a beautiful rotogravure portfolio containing nearly 150 photographs of Longview. It is free.**

"Longview is a city in which any American would be proud to live. You have built on a solid foundation. Your community stands for every good thing in life."

"Built in accordance with plans that were splendidly conceived, the city's future is assured, and it will endure long as a monument to the energy and foresight of those who founded it."

"You estimate that you will have 50,000 people in five years. I would say that you would have more than that. Your strategic location is unquestioned, and just as soon as America realizes that you are building a city that will give the employee an opportunity to benefit and enjoy life on a par with the employer, factories will seek locations here."

"I am simply amazed at all my eyes behold. When I think of the comparatively few months in which all of this has been accomplished, it seems incredible, and in railroad circles we think we do big things."

"This city, with its climate, its railroad facilities, its deep-water harbor, the excellent living conditions . . . Why Longview may some day rival Seattle and Portland."

"I admire the tenacity, ambition and loyalty of these people. I do not believe there is another section of the country in which a city such as Longview could be built in so brief a time."

"It is particularly gratifying to me to think that with the large development which my company expects to make in Longview that its employees will have a sensible, practical town to live in." (From a statement by an officer of one of America's largest industrial concerns which has begun the erection of a huge manufacturing plant in Longview.)

"What I have seen today convinces me that Longview is the greatest place for future growth along the Columbia."

"I think it is the most impressive thing in the way of community development I have ever seen. The way your plans have been worked out certainly entitles you to congratulations for your foresight and judgment."

"The same qualities that elevate an individual above his fellowmen—progressiveness, stability, foresight—elevate cities, and these qualities Longview possesses.

"I have no doubt at all that within a decade or two it will be the home of at least 100,000 people."

"Money can build cities but it cannot build spirit and that is where Longview differs from other programs of a similar nature."

THE LONGVIEW COMPANY
12 Colonial Bldg., Longview, Washington

He Lives on Top of a Hill and Lets the World Go By

(*Continued from page 57*)

with an ax when I was buildin' a fence! The doctor come from the village and sewed it up; but it didn't git along because he couldn't find the arteries. So they sent to Albany for a surgeon. And after I'd waited a day and a half for him to git here," laughed Mr. Clum, "I wished he'd stayed to home, because he wanted to cut my leg *off!* He said if he didn't do it that trip he'd have to do it the next one, and he didn't want to make any more trips than he had to.

"'There ain't more'n one chance in a hundred of savin' that leg!' he said.

"'Well,' I says, 'I ain't got so many legs that I can afford to spare any of 'em; so I'm goin' to take that one chance.'

"I did; and we saved the leg. But it was so many months before I was able to work, that I 'most forgot how. That was the only time, in my whole life, that I've been away from this farm more'n two or three days at a time. When I was well enough to git around on crutches, I went and visited my relatives in C'lumbia County for a month.

"I ain't much of a traveler, I guess. I'll tell you somethin'," he said, in a confidential tone. "I ain't never been further than Newark, New Jersey; and that's less than a hundred miles from here."

"DO YOU often go to New York?" I asked, for we were only about sixty miles from that city.

"I ain't *never* been there!" he declared, his blue eyes fairly sparkling with amusement at my surprise.

"My boys and girls have been there," he went on; "but they tell me I ain't missed much. Just a lot of folks herded together. Nothin' to hear but noise; and nothin' to see that can beat this!" and he pointed toward the glorious view.

"Are you too busy to sit down and talk a little while?" I asked.

"Never too busy to talk to a friend!" he said, and led the way toward the shady side of the house.

He motioned me toward a comfortable up-to-date hammock; and, as I sat down, I picked up a book which was lying there. The title was "Easy Lessons in French."

"That belongs to my youngest girl," said Mr. Clum. "She goes to town, to high school. She's been all through that book and got another one now. I don't know why she's learnin' French, but I guess it won't hurt her, anyhow.

"When I was a youngster, I didn't have a chance even to learn English; not as much as I wish I had. I used to go to school—when there was any to go to—until my father died. Then my brother and I ran the farm. After he left, I ran it alone.

"This house here has seen a lot of life. There's been enough children brought up here to start a whole town! My father's first wife died and left him with one set of children. He married a second time, a widow who had children of her own. That was two sets. My father and his second wife had children, and they were the third set. I belonged to that one.

"My older brothers married, and several of 'em lived here for a while, and brought up children here. The house used to be bigger than it is now. They tore down the oldest part years ago. But if the children that have been raised here could all come back, bringin' their husbands and wives and their own children with 'em—they'd fill the house and the barns two or three times over.

"One by one, they all left, except me. Finally, the farm belonged to me and one brother. But he didn't live here; he'd moved away, too. In them days there was neighbors around us; workin' the farms their fathers had worked before them. There was hundreds of tons of hay cut where you won't find nothin' but second-growth trees now. And there was nice, comfortable homes, where there's nothin' now but old cellars choked with bushes.

"Then a man begun buyin' up the farms around here. I don't know what he wanted 'em for, because he ain't never done a thing with the land. But he bought it anyhow; and the families moved out, and went—I don't know where.

"The man made an offer for this place; and my brother wanted to take it."

The figure facing me straightened, and stiffened. The cheerful twinkle died out of the blue eyes and something grim and resolute came in its place, as he went on:

"'Mebbe *you're* ready to sell,' I says, 'but I ain't! This is the old homestead, where we've lived and worked. Long before you and I can remember, this was the Clum farm. The Clums have kept these fields yieldin' crops and makin' a livin' for a family. If we sell out, there'll be an end to all that. This land will go back and be a wilderness again. There won't be nothin' left to show, for a hundred years of work, but the name of that hill up there! And if I went off and left the farm to ruin, I'd hate to leave even my name behind. It wouldn't be any credit to me.'

"MY BROTHER says, all right; if that was the way I felt about it, we wouldn't sell. And we didn't. Then, finally, he died. That sort of complicated matters, so I made up my mind to buy his share. It would cost me a thousand dollars; and so far as my havin' the cash was concerned, it might as well have been a million. But my brother-in-law loaned me the money on my note.

"'You know, Jonie,' he says, 'it's goin' to take you a long while to pay off this thousand dollars.'

"'No, it ain't!' I says. 'It's all goin' to be paid inside of a year—mebbe before next Christmas!'

"You see, I knew just where the money was comin' from. Lots of summer folks drive or walk up here to look at the view; and more than once they'd made me an offer for part of my land.

"I hadn't taken none of these offers. Not yet! But I'd made up my mind now

Spalding

adds just the touches that make you look like a *swimmer*

• • •

SPALDING has designed and made the equipment of expert athletes for over fifty years. They are exacting, these athletes, about the equipment which affects their chances of winning. But Spalding has suited them —*for over fifty years*.

Naturally, Spalding designers have a "know-how" when it comes to athletic apparel. They give it an air, a finish, which no one else approaches.

And no garment is more rigidly "just right"—or all wrong—than a swimming suit.

In a Spalding Suit you'll have the professional air. You'll look like a *swimmer*—whether you are or not. And you'll feel at ease—and rather proud of yourself.

Moreover, your suit will be of *professional* quality—like a life guard's. Wear or water won't dim the colors or harm the fabric, within a long season. That is guaranteed.

Spalding brings you new models —good clean *swimming* designs— and scores of new color combinations. You'll find *your* design and *your* colors among them.

There is a Spalding Store, or some other store which has these suits, in almost every town. The prices are surprisingly low, quality considered.

to do it, so as to own my farm, free and clear. I was willin' to sell a piece of it to a city man, if he'd build on it, because that wouldn't be lettin' it go back to the wilderness.

"One day there was a picnic up here, and a gentleman in the party come to the house to git some water. I talked with him a bit—and I took to him right away. So I asked him how he liked the place and he said it was a wonderful spot. I knew he meant it, too.

"'Well,' I says, 'if you're thinkin' of buildin' a summer home, there's a good site for it, right over there.'

"'Is it for sale?' he asked.

"'I'm goin' to sell it within six months,' I says. 'Mebbe within *two* months!'

"'All right! I'll think it over,' says he.

"Inside of two weeks, he and his wife bought them two fields over there. That was the best stroke of business I ever done. Not because of the money I got out of it! But because it brought us two of the finest friends and neighbors in the whole world.

"When my barn burned down, the summer folks across the valley chipped in five hundred and fifty dollars to help rebuild it. But in spite of my puttin' in five weeks of work on it myself, it cost a good deal more than that; and my neighbor over here paid the deficit out of his own pocket.

"His wife is as good to my children as if they were her very own. She give 'em that phonograph you hear goin' in the house right now. She give 'em a fine radio. And what do you think she done last spring? Give 'em a check for five hundred dollars to buy an automobile!

"I says, 'No, they can't have one!' So she says, 'All right! They can put it in the bank and use it any way they like; mebbe to help with their education.'"

"WHY didn't you want them to have a car?" I asked.

"Because it wouldn't do them no good!" was the emphatic reply. "I don't go off this farm much. I ain't been to town in two years; and then I had to go to git some tools mended. But I don't have to go out of sight of that road," pointing to the one leading up from the valley, "to know that my children are better off at home than runnin' all over the country in an automobile.

"One night two young fellows stopped here and got me out of bed at one o'clock in the mornin'. They was both full; but the one that was drivin' was downright drunk. The other one was afraid to ride with him any further, and wanted to stop here for the rest of the night. Of course I couldn't turn him away, so he stayed.

"When the car had gone on, I heard it crashin' around in the bushes, down the road a piece; so I got dressed and went to see whether the fellow had come to some harm. I couldn't find him; but a couple of days later he come up here and apologized.

"'That's all right,' I says; 'but I give you fair warnin'. The next time you come up here drunk, and git me out of bed at one o'clock, I'm goin' to take a log-chain and fasten your car to a post, so that you won't go no further *that* night!'

"He's been up here since then. He was full, too. But," with a chuckle, "he didn't risk gittin' tied up for the night. He went right on by. I've seen too much of that sort of thing to have my children take any chances."

"But they need recreation," I said.

"Sure!" he agreed. "They go to the village when they want to. It's only half a mile, by the short cut through the woods. They don't think nothin' of that. But," he added, "they don't think an awful lot of what they find when they git down there, either! They seem glad enough to come back home.

"My oldest daughter has married and gone away. The second one is keepin' books for her uncle down in New Jersey. The rest are here at home now; but mebbe they'll go, too, when they git older, though I hope at least one of the boys will stay on the old homestead. This farm has raised a good many folks. Seems like 'twould be a pity to let it stop."

"WHAT else do you raise here besides folks?" I asked.

"Mostly hay," he replied. "I keep ten cows and two horses. I raise the hay for their feed. The cows give us milk and butter and meat. We have enough chickens to give us the eggs we use. We have a flock of geese. We raise our own vegetables, and we have apples, pears, plums, and berries. We cut our own wood."

"That means," I said, "that you are pretty nearly independent. You literally get your living from your own farm."

"Just about!" he agreed. "We have to buy a few things: flour, tea, coffee, sugar, and clothes. Nothin' else to speak of. We put down butter and eggs for winter; and we put up fruit and vegetables."

"Where do you get the cash for the things you have to buy?" I asked.

"During the summer we sell a lot of butter. I sell some of the calves and occasionally a cow. Then there's the wood. You see that pile of cut stovewood? There's more than a hundred cords in that pile. We'll use most of it ourselves, but a good bit of it will be sold. So, you see, we won't have to go without flour and sugar and that sort of thing. We have just as good food as anybody—and a better appetite for it than most folks have!" he added, with that irrepressible twinkle in his eyes.

"And of course," I said, "with the town so near, the children can go to school and you all can attend church."

"Sure!" he replied. "For that matter, I can go to church in my own settin'-room, now that we have the radio. I heard a fine sermon last Sunday; sermon and singin' and everything.

"Not that I have to go to church to git my religion," he added.

"What *is* your religion?" I asked, with interest.

"Well," he said, "if a man tries to *do right*, and to do right *by others*, I don't know as he could find a better religion than that. If there *is* one, I ain't never found it. If goin' to church helps you to git that religion, you'd better go as often as you can. But it seems to me that *some* folks go to church to cover up their sins.

"I went to a minister once and asked him to preach a funeral sermon for one of my neighbors.

"'What did he die of?' says the minister.

"When I'd told him, he says: 'Why—don't you know it ain't safe to go where anybody's died of that disease?'

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"I says to him: 'What kind of a religion have you got? If it can't keep you from bein' afraid to go where there's sorrow and sufferin', it ain't worth much! I've been to that house a'ready and I'm goin' there again. I'm goin' to the funeral. I'm goin' to hear a funeral sermon—and I think *you're* goin' to preach it!'

"He did, too!" remarked Mr. Clum.

"Aren't *you* afraid of anything?" I asked.

"Naw!" he said, with calm contempt. "There's some things that can hurt you—*but most of 'em never git you!* No use worryin' for fear they will, because they probably won't! Keep busy workin', and you won't have no time for worryin'."

"WHAT is it like, up here, in the winter?" I asked.

"Fine!" he declared. "You just ought to see it! Sometimes the snow is more'n four foot deep on the level. It's beautiful."

"But lonesome," I suggested, turning to Mrs. Clum, who had come out of the house and joined us.

She smilingly shook her head.

"I've never known a lonesome day in all the years I've been here!" she declared.

"Then you are no more anxious to leave the farm than your husband is," I said.

"What would we leave for?" she asked. "We're comfortable and happy here. That's all anybody can be, anywhere, ain't it? We have our health, and mebbe we'd leave that behind us if we went to live in town. We don't have any 'boss' over us. If we want to sit down and visit with you," she laughed, "we don't have to ask somebody to let us. Our time belongs to us. So does our home. And so do our children. Seems as if, in town, parents don't see their own children except at mealtime—and mebbe not even then. No! I hope we won't ever have to sell the farm. If we did, I don't know where we could be any better off than we are right here."

After a while, I reluctantly said good-by and again walked up to the edge of the forest—that vanguard of an enemy always menacing the fields which encircled the old gray farmhouse. I looked down on them, thinking of the long procession of years during which so many men and women had lived and worked there, raising a sturdy human crop where once the wilderness held possession. It seemed to typify the struggle, ages old, between the spirit of man and all the forces that are arrayed against him. A struggle also, to keep alive the traditions of that simple, honest, hardy living on which this nation was founded, and in whose permanence lies our greatest guarantee for the future.

VIRGINIA TERHUNE VAN DE WATER, whose novels, stories, and articles have made her one of the most widely read writers in this country, surpasses herself next month on the subject of "Feeling the Years." Although she is more than fifty-five, and has no illusions as to the number of years that have passed over her head, she refuses to "feel the years" just because she is gray and a grandmother. With charm and humor and sound common sense, she writes of the compensations of age.

TO GET THE TRAINS THROUGH . . . SAFELY, SWIFTLY, AND ON TIME

After each run, a Pennsylvania locomotive is "put over the inspection pits" and gone over as though it were a racing car awaiting its crucial test

Here they groom the iron horse

DOWN in the pit, with flaring torch held up toward the barrel of the huge locomotive which crouches over him, the inspector shrugs his shoulder at the gale which rages through the summer night.

"Got to keep her tuned like a harp."

Clinging to the towering front of the engine, another intent figure works on oblivious to the storm, cleaning the headlight which must shine clearly through the flying rain.

"Got to keep her right on her toes."

Other figures along the platform at either side go about their work in the same spirit:

"She's got to run like a top."

They phrase it a dozen different ways; but its meaning is the motto of the Pennsylvania inspection pits.

As each locomotive steams in from the road, these men clamber through it, over it, under the great bulk which crouches astride the pit.

Grease cups are filled under high pressure; bearings are inspected and oiled; a flaring torch held at every joint and coupling tests for leaks; each working part is tried with hammer and spanner and wrench until this half-million pound mass of machinery is tuned to the concert pitch demanded by the great Limited trains.

Driving blizzard, black of night, blinding thunderstorm. But in spite of them all, the locomotives have got to roll—efficient, safe, on time to the dot.

In the lap of the Rockies

IN THE trough between the Cascades and the Bitter Root Mountains spreads an enormous vale, the size of France, tilted southwestward to meet the warm Pacific winds. Through this vale flows the Columbia River and its rushing tributaries. Richly blooming valleys, famous throughout the world, open into it; and more than seventy lakes of dazzling beauty are scattered like lambent jewels among the tumbled velvet and silver of the mountains that hem it in.

This is the famous Inland Empire! In the heart of it rises Spokane, its shining metropolis. And here are factors that make it great:

POWER. Spokane River alone developing 172,000 H.P. Billions of potential horse-power charging unchained away to sea. Priest Rapids Dam and Columbia River Project, both planned to surpass Muscle Shoals.

AGRICULTURE. One-fifth the Nation's boxed apples. One-tenth the Nation's wheat. Last year's new wealth of farm crops, $250,000,000. Orchards, $50,000,000. Famous valleys of amazing fertility; and far greater valleys waiting to be tilled!

TIMBER. Thirty-five million acres of virgin timberland, including largest stand of white pine in the world.

MINERALS. The center of probably the richest mineral region known. Already producing one-third the Nation's magnesite; over one-third the Nation's lead; large quantities of silver, gold, zinc. New mineral wealth last year, $65,000,000. Close contact with the copper region of Butte.

TRADE. Spokane, regional center for 63 cities and towns, distributing to 1,500,000 inhabitants. Annual wholesale and jobbing volume totaling $200,000,000. Greatest production of white pine timber in the country.

TRANSPORTATION. All resources easily reached by railroad, river and highway. Ten thousand miles of improved roadway winding through the valleys and mountains. The trunk line of the Chicago, Milwaukee & St. Paul passing through the heart of it; and spur lines reaching out as feeders.

A generation ago the Inland Empire was virtually a wilderness. But it has shared with the Olympic Northwest in an uninterrupted *growth five times faster than the Nation as a whole!* With the marvelous maritime region of Puget Sound to the west, with the tremendous resources of Industrial Montana to the east, with its own inestimable richness of soil, of mineral deposits, of timber resources, of white power, of an incomparable climate, the already famous Inland Empire is destined to become the center of a much vaster industrial and agricultural dominion.

Lombardy in the Northwest

Like Lombardy, ringed with Alpine peaks and tilted towards the warm scented winds of the Mediterranean, the Inland Empire is a land-locked vale strongly influenced by the warm breezes from the Pacific Ocean. Like Lombardy, but as large as all France! In the west Rainier lifts its glacier-crested peak. To the north and west stretch glorious wildernesses of mountain and primeval forest. Through enormous fertile valleys, blossoming with apricot, melons, grapes, apples, pears, plums, peaches, alfalfa, wheat, rushes the mighty Columbia under claret-colored headlands.

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND THE ORIENT

The

is the Inland Empire

How does the railroad reach the Inland Empire?

IT IS directly in the path of the shortest and most modern transcontinental route to the Pacific! No region in America is more adequately served by great railroads. It was the railroad, breaking through the mountain barriers, that opened up its riches to the world.

The Chicago, Milwaukee & St. Paul—pioneer in the last great American development, from Chicago and Milwaukee westward—penetrates the Inland Empire with a marvelous *electrified system*, one of the world's greatest achievements in railroad engineering. Its feeders extend into the richest valleys, timberland and mineral regions. Yet this is only part of the vast system—11,000 miles long—with which this railroad serves the Northwest.

It is like a great artery along which flows the life-blood of a waking giant. Farm implements, machinery, tools, seeds, pure-bred stock, and people pour through it, giving energy and life. Pulsing back comes the flow of raw products upon which the giant industrial centers of the East are fed.

Far-sighted industrial and commercial leaders are already planning for the great trend towards the Pacific. The Pacific Northwest now leads the Coast in commerce. *And the Chicago, Milwaukee & St. Paul is the shortest link with the Pacific Northwest and the Far East!*

See it on your next trip West

When you make your western trip, take this wonderful route. You will see the most diversified scenery in America—the golden plains—lush dairy country—three of the greatest rivers in the world—four tremendous mountain ranges: the Belt, the Bitter Root, the Rocky, and the Cascade Mountains—the glories of Puget Sound—truly an empire bursting ripe with opportunities!

Milwaukee passenger cars are now being equipped with *roller bearings*—a revolutionary improvement first adopted by this road.

Voyage to vacation land on D&C LAKE LINES Steamers

Ride the new $7,000,000

Str. Greater Detroit
Str. Greater Buffalo

—the largest and most luxurious of their type in the world—and their sister ships, the swiftest that sail the Great Lakes.

Vacation at MACKINAC ISLAND
"The Summer Wonderland"

Overnight from Chicago or Detroit via the fast D & C boats is this scenic wonderland. Here days are warm, and nights refreshingly cool. Here unspoiled natural scenery, virgin forests, historic points of interest will allure you. Golf, tennis, horseback riding, boating, fishing, and countless other recreations.

View the illuminated NIAGARA FALLS

—now more interesting and beautiful than ever with the billion candle-power multi-colored lights playing on the falls every night.

Utmost in Luxury Aboard

First class accommodations exclusively. All water sterilized. Autos carried. Radio and moving pictures on both the Buffalo and the Mackinac Divisions. On the Mackinac Division there is also dancing, with hostess in charge, afternoon teas, bridge, golf, horseshoe pitching, etc. Tickets on this Division limited to sleeping accommodations.

Round Trip Fares *between*

*CHICAGO and DETROIT $60
*MACKINAC ISLAND and CHICAGO or DETROIT $30
*BUFFALO and CHICAGO $79

	One Way	Round Trip
†CLEVELAND and DETROIT	$3.50	$ 6.00
†BUFFALO and DETROIT	$6.00	$11.00

*Berth and meals included. †Berth and meals extra

No surcharge.

Unlimited stopover privileges at all ports.

My Biggest Moments

(*Continued from page 45*)

know," he agreed, in that staccato voice of his. "But, you see, Powell, these European royalties have formed their ideas of me from the Rough Rider caricatures they have seen in the comic papers. They picture me as a sort of sublimated cowboy, and they'd be disappointed if I didn't shoot out the lights and kill the butler."

A few days later, as the "Hamburg" was approaching the Straits of Gibraltar, I came upon the ex-President in the bow, leaning upon the rail and watching the shores of Africa slipping past. He beckoned me to join him.

"You have no idea what a thrill it gives me, Powell," he confided, "to find myself actually sailing these historic seas—through waters which have been plowed in turn by the galleys of Phœnicia and Carthage, the triremes of Rome, the galleons of Spain, the frigates of Napoleon and Nelson."

"But, Colonel," I remarked, "hasn't it occurred to you that you were yourself responsible for sending around the world an armada far mightier than all the navies of antiquity put together?"

He pondered my remark for a moment; then clapped me on the shoulder.

"By Jove, Powell!" he exclaimed, "I never thought of it before; but you're perfectly right."

PORFIRIO DIAZ when history tardily grants him the justice of perspective, will be recognized as one of the greatest figures which Latin America has produced. In 1910, when Diaz was at the pinnacle of his power and fame, it was my good fortune to be invited to accompany him on a journey by rail and motor from the City of Mexico to Acapulco, the occasion being the inauguration of a highway from the Capital to the Pacific. As the presidential train drew slowly into the precincts of Guerrero it was suddenly engulfed by a mass of cheering, singing, flag-waving humanity. Every class of Mexican society was represented in that tumultuous throng—provincials and municipal officials in full evening dress girt with red-white-and-green sashes; top-hatted, frock-coated business men; rich *hacendados* who had driven in from their ranches; *vaqueros* on wiry ponies, their sombreros, jackets, and saddles encrusted with bullion; black-eyed, red-lipped girls with fans and mantillas; and thousands upon thousands of *peons* in enormous straw hats and garments of white cotton. As they caught sight of the sturdy, dark-skinned, white-mustached man standing on the rear platform they went mad with enthusiasm. "*Viva, el Presidente!*" they roared. "*Viva, Porfirio Diaz! Viva, Mejico!*" Flowers and confetti rained upon him.

"Such a reception as this must be very gratifying to you, Señor Presidente," I remarked. "It shows how great is the affection your people have for you."

"It is gratifying," he replied, "particularly when I recall that the last time I was in Guerrero, forty-seven years ago, I was a hunted fugitive, pursued

7 Joyful Days' Cruise On 4 Great Lakes and Georgian Bay (30000 ISLANDS)

A restful and exhilarating 2,200 mile trip over beautiful waterway with alluring scenery en route. Drive around historic *Mackinac Island*, see the Indians at Canadian village of *Parry Sd.* Take the sight-seeing bus at *Detroit and Chicago. See Cleveland*—spend a full day at *Buffalo.* Gaze in wonder at *Niagara Falls*, the world's greatest cataract.

by French troops and with a price on my head.

"I was encamped on those hills over there," he continued, pointing toward the bare brown range which rises to the north of Guerrero, "with only a small body of troops under my command, when word was brought me that an immensely superior force of French cavalry was approaching. Some means of delaying the pursuit had to be devised if I was to effect a retreat.

Fortunately for me, the French had no accurate information as to the strength of my command. So I set my men to cutting mesquite, which they tied into bundles. Then, deployed on a broad front, we turned northward, each soldier dragging a bundle of mesquite behind him at the end of his lariat. The enormous cloud of dust thus raised convinced the French commander that I had a much larger force at my disposal than he had been led to suppose, whereupon, instead of attacking, he decided to wait for reinforcements. But by the time they arrived I was safely across the mountains and on my way to join the Army of Liberation.

"What a change for one man to witness!" he said meditatively. "I left here ragged, tired, hungry, knowing that if I were captured I would meet my end between a blank wall and a firing party. I come back to be greeted with cheers and flowers, and in danger of being killed by kindness."

The old dictator was noted for his Indian stoicism, but as he stopped speaking and looked out across the cheering throngs and the flag-bedecked city, to those well-remembered hills, it seemed to me that I caught the gleam of moisture in his eyes.

THE most remarkable demonstration of popular admiration and affection that I have ever witnessed occurred a good many years ago in Paris, and the object of it was a nineteen-year-old boy. In the spring of 1905, His Most Catholic Majesty, Alfonso XIII, King of Spain, who, if my memory serves me faithfully, had just passed his nineteenth birthday, left his own country for the first time on a state visit to Paris. His stay in the French capital was inaugurated by a gala performance at the Opera, in which many of the musical celebrities of the day took part. Being unable to obtain tickets—the house had been sold out weeks in advance—Mrs. Powell and I stationed ourselves on the rue de Rivoli to watch the royal procession pass on its return to the palace.

Because of persistent rumors of an Anarchist plot against the king and his host, President Loubet, the authorities had adopted extraordinary precautions to insure their safety. The entire route from the Opera to the Palais d'Orsay, where the king was staying, was lined with troops standing shoulder to shoulder, and the four-horse barouche in which the king and the president rode was surrounded by troopers of the Garde Républicaine.

Just as the cortège had come into the rue de Rivoli, and when the leading ranks of the escort were within a hundred yards of where we were standing, there came a sudden, blinding glare, as though a million magnesium lights had been touched off

Something new under the sun

Thousands of factories have been erected in the South, but they have not brought about congested industrial centers. These factories lie apart—often on wooded hillsides and in smiling valleys. Nearby are the small and well-kept towns with attractive homes for the workers, and schools and playgrounds for the children.

Southern industry, turning natural resources into wealth, is wisely investing its prosperity in its people.

Small wonder that industrial towns and cities of the South are prosperous, and their people busy, healthy and contented.

Three-fourths of the mill capacity of the South's billion dollar textile industry, which now takes more than two-thirds of the cotton manufactured in this country, is along the lines of the Southern Railway System.

The Development Service of Southern Railway System, Washington, D. C., will gladly aid in securing industrial locations, farms and home sites in the South.

AMERICAN
KAMPKOOK
AMERICA'S FAVORITE CAMP STOVE

A Gas Range on The Running Board

Kampkook **is the most important item in your camp equipment—and the easiest to carry. Packed like a miniature suit case, it is up and going full speed in two minutes, with every facility of your gas range.**

Hot biscuits, baked or broiled meats—whatever your outdoor appetite demands, is provided by *Kampkook*, for, with its handy built-in oven, *Kampkook* bakes, broils, and roasts as well as it boils, fries and toasts. Uses common motor gasoline; burns with a clear blue flame as hot as gas, and free of smoke and soot. Large capacity detachable tank, with built-in funnel and pump, is easy to fill; the folding wind-shield makes it weather-proof; patented burner won't clog, lights quickly in any weather.

"Kampkookery," a valuable hand book on motor camping, sent on request.

Kampkook's **many exclusive features, the result of 30 years' manufacturing experience, make it the ideal stove for every outing. That is why there are more *Kampkooks* used than all other camp stoves combined. If your dealer does not carry genuine *American Kampkooks*, write for names of nearby dealers who do, and folder showing the full line. Address Dept. M. 8.**

Kampkook No. 8, with built-in oven and heater, America's finest campstove, bakes, broils, boils, fries, roasts, toasts—in short, does everything you can do with your kitchen range at home. Strong wind-oven protects utensils on all sides and top. Unequalled for heating the tent or cottage. Has 10½x19-inch cooking surface. Two-quart tank, with built-in pump and hand operated filler plug, holds six hours' fuel supply. Folds to 10½x19 inches, with everything inside. Price in U. S., $11.00. Other models $6.30, $9.00 and $14.50.

together, accompanied by a terrific detonation. The Anarchists had made good their threat. A bomb had been hurled at the king. A number of the escort were killed or wounded; the royal carriage was filled with fragments of steel; but, as by a miracle, its occupants escaped unscathed.

Those in charge of the arrangement must have acted quickly, for a moment later the cavalcade tore by us at a gallop, some of the troopers and postillions streaming with blood. President Loubet, who sat at the left, was crouched forward, as though still stunned by the explosion, but the slim young king stood erect in the swaying carriage, plainly visible above the cordon of steel which surrounded him, bare-headed, smiling, and waving his silver helmet in response to the roar of plaudits from the crowd.

The following evening we attended a state ball given for the king by President and Madame Loubet at the Élysée Palace. I have never seen, and never expect to see again, such a spontaneous and heartfelt demonstration as that which greeted the youthful monarch when he entered the glittering ballroom with Madame la Présidente on his arm. Magnificently gowned and jeweled women stood on the tapestried chairs and waved their handkerchiefs and fans and tossed their bouquets at him and cheered; cabinet ministers and ambassadors and officers of state cheered and clapped their hands until their white gloves burst; the Archbishop of Paris forgot his dignity as a great prelate of the Church, and cheered; and the gray-bearded president of the republic cheered loudest of all, while out in the illuminated gardens the band of the Garde Républicaine burst into the Royal March of Spain.

And the boy-king, who had never been out of his own country before, blushed and bowed and smiled with embarrassment and confusion, like the democratic, unspoiled youngster that he then was.

OF ALL "the vanished pomps of yesterday" of which I was a witness, none impressed me more deeply than the funeral of Prince Regent Luitpold, the octogenarian ruler of Bavaria. I chanced to be in Munich at the time and, through the good offices of a high official of the court, I was permitted a private view of the lying-in-state in the Frauenkirche, the ancient cathedral-church in which the Bavarian monarchs were crowned and from which they were buried.

Entering by a side door, I was led up a flight of narrow winding stairs to a balcony heavily draped in black. Groping my way to the rail of the balcony—for, barring a patch of light in the center of the nave, the vast interior was shrouded in darkness—I found myself looking down into the face of the dead ruler, an old, old man with a long white beard reaching half way to his waist. Clad in the black velvet costume of a noble of the Middle Ages, his face framed by a huge white ruff, he lay upon a catafalque of black-and-silver. His hands were clasped upon the hilt of an ancient sword, and from his neck hung the jeweled collar of the Golden Fleece. The fitful light thrown by the guttering tapers was reflected by the steel breastplates of the halberdiers who stood on guard, immobile as statues, at the corners of the catafalque. The silence was broken only by the muttered prayers of the two nuns and the two Capuchin monks who knelt at the head and the foot of the bier. So medieval was the scene that it seemed as though I had stepped back into history for half-a-thousand years.

As I stood there in the semi-darkness, enthralled by the majesty and solemnity of the scene, the silence was abruptly broken by the shrill notes of a bugle, sharp commands, and the rattle of arms, and the great doors were flung open to admit a solitary and most striking figure. The man who entered thus dramatically was wrapped from neck to heels in a voluminous gray cloak with a broad fur collar. Of medium height, his stiff, military carriage and silver helmet surmounted by an eagle made him appear taller than he really was. He advanced with quick, jerky steps to the foot of the catafalque, and, bringing his spurred heels together, raised his white-gloved hand to his helmet in salute. Then, as the light from the candles fell upon that pale, masterful face with the upturned, grizzled mustaches and the haughty, intolerant eyes, I recognized him. It was the Kaiser.

IN THE spring of 1906, as the representative of a syndicate of American and English newspapers, I attended the revival of the Olympic Games in Athens. They were held in the ancient stadium, which was rebuilt for the purpose by the liberality of a Greek merchant prince and held about fifty thousand persons. Among the spectators were two kings, three queens, and a whole galaxy of lesser royalties, several of whom were destined to wear crowns of their own.

The Stars and Stripes were at the masthead most of the time, for the American athletes won more points than all their competitors put together. But the Marathon race was by far the most important event of the games.

Perhaps I should explain that the Marathon race was instituted to commemorate the feat of the Athenian soldier who, in 490, B. C., ran from the field of Marathon to Athens—a distance of about twenty-five miles—with the news of Miltiades's great victory over the invading Persians, and fell dead as he delivered his message. Because of its historical associations, its length, and its arduousness—for the course leads over the Pentelikon Range—it is the most picturesque and interesting athletic event of modern times.

It was a foregone conclusion that a Greek would win the great race, and the Greeks who packed the stadium to its utmost capacity and who formed a solid mass of humanity along the course for many miles were agog with excitement and expectation. It seemed as though every man, woman, and child carried a Greek flag, and hundreds of thousands of drachmas had been wagered upon the outcome.

It was late in the afternoon when the rumor spread through the eager throng that the runners had entered the precincts of the city and were approaching the stadium. A moment later, from our seats in the press stand we saw a lithe figure in a white shirt and running shorts dart into view at the far end of the troop-guarded lane. As he trotted through the marble

Retail merchants:

Now more than ever— a powerful local selling help

"I am astonished," says one of New York's greatest retailers, "to learn what a large number of subscribers the Woman's Home Companion has in the better residential neighborhoods. Certainly, the Companion is a tremendous factor in the local sale of products advertised in its pages."*

For years dealers who realize the importance of checking up on advertising facts have watched the constant increase in the number of Companion readers—from 900,000 in 1915 to 1,900,000 in the first part of 1926. And *right now* a gain of 300,000 new readers since July, 1926—bringing the Companion's circulation to a high level of 2,200,000.

And here's what these circulation increases mean to you.

If you are a hardware merchant with a rating of $5,000 or over, there are now about 106 Companion homes in your neighborhood that you can logically draw trade from.

Or if you are an electrical goods dealer, there are 787 Companion homes in your trading area that are familiar with products in your line through seeing them advertised in the Woman's Home Companion. And all good customers for you.

In other words, today, more than ever before, the Companion is giving *local* coverage, creating *local* demand for the products advertised in its pages, making *local* sales for merchants who handle those products.

That is why the shrewder merchants in all parts of the country are featuring Companion-advertised products, tying-up with manufacturers' advertising by means of window displays, counter cards, and local newspaper advertising.

Now, more than ever, they know the Companion is a powerful *local* selling help for them. Equally important to you as dealers is the way leading manufacturers are helping you reach these Companion homes—so that you can sell more goods and increase your profits. For instance, in the short space of 5 years the advertising in the Woman's Home Companion has increased over 400 pages. And this is the final test of the local sales value of Companion advertising.

Number of Companion Homes Reached per Retail Outlet

Dealer	Homes reached per dealer rated over $5,000
Auto Dealers	160
Department Stores	758
Drug Stores	103
Furniture Stores	164
Hardware Stores	106
Jewelry Stores	277
Grocery	52
Radio	2824
Music Stores	699
Women's Furnishings	488
Electrical Stores	787
Dry Goods	110

Pathé News

Japan is rocked by an earthquake, thousands are killed, other thousands made homeless—cable and wireless reach Pathe News cameramen in the Orient, motion pictures are taken while the earth is still shaking, a speeding liner bears the film to America, airplanes carry it to five great film distributing centers for printing—once again Pathe News is first in the theatres of America.

Wherever something big is happening, there is a Pathe News cameraman near at hand to cover the "story". England, France, Germany, Italy, China,—all over the world these men are in constant, immediate contact with the News.

The experience of sixteen years has made all this possible. The first news reel is still the first. Its incomparable organization can be imitated but not equalled.

Make Pathe News a habit at your favorite theatre

PATHE EXCHANGE, INC.

"Sees all—knows all"

portals of the stadium, the vast concourse rose as one man beneath a fluttering cloud of blue-and-white banners. For an instant the hush was so intense that we could hear the rapid "pit-a-pat" of the runner's feet and his labored breathing. Then there came a great sigh, almost a groan, of disappointment: the forest of Greek flags drooped and fell. For the runner, instead of wearing the Hellenic colors, carried on his breast the Canadian maple leaf. M. D. Sherring, a Canadian, had won.

There was a moment of deathly silence, and then the innate sportsmanship of the Greeks asserted itself. Bands blared the British and Canadian anthems, a Canadian standard fluttered out from the top of the winner's flagstaff, King George of Greece shook hands with King Edward of England, and Queen Olga embraced Queen Alexandra, half a dozen royal princes ran out into the arena and fairly lifted the little Canadian from his feet as he plunged across the finish-line, and when the King of the Hellenes placed on Sherring's brow the laurel wreath of victory, the crowd, forgetting its disappointment and chagrin, cheered itself hoarse in tribute to the winner of the Marathon. It was a great moment—a sight worth having seen.

THOUGH during the four years of the Great War I witnessed many profoundly impressive military spectacles, the one whose memory will remain with me longest, I think, was the entry of the Germans into Antwerp, on October 10th, 1914, when sixty thousand fighting men passed in review before the military governor in front of the royal palace, from which, only a few days before, the Belgian king and queen had fled. So far as onlookers went, the Germans might as well have staged their triumphal entry in the streets of Pompeii. My photographer, Donald Thompson, and I, standing on the balcony of the American consulate, were among the few non-German spectators in the entire length of the mile-long Place de Meir—which is the Broadway of Antwerp. The streets were deserted; every door was barred, every window shuttered. In a thoroughfare which had blossomed with bunting only forty-eight hours earlier, not a flag was to be seen. I think that even the Germans were a little awed by the sinister silence which greeted them.

At the head of the advancing column rode a squadron of gendarmes—the policemen of the army—in uniforms of bottle-green and silver, mounted on sleek and shining horses. After them came the infantry: solid columns of gray-clad figures, with the silhouettes of the mounted officers rising at intervals above the forest of spiked helmets. After the infantry came the field artillery, the cannoneers sitting on the caissons with wooden faces and folded arms and heels drawn in, like servants on the box of a carriage, as the guns rattled and rumbled over the cobblestones. After the field batteries came the horse artillery, and after the horse artillery the machine guns, until one wondered where Krupps' found the time and the steel to make them all. Then, heralded by a blare of trumpets and a crash of kettledrums, came the cavalry: Cuirassiers, with their steel helmets and breastplates covered with gray linen; hussars in fur busbies and befrogged gray jackets; and finally the uhlans, riding amidst thickets of lances under clouds of fluttering pennons.

For five long hours that mighty host poured like a human river through the canyons of brick and stone.

Battalion after battalion, regiment after regiment, brigade after brigade swept by, until our eyes grew weary watching the endless ranks of gray under the slanting lines of steel. As they marched they sang, the high buildings along the Place de Meir and the Avenue de Keyser echoing the thunderous strains of "Die Wacht am Rhein," "Ein Feste Burg Ist Unser Gott" and "Deutschland über Alles." Though the singing was mechanical, like the expressions of the men who sang, the mighty volume of sound, punctuated at regular intervals by the shrill music of the fifes and the rattle of the drums, and accompanied by the "tramp, tramp, tramp" of iron-shod feet, was one of the most unforgettable things that I have ever heard.

As the result of a serious injury incurred during the latter stages of the World War, the final days of the great conflict found me on a hospital ship in mid-Atlantic. The vessel, a former German liner, was crowded with sick and wounded officers and men, bound for home. I think it was shortly after midday on the eleventh of November when a hatless, coatless radio operator dashed from the wireless room to the captain's cabin with a message in his hand. A moment later the ship's siren split the gray silence of the wintry Atlantic with a shriek of triumph which could be heard for miles. We didn't need to be told what that blast signified. Intuitively we knew. The Armistice had been signed. The war was over! Peace had come!

THE great news spread through the ship like fire in dry grass, and in scarcely more time than it takes to tell about it the decks were ateem with cheering men. From the stokehold came figures begrimed with coal dust. Bluejackets came flocking from the fo'c'stle. Men in stained and faded khaki, with wound chevrons on their sleeves and the hospital pallor on their cheeks, hobbled from their cabins. Ship's officers, army surgeons, hospital orderlies, nurses, Y. M. C. A. workers joined the cheering throng. *These* were men who had made this thing possible—the men who had fought at Château Thierry and the Bois de Belleau, who had smashed the Hindenburg Line, who had faced the German steel-storm in the forests of the Argonne and on the slopes of St. Mihiel, who had fought amid the swamps along the Yser and the marshes of the Piave, who had manned the Atlantic convoys and the North Sea patrols. For a moment all was chaos, pandemonium, wild rejoicing. Then—and I never knew who gave the signal or how it started—the tumult was suddenly superseded by a reverent hush, and from the crowded decks rose, in a mighty volume of sound, the solemn strains of the Doxology—"Praise God from whom all blessings flow . . ."

Of all the big moments of my life, *that* is the one which I shall remember longest.

Do Wild Animals Think?

(*Continued from page 55*)

Just how the first ratel learned to follow the first honey guide, it is of course impossible to say. The first coöperation of these two was probably a chance circumstance. Additional such chances followed, until the honey badger came to recognize the chatterings of its friend the honey guide, and the bird came to remember that the little badger was powerful enough to tear open the home of the bees. From these first chance encounters and associations grew the knowledge which each now possesses. To me, such a chain of circumstances is neither impossible nor improbable.

During the dry season, which lasts for six or seven months, the majority of the rivers in parts of Africa dry up. In July and August often nothing remains of a once rushing stream save a few rather stagnant pools. Most of the water holes and pans have become crinkled beds of hard mud. As a result, all the animals of a particular district become dependent on one or two pools or holes for their water.

If one did not know animals' habits, one would expect that such preying animals as lions and leopards would naturally lie in wait near such spots. It would seem that the one water hole in an area of, say, fifteen square miles would be the easiest place at which to secure a meal of zebra or hartebeeste meat. But such is not the case.

In my hunting, I have walked at least five thousand miles. I found many spots where antelope had met their death from lions, leopards, wild dogs, or cheetahs. Yet I cannot recall a single instance of such an occurrence near a watering place.

IT SEEMS to me that this action in itself shows reasoning. The fact that lions and other killers never bother to wait for game near a water hole is even more significant. They evidently know how useless such a procedure would be. Game does meet death at water holes, but only by accident. The winds and light breezes play queer tricks occasionally, and it might very well happen that a lion sometimes came face to face with a zebra without either animal being aware of the other's proximity until too late for the zebra.

Buffalo, eland antelopes, rhinoceroses, and elephants are often accompanied by egrets, which walk around and over their bodies, feeding on the blood-swollen ticks. Egrets are nervous, wide-awake birds. At a distance, their sight is probably better than that of the animals they ride on. If a hunter can approach a herd of buffalo, or a solitary rhino, without disturbing the birds, and without telegraphing his scent ahead of him on some wandering breeze, it is pretty certain that he will get his shot. But if the birds see him, they will at once become restless, and eventually take flight if the hunter continues to approach.

The departure of the birds arouses the animal. It becomes conscious that probably something is approaching. Once they are on the alert, animals are very difficult to approach. The least snapping of dry grass, the faintest breeze, or a sudden movement will give the hunter away.

Although the eland, elephant, and rhino are nearly always covered with ticks which annoy them they did not seek out birds to pick off the parasites. Probably the egrets found out by accident that certain large animals are infested with ticks. Then the birds associated themselves with the animals in order to obtain food. After a time, the animals learned by experience to take the sudden flight of the birds as a danger signal. Now, to me learning from experience means reasoning.

Very seldom do animals lie down or stand up for their noon-day snooze without previously circling down-wind and back-tracking some distance. They do this so that they will have forewarning of any enemy on their trail. Is this act instinctive? Or is it performed with conscious design? I believe the latter, because all animals which I have tracked always have a sentry or guard. I have never yet found a whole herd of adult animals asleep.

It is an interesting point that very young animals do not know this trick of safety. They lie down where they are, without regard to wind. It is because such youngsters have not yet learned how to take the necessary precautions that so many are killed by wild dogs, hyenas, and lions, and it is also the reason why so many are captured by natives, who stumble across them by accident.

The ignorance of such an emotion as fear is another factor in the careless behavior of very young creatures. Young animals accept any other animal as a friend, on first meeting it. On my farm, I once had a young wart hog which tried to make friends with a full-grown leopard. She did. But not in the way in which she expected. Only quick action on the part of my natives and myself saved her from serving as that big cat's noon-time meal. We had a monkey whose greatest pal was a kitten; a leopard and a Great Dane dog that drank milk from the same bowl; another leopard which used to box in the most friendly fashion with a goat.

WATCHING young animals make friends, regardless of species, on our animal farm, plus experiences while hunting, has convinced me that adult animals teach their young how to feed, what to eat, what to be afraid of, and how to act under any and all circumstances. Having learned what their parents can impart by example, the young animal fares forth on its own. If it is intelligent and strong, it survives. Otherwise, it quickly succumbs and becomes a prey of vultures and hyenas.

Animals learn from observation and from experience. I do not believe that a zebra approaches a water hole up-wind because it reasons each time that by this procedure it will be warned if lions are lying in wait. When it was a foal, the young zebra followed docilely wherever its mother and the rest of the herd led. Scents and sounds meant nothing to it.

This was because it had had no experience wherewith to connect certain scents with certain animals, or certain sounds

Resinol Soap – the choice of the younger set

Its soothing Resinol properties protect the softness and youth of the skin

"My skin is very smooth and it is due to the regular use of your wonderful soap."

"I have a skin that is easily irritated, but Resinol Soap soothes it."

"I—delighted to see how soft and smooth it made my skin."

"Resinol Soap is wonderful if one has to use hard water. Does not draw the skin as some soaps do."

"I have so many compliments on my complexion and owe them all to Resinol Soap—the most wonderful soap on the market."

The above extracts from a few of the letters written to us by enthusiastic girls show that even the youngest of the "younger set" has found that her skin must be watched carefully or it will grow tired looking in this modern age of cosmetics, jazz and excitement. She has accepted the fact that thorough cleansing once a day is a positive necessity, and she turns to a cleansing agent that will soothe the skin at the same time.

In Resinol Soap the required elements are found because of the special Resinol ingredients. Begin today to use Resinol Soap and you will be giving your skin the protection of daily Resinol treatments. In countless homes the name Resinol is synonymous with skin health and beauty.

If blackheads, blotches, etc., are already present, apply Resinol Ointment to the irritated spots and see how it clears them away. This soothing, healing preparation, has been prescribed by doctors for more than 30 years in treating skin troubles slight or serious. Excellent for the relief of sunburn, chafing, prickly heat, etc.

SEND TODAY FOR FREE TRIAL

Dept. 8-F, Resinol, Baltimore, Md.

Please send me, without charge, a sample of Resinol Soap and of Resinol Ointment.

When your one shot must be a sure shot, it's a *Readyset* you need

YOU can whip out and use a Readyset almost as fast as you'd aim and shoot a pistol. You don't have to focus it or stop to adjust it. It draws a bead on your target the instant it is aimed.

Just open—aim—shoot. The picture—that fleeting opportunity that comes and goes in a second—is still there for you at the moment your Readyset clicks. Not a single precious instant has been wasted "getting set."

And it's all because Ansco—and only Ansco—offers in the Readyset a camera which does automatically and correctly several basic things that people might do wrong. Every Readyset is "set" in advance, by an expert, to suit exactly the conditions under which most snapshots are made.

By all means, own a Readyset. Good stores everywhere have them, in the three favorite picture sizes—Vest Pocket Readyset $7.50; No. 1 Juniorette Readyset, $10.50; No. 1A Readyset, $13.50.

The Ansco Readyset—

—the easiest camera in the world for non-professionals to use—is one of the line of famous Anscos that won the Sesquicentennial Gold Medal, the highest prize awarded for excellence of manufacture and design. Good stores everywhere sell them

And remember "6 out of 6"

is regular Ansco Speedex percentage, in any well handled camera. There is no film finer, surer, faster. Look for the Ansco Dispenser (shown above) at your dealer's

ANSCO

The distinction of originating roll-film, of putting the first hand and studio cameras on the American market and of being the first to establish a full line of professional supplies, all belongs to Ansco.

ANSCO PHOTOPRODUCTS, INC.

Binghamton, N. Y.

Ansco Cameras—Cyko & Noko Paper—Ansco Speedex Film

with danger or safety. But over the course of the first six months of its life, the herd with which the foal belonged undoubtedly came into contact with preying animals of some kind. The little zebra learned to associate certain smells with instantaneous stampede. It saw that the roar of a lion made its mother nervous and caused her to be doubly on the alert. As yet, however, it did not understand why its companions fled so precipitately when the strong smell of lion came drifting down the breeze, or the high, whooping yelp of wild dogs sounded in the near distance.

Then, one day or night, the killing rush of a lion was successful, and one of the foal's companions disappeared. The roar, the terrified rush for safety, the squeal of the dying zebra, and the horrible smell of hot blood made a deep impression. Now the smell of lion was connected with something tangible. When that reeking scent came to its nostrils, the young zebra shivered involuntarily.

As it grew older, the foal noticed that danger always came from a certain direction; namely, that in which the wind was blowing. From these observations, and from the example of the herd, the young zebra developed the habit of approaching water, food, and lying-down places against the wind.

IN MY opinion, it is in some such way as this that animals learn. I do not believe that knowledge of danger, for instance, comes to them instinctively. If such were the case, would not all young antelopes be terrified of man, of lions, of dogs, of leopards? Yet they are not. Of all the more than a thousand very young creatures which I have handled in Africa, I have never seen one which was afraid. Baby elephants, cheetahs, rhinoceroses, leopards, wild dogs, monkeys, wart hogs, baboons, zimba cats, blue jays, owls, mongooses, hawks, duiker, koodoo, reedbuck, hartebeeste, sable and lechee antelope, zebra, kingfishers, hornbills, and servals have passed through my hands.

The little ones which were just beginning to see, to walk, and to eat were never afraid. The older ones did exhibit fear, but only of certain other animals. Some were afraid of dogs or cats; others of human beings. Some paid no attention to the growl of a leopard or to the crack of a rifle. Others were terrified. In short, reaction of the individual animal to these sounds and sights depended on the picture which past experience conjured up in their minds. Without such previous experience they had nothing by which to judge, to form an opinion.

This theory is borne out by the obvious difficulty which young lions have in killing their first antelope. I have shot many a buck which bore on its back and hindquarters the long scars of lion claws. But with the exception of the huge bull eland, which even adult lions have great difficulty in killing, these marks were nearly always those of immature lions, who were obviously learning how to kill. Instead of springing on the neck and shoulders, and either biting through the spinal column or breaking the neck of their prey with the strength of their tremendous fore legs, they missed their spring and landed on the broad, strong back or sloping hindquarters. They had not yet learned to time a spring accurately.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Intelligence is a very difficult trait to define, particularly when the term is applied to animals. However, I believe that if any animal or group of animals can be shown to be able to communicate, discriminate, remember, coöperate, teach, and learn, they must be able to reason. And the ability to reason certainly implies some degree of intelligence.

Elephants always provoke wonder, whether in a circus, walking the streets, working on the docks in India, or roaming free in the African bush. Their size, enormous ears, and ponderous yet rapid movements are a never-ending source of wonder. Compared with their bulk, their brains are small. Yet they are among the most intelligent of all African animals.

ELEPHANTS have a language, or a series of calls, by which they can communicate ideas. These noises vary greatly. There is the clear, loud trumpet call given when elephants are at ease feeding through the bush. At night I have heard this trumpeting come rolling across the veldt through the darkness, and I have pictured the herd scattered among a patch of mauhaubahauba trees, pulling down branches and butting over whole trees in order to feed on the fruit of which they are so fond. This clear trumpeting is a call uttered much as boys call and shout when swimming or playing some game. Indeed, I have heard elephants trumpet and squeal at a water hole just as if they were a crowd of boys at the swimming hole playing hooky.

One night when I was far up the Luia River in Portuguese East Africa, I listened for hours to a herd of over sixty elephants bathing and playing at a water hole in the nearly dry river bed. I had made a machan—a tree house or platform—high up in a white thorn tree on the river bank. My native boy and I were watching a spring of clear water, to which elephants often came to drink.

I was beginning to doze off when Mangineera poked me in the leg. I swung around toward him. In the faint light I could see that he was pointing toward the running water of the spring. I listened carefully. A subdued "slap, slap, slap, slap" came to me. Then there was a sound as if water were being sucked through a large hose. Staring hard, I gradually made out a dark bulk looming against the black background of the bush and papyrus on the opposite side of the dry river. There was a movement, and the gleaming white of a tusk showed for a moment. An elephant; probably a single bull come for a drink. The slapping was its trunk dabbling at the water. From the glimpse of its tusk, I knew that it was probably a big bull.

We lay silent, watching intently. Old bull elephants usually travel alone, but often there is a herd not far away. There were only two places on this stretch of river where there was sufficient water for a herd to drink. We hoped the bull was a forerunner, and that the herd would come in the early hours of the half-dawn.

The black blotch had gone. There had been no sound, nor any movement that we could see. But the bull had left, making his way under the shadow of the great thorn trees. We settled back on our grass and blankets, only to sit up again as the clear trumpet call of an elephant sounded

for **Real Summer Thrills**
take **MOTION PICTURES**
with this camera

WHEN you go boating, fishing, riding, swimming, golfing—you're missing the biggest thrill of all if you fail to take your own Filmo motion pictures.

It's so easy! Simply look through Filmo's spy-glass viewfinder and press the button. Two simple operations. That's all. And you are taking movies as sharp and clear as those shown in best theatres everywhere. No focusing, cranking, tripod or other inconvenience.

In Filmo you find exclusive features developed by Bell & Howell's 20 years experience in making cameras and equipment used by leading motion picture producers all over the world. The Filmo booklet, sent on request, describes these features in simple language.

Eastman Safety Film [16 mm.]—in the yellow box—used in Filmo camera is obtained at practically all stores handling cameras and supplies. First cost covers developing and return postage to your door.

Write for descriptive Filmo booklet "What You See You Get" telling the whole interesting story.

BELL & HOWELL CO.

from the other water hole, a quarter of a mile below us. Another trumpet. Then more. Splashing, thumps, squeals, and half-roars sounded through the night. The herd was having a party at the other pool. We were disappointed, but we listened eagerly to the uproar. The herd was bathing and playing. The sound of sucking mud and squirting water drifted up to us. The crash of a tree torn down in sport cut across the other sounds. But through all the sounds, there ran a note of enjoyment and fun.

THERE are many less pleasant sounds that an elephant makes. When wounded badly, even a big bull will sometimes call for help. This call is a penetrating, screaming trumpet, and nearly always brings response. If there are members of the herd near when such a trumpet strikes through the bush, they respond. The elephants which come to the aid of a wounded comrade are in most cases cows. That they come in response to the call is evidenced by their endeavor to get their helpless companion away. If the wounded elephant is down, the good Samaritans will attempt to get it on its feet. If it has a broken leg or shoulder, a friend will walk on each side and bolster up the stricken comrade, so that it can get away.

This action is one of the most touching and courageous which one sees among wild animals. To hear a wounded elephant trumpeting for help and succor, to see two cows returning to render what assistance they can, and then to watch the cleverness with which they get the sorely hurt elephant to its feet makes the human watcher think hard. Are these acts performed without conscious design? Do cow elephants return in the face of danger because such an act is merely an instinct with them? Or do the cows answer a call for help, in spite of the danger which they know awaits them from the hunter's rifle?

Elephants also roar and scream from rage, and with the purpose of terrorizing men or other wild animals. More often than not, a charging elephant bursts out upon the hunter, screaming like a tied-down locomotive whistle. It is a terrifying sound, and is more nerve-shaking than the sight of the enormous beast, bursting down with terrific speed, with its great ears spread twelve feet or more, tusks gleaming, pig eyes rolling, and trunk dangling wickedly.

Elephants trumpet when they scent danger. On such occasions, the call sounds only once, but the entire herd moves as if one, and disappears for some more secluded and less dangerous locality. I have heard such a call only once, but the warning quality in it was unmistakable. Unwittingly we had passed up-wind of a herd and they had scented us. The trumpet sounded below and slightly behind us. Although we hurried toward it we were too late. The elephants had gone.

We know that elephants can coöperate, as witness the return of the cows to help a wounded bull. They also combine their strength to push down trees too well rooted or too large for the strength of one.

Water every two days, and preferably every day, is essential to an elephant. During October and November the heat is terrific in the parts of Africa just south of the equator. It is then the end of winter and the dry season. Most of the rivers present only dry beds of roasting white sand. Yet elephants obtain water.

Often I have found places where they have dug in the sand, and secured pure, clean water sufficient for their immediate needs. An elephant digs by swinging one of its huge, powerful fore legs back and forth, sending gravel and sand flying. Tusks also are used for digging, but more often to dig for roots than for water. Once an elephant has scraped and kicked a hole in the sand deep enough to collect the water, it waits until sufficient has seeped through to furnish a drink.

This digging shows, to me at least, that an elephant can think. First, it must find the water under the sand. How does it do this? Probably by remembering where the various river beds are, and by walking along them until its keen smell tells it that water is below. It then digs. Between it and the necessary drink is a mass of sand and gravel. The elephant proceeds deliberately to remove that which is between itself and the water, to wait until the water collects, and then to drink. Is this an action performed without conscious design? Or does the elephant remember, discriminate, and reason, as I most firmly believe it does?

A FIRE is commonly thought to be a protection against wild animals. As a matter of fact, it is firelight which frightens away marauders.

During the months of July, August, and September, all Africa south of the equator burns. The grass, which during the rainy season has reached heights of six, seven, and eight feet, becomes dry as tinder. The natives fire the grass to drive game into nets, or water, or pitfalls, and to encourage new grass to grow for their cattle. Consequently, wild animals have become accustomed to the sight, sound, and smell of fire. As a matter of fact, antelope and zebra are very interested in fire as a means of securing a delicacy—salt.

While hunting, I have often fired great stretches of grass, with the deliberate intention of helping myself to obtain game. Antelope, and zebra also, have found that the blackened roots of the harsh burnt grass contain a residue of salt. One of the easiest methods that I know of to secure game is to burn off the grass of a particular area, and then wait until some hartebeeste, wildebeeste, duiker, or zebra come to feed on the salty residue which remains.

Again, antelopes, wart hogs, or zebras will seek the protection of man and his fires when pressed by a pack of wild dogs. One evening, when I was camped in a district far west and south of the upper Kafue River, a hartebeeste came into camp at a staggering gallop. It stood shaking and quivering, surrounded by my dogs and natives. It was terribly frightened, yet it would not move. Then the yelps and barks of a pack of wild dogs sounded from the bush from which the hartebeeste had come. The dogs came up, circled around us and after a time withdrew. The hartebeeste stayed with us until late at night, and then took itself off.

Firelight is a protection because animals realize that they can be seen if they come within its circle. Of the actual fire itself, they are not afraid. A lion, for instance, will approach close to a camp, will wander around and even through it, but very,

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

very seldom does it approach close enough to a fire to be revealed.

When we first made camp on the Luia River in Portuguese East Africa we had no houses or stables. While these were being built, we surrounded our tents and houses with a fence made of the stiff stalks of dried papyrus reeds. It was flimsy enough, but it was all the protection that we required. Inside at night we tied our six horses. Near them slept several natives, whose special job it was to keep fires burning all night.

The first time lions came up to us they prowled all around the fence. For a time one stood within six feet of one of our tents. Yet nothing happened. Those lions did not want to enter the brightly lighted area inside the fence, even though they could see and smell the horse and dog meat there.

Are all these actions examples of instinct, or do they show that animals act with intelligence? The very variations in the conduct and habits of animals tend to convince me that animals often act with conscious design. Antelope, for instance, know only too well that man means danger. Yet, when hard pressed, they will appeal to him rather than suffer the agonies of being torn limb from limb while still alive. When fire rages behind them, antelope, buffalo, and all wild creatures flee headlong. But they will return, and, if herbivorous, feed on the salty residue behind. Young animals are born unafraid. Of that I am positive. Still, when adult, they possess all the fears of their species. Observation has convinced me that, like human beings, animals learn through experience.

One Way to Kill Worry is to Laugh It to Death

(*Continued from page 51*)

out to one of the six who had lost heavily.

"'He can afford to worry,' he laughed, 'because he's got nothing to worry about. It won't hurt him. As for me, I can't afford it. I've got too darned much work to do to make up that loss. If I worried about it, I sure would be sunk.'

"Worry is destructive. Nobody will dispute that. Then, when you are down on your back, so bad off that you need every ounce of will and strength to get back on your feet again, why weaken yourself with worry? It's like pulling the last prop from beneath an undermined house you want to save. It's making yourself a hand-in-glove assistant to the trouble that has downed you.

"Ask me to name the most useless, the most destroying thing in this world, and I'll answer you in one word, 'Worry'! It has slain more men, wrecked more homes, ruined more lives than war itself! The tortures of war are thrust on us. Worry is torture self-inflicted. It is thought which we ourselves dress in black!"

Nights, at home, young Bell studied accounting. At the bank he began to do work of a clerical sort, in addition to his duties of running errands and sweeping up. A year went by and his pay was

Curbing the 4 o'clock toll . . . of wasted energy

FAGGED OUT—and the peak of the day's work yet to come. Reserve energy wasted by daily hundreds of unnecessary steps, anxiety at needless delays, irritation at obsolete equipment unequal to the demands of the modern office.

Work itself is not the only drain on alertness and vitality. Far more harmful are the adverse conditions under which that work may be performed. Efficient office equipment means a bigger and better day's work, with much less effort—and plenty of reserve energy for the day to come.

But such equipment is no longer a mere hit-or-miss proposition. As now developed in *Globe-Wernicke Service*, it combines these three essentials: 1, the right kind of equipment for your particular business; 2, its convenient, space-conserving arrangement; and 3, a knowledge of how to use it efficiently and economically.

Globe-Wernicke Service brings direct to you all that is new and practical in office layout and equipment. Facts, figures, and plans—derived from exhaustive research in actual office conditions—are now ready to be conveyed to you by trained consultants in office equipment, wholly without obligation.

Phone, write, or call on your nearest Globe-Wernicke Dealer—*today!* He will gladly send his consultant in office equipment, at your convenience. Or, if you prefer, just sign and mail us the coupon at the bottom of this page.

At noon—each day

JAPAN TEA

Unties your nerves

That taut feeling in your nerves, most afternoons, is nothing to fret about.

It's the natural result of too much hurry, of concentrated work.

Escape it by setting aside ten minutes each day for relaxation.

The best time is at noon, at luncheon.

The best way, with a cup or two of fragrant, restful Japan Tea, leisurely savored, *lingered* over.

See how it unties your nerves. How it keeps you fresh, all afternoon.

Japan Tea is tea at its best — tea in its *natural* state, uncolored and unfermented, with all the flavor-laden juices of the fresh leaves preserved by immediate sterilization.

Specify Japan Green Tea. Packaged for the home under various brands. Several grades and prices. The best costs but a fraction of a cent a cup

raised to thirty-five dollars a month. But, and he chuckled as he related this, the bank told him that thereafter he would have to pay his own car fare. The actual pay increase was, therefore, only one dollar a month.

In the meantime, his father was in the Klondike. His partner came down with scurvy. To save his life, the elder Bell started with him by sled to the coast; but no medical aid was to be had there, and they had to go on to Seattle. The sick man pleaded to be taken home, and Bell came back to Jermyn with him. The gold he brought hardly paid expenses.

At the bank, Grant was promoted to bookkeeper. He married. That year, to increase his income, he also kept the books of a lumberyard, a mill and grain company, and a stationery store. He was working holidays, and nightly until midnight. He was forgetting to play. But the bank promoted him to teller. From that he went up again, to become the assistant treasurer of a trust company, a concern with a dozen branch offices and doing business in forty states. A few years more and he was treasurer, then treasurer and comptroller.

A rapid rise was this, founded on nothing but work; on work undiluted, unrelieved, unbroken. I've said that he forgot how to play. He forgot, too, how to laugh. Life had become a dead-serious, a grinding and driving business with him, work and sleep, sleep and work.

"Ease up a little. Take a rest. You can't stand this pace," pleaded his wife.

"I couldn't ease up," Mr. Bell told me. "The work had me. The responsibility had me. I had got the notion in my head that if a thing was to be done right I had to do it myself. I had been successful, and it had gone to my head. I was a slave to my job, and, what was worse, my own slave-master, my own tyrant."

Warnings came—annoying little pains. That was as early as 1902. The pains meant there was a physical weakness, something in need of correction, or at least of consideration.

"It's nothing," Bell insisted. "I can't slow up for that." He didn't bother to stop work now at midnight; he was still plugging away at two, at three in the morning. Hang the pains!

But the pains wouldn't be hanged. They kept announcing their presence more frequently, more annoyingly. "Muscular rheumatism," said the doctors. "You're working too hard, wearing yourself out."

"Nonsense!" Bell retorted, and dashed away on another grueling trip. The nature of his work demanded a lot of traveling, for the twelve branch offices were scattered the country over.

AND then came 1907.

For several years, apart from his duties with the trust company, Bell had been making investments in stocks for himself and friends. He had gained some little reputation in this, with the result that two large customers of his company engaged him to buy for them, quietly, fifteen hundred shares of a certain stock. By scattering his purchases over five months and watching the market, he was able to buy the stock for much less than the two customers had expected. They were so gratified that they offered to let Bell into the pool to the extent of three hundred shares.

"But at the present market price," he protested, "three hundred shares would cost me sixty-five thousand dollars. I can't afford to make such a purchase."

"You don't need to put up cash," explained the two. "Buy the stock, as we are buying ours, on notes. Pay for it when you can. We'll make it a joint purchase. You merely have to sign the notes we have already given. The banks have accepted the stock as security."

The offer was prompted by a generous impulse, the idea being to let Bell "in on a good thing." The men had information that the stock was due for a rapid rise. Their profit would be considerable, and they wanted Bell to share in it.

But 1907, you will recall, foreran another panic. One by one, various of the investments Bell had made for friends started to go bad. They came to him, alarmed. Bell had confidence in the investments, so he personally guaranteed his friends against loss.

To make some of his own investments, he had borrowed money on personal notes secured by stocks. Week by week, under the broadsides of the panic, the value of first one and then another of these stocks went down, requiring him to supply additional security. His friends' stocks, guaranteed by him, went down likewise; but somehow he was able to keep up with the demands.

THEN, in climax, came the heaviest blow of all. The stock which he had purchased for the two wealthy clients, and to which he was committed for three hundred shares, started to drop, and not to rise as anticipated. The two men came to him. Their own affairs had been hard hit, and they were as hard pressed for money as was Bell himself.

"All three of us are down on those notes," they pointed out. "We'll have to fight together or all three will go under."

The stock, quoted at $185, fell to $170, to $150, eventually to $100. With each drop new security had to be furnished. Before the bottom was reached Bell was bankrupt, as were also his two partners.

And into this diet of work and money-grubbing crept a new factor—worry! While behind worry, black as night, stalked its boon companion, fear!

"I was bankrupt," Bell confessed to me; "but my wife didn't know it. My friends didn't know. My company, which wasn't involved at all, only suspected the truth. You see, my plight was strictly a personal one. The company was sound, though it, too, was having its difficulties. I was bankrupt, and yet working for a sound company. Outwardly, I tried to be as usual. Inwardly, I was raw in every nerve."

Trying to beat back the hidden worry, he plunged harder into work. His physical pains were growing more menacing. At times they were so bad he couldn't get to his office; an associate had to come to his home with a horse and carriage to get him. Twice his leg joints became so swollen and distorted that he had to go to a sanitarium for treatment. But the doctors couldn't keep him there long enough to check the disease.

"I was living in a house of cards," said

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Bell; "and I knew if I wasn't there to hold it the whole thing would come tumbling down. I didn't dare stay away. You see, at home I had two boys and a wife. They were dependent on my carrying on."

Between that year of 1907 and the year of 1913 everything that Bell touched went wrong. His health was failing, and even his life insurance was pledged to cover debts. His nights were nights of sleepless worry; his days, days of work, and fear. He was at that point where he was afraid to say "Yes," for fear that he should say "No;" afraid to move, for fear that he should stand still. Everything went wrong, and all of this trouble he kept pent up inside of him.

In the fall of 1913, the trust company's affairs demanded that he make a flying trip across the continent in a round of the various branch offices. For thirty days he was continuously on this trip, twenty-one nights being spent on sleepers. In San Francisco he was forced to call a doctor, so great had become the pain racking his body.

"YOU should be in a hospital," the doctor warned him. "You are completely worn out, ready to go to pieces."

"I've got to go on," insisted Bell, kept up only by sheer will. His joints were swelling; he could move only with difficulty.

He completed the trip, finished the work, and somehow got back to his desk in Scranton. All at once he began to sway dizzily. The room went black, and he slumped over senseless in his chair. A few hours later, when he opened his eyes, he was in bed at his home. A physician stood by, and Mrs. Bell. The room tilted crazily, like a ship in a stormy sea. He didn't want to get up any more.

Until January he lay there, more dead than alive. Most of the time, unable to move, he could only think: Who would pay the doctor? Who would pay his debts? What would become of his family? There were times when the shadows of fear pressed close.

One afternoon—it was approaching Christmas—he spoke to the doctor alone. "I'm no baby," he said earnestly. "If I'm due to pass on I want to know it. A day or two, more or less, isn't going to make much difference now."

"Grant, you'll live," said the doctor; "but—"

"But what?"

"I don't think you'll ever walk again. If you do, it will be by a miracle."

"That," smiled Mr. Bell, "was my Christmas, 1913."

A week or two later they took him to Newark for treatment. It was there, three months later, that we began this story.

"Call it a miracle, call it what you will," said Mr. Bell. "I started to get better the very moment I stopped worrying! My world began to change the instant I changed my state of mind!"

He went on:

"I had been seeing only the red side of the ledger. There, were set down all the things I didn't have. I turned from it over to the happy entries, though I hardly expected to find any there; but there were some, nevertheless. My wife! She had never uttered a word of complaint, never a reproach; not once had *she* groaned at

What do you understand in *your* family when you say "*Antiseptic*"?

Don't think of an antiseptic simply as something to put on a scratch or a cut. A *real* antiseptic is a daily protector against infections of the skin, hair, mouth, nose, throat, gums and all membranes and cavities of the body. Make yours an antiseptic household.

OUR own time has well been called "the age of antisepsis". Not only physicians, but all people in general have advanced in their knowledge of disease-*prevention*. And many dangerous germ-diseases are becoming rare because of enlightened measures of protection.

For family protection there are many forms of antiseptic available—one for cuts and wounds and another for the throat—this one for sunburn and that one for feminine hygiene or the enema. But there is *only one* antiseptic that will do *all* these things. That antiseptic is *Zonite*.

Zonite the all-round antiseptic

Zonite is powerful. Zonite is non-poisonous. Zonite is quick-acting. Can you name any other antiseptic which combines these all-round qualities? Such germicides as carbolic acid and bichloride of mercury are powerful but poisonous. The non-poisonous products, such as peroxide of hydrogen and various mouth-washes, are weak and ineffective. In comparison Zonite stands in a class by itself. For though as harmless as the weak antiseptics, it is actually more powerful than any dilution of carbolic acid that can be used on the body.

Astonishing range to Zonite usefulness

Yet Zonite, despite its great strength, is absolutely non-poisonous. It is so harmless that it can be held full-strength in the mouth. In fact, one of its principal uses is the daily mouthwash. Zonite guards against gum infections. It is a breath deodorant and a body deodorant. It corrects dandruff. It purifies drinking water.

When an antiseptic enema is desired, Zonite supplies the needed germicidal qualities; also invaluable in feminine hygiene. For sunburn, poison-ivy and mosquito bites, Zonite Ointment is available (in vanishing cream form); also for after-shaving use and as a deodorant.

Many in one:
Emergency antiseptic
Dental cleanser
Mouthwash
Nasal spray
Water purifier
Sunburn relief
Dandruff corrective
Body deodorant
Enema
Feminine hygiene

In bottles 25c, 50c, and $1 Large tubes, 50c

Full directions in every package

Use Zonite Ointment for sunburn, plant poisoning, insect bites, etc. Also as a powerful deodorant in vanishing cream form.

Zonite *the* **Great** *family* **Antiseptic**

Only one solution to the problem —eliminate waste . . .

PITY the poor manufacturer! On one hand stands his customer, expectantly awaiting price reductions. On the other his organization demanding ever increasing operating costs.

"What to do?" is a question that is giving grave concern to many American business men today.

There is only one solution to the problem of meeting increasing costs with lowering prices — eliminate management and production waste.

Remington Rand through the ceaseless research and service efforts of its associated divisions is effecting tremendous economies in every line of commercial activity. Millions of dollars have been saved to American business by them in the elimination of wasteful methods.

Let the Remington Rand man show you how this great organization can help you find the solution to your management problems.

The coupon will bring him to your desk.

the load, which was hers as well as mine. My boy too. With all the worrying I had done—and I had become an expert worrier—I had found not once occasion to worry over my boy. I had never had to ask, 'Where is he to-night? Is he in bad company? Is his character bad?' The boy was on the credit side of the ledger. His younger brother was yet too small to be anywhere but there.

"And my friends: their names were not so numerous, on the credit side, as I once had thought; but those left—and they were more than a few—had been tried by brimstone. Trouble had done me the favor of sorting the true from the false. Here were friends of whom no questions need be asked.

"Then I was young, only thirty-five years old. My heart was sound. My lungs were good. My brain was intact in my head. Those nearest and dearest to me had kept their confidence and faith in me; at least I could do as much for myself!"

THAT little office space which he rented upon leaving the sanitarium was over the bank where he had started work as messenger. An accountant is like a lawyer or a doctor: he can't, ethically, go out and solicit clients. They must come to him. There were weary months of waiting and then things began to happen.

A bank failed. There was a shortage in its accounts. For the first time in seven years, opportunity knocked at Bell's office door. He was named to do the accounting in the failure. The case got into court, with Bell as one of the principal witnesses, and into the newspapers. The ice was broken. Clients began to come in a steadily swelling stream.

A great company with a thousand employees and two dozen subsidiary concerns got into difficulties, and Bell was retained to do the accounting incident to its reorganization. This was constructive work, different from that of the bank failure, and it was the kind of work Bell longed to do. So successful was he in this instance that he was engaged for other reorganizations. Big businesses and banks alike began to seek his services. He became an expert in income-tax returns.

Now he was back on his feet again, both figuratively and literally, for he was able to walk, with the aid of a cane, to drive a specially fitted automobile, and to go fishing once more—the sport of his boyhood—in a specially equipped boat. He bought a camp site in the mountains, built on it a bungalow by a lake, and learned to play again.

This is the way Grant Bell summed up his creed to me:

"My friend, beat worry and you'll beat life. It has cost me a good many thousands of dollars, and a good many hours of pain, and a whole making-over to learn that. But it is worth the price."

EDGAR A. GUEST reappears next month in "You Can't Live Your Own Life." This article is full of simple, stimulating philosophy. "We may not be important to ourselves," says Eddie; "but we can't side-step the fact that we are vastly important to others."

"Smells Are Surer Than Sounds and Sights"

(*Continued from page 49*)

"The result is that natural perfumes are not perfectly standardized. But the chemist, working in his laboratory, can turn out a synthetic perfume which is absolutely unvarying. If he has the correct formula, his product is just as good as the original. And it is always the same.

"To get this formula, he first extracts the flower's own perfume in concentrated form. He finds out what elements it is composed of. Then, by repeated experiments, he tries to find in what proportions and in what arrangement these elements must be combined in order to give the right odor.

"Our synthetic violet perfumes are the result of experiments made by Tiemann and Krüger, famous German chemists. The odor of orris root is very like that of violets, so these chemists attacked the problem from that direction.

"From two tons of orris roots they obtained about twelve grams of odoriferous material. But they found that the odor was supplied by only a small proportion of these twelve grams of substance! From their experiments came the clue to the formula which is used now in making synthetic violet."

"What is the most persistent of all odors?" I asked. "The one that lasts longest."

"Musk seems to be the Methuselah among perfumes," replied Doctor Bogert. "According to what seem to be reliable statements, the odor of musk, clinging to articles shut up in tight receptacles, can be detected even after the lapse of centuries! This appears incredible, but I believe it is true.

"Musk, which comes from the male musk deer, is one of the strongest as well as one of the most persistent odors. Because of its lasting quality, it is used in combination with the flower essences in manufacturing many of our favorite perfumes.

"DIFFERENT people like different perfumes. It is just as it is with food, or color, or music; our tastes are not alike. Musk, for instance, is very unpleasant to some persons' sense of smell. Others delight in using a scent so strong of musk that everybody else in the room is actually uncomfortable.

"Between peoples of different nationalities this contrast in taste is even more astonishing. In certain Oriental countries there is an odoriferous substance which is called by a name suggesting a most repulsive origin. To the Occidental nose, the odor itself is intensely disagreeable. Yet the people of the Orient actually like the smell.

"We have 'periods' in perfumes, just as we have in pictures and in music. The perfumes which are the vogue now are complicated blends; many of them very artistic ones. Just at present, the chief demand is for those in which jasmine is an

Milestones in National Service

An Advertisement of the American Telephone and Telegraph Company

THERE are twenty-five Bell companies but only one Bell System—and one Bell aim and ideal, stated by President Walter S. Gifford as:

"A telephone service for this nation, so far as humanly possible free from imperfections, errors or delays, and enabling anyone anywhere at any time to pick up a telephone and talk to anyone else anywhere else in this country, clearly, quickly and at a reasonable cost."

The year 1926 brought the service of the Bell Telephone System measurably nearer that goal. Seven hundred and eighty-one thousand telephones were added to the System—bringing the total number interconnected in and with the Bell to more than seventeen and a half million.

The number of applications waiting for service, including those in new and outlying sections, was reduced fifty per cent.

A third transcontinental telephone line was completed to the Pacific coast.

The largest number of miles of toll wire for one year was added to the System—more than 664,000 miles.

The average length of time for completing toll calls throughout the System was lowered by thirty-five seconds.

A seven per cent improvement over the previous year was made in the quality of voice transmission in toll calls. An adjustment was made in long distance rates amounting to a reduction of about $3,000,000 annually.

BURGESS FLASHLIGHTS & BATTERIES

important factor. But, taken over a long period, I believe the favorite among natural perfumes is violet.

"I spoke of some of our modern blends being 'artistic.' That word is the correct one to use in this connection, for the preparation of a really fine blend is truly a work of art. The experts who produce these formulas are creators, in the same way that a painter creates a beautiful picture. The price you pay for a perfume does not depend solely on the cost of the ingredients of which it is made, any more than the price of a painting depends on the cost of the colors and brushes and canvas. In each case, you pay for the skill of the man who created the work of art.

"That is something which most people do not realize. My students often bring me samples of perfumes which they have made in the laboratory. It seems a simple matter to put together certain known ingredients. But long experience is necessary in order to know how these ingredients will behave when they have been combined. One member of the group may unexpectedly turn out to be stronger than all the rest. Another one may seem to disappear entirely. Inside of a week, a perfume made by an amateur may have an odor which is totally different from the one it had at the beginning.

"AMONG savage peoples the sense of smell is much keener than among civilized races. Some years ago, when I lived for a time among our Western Indians, I was acutely conscious of my inferiority to them in this respect. They could smell the smoke of a distant camp fire, for example, when I couldn't possibly detect it. In Africa, the people of some of the native tribes track their enemies, almost as a hound does, by the sense of smell.

"We all know that animals locate their prey by scent, but it is also likely that insects use the same method. When a mosquito finds you in the darkness, it is probably guided by its sense of smell. This sense is extraordinarily developed in many insects, their organs of smell being located chiefly, or even entirely, in their antennæ. Apparently insects are like human beings in having certain preferences in odors. Bees, for example, dislike musk, but have no aversion to asafetida!

"Even in the average person, the sense of smell is more marvelously delicate than any of the others.

"You remember that Kipling wrote: 'Smells are surer than sounds and sights, to make the heartstrings crack.'

"It is true that perfumes, or other odors, have a peculiar effect on our emotions, because they awaken our memories. A breath of perfume may instantly bring up the recollection of some past experience, with a revival of the pleasure or the pain connected with that experience.

"There may be some flower which you never like to have near you. Not because its fragrance is unpleasant, but because it is associated with something which has been painful—or with some happiness which you have lost. These 'odor memories' seem to be more poignant than those connected with sight or with hearing.

"The explanation probably is this: Our mental associations depend on the interconnection between different areas of the brain. The olfactory cortical center in one of the brain lobes is widely connected with other parts of the cerebrum; the result being that we have many associations with odors and excellent 'olfactory memories'."

"The sense of smell is affected by certain drugs. Caffeine and strychnine, for instance, stimulate it. Cocaine, applied to the mucous membrane of the nose, paralyzes the sense of smell. It may be totally lost as a result of disease.

"It gets 'tired,' too. Sometimes you are acutely conscious of an odor. It seems to thrust itself upon you. And yet, after a while, you cease to notice it. The stimulus has continued to assail your olfactory nerves until they are so fatigued that they no longer react to it. Some odors have this effect on practically all of us. There are others to whose benumbing influence only a few people are susceptible.

"Everyone has heard of color blindness; but there are cases also of 'smell blindness'—the inability to distinguish between certain odors.

"There are other cases of people who are hypersensitive to some one odor. To us it may be a highly agreeable perfume; yet if a person has this mysterious hypersensitiveness to that particular scent, it will cause him acute discomfort.

"It is a rather interesting fact that the sense of smell is, on the average, more delicate in males than in females. This statement may arouse feminine protest, but it seems nevertheless to be true.

"Probably few people think of fish as having a sense of smell. Yet many of them are better off than human beings in that respect. The shark, which is one of the most intelligent of fishes, has an olfactory membrane of astonishing extent. If spread out, it would cover about twelve square feet.

"However, certain kinds of birds surpass not only man but all other living creatures in the keenness of their sense of smell. If you ever have been in the South you have seen the buzzards sailing in slow circles hundreds of feet above the earth. Occasionally they descend, to make a meal off some dead animal. Even so small a thing as the carcass of a mouse, they are able to locate from aloft—not by sight, but by smell.

"Vultures scent the same sort of food at incredible distances. Still more amazing, Pliny declared that carrion crows can 'smell death' three days *before* it occurs! They arrive in advance and hover about, waiting for the stricken creature to die."

"WHAT is the strongest odor?" I asked.

"Well," laughed Doctor Bogert, "I am willing to award the title to the skunk. Its scent can be detected at a distance of a mile or more.

"Among drugs there are several which have powerful odors. Doctor Holleman, a Dutch chemist, tells of noticing the smell of a certain chlorophenol as he was walking along a street in Amsterdam one day. Looking up, he saw one of his assistants a block away. The man had been working with this compound in the laboratory; and the odor, still clinging to his garments, was strong enough to attract attention, even at a distance of a block.

"One of the most persistent perfumes is patchouli, which was very fashionable a

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

century or two ago. There is a curious story in this connection: Cashmere shawls also were fashionable in that period, and an attempt was made to manufacture them in France. Apparently the French-made shawls were exactly the same as those imported from the Orient and yet, people wouldn't buy them!

"Finally, it was discovered that the Oriental shawls were preferred because of a subtle odor clinging to them. This odor turned out to be patchouli. The perfume was used by the Oriental workers; it clung to their hands and their garments; the fabric of the shawls became impregnated with it; and this was responsible for the subtle scent which characterized them.

"Some of the facts concerning odor are almost incredible. For instance, we can detect the smell of camphor in a dilution of one part to 400,000! With musk, all that is necessary is one part in eight millions. With oil of rose, one *one-hundred-and-twenty-thousandth* of a grain can be detected. With mercaptan, a strong-smelling chemical compound, the minuteness of the amount is almost inconceivable; for it is estimated that if one *four-hundred-millionth of a milligram* of mercaptan comes into contact with the olfactory nerves, they immediately react to it."

"HOW about flowers?" I asked. "Which ones have the most perfume?"

"They differ decidedly in the amount of flower oil they yield," said Doctor Bogert. "The amount varies, too, according to the process used in extracting the oil. A ton of orange blossoms, for instance, yields only one fifth of a pound of oil by what is known as cold enfleurage. But it yields over two pounds by distillation with steam. For that two pounds of oil about *one million* orange blossoms would be necessary; and they would be the total output of perhaps ninety or one hundred trees. The oil would be worth from $100 to $130 a pound at wholesale.

"As for attar of roses, only one pound of the oil is obtained from over a million blossoms. As they are larger than orange blossoms they would weigh several tons! Attar of roses sells at wholesale for about $10 an ounce, which is at the rate of $160 a pound. But when you realize that this is for several tons of roses, not counting the cost of labor and other items, the price certainly is not high.

"One of the most expensive of the hyper-essences of flowers is that of Parma violets. In a recent catalogue, I saw it quoted at $1,900 a pound. That of victoria violets was $1,300 a pound, and of roses $200 a pound."

"What flower yields the most perfume according to the weight of the blossoms?" I asked.

"Perhaps cassie," said Doctor Bogert, "which is raised extensively in the south of France. The bright yellow blossoms grow in little tufts close to the stem, like some species of acacia. One ton of the flowers yields from seven to ten pounds of 'concrete,' which is the name given to the extracts obtained by a certain process.

"The most enormous flower garden in the world is in the south of France; for in the district surrounding the little city of Grasse thousands of tons of flowers are

raised every year, and their essential oils extracted for the perfume manufacturers.

"Grasse alone uses about 2,000 tons of orange blossoms, 2,200 tons of roses, 1,750 tons of jasmine, 450 tons of violets, and 300 tons of tuberoses, besides hundreds of tons of narcissus, mignonette, carnations, and other flowers.

"You can get some idea of the size of this immense 'flower garden' from the fact that at least 1,000 acres of jasmine, with something like 40 million plants, are necessary to produce the 1,750 tons of blossoms which are supplied to Grasse.

"Jasmine essences sell at wholesale for $600 a pound. Of course all prices vary according to the demand; also, according to the season, which may be a good one or a bad one for the flowers. Jasmine flowers, for example, have sold in the Grasse district as low as five or six francs per kilo, and as high as fifty or sixty francs per kilo. A kilo is a little over two pounds. When orange blossoms and roses were selling, before the war, at the rate of about six cents a pound, violets brought thirty-five cents and tuberoses forty-five cents.

"In some cases, like the rose and the orange blossom, the perfume is ready-made when the flower blooms. In others, like the jasmine and the tuberose, the flowers seem to contain very little of the essential oils at first. They keep on producing it, however, even after they have been picked.

"If flowers of this latter class are treated with steam or hot solvents, to obtain the floral extracts, they cease to produce perfume. But if they are placed over cold fat they continue for hours to manufacture and to give off perfume, which is taken up by the fat. By this process ten times as much is recovered from jasmine flowers as by the other processes; and in the case of tuberoses, the difference is even greater.

"Plants furnish many odors besides the perfume of their blossoms. The essential oils are sometimes in the wood itself, as in cedar and sandalwood; or in the bark, as cinnamon and cassia; in the leaves, as patchouli, bay, mint, thyme, or lemon verbena; in the fruits, as orange, lemon, nutmeg; in the seeds, as almond and caraway; in resinous secretions such as turpentine; or even in the roots, as the orris I mentioned before.

"Oil of peppermint, which has a very strong odor, is made from the leaves of the plant. Most of our supply in this country comes from Michigan, and sells for two or three dollars a pound at wholesale. Oil of wintergreen is made not only from the wintergreen plant, but also from the leaves and twigs of the sweet birch. True wintergreen oil sells for from four to eight dollars a pound; while that which is made from the North Carolina sweet birch brings about half that price.

"THERE are fascinating possibilities in the field of synthetic perfumes," Doctor Bogert continued. "We shall be able in the laboratory not only to duplicate the natural perfumes but to build up entirely new ones. In fact, this has already been done. There are perfume substances now in common use which, so far as we know, do not occur in nature. These were invented, or created, outright. In other cases, the chemist has taken a natural product and changed it into a different and often more valuable one. For instance, he has transformed asafetida into vanilla.

"Many of our synthetic perfumes have been built up, step by step, from some of the components of coal tar. There is no more beautiful miracle in all chemistry than this transmutation of a foul black mass into the most delicate and delicious perfumes. It is a more wonderful magic than even the old alchemists dreamed of when they attempted to transmute base metals into gold."

"THE history of perfumes, by the way, is a romance in itself. In Athens, the shops where they were sold were the most fashionable places of rendezvous. People made appointments to meet at the perfumer's, just as they now arrange to meet for tea, or at a club, or at a theatre.

"For social affairs, the host or hostess had the rooms exquisitely scented. Sometimes tame doves, whose plumage had been drenched with perfume, would circle about the banquet hall, delicately showering a sweet spray from their wings. The craze became so universal that Socrates complained that everybody, from the slave to the aristocrat, 'smelt exactly alike.' Finally Solon advocated a law restricting the sale of perfume; at least to men.

"Rome also went to extremes: It is said that more perfumes were used for the funeral of Nero's wife, Poppæa, than all Arabia produced in a year. Here, too, the law was invoked, because the popular craze was depriving even the places of worship of the perfumes which were a part of the religious ritual.

"Later, in France, it was practically the same story all over again. During the reign of Louis XV, the rooms in the royal palace were perfumed each day with a different odor. Madame de Pompadour is said to have spent 50,000 francs a year on perfumes. And 50,000 francs, in those days, was an immense sum.

"The vogue never reached such extremes in England, although it did not fall far short. But that country did furnish one of the most curious bits in the whole story. Here is an extract from an old English law, which ought to interest the eligible bachelors of to-day."

Doctor Bogert showed me this extract, which read as follows:

> Any woman of whatsoever rank, profession, or condition, girl, woman, or widow, who, subsequent to the date of this act, shall deceive, entice, or influence to marriage, any of Her Majesty's subjects by the aid of Perfumes, False Hair, High Heels . . . shall be subject to the same penalty as that now in force against sorcery, and the marriage shall be declared void and of no effect.

"That," said Doctor Bogert, "is an extraordinary recognition of the power of perfume to excite emotion. Everybody is conscious of this power. As I said before, the same odor does not arouse the same emotions in every person. As someone has said, 'One man's spinach is another man's poison ivy.' But every odor has its effect; and it certainly seems as if we are 'missing a trick' by not getting more enjoyment out of this marvelous sense which we possess."

That Refrigerator Door

(*Continued from page 48*)

of July the Edward Wimpers had reached a condition that threatened either an explosion or a collapse. Early in May the weather had become unseasonably warm and the heat had increased continually, and whenever Mrs. Wimper entered the kitchen a stream of overflow water seemed to be trickling from under the refrigerator.

"Mr. Goletti," she said to the ice man, "I think I'll hang the ice card on the back porch after this."

"Sure! Go to it!" agreed Mr. Goletti, who had learned English in the night schools.

The ice card was a printed card with a space for entry of the weight of the ice delivered each day. Hanging in the kitchen it got on Mrs. Wimper's nerves—the amount of ice used never growing less.

Everything, for that matter, was getting on Mrs. Wimper's nerves, much as she tried to prevent it. Even trying to prevent things getting on her nerves got on her nerves. Any noise annoyed her, because noises made the refrigerator door spring open; any silence annoyed her, because silences suggested that the refrigerator door would spring open when the silence ended. Her thoughts dwelt too much on Mr. Wimper when he was absent, and that was a bad sign, because a female very properly forgets her husband's existence when he is absent, except at two periods—one is when she is falling in love or is in the first fire of love; the other is when she is beginning to hate him or is hating him for the first time.

Mrs. Wimper spent hours wondering why Mr. Wimper could not do something about the refrigerator door. She spent hours wondering why the children could not remember to close the refrigerator door properly. Like Mr. Wimper, she began feeling abused and maltreated, and she sometimes wished she had never met him.

Mr. Wimper, as his part, began to act as if wives were a nuisance. Following the years during which he hardly looked at his wife at all, he began to look at her often, but not as he had looked at her during their courtship. Then he had thought how beautiful she was; now he thought she was getting too fat.

From time to time Mr. Wimper tried anew to mend the latch of the refrigerator. Mrs. Wimper herself tried to do something to the latch that would keep the refrigerator door closed; she tried sticking a fork in the latch, and she tried wrapping a piece of string around it. None of these things did much good. The refrigerator door latch was wrecking the whole happiness of the Edward Wimper home.

ONE pleasant afternoon in August, Mr. and Mrs. Wimper were sitting on their porch in comfortable indolence. For the moment they had forgotten the refrigerator. Mrs. Wimper was knitting and Mr. Wimper was smoking his pipe and reading a periodical he liked. Young George was seated on the steps reading a book.

FAMOUS FEET

..how they're kept free from corns

DOROTHY KNAPP's *Famous Dancing Feet*

"Even Cleopatra had indigestion. And a lovely foot may acquire a corn."

So writes Dorothy Knapp...beautiful star of Earl Carroll's "Vanities."

"But the crime isn't in *getting* a corn...it's in *keeping* it, with Blue-jay at the nearest corner drug store."

. . .

Always the safest and gentlest way to end a corn, Blue-jay for 1927 offers new refinements. A creamy-white pad instead of a blue one. A more flexible disc for the awkwardly placed corn . . . And a sprightly new package . . . One plaster usually ends the corn. But even the rugged "old-timer" seldom needs more than two . . . The new Blue-jay costs no more . . . At all drug stores. *For calluses and bunions use Blue-jay Bunion and Callus Plasters.*

WASHINGTON BLVD. BLDG., DETROIT, U. S. A.

Edgar was home from college—he was a junior now—and presently he came up the walk swinging his tennis racket and smoking a cigarette. He seated himself with a pleasant "Hello, Pop! Howdy, Mom!" and tapped George on the head with the edge of the racket.

"Ouch! Stop, you!" George said, and went on reading.

"Did you have a good game, Edgar?" Mrs. Wimper asked, dropping a stitch but recovering it without trouble.

"Not so bad," Edgar said. "Is there anything to eat?"

George looked up from his book and listened.

"There is that cold chicken in the refrigerator," said Mrs. Wimper.

"If you go to the refrigerator," said Mr. Wimper, "be sure you close the door tight."

"Or I can make you a couple of sandwiches in a minute," said Mrs. Wimper.

"Oh, slush!" exclaimed Edgar with true college spirit.

"Chicken?" asked George eagerly. "Where is it—in the refrigerator?"

"If you go to the refrigerator," said Mr. Wimper, "be sure you close the door tight."

"I could make you a fried egg sandwich in a minute," said Mrs. Wimper. "I'm sure we have some eggs."

"I could stand a fried egg sandwich myself," said Mr. Wimper; "but if you have to get the eggs out of the refrigerator be sure you close the door tight. The last time I was in the kitchen—"

AT THIS moment Dorothy appeared, waving her tennis racket gayly as she saw the group on the porch. She was glowing from exercise.

"Mother!" she exclaimed, as she dropped to the step beside Edgar and playfully tapped George on the head with the edge of her racket.

"Ouch! Stop, you!" George exclaimed, and rubbed his head.

"Mother, I do think you might make George wash his hands once a month or so! They're filthy!" Dorothy exclaimed.

"George, go this instant and wash your hands," said Mrs. Wimper, dropping a stitch.

"And if you go near that refrigerator see that the door is closed," said Mr. Wimper. "The last time I was in the kitchen—"

George began reading his book again. "Mother!" exclaimed Dorothy. "What do you think? The Blanes have a new refrigerator. Oh, peachy! Spiffy! Is there anything to eat?"

"There's that cold chicken," said Mrs. Wimper, dropping a stitch.

"If you go to the refrigerator," said Mr. Wimper, "be sure you close the door tight. The last time I was in the kitchen—"

"Is there any cheese?" asked Dorothy.

"There is some in the refrigerator," said Mrs. Wimper, dropping two stitches, but quickly recovering one of them.

"If you go to the refrigerator—" said George; but Mrs. Wimper interrupted him.

"George!" she exclaimed warningly.

"Well, I was only going to say that if she went to the refrigerator she could bring me a piece of chicken," said George, in a hurt tone.

"If you go to the refrigerator," said Mr. Wimper, "be sure you shut the door good and tight. The last time I was in the kitchen—"

"Well, I didn't leave the refrigerator door open!" all exclaimed angrily, and in a moment they were all quarreling bitterly. Mrs. Wimper said she wished she were dead.

"Oh, that reminds me!" Dorothy exclaimed. "I met Lawyer Bruce; I suppose he has told you that Uncle George has died and left us one million dollars?"

MRS. WIMPER immediately dropped several stitches and a couple of tears; she picked up the stitches, but the tears seeped into the yarn that she was using and were lost.

"We must send some flowers, Edward," she said; but Mr. Wimper was frowning.

"If that isn't just like your family," he said with annoyance.

"I'm sure I don't know what you mean," said Mrs. Wimper, with considerable spirit.

"He means leaving us a milllion dollars," said young George. "He means he'll have to give up that soft snap of a commission business and hustle around investing and reinvesting the money day after day and week after week, like old Mr. Fultz."

"Buying stocks and bonds," explained Edgar; "and worrying for fear they'll be no good."

"And fretting about taxes," said Dorothy. "Fretting about income taxes and inheritance taxes and real estate taxes—great long income tax blanks. That's what he means, Mother."

"Nothing of the sort!" said Mr. Wimper. "You don't know what you are talking about. I meant that now the funeral will probably be Sunday, and I had set Sunday aside for mending the latch on the refrigerator door."

"But, Father!" cried Dorothy, clapping her hands. "Father, with all that money we can afford to buy a new refrigerator!"

"Edward!" exclaimed Mrs. Wimper, dropping all the stitches she had left. "That is absolutely true! We can buy a new refrigerator!"

"That's right!" cried Mr. Wimper, slapping his knee. "Why, folks, this ends all our troubles right here. We'll never have another cross word or unpleasantness or anything. I've said time and again—and you'll remember it, Eleanor—that if we had the money to afford a new refrigerator we would be as happy as—as happy as—"

"Larks," said George.

"What did you say?" asked Mr. Wimper suspiciously.

"I said we would be as happy as larks," said George.

"What kind of larks?" asked Mr. Wimper.

"Happy larks," said George.

"We will discuss that later, young man," said Mr. Wimper. "What I was going to say was that if this family had a new refrigerator with a latch that would stay latched when it was latched, we would all be as happy as a family that has a new refrigerator with a latch that would stay latched when it was latched."

"Your father is right, George," said Mrs. Wimper, and she looked at her knitting needles, seeking a stitch to drop; but

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

there were none, so she did not drop any. The era of happiness had begun.

On the way to the office the next morning, Mr. Wimper stopped at the refrigerator store and priced refrigerators. He found an excellent one at $245, all enamel and nickel plate, with a new style patent latch on every door. The doors were heavy, and so attached that they swung to voluntarily when opened, and the latches latched themselves instantly and completely. Even when a light chair was placed against an open door the door pushed the chair out of the way and closed itself, and the latch immediately latched.

"This is an excellent refrigerator," Mr. Wimper told the salesman. "I would like to own it. I have not $245 with me, but my wife's uncle George has just died and left us one million dollars; and if you do not mind waiting a few weeks for payment, you may send it to my house in Flushing."

"I'm sure we would be delighted," the clerk said in a friendly manner. "If you could make a small deposit—"

Mr. Wimper made a small deposit, and the refrigerator was immediately sent to his house in Flushing, and for several days everyone in the family—and a few of the neighbors—opened and closed the doors of the refrigerator, and the latches worked perfectly. It was such an excellent refrigerator that when, in the evening, Mrs. Wimper looked at the chunk of ice that had been put in it in the morning the chunk actually seemed larger than when it had been put in.

This was because—as was explained by the diagram that accompanied it: "The air passage (p) opening under the ice tray (t) passes below, but not through, the food chambers (f—f′—f″), thus preventing the hot roast beef (b) from warming the air (a)." Or words to that effect.

"And everything else that troubles us in the future," Mr. Wimper said to his wife, "we can smooth out the same way. That is the wonderful thing about money; if one has plenty of money one has no troubles."

"THE beauty of having plenty of money," Mr. Wimper again said to his wife, a week or two after the new refrigerator had been installed, "is that it smooths out all worries and cares. Money is the lever that lifts the load from life."

"Levers," said Edgar. "I know about levers. Levers are in physics, and physics is what I flunked in at Amherst last semester."

"I know about physics, too," said young George eagerly. "Physics is what Benjamin Franklin invented with a kite."

"Are you sure, George?" asked Mrs. Wimper pleasantly, as she dropped a stitch. "Wasn't it the steamboat Benjamin Franklin invented?"

"Oh, say, Father!" exclaimed Dorothy, before Mr. Wimper could correct all this misinformation, "speaking of steamboats—there's something the matter with the car again; it won't run."

"Did you release the clutch before you threw in the gears?" asked Mr. Wimper, and Mrs. Wimper drew a quick breath and glanced down hurriedly.

"I never throw in the gears before I release the clutch," said Dorothy. "I certainly know that much."

17 Times A Minute

you breathe air *that makes or breaks your health*

YOUR mental and physical energy, even the span of your life, is measured by the air you breathe. Unconsciously you inhale about 30 cubic inches of air with every breath, the purity of which makes or breaks your health. That's the reason why your office, store or workshop should be ventilated with an ILG Electric Ventilator. The change it makes in the atmosphere is delightful — the air is pure, fresh and invigorating; it keeps you fit and promotes a better day's work. Ask your electrical goods dealer for a demonstration or send for free 48 page illustrated booklet.

COLLAR BUTTON
GUARANTEED 25¢ A LIFETIME!

Mr. Wimper arose and went out to the garage. He returned presently with a very unpleasant look on his face.

"I would like someone in this family to tell me," he said, "just how many times I have told you all not to throw that car into gear before you release the clutch. One thousand and one times if once! Here I go and buy a seven-thousand-dollar car, and not a soul in this family will take the trouble to release the clutch."

"I'm sure, Edward," said Mrs. Wimper, "I have told the children again and again to release the clutch. I am most careful, when I use the car, to release the clutch—"

"I notice you did not release the clutch this morning, however, when you drove me to the station," said Mr. Wimper coldly. "It is strange to me how the gears always get stripped if everybody always releases the clutch."

"I've told them a thousand times—" said Mrs. Wimper.

A WEEK later Mr. Wimper came home with a garage bill in his hand.

"Well," he said, "I've got another garage bill."

"Oh, dear!" exclaimed Mrs. Wimper; "is it a big one?"

"It's $216," said Mr. Wimper accusingly. "I don't want to say anything, and of course what I do say don't seem to mean much in this house; but if you would only release the clutch before you throw in the gears—"

"But I do, Edward," Mrs. Wimper cried. "I don't believe it is releasing the clutch or not releasing the clutch. I believe it is just that automobile. We all release the clutch."

Mr. Wimper drew his memorandum book from his pocket.

"In thirty-one days," he said, with a most irritating lack of emotion, "I have watched this family start that car fifty-six times, and out of those fifty-six times the clutch was released an exact thirty-nine times."

At this Mrs. Wimper began to weep. "Oh, I wish you would get a new automobile," she sobbed.

"That is utter nonsense," Mr. Wimper declared. "That is a perfectly good car."

"Then can't you do something about the clutch? I should think a man could do something about the clutch!" Mrs. Wimper pleaded.

"Very well," Mr. Wimper said coldly. "If you will kindly ask George to leave the tools where I can find them I will do something about the clutch."

From time to time Mr. Wimper tried to loosen or tighten the clutch or loosen or tighten the gears, and from time to time he had the garage man get the car and work on it, but something was always going wrong with it. Sometimes it was a flat tire, and Mr. Wimper would say, "If you did as I told you, and released the clutch—" And sometimes it was the ignition, and then Mr. Wimper would say, "If you did as I told you, and released the clutch—"

The automobile clutch was wrecking the whole happiness of the Edward Wimper home. Each member of the family blamed every other member for not releasing the clutch in the proper way. Mr. Wimper was bitter and sarcastic about it, and the others were bitter and hateful, because Mr. Wimper made them keep on with a car that had a clutch that was so exceedingly hard to release.

The Wimper family had actually become so unhappy that Mrs. Wimper had looked up Lawyer Bruce's address in the telephone book and had called up to see how much he charged for divorces, but he happened to be out. Mr. Wimper was seriously thinking of going to Europe without telling Mrs. Wimper in advance, and Dorothy was on the verge of eloping with anyone who would elope with her. Things had reached this sad pass when something occurred to give this story a happy ending—which is something all stories should have.

Mr. and Mrs. Wimper were sitting in the living-room. Mrs. Wimper was knitting, and Mr. Wimper was reading a periodical he liked. Young George sat on the sofa reading a book. Edgar, nicely flunked out of Amherst, entered the room.

"I say, Pa," he said, "may I use the car?"

"If you do," said Mr. Wimper, "be sure you release the clutch before—"

"Oh! there you go again!" exclaimed Edgar angrily. "Don't go howling 'clutch' at me all the time!"

Mr. Wimper grew red in the face, but, luckily, Dorothy entered at that moment.

"Folks!" she cried. "What do you think I have just heard from Lawyer Bruce? Grandaunt Jane has just died, and she has left us ten million dollars!"

"Ah! That's too bad!" exclaimed Mr. Wimper, for Aunt Jane was his aunt.

"If that isn't just like your family!" said Mrs. Wimper. "I suppose the funeral will be Sunday, and I had intended going for a drive Sunday if the car was mended by that time."

"If you would release the clutch when—" Mr. Wimper began; but young George looked up from his book.

"But, say!" he exclaimed. "Say! With all that money, we can afford a new automobile, can't we?"

For a moment all the Wimpers looked at each other as they grasped this delightful truth; then they all laughed joyously for, of course, this ended all their troubles.

"Now we can get a yacht!" exclaimed Dorothy, "and join the yacht club like the Fultzes! Oh, peachy! Spiffy!"

"A yacht?" retorted Mr. Wimper. "A yacht? I don't want a yacht. If I'd get one some of you would always be forgetting to batten up—I mean fasten down those things they call hatches. Then the rain would rain in the yacht, and rain on the inside of a yacht ruins it."

"Oh, slush!" said Edgar.

"No, rain," Mr. Wimper replied sarcastically.

"IF YOU are unhappy, money will make you happy; if you are happy, money will make you happier."

This is the third epigram the writer of this story has made since starting it. The first one meant nothing at all; the second meant less than the first; and the third one means less than the other two combined, because it isn't so. If you don't believe it, ask the people who have plenty of money and have tried to find their happiness in it. The Edward Wimpers, for instance.

What Causes Unhappy Marriages?

FIRST PRIZE

Too Many In-Laws and Not Enough in Common

MY MARRIED life began nearly three years ago with an infatuation that swept away all obstacles. I had secured the financial backing of a millionaire in my medical career, and had completed only two years of pre-medic work; but I turned my benefactor down and launched out upon the stormy sea of monogamy.

Though my wife was the only child of a wealthy family, she was willing to go anywhere, and do anything, that we might be together; that is, so she said. I was forced to take a job in a factory, and she did our housekeeping in two rented rooms. Everything went smoothly until my mother-in-law came to visit us. She said she was not used to "slumming," so we were packed bag, baggage, and kaboodle into a better place, with my in-laws meeting the difference in rent. This gesture caused me to lose all self-respect, and I began to realize my mistake.

For the first cause of unhappy marriages, I should put interference on the part of parents. If parents have any objections to a match, they should break the initial bargain with brickbats, instead of banking the altar with roses.

The next greatest cause for failure in marriage is, to my mind, a stationary level of intellectual attainment on the part of *one* of the contracting parties. My wife insists that I am a bookworm, and that she alone is practical. Intellectually, I feel that I have progressed miles beyond the place I stood when I was married. What would I not give to be able to say that my wife had done the same! R. L.

SECOND PRIZE

Poverty Ruined Our Marriage

I AM seventy-five years old. I was married when I was twenty, and helped rear a family of six; but for the past twenty-one years I have not lived with my wife, though at all times supporting her in comfort. Some time ago she brought suit for divorce, which I did not defend. She is, I think, like any woman who has reared a family, entitled to anything she may desire in her old age—bobbed hair, dancing lessons, and a divorce—all of which she has!

Having qualified, I think, in the expert (or at least experienced) class, I shall now address myself to the subject. The principal cause of unhappy marriages may be stated, according to my personal experience and observation, in a single word. *Poverty!* Not dire penury, necessarily, but lack of the means to meet the demands of a family according to their needs and natural desires. When the wage-earner has to exert his utmost effort, and strain his every nerve to secure shelter, clothing, food, education, and an occasional amusement for those dependent upon him; when the wife and mother has to labor and scheme and contrive, day in and day out, early and late, her body and nerves worn to a frazzle by the insistent demands made upon her, how long can happiness endure?

There *may* be people who can be happy when they see their families unable to enjoy that share of the good things of life to which they feel entitled, but they are few. I know that my wife and I started out in our combat with the material trials of existence with loving, cheerful hearts and high hopes. And I know that our insufficient income, and the consequent discouraging present and gloomy future drove away the cheerfulness and happiness that are necessary for a harmonious marriage.

The old proverb about love flying out the window when poverty comes in the door is only too true. Believe me—*I know!* G. F. W.

THIRD PRIZE

Loss of Illusions Often Causes Unhappiness

"HOW do you manage, you and Dick?" I inquired of my old friend Janet married ten years, mother of three children, and only middling prosperous. "How do you keep so head over heels in love with each other?"

Janet replied without hesitation: "We have kept our illusions. You know when you're engaged, how you always keep your nose powdered, your shoes shined, and your conversation gay and sprightly. Well, Dick and I have gone right on trying to make a hit with each other," she laughed. "I never get breakfast in my bedroom slippers, or greet Dick at dinner in an untidy dress, and I don't forget to flirt with him now and then, just as I used to when I wasn't quite so sure he was mine.

"As for Dick, he always wears a collar; he sends me valentines; gives me an allowance, and locks the bathroom door when he shaves. If we go to a show, we discuss the play between acts with as much animation as we used to in courting days, and when Dick takes me to dinner at a restaurant we try to act as if—well, as if we weren't married!"

"But can you *always* keep your illusions?" I inquired.

"Oh, perhaps not always," Janet admitted. "With three children and no servants, the steak is bound to scorch now and then, and the cake to fall, and the baby to yell. But Dick and I have tried so hard to be pleasant, even when things are a bit upset, that we have got the habit.

"People deal politely with their friends and acquaintances," Janet finished. "Why shouldn't husbands and wives treat each other with like consideration? As soon as married folks grasp the full meaning of that old saying, 'Familiarity breeds contempt,' the divorce lawyers will be looking for other jobs. Carelessness in dress, manners, and general conduct after marriage causes many a break." F. D. M.

NOGAR Suits Make Perfect Uniforms

$12.50 & $13.50

Business concerns are invited to write our Home Office or consult our Local Representatives for low cost of outfitting employees.

NOGAR Suits are just the thing for delivery men, bus drivers, expressmen, elevator men, linemen, employees of service stations, institutions, etc., etc. In fact, wherever a number of men are engaged in the same employment.

Strange Things We Human Beings Swallow and Inhale

(*Continued from page 29*)

top floor of the big new hospital annex.

Since its inception the Jackson Clinic has removed more than seventeen hundred foreign bodies from the air and food passages of sufferers brought to Philadelphia from every part of this country and more distant lands. Eighty per cent of these patients have been children, many of them at death's door. "And the tragic feature," said Doctor Jackson, "is that most of these accidents which cause so much suffering and often death might have been prevented with a little care.

"Very small children are the most common victims; but the age of swallowing foreign objects never stops until the grave. We have many middle-aged and elderly persons among our patients, here invariably as the consequence of carelessness.

"Firearms, as everybody knows, are deadly. Yet the supposedly harmless safety pin has killed more babies than firearms. A button box in the hands of a small child is almost as dangerous as a box of firecrackers. Peanut candy may become as deadly as poison.

"Children, especially babies, are imitative. Also, they are curious. The mother will hold pins in her mouth, and the child at the first opportunity will do likewise. A cough, a laugh, a stumble while at play, and the pin is swallowed or aspirated. The mouth is the childhood laboratory. By placing things there the youngster determines if they are hard or soft, sour or sweet, hot or cold, edible or inedible. Whatever comes within a small child's reach is likely to go into his mouth for investigation, and then the accident happens.

"TWO years ago, in a Missouri city, a mother was tacking down some carpet in her home. Near by her little eight-months-old girl baby played on the floor. The tacks were brass-headed and bright. The sparkle of them attracted Baby. She reached out and captured one when Mother was busy and put it into her mouth.

"In a few short moments the baby was coughing and gasping painfully. The doctor was called in. The medicines he had were of no avail. The child's symptoms became those of acute pneumonia, and she was sent to the public ward of a hospital. There other physicians came to study her case and they, after talking with the mother, guessed what had happened: Baby had breathed the tack into her windpipe.

"The doctors said she would have to be taken to Philadelphia to have the tack removed, or she wouldn't live. But the father, a janitor, earned only nineteen dollars and fifty cents a week. He hadn't funds for the long journey of thirteen hundred miles.

"At length some church organizations heard of the baby's plight, and raised the necessary money. On fast trains the child

Special Schools

JIM THAYER The Crowell Publishing Co. Dept. AA57, Springfield, Ohio

was brought to the clinic and, after four weeks of terrible pain, the tack was taken out and the baby saved. Newspapers all over the country featured the story; people read it, and thought the case exceptional because of the attention and sympathy it had drawn. But it wasn't exceptional. Even while mothers read of it their *own* babies were perhaps playing on the floor near by, groping about for unnoticed objects that might be there, to put into their mouths.

"WHAT I want to emphasize and wish folks to realize is that *none* of our cases is exceptional," Doctor Jackson continued. "It may sound exceptional when I say that the tiny rubber eraser on the end of an ordinary lead pencil has endangered numerous lives and taken some. But how many times have you seen children, and grown-ups too, stick that end of the pencil into their mouths? Perhaps it rings of the spectacular to assert that such a common, seemingly harmless thing as a peanut, or a watermelon seed, or a grain of corn, may prove deadly to a child; yet thousands upon thousands of babies, without teeth with which to chew, are given these things in food or to play with. The marvel of it is that more children don't get them into their air passages, where invariably they produce dangerous infection and suffering.

"Our collection of foreign bodies which we have removed from our patients' lungs and gullets includes almost every small object that ever finds its way into the hands of a child. We have every conceivable kind of seed that is found in food and fruit; nearly every nut kernel under the sun; bits of bark; sunflower stems, burrs, pieces of cornstalk, and so on.

"The collection also includes all kinds of shells—oyster, clam, crab, lobster shells. Not long ago we removed a piece of ginger root from the lungs of a man who was fifty. We have a small electric light bulb a boy swallowed; lead whistles, watch charms, trinkets, pins, tacks, nails, loaded cartridges, nuts, bolts and parts of automobiles, coins, false teeth, the glass eyes of dolls, and even bits of kitchen utensils. Most pitiful of all, we have children, and even adults, suffering from swallowing an apparently harmless cleaning powder, which was deadly because it contained lye.

"In connection with lye used in the household there is a remarkably significant fact. The law requires that when a druggist sells a poison of any kind to a layman that he label it as such. In all my nearly forty years of experience in medicine, I have had no child come to me, nor so far as I am aware, to any of the many hospitals with which I have been connected, who had been poisoned by swallowing a substance so labeled. But hundreds of children have come to us poisoned with lye, sold in cleansing preparations for which the law demands no poisonous label.

"While the druggist's poison went into the medicine cabinet beyond reach, the grocer's poison went into the kitchen and into everyday thoughtless use. The parent would not have thought of eating it, nor considered for a moment giving it to a child; yet because the *warning* of poison was absent, carelessness was present!

"Let me tell you of just one case: The favorite playhouse of a little boy, three and a half years old, was the smokehouse. One day he found a can containing some water. He had been playing hard; it was hot, and he was thirsty. Being too small to reason, he drank some of the water.

"Almost immediately the child was unable to swallow solid food, and soon became so bad that liquids, and even his own saliva, would not go down to his stomach. Brought to the hospital, starving from lack of nourishment and water, it was found that his esophagus, which is the passage from the mouth to the stomach, was ulcerated and completely closed, from lye poisoning. He was in a pitiful condition, wavering between life and death.

"The smokehouse, we discovered, was the place for making soap on the farm. The can from which the boy had drunk had been used in measuring the lye used in soap. This can of lye *was* labeled as a poison, but in such a manner that the print was almost undecipherable. The mother's eyesight was not good, and the label had escaped her.

"An operation was performed, a tube passed into the child's stomach, and for months he was fed through this tube with the aid of a funnel. A long course of treatment finally opened the boy's esophagus so that once more he could swallow. Then measles complicated by bronchopneumonia set in, and he died.

"Such cases by no means are limited to children. A man thirty-nine years old was sent to the clinic because of inability to swallow solid foods. Thirty-seven years before, as an infant, he had drunk from a pitcher which had held a preparation containing lye. He was very ill for two weeks; but then recovered sufficiently to take liquid nourishment and soft foods. For years he had lived under the impression that he had 'stomach trouble.' An X-ray examination revealed that his esophagus was constricted in three places—drawn together by the burning action of the lye.

"There is a lesson worth heeding in this. Every cleansing preparation and laundry powder, regardless of how harmless it is to delicate fabrics and to the hands, should be as conscientiously kept beyond the reach of children and away from food containers as if it were Paris green, arsenate of lead, or the most deadly of insecticides! The powder or liquid may be harmless. On the other hand, it may be deadly, if swallowed. Don't take the chance.

"IN LIKE manner, don't take the chance of the button box, of the watch-charm plaything, of the candy containing nuts, of the coin as a teething ring, or of *any* small objects in a baby's hands! To be absolutely safe, consider every foreign body that is swallowable as dangerous as a poison branded with the death's head.

"'Oh, I'm always careful,' one mother assured us. 'My baby likes to play with coins; but I never let her have one smaller than a half-dollar piece. She couldn't possibly swallow that, and it makes a good teething ring.'

"I'm not so sure of this mother's supposed care. Money, at best, is a filthy thing to put into the mouth. Furthermore, here in our clinic we have removed seven half-dollar pieces from children's throats and gullets! And in Massachu-

setts a small child swallowed a wooden spool, an object far larger than any of our coins!"

"What is the largest article in your collection?" I asked.

"A set of false teeth," the doctor replied. "The owner, a man of middle age, forgot to remove the teeth when he went to bed. During his sleep he choked and swallowed them.

"This is a common accident. Altogether, we have sixteen sets of teeth that we have removed and various other kinds of artificial dentures. These were swallowed or aspirated while eating, while asleep, and at other times. The dentures became loose or misfitting, and the owners neglected to have the defect remedied; they also neglected to remove them before going to sleep.

"Pieces of bone, especially chicken bone, are the foreign bodies most frequently swallowed by adults. A little triangular bit of bone from the breast of the chicken is among the worst of offenders. This small triangular piece extends out a ways from the breast bone proper, and often is cut off and left in the meat in carving. A person who doesn't masticate thoroughly may very easily swallow this bit of bone.

"Meat which is cut with a cleaver in the butcher shop frequently contains bone fragments. If you take food into the mouth in small quantities, as good taste demands, and chew it well, these bits are readily detected. They are dangerous principally to the 'fast eater,' to the aged whose teeth are poor, to invalids, and to people with artificial dental plates that cover the roof of the mouth and so diminish the mouth's sensitive area. Anyone who wears such dental plates should always eat slowly and carefully.

"GENERALLY, we give foreign bodies two classifications: First, opaque substances, such as coins, pins, nails and other articles of metal which are visible to the X-ray; second, those substances, such as nut kernels, seeds and food particles which are non-opaque to the X-ray. These latter probably are the most dangerous when lodged in the air passages or lungs, because of the intense irritation produced.

"All nut kernels are dangerous in the mouths of young children. If a baby under two years old, and hence without molars, is given a nut—whether in candy or otherwise—he can't masticate it. Therefore, the child will do one of three things: spit out the nut, swallow it whole, or choke and inhale it into the lungs. When the last happens the child will become dangerously ill. Unless the kernel is removed it will cause serious complications and death.

"Peanuts are the worse offenders, but that is because other nuts are not so popularly bought as the peanut.

"Watermelon seeds rank next to peanut kernels in the number we have removed from children. Sometimes they are given to children to play with, but usually the child gets them in eating. It is easy to remove seeds from a melon—far easier than from a child's lungs; and this should invariably be done before any portion of the melon, or of any seedy fruit, is given to a small child.

"Coins are the most common of the opaque foreign bodies in children. We

Only once in 50 years
comes a book bargain like this!

1. SHAKESPEARE
—everything he ever wrote, complete in one wonderful volume.

Here is the book that has taken America by storm—all of Shakespeare, complete in one beautiful *useful* volume. We want you to examine it in your own home at our risk—and return it at our expense if it doesn't exceed your expectations. Everybody reads Shakespeare. Everybody needs Shakespeare. Everybody can find a new thought every day in his pages. Along with the Bible, Shakespeare is the foundation upon which *all* modern English literature rests. And now, for a tiny fraction of the cost of an old-fashioned set of Shakespeare, you can have his complete works in one splendid book, easy to use and delightful to own.

2. OMAR—*free*

Pocket edition of the Famous Rubaiyat of Omar Khayyam, best of all books to dip into for an alluring thought or a haunting line of joyous Oriental poetry. Large, clear type, stamped in gold. While the edition lasts, a copy of Omar—without extra charge—comes to you with each Shakespeare.

SHAKESPEARE *and* OMAR
TWO BOOKS at less than the price of ONE!

We want you to take plenty of time to examine this Collier's Lakeside Shakespeare. Show it to your friends. Read it for a week. Compare it with any edition you can find. If for any reason it doesn't far exceed your expectations, return it without obligation.

Two books at LESS than the price of one

ALL of SHAKESPEARE in ONE VOLUME

FREE
Omar Khayyam

1,312 pages —clear readable type— weighs only 16 ozs.

To celebrate the Golden Jubilee of P. F. Collier & Son—our 50th year of selling the best books at popular prices—we determined to offer an AMERICAN Shakespeare.
Dependent in the past on Oxford and Glasgow, we have sold thousands of these imported books at $6.50. Now with the aid of the Lakeside Press, rid of ocean freights and customs charges, Collier's presents a volume that rivals the most famous foreign edition at prices for every American home.

37 plays, 2 long poems, 154 sonnets—All. Introduction by President W. A. Neilson of Smith College, authoritative Life of Shakespeare, full-page portrait, Index to Characters, Glossary of Unfamiliar Words. Convenient thumb-index to find instantly the play you want. 1,312 pages, clear readable type—a book so finely made you can roll it up and carry in your pocket. EXAMINE IT IN YOUR OWN HOME AT OUR RISK.

SPECIAL CASH PRICE $5.00 (With your complimentary copy of Omar's Rubaiyat)

SEND NO MONEY

Shakespeare—in one fine volume—treasured companion of statesmen, bishops, authors, engineers, society women, students, ready for YOU to use and enjoy. Printed on finest India paper, bound in soft ooze brown suede leather. Along with Omar Khayyam, for FREE examination, in your own home.

But be prompt. To insure immediate delivery, before you turn the page or mislay this offer, use the coupon now.

P. F. COLLIER & SON COMPANY, Inc.
250 Park Avenue, New York City.

Send me, for free examination, your American De Luxe Shakespeare, complete in one volume. Send also, without charge, until edition is exhausted, the pocket Omar Khayyam.

☐ When the books are delivered, I will deposit with the postman $1.00, plus a few cents postage, and send you $1.00 each month until the price of $6.00 has been paid. (OR)

☐ I will deposit with the postman $5.00, plus a few cents postage, which will be credited as payment in full, and promptly returned if I decide not to retain the books.

Pure Silk to the Top

$1.00 *"I can't afford to wear sheer silk hosiery every day."*

The woman who said that is mistaken. She can't afford to pay some outlandish price for a stocking that won't wear. But she *can* afford exquisite hosiery—pure silk from top to toe—and she *can* afford to wear such hosiery every day.

IRON CLAD NO. 807

Iron Clads are more than silk from top to toe. They are *strength* from top to toe—the kind of strength that gives repeated wear, and wear, and wear—the kind of strength which carries with it an Iron Clad *guarantee* of satisfactory service or a brand new pair of hose. Durability, flawless texture, fadeless colors—these are the things which make Iron Clads so inexpensive to wear.

14,000 stores are selling these sheer silk Iron Clads. If your dealer cannot supply you, mail us your remittance of $1.00 a pair with a request for Style 807, and we'll supply you *direct*. State size (8 to 10½) and color (black, white, atmosphere, skin, champagne, blonde, grain, parchment, moonlight, rose blush, sandust, French nude, mauve taupe, silver grey, Aloma, peach bloom, gun metal). We'll pay the postage!

A new way to revive and refresh

Tired Aching Feet

Instant Relief

MANY people, after any long and unusual exertion, such as golfing, dancing, a brisk walk, or standing hours at a time, experience distressing pains and aches in their feet. They swell, burn, and make one feel all tired out.

At such times Dr. Scholl's Foot Balm brings immediate and grateful relief. It puts you right back on your feet with comfort. You can walk or work, dance or play and have really happy feet.

One application drives out all discomfort. It stimulates circulation, ends the pain, reduces the swelling, opens the pores, and leaves the feet delightfully cooled and refreshed.

Dr. Scholl's Foot Balm is a cream-like preparation, powerfully penetrating and analgesic. The pores quickly absorb its healing, soothing properties, and spread them deeply into the tissues. It is equally beneficial as a general external application for muscular soreness, etc.

Go to your druggist or shoe dealer today and get a jar of Dr. Scholl's Foot Balm. Costs only 35c.

For Free Sample, write The Scholl Mfg. Co., Chicago

JIM THAYER

The Crowell Publishing Company
Dept. AA59 Springfield, Ohio

have extracted any number of pennies, nickels and quarters, and seven half-dollars, as I have already said. Ride for a time in a street car, and you are almost certain to see a woman hold a coin in her mouth while getting change for the conductor, yet very few women come to us with coins stuck in their throats. Their bad example, however, is followed by youngsters, in whose throats and gullets we *do* find the coins.

"Safety pins stand second to coins. One child managed to remove the pin from its stocking, which means that safety pins must be secured beyond Baby's reach. With another little patient, the pin was accidentally dropped into the crying child's mouth while the mother was changing the quilts of its crib. A little girl who had seen Mother hold pins in her mouth while attending to the baby, did likewise in attending to her doll. So I might continue the list indefinitely."

I WAS curious to see these marvelous instruments, the gastroscope and the bronchoscope, expecting to see an expensive, complicated set of surgical apparatus. Instead, the doctor pointed to a number of simple, slender tubes of polished brass that averaged not more than two feet in length. Each was a separate instrument and complete in itself, the varying sizes being for different operations; an infant, naturally, demands a smaller tube than a grown-up.

"Now, here is all there is to it," Doctor Jackson explained. "The periscope, about which everyone knows, enables a man in a submarine to see *up* from his ship to above the level of the water. Our instruments are to all effects *inverted* periscopes, which enable us to see *down* into the interior of a patient. It is dark down there, so we must have a light. This is provided by a tiny electric bulb, which is connected through the tube with a battery.

"Also, the patient breathes through the tube, and our long slender forceps are passed down through it. We know from our X-ray and supplementary examinations just where the offending object is lodged, and so don't have to hunt long in order to find it. The forceps are attached to the object, and then object, forceps, and tube are withdrawn simultaneously.

"The difference between the gastroscope and the bronchoscope is chiefly that of purpose. The former, as its name implies, is designed for removing objects from the food passages, and the latter for removing objects from the air passages. Both are inserted through the mouth.

"Now, please don't get the notion," he added, "that our clinic and our doctors are the only ones who have and who know how to use these instruments. If that were true all of the teaching which we have done would have been in vain. Today, in virtually every large city in this country, and in many towns as well, physicians are doing work identical with that which we do here."

It greatly depends, explained Doctor Jackson, in what part of the lungs or air passages the foreign body is lodged, whether or not the danger to the victim is immediate. A Michigan woman had been perfectly healthy up to four years before she came to the Jackson clinic. Then a cough had developed that was diagnosed first as a symptom of a lung abscess and later as acute asthma. But to Jackson and his associates the symptoms were of something else. They brought the X-ray into action. It showed a safety pin lodged in one of the lungs.

"A safety pin?" repeated the woman in astonishment. "Why, I remember clearly that I swallowed that pin when a child! It never bothered me, so I never gave it another thought." The pin had been in her lung for thirty-six years!

A boy from British Columbia carried a tack in his lungs for eight years before his condition became such that he had to be hurried to Philadelphia to save his life. A New Zealand youth similarly harbored a button inside him for a year, while a Massachusetts woman furnished the longest case on the clinic records: she carried a screw inside a lung for forty years and more before it threatened to take her life!

"However, most of our cases are of the emergency kind early after the accident," Doctor Jackson went on. "We can't always get them soon enough, because often the trouble is mistaken for pneumonia, bronchitis, or a similar disease, and thus there is delay in ascertaining the real cause, especially when the foreign body has lodged in the lungs proper.

"For example, a toy balloon is a seemingly harmless plaything. You would wonder how it might cause trouble. Yet one of these harmless balloons exploded while its little owner was blowing it up with his mouth. The wooden mouthpiece flew backward and was inhaled by the boy. He died before the thing could be removed.

"Among all the hundreds of cases which the clinic has handled there is only one where the foreign body did not enter through the mouth. That was the case of a young man who was accidentally shot in the right lung while handling a loaded revolver. It was impossible to remove the bullet by surgery. To have left it there would have resulted fatally, from lung abscess. We took the bullet out with the bronchoscope through the mouth."

I asked Doctor Jackson what first should be done in these emergencies when a foreign body is aspirated or swallowed.

"If it has gone that far," he answered, "do nothing. Get the patient to a physician as quickly as you can take him there. Tell what has happened. Let the physician take the necessary measures for relief.

"If you *see* a pin, a tack, a button, or any foreign body on the tongue of one of your children, take it out with the fingers without exciting the child or frightening it. But if the body has gone down *back* of the tongue, don't try to reach it with the finger. You will probably just push it farther down into the throat. Call a physician immediately.

"A YEAR or two ago I published a short list of rules which, if observed, would do away with most of these distressing accidents. The whole represents a summary of what we have learned in a preventive way here in the clinic. Here is the list:

1. Analysis of the causes in 1,135 cases of foreign bodies in the air and food passages shows that in nearly 90 per cent, the presence of the intruder is due to easily avoidable carelessness:

Carelessness in the preparation of foods.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Carelessness in eating and drinking.

Carelessness in putting inedible objects in the mouth.

Carelessness of parents and nurses.

2. Foods for children, invalids, and aged persons should not contain such things as bones, watermelon seeds, orange seeds, lemon seeds, grape seeds, cherry, plum, prune, or peach pits, or stems of fruits.

3. Foods other than fish or birds should not be served, even to normal adults, with small bones. Fish and birds should be eaten with the utmost care as to the bones.

4. It is careless to serve food containing fragments of nut shells, egg shells, oyster shells, crab shells, and so forth, and to permit containers and utensils to contribute to the food such fragments as chips of enamel or chinaware, splinters of wood from flour or sugar barrels, and solder from tin cans. When a fruit jar or jelly glass breaks or chips in opening, the contents should be strained or thrown away.

5. Care should be taken when cooking or serving food to see that there are no loose pins or buttons in the clothing that could fall into the food.

6. Hasty eating and insufficient mastication should be avoided as dangerous.

7. The chewing of pencils, toothpicks, grass stalks, straw, is a cause of foreign-body accidents. Pencils are filthy things to put in the mouth anyway.

8. Children should be taught not to put inedible substances smaller than a spoon into their mouths.

9. Coins are dirty things to put into the mouth, and may get lodged in the throat. Teething rings are objectionable, but a coin as a 'tooth cutter' is worse.

10. It is careless to allow a child to run or jump with anything, even food, in its mouth.

11. Babies should not be put on the floor to amuse themselves, until the floor is cleared of all small objects, such as tacks, seeds, and bits of coal.

12. Children's toys should be inspected for small loose parts, such as eyes, buttons, fragments of metal and wood.

13. Babies should not be allowed to play with corn (maize), coffee berries, seeds, small marbles, jacks, or similar objects.

14. Children under two years of age should never be given peanuts, peanut candy, or any other kind of nut candy. They cannot chew the nuts, and are likely to choke on them and aspirate them into the lungs.

15. Don't set a bad example to a baby by holding a straight pin or a safety pin in your mouth.

16. Don't bend over a baby or take it into your arms without making sure that there are no pins, needles, safety pins, buttons, or jewelry in your dress that could get into the baby's mouth or reach.

17. Artificial plates should be kept in good repair and adjustment, and, no matter how well they fit, should always be removed, not only before anesthesia, but also in case of delirium, coma, semi-consciousness, unconsciousness, severe shock, and intoxication, and before sleeping, or even dozing.

18. If you see a foreign body on the tongue, take it out; but if it has gone down back of the tongue, don't try to reach it with your finger. Send the patient to a physician.

Do Your Stuff—And Keep Your Eyes Open

(*Continued from page 37*)

but five months afterward, I received a telegram offering me a job on the Illinois Central at sixty dollars a month. I accepted with joy."

Turning to one of the windows of his office, Mr. Downs pointed. Below us, as if viewed from an airplane, lay the tracks of the busy terminal, and the city's front door.

"I began right down there," said Mr. Downs, "in the year 1896. Do you see that retaining wall east of the tracks? It hadn't been built at that time. All the land over east has been made since I knew it; in 1896 that space was covered by blue water. I went to work as a rodman in a surveying party under my friend Wallace."

With this position began a program which proceeded through the years without striking incident. But steadily, from job to job, the experience was enriching Downs with a rare knowledge of men, a deep fund of experience, and what amounts to-day to a philosophy of promotion and achievement. Within a year came the first step. Young Downs was made an instrument man in the roadway department, with an increase of salary to seventy-five dollars a month, and later he became an assistant engineer. Inside of another year he was promoted to roadmaster, one hundred and twenty-five dollars a month, and oversight of several hundred men.

"I couldn't tell you," Mr. Downs said, "what special reasons there were, if any, for these first promotions. Such steps were natural on the railroad for a young fellow who did his stuff."

There is a kind of fascination in chronicling, one after the other, the ensuing promotions. For nine years, Downs served as roadmaster on various divisions; next, for three years, he was assistant chief engineer in charge of maintenance of way. Following this job, at his own request he was transferred to the transportation department, serving during the next five years as division superintendent in turn at Fort Dodge, Iowa, Dubuque, and Louisville.

Next he was made general superintendent, with supervision, at first, of the Southern lines, and later of the Northern lines—he held the two positions for four years. Shortly, he became assistant general manager; then vice president and general manager of the Central of Georgia, a railroad owned lock, stock, and barrel by the Illinois Central. Next, president of the same railroad, and also of the Ocean Steamship Company. And, finally, in September, 1926, he was elected president of the Illinois Central itself. He had reached the summit of the long climb begun humbly as a rodman and track apprentice thirty years before.

Naturally, Downs made records along

Charter Member of National Home Study Council

the way. As division superintendent at Fort Dodge, he began analyzing performance in a simple report for his own information, comparing each detail with that of the previous year. Before he left, he had made that division perform better than ever before in its history. Incidentally, the simple report he inaugurated has grown into an elaborate "dope sheet," now used on the entire system.

While he was president of the Central of Georgia, for instance, that road made the most money in its history; not because of any one particular thing he did that you could put your finger on, but because the whole job was done well.

"As I told you before," said Mr. Downs, "I'm an average person. I do the things the ordinary man does, and do most of them just about average well. So, judging by my own experience, I feel sure that an average man who does the necessary things has a chance to win promotion to the biggest jobs, even in the biggest organizations.

"OF COURSE, being as good as the average is not quite enough to win regular promotions. It's necessary to be a little better, to work a little harder, perhaps display a little better grade of judgment, express yourself a little more tactfully and persuasively and fairly. But the difference between 'average good' and 'better than average' in these matters is not great enough to stop a determined man.

"I believe, in fact, that it is possible to frame a sort of program of promotion, and in my opinion it should include at least these seven corner stones:

"1. Do your stuff on the job you've got.

"2. Let the man immediately above you know that you are dependable; if possible, the *most* dependable man he has.

"3. Avoid 'pockets' and blind alleys that lead nowhere—even quit a job, if necessary, rather than stagnate.

"4. Size up the job ahead, and prepare yourself to fill it.

"5. Don't overwork; there are hours enough in the business day to do all the work you need to, provided you plan your duties, and don't waste time.

"6. Don't over-specialize; balance up your accomplishments. There is such a thing as becoming so much better at one particular job than at any other, that you aren't worth your keep elsewhere.

"7. Above all, be fair—to yourself, to your employer, to your associates.

"When I took a job," Mr. Downs went on, "I never thought of becoming president of this or any other railroad. It was a long, long time before the thought entered my head as a possibility. At the start, as I told you, I wanted a job, and that was all. I simply aimed to fill that job creditably.

"That, I'm sure, is the first step to promotion: to do your stuff where you are. The spectacular things are rare and don't matter very much. The thing that does matter is the cumulative effect of many little jobs done well.

"Down-stairs is a door bearing the sign 'general superintendent.' I held that job once. To-day it is held by a man whose progress I have watched with interest ever since I was division superintendent at Dubuque. What is he doing in it? Nothing, you may say, not a blessed thing!—*except doing the job well.*

"He is one of many. One of these days, from among them, one will certainly step out to become general manager, another to become vice president—who knows what more? You could put all the spectacular things they do in a year into one very small tin cup!

"As I went along from job to job I gradually learned that promotion was a thing I had to look out for on my own hook; I couldn't leave it entirely to the boss.

"Sensing this, I made it a practice, about as soon as I got my chair warm in each new job, to look around and see what might be next in line, and to fit myself, in case the opportunity for such a promotion ever came, by doing two things: First, studying the requirements and duties of the job ahead; and, second, convincing my immediate superior, not by argument but by my actions, that I was one of the best assistants he had.

"Sometimes, of course, the man ahead, instead of moving on, blocks the way to promotion for those behind him. It is perfectly true that there are 'pockets' or blind alleys of employment, in almost every large organization, and they must be guarded against.

"There are some jobs, for example, in which, as time passes, a good man acquires skill and experience, and becomes very useful doing *that particular thing*, so that the management finds it costly to shift him. Promotion may pass him by for that reason; or, of course, he may be happiest and best fitted to stop right there. But if he can qualify for promotion there is always a way to get it, even out of such a job, provided he has the stuff to find it. Sometimes it means detouring; sometimes it means taking another job that pays less in money, but more in experience and opportunity.

"When I was assistant chief engineer, for example, I seriously doubted whether there was a very great opportunity due ahead. I stood a chance of becoming chief engineer, it was true, if and when a vacancy occurred. But beyond that *possible* promotion, it seemed as if a man of my training and disposition might have a hard time finding a good place to jump!

"So I asked for a transfer to another department and kind of work, and kept asking for it for some time, until finally I was made superintendent of a division in the transportation department. It was not a promotion, in either pay or dignity, but it gave me an opportunity to learn at first-hand a different phase of the railroad business; and in the new job I thought I saw more ways to jump.

"IF," Mr. Downs continued, "a man has unused ability beyond the job he occupies, it isn't best for him or anybody else if he stays in a blind-alley job. Most employers know this; but many employees, I think, do not grasp the fact that if they want a different kind of work, ask for it, and have a good reason for asking, their chances of being shifted are good.

"When I was with the Central of Georgia, I sent out several simple, home-grown letters to employees, touching on different subjects I thought important, and one of them was entitled, 'What are you doing to prepare for promotion?' I brought out this thought about blind alleys. I added that if any man felt he could

Touch a Corn

With this amazing liquid

Acts like an anaesthetic
Stops pain in 3 seconds

INSTANTLY and at once, you can wear tight shoes, dance, walk in comfort. Then soon the corn or callus shrivels up and loosens.

You peel it off with your fingers like dead skin. No more dangerous paring.

Professional dancers by the score use this remarkable method. Acts instantly, like a local anaesthetic. Doctors approve it. Removes the whole corn, besides stopping pain at once.

Ask your druggist for "Gets-It." Satisfaction guaranteed. Works alike on any corn or callus—old or new, hard or soft.

"GETS-IT" *World's Fastest Way*

do better in a different job, he should write in and state his case. Quite a number of replies were received, even from wives and members of the families of employees. As a result, there were some shifts that made people happier, and which in the course of years may prove critical.

"A blind alley may be created artificially. That is, a man may advance to a position beyond which he cannot very well go; meanwhile, there may be men working under him who are smarter than he is. The company can't afford to discharge him, and doesn't want to, anyhow, for he is good where he is.

"It has been my experience that, somehow, a man of ability hurdles such obstacles.

"Blind alleys, in short, are 'blind' for men of ability only when they do not try hard enough to find the way out. There is always a way. If the situation becomes too discouraging, there is nearly always a job somewhere else.

"When Mr. Charles H. Markham, president of this railroad for fifteen years, and by all odds the greatest railroad man I have known, came to the Illinois Central, he came as president. He had never been connected with this road previously in any capacity, but had gained his experience mainly on the Southern Pacific and in industrial lines.

"Mr. Markham's plans were not known. It was thought by many that he would make sweeping changes in personnel, bringing in friends and other outsiders. However, one of the first things he did was to call a meeting of department chiefs. At this conference, he stated explicitly that he did not intend to make any immediate changes, and furthermore, that, as far as was humanly possible, he would not at any time bring outsiders into the organization as executives, but would promote from the ranks. That policy has been followed with very, very few exceptions from that day to this.

"NOT all business men follow this policy or believe in it. For that matter, such a policy is not invariably desirable. Circumstances alter cases.

"Certainly there is no law compelling promotion from the ranks. But any man considering his own future owes it to himself to know the policy of his company in this vital matter, and to govern himself accordingly.

"Furthermore, he owes it to himself to know whether his line of work is one that will permit him to expand to the full limit of his capacity.

"When I was division superintendent at Fort Dodge, I had an offer to become general manager of the Panama Railroad. I was getting three thousand dollars a year, and was offered seven thousand.

"I made a trip East to talk the matter over with the man who had the job in his gift. I had virtually made up my mind to accept; my wife also had agreed to go to Panama. However, I asked for a week in which to reach my final decision. On the way back to Fort Dodge I stopped at Chicago to have a talk with our president, Mr. Markham.

"'Are you going to accept?' Mr. Markham inquired.

"'I don't quite know," I said.

"'That ought not to be difficult to decide,' Mr. Markham went on. 'The first

thing to do, I should say, is to settle in your own mind what job in this organization you want, then size up the competition ahead of you. If you decide you can get what you want here, probably you'd be foolish to leave. But if you decide the competition is too stiff, then you might get further in the end by taking the other job. Nobody can decide that for you.'

"I left, with a determination to try Mr. Markham's suggestion before resigning. Thinking over the jobs ahead, one within reasonable reach that appealed to me was the superintendency of the Kentucky division, one of the most important on the line. I figured there was one man, a chap named Baldwin, already holding the Louisville job, from whom I might expect my stiffest competition. But he was moving fast; I believed he would keep on going. There seemed a reasonable chance to satisfy myself by sticking—so I turned down the Panama offer.

"Curiously, things turned out about as I figured. Before long, I was transferred to Dubuque. Not long after that Mr. Baldwin moved on, leaving a vacancy at Louisville, and I was given that division.

"Of course a good deal happens in a man's life that he isn't responsible for. Fortunate openings occur. There are heroes of circumstance, just as there are victims of circumstance. But in planning for promotion, it is safe to remember that such 'breaks' are occurring all the time, and, *other things being equal*, the advantage goes to the man who is ready.

"ONE of my favorite theories," Mr. Downs went on, "is the danger of one-sidedness. Not long ago a man was talking with me about his son, and said he was afraid the boy was not getting what he should out of college. The boy, he said, was on the football team and made long trips to games; he went a good deal to dances and social functions; he belonged to a fraternity. And, the father owned up, the boy wrote to his mother frankly about all these activities.

"'But,' he said, 'I didn't send John to college to cut up on a dance floor, or a football field. I sent him there to learn something.'

"'How,' I asked, 'are his grades?'

"'Oh, they're all right; he passes.'

"'Then don't worry about John,' I replied; 'from what you've told me I can see that he is getting an education.'

"My views on this grew out of my own experience. I have felt pretty strongly that I got far more from college *outside* of books than from them. And in that, I think, is involved a significant principle of living. There is a balance among activities to be maintained, and if it falters a man is almost certain to become one-sided. And just because of that one-sidedness, he may slip up in larger aims.

"I knew of a man who was ambitious and worked hard, so hard that finally he broke down and lost his health, and could not accomplish his ambitions. That man grew bitter, and nursed a grievance as long as he lived, feeling that the world had treated him shamefully and unfairly. He held that, since he had worked so hard as to lose his health, success was due him!—he never admitted nor realized that it was solely because he had neglected to pay proper attention to his health that he failed.

"In college, again, I knew a man who was a student, and not much else. He did not play football; he did not join a fraternity; he did not dance; he did not belong to a literary society; he did not take a minute more of military training than the curriculum required; he did not belong to the glee club. In short, he came to college to get an education as he understood it, mistakenly believing that it was all in the books.

"Well, in studies he led his class. But what happened later?—life is the biggest university, after all. I can take you to an office not far from here and point out this chap, bending over a drafting board, doing work that a man of far more modest attainments could do just as well.

"He failed. Why? Because he neglected to balance up. He recognized value in only one thing, and did not cultivate other values which are equally needful in the larger affairs of life.

"I realize that this counsel is risky, because it can so easily be misinterpreted. To be specific, I do not believe that *every* boy who goes to college should engage in a lot of miscellaneous activities beyond his studies, because not every boy has the strength or capacity to do it and maintain at least an average grade in what the books teach; and that much, at least, he should contrive to do. I do believe, however, that every boy should do it to the extent of his ability. And, also, every man, I think, should cultivate diverse interests to the extent of his ability.

"And because it narrows more than it broadens a man, I object to spending too much time on the job continuously. There is time enough in a business day to finish the biggest kind of a day's work, provided it is well-organized; unless, of course, there is some emergency to be met. More than that much work, if undertaken regularly, is likely to dull a man's point of view. I never carry home a folder of work to finish at night.

"LAST of all, but far from least, in any program leading to promotion comes fairness. Unless a man's associates learn to trust his judgment and sense of justice in matters of importance, they will never tolerate him in a position of much responsibility.

"How does a man cultivate the spirit of fairness? Largely, I think, by studying men sympathetically, by learning their peculiarities and idiosyncrasies, by finding out what prompts one man to do a certain act, and what else prompts another. Human nature is the biggest book there is. All my life it has been one of my greatest pleasures to try to read a few chapters in it here and there.

"In mere dollars and cents, if we could figure them that way, men constitute the biggest kind of investment, although the fact isn't recorded on balance sheets. Take this railroad: We buy much of our equipment, including locomotives, cars, and the like of that, with borrowed money, which we rent at an interest rate somewhere in the neighborhood of five per cent. That investment, of course, goes on the balance sheet.

"But take the other investment—men. Select one man whose salary, we'll say, is five thousand dollars. Assume that the salary represents interest paid on a capital sum. At five per cent, that man's capital

worth is one hundred thousand dollars. Let a man think of himself in this light—let others think of him so—and there grows up a greater sense of personal worth.

"See how this human 'investment' mounts up on a railroad like ours. The average yearly wage is around fourteen hundred dollars, and there are about sixty thousand employees. On the five per cent basis, the 'investment' is worth *one billion six hundred and eighty million dollars*. The physical property of the railroad is worth less than half that much.

"The peculiarity of this human 'investment' is that every single unit is different from every other. And a man meaning to be fair must know something about these differences and understand each particular man he deals with. I know one man, for example, who always has to be addressed a bit gruffly, or at least very seriously; he wouldn't know how to take it if he were joked.

"On the other hand, I know another man whom you can kid; in fact, that's the best way to get your ideas across to him. If you talked to him seriously about a mistake, it would almost take the heart out of him. You can utter any reproof that's needed, and give him the courage and determination not to repeat, by simply saying:

"'Bill, that was a darn-fool thing for a man like you to do; now, wasn't it?'

"I knew another man whom it was dangerous to praise, because he puffed up and went to pieces under it. On the other hand, men who know their own worth and shortcomings correctly can be praised to their faces, and they will find in the appreciation, not flattery but the stimulus and inspiration to do even better.

"THE individuals in this great human 'investment,' too, are prone to get into all sorts of difficulties. That fact needs understanding. For when a man's in trouble and can't see his way out, if he gets no help the trouble may color all his actions and prevent realization of his ambitions.

"I mentioned the home-grown letters sent to employees when I was with the Central of Georgia. In one of those letters, speaking of thrift, I remarked that if any man had allowed himself to slip into the clutches of a loan shark, and he would let us know, we would try to help him. I believe we received three hundred calls for help! Some of the victims were simply poor managers of their money; others had had sickness, and hospital or doctor bills to meet; others had other reasons or excuses. But the trouble clouded their lives. Many could see no way out. Some had borrowed twenty dollars, paid back thirty in interest, and still owed twenty! A very little help was needed.

"Understanding of this human 'investment' begins to come only as the result of life study. In dealing with it, however, no matter what the circumstances and peculiarities of the individual may be, there's only one rule I know that will work with all men at all times; that is, *be fair*. If a man does well, be fair-minded and commend him. If he does poorly, don't neglect to let him know that you know it—don't be 'easy'—be fair enough to tell the truth, whatever the circumstances. That covers it!"

Dot and Will Take a Vacation

(*Continued from page 23*)

warm bath after those damp, chilly days in a soggy tent! Long after Will was asleep in his twin bed, I trailed around the room in my nightgown, sitting down in front of the dressing table, switching on the candle lights and trying my hair one way and another, feeling like DuBarry or somebody. Oh, but this was the life!

I was nearly dead from sleepiness, but I lay for a few minutes, propping my eyes open, looking over a new magazine, just to use my little bed reading lamp. The luxurious feeling that it didn't make any difference what time I went to sleep!

I finally dozed off, still trying to make up my mind whether to have breakfast in our room at a little table drawn up by the window, or to dress and go into the dining-room, where you'd see other people. . . .

"For the love of Mike!"

I woke up with a start. Will was shutting the windows, looking at his watch. I blinked at him.

"It's quarter past eight!" he said accusingly.

I stretched, sat up in bed.

"I'd thought I'd sleep till nine," I said.

"Sleep till nine!" Will exclaimed, and from his tone you'd think I'd said I thought I'd set the hotel on fire. "What do you want to sleep till nine for?"

"Because I'm staying at a hotel."

Will looked baffled.

"Living in as quiet a place as Montrose," he said, "I can't see why anybody's got to go to a Chicago hotel in order to get their sleep!"

I rose without trying to explain. I was wide awake now anyway, and I might as well get up. Besides, there's no use trying to explain anything to a man. Will had already had his bath and was beginning to shave.

"Well, what's the program for to-day?" he asked briskly.

"How would you like to go to the theatre to-night?" I asked.

"Fine! And what about the day?"

"We might go shopping this afternoon."

Will looked sort of dubious.

"What about the morning?"

"Well, I thought I'd get my hair washed."

Will looked even more puzzled than he had at my wanting to sleep till nine..

"Can't you wash your hair at home?" he asked.

"I can't have it done in the beauty shop of one of the swankiest hotels in Chicago, at home," I explained. "I want to have one of those new finger waves put in, and see if I can catch on to how it's done, so I can do it, myself."

"Oh," said Will.

I HAD a perfectly lovely morning. The girl who did my hair does the hair of a lot of actresses, and the things she told me about some of them would surprise you. She kept calling me "Miss," and when I told her I had two babies at home, she just wouldn't believe it. She said I didn't look old enough to be married. She said anybody with hair like mine owed it to herself to have the right kind of water-waving combs, and I bought a set.

I also got a face-patter and a jar of Anti-Wrinkle Cream and a little bottle of muscle oil. They were terribly expensive; but the girl said that anybody with a fine, clear skin like mine couldn't begin too early. She said so many women made the mistake of waiting till the wrinkles began to come. She was an awfully nice girl, and seemed to have a lot of sense.

I met Will for lunch. We went to a tea-room on Michigan Avenue that Louise Curley had told me about.

I thought it was a perfectly wonderful tea-room, but Will complained that he didn't get enough to eat.

"Mercy, Will," I said, impatiently, "you can eat at home! You don't go clear to Chicago for food!"

"Maybe not," said Will; "but when I go into a restaurant, that's what I'm going for."

He didn't seem exactly to enjoy shopping that afternoon, either. I wanted to get some silk stockings. There are a lot of new shades that Father doesn't carry in the store. I'd read in one of the fashion magazines that Spanish Nude was the latest thing, and I had to go to three different stores to find any.

Will didn't seem to have any patience at all. When I couldn't find them at the very first store, he lost interest. Of course I paid no attention to him, but a person along who isn't in sympathy can certainly take the edge off shopping.

GOODNESS knows I hadn't any intention of just dragging Will around shopping all our time in Chicago. I had thought we would try to compromise, and do things that both of us enjoyed. But it gave me a terrible shock to find out what queer sort of things Will did enjoy. He wanted to go to the Field Museum, for instance!

Of course I wouldn't want to say anything against natural history museums. They're very interesting and instructive for people who like them and have time for them. If I lived right in Chicago all the time, doubtless I'd go to the museum often, or at least once. But with only ten days out of five years, it did seem kind of crazy to waste the best part of a day among skeletons and birds' nests.

And then Will wanted to go to the *stock yards!*

When he said that, actually I could have cried. Our precious time in Chicago! Why, I could have filled every day, from the moment I woke up till I fell into bed at night with fascinating, lovely things to do. I grudged the time I had to spend in sleeping, and Will wanted to go to the stock yards!

I actually believe Will would have eventually ruined the whole trip for me if we hadn't met the Janssens. Lorraine Janssen and her mother used to have a cottage at Winneposocket and I'd known them for years. We just ran into each other at the theatre.

From the moment we met them, the vacation began to be the sort of thing I'd dreamed of. The Janssens were real women of the world. While Will went to

see the stock yards, I went shopping with the Janssens. They were two women who knew how to shop! Why, we could be in the stores all day long, and never spend a cent.

They knew all the really interesting places to go, and how to go to them without spending a lot of money. They took us to a Russian tea-room for lunch, where the tea was made in a samovar, and where all the waitresses were refugees and not one of them less than a countess. They showed us how to see all the swanky restaurants and dance places very inexpensively, by going at tea time, and just ordering tea and cinnamon toast.

They took us to "Book Week" in one department store, where a real poet would autograph his book if you bought it. They took us to an art exhibit that everybody who was anybody in Chicago was going to. It was wonderful and sophisticated. Why, if you saw those pictures anywhere but in an art gallery you'd never have guessed they were pictures.

It was an opportunity such as might not come twice in a lifetime. Without somebody like the Janssens to show us the ropes, we might have floundered around spending our money on all the wrong things. But this way, it was an education.

And the fun that it was, getting it! I'd wake up at six o'clock mornings, so excited and anxious for the day to begin that I couldn't possibly have lain in bed till nine. If I hadn't been so breathlessly happy, I suppose what happened wouldn't have come as such a shock.

BUT, actually, I'd been so engrossed in what we were doing I hadn't realized that Will wasn't enjoying it. So the blow came upon me, completely unprepared.

We were riding up in the elevator at the hotel when we'd been there nearly a week, reading our mail. I had a letter from Mother saying that the twins were fine and everything was going well. Will had a letter from Howard Merton, and was reading that. I tucked my letter in my bag, and began to tell Will about the most exciting thing yet that was going to happen. The Janssens were going to give a bridge luncheon for me Labor Day!

And such a luncheon! It would be in the dining-room of a very smart apartment hotel near their apartment, a big table, reserved and everything. Lorraine said you could scarcely go there without seeing a débutante. Then we could go to the Janssens' apartment for bridge afterward. Taking taxis! Lorraine was having all up-to-the-minute Chicago girls. The party was in my honor! My, but I was glad I had my new black satin dress to wear and knew how to play a good game of bridge!

I was talking about it to Will, and I was so excited that I didn't realize at first that he wasn't listening to me.

"I wonder," I was speculating, "if I wouldn't be justified in getting a pair of those beige patent leather two-strap slippers. They are all I need to make my costume absolutely perfect."

I looked doubtfully at Will to see whether he felt that this would be going too far. He had a queer, absent look, and his face was lit up like Main Street on Saturday night.

"Say, listen to this," he said, as he unlocked our room door; "I got a letter here

"There's the *new* Ned Tyson"

He's making $6500 a year now

"I USED to know him when I was a kid—we went to grammar school together.

"Then his father died and he had to go to work. Got a job with Brooks & Watson as a clerk, but couldn't seem to get ahead.

"Then overnight something seemed to wake him up. He began making suggestions to the firm—helped them to save a great deal of money.

"Then Old Man Brooks became interested—wanted to know how Ned happened to know so much about the business. Ned told him he'd been studying at home at nights through the International Correspondence Schools. 'H'm,' said Mr. Brooks, 'I'll remember that.'

"He did too. Put Ned out on the road as a salesman for a year or so and then brought him into the main office as sales manager.

"He's getting $6500 a year now and everybody calls him 'the new Ned Tyson.' I've never seen such a change in a man in my life. The I. C. S. deserves a lot of credit."

An International Correspondence Schools course will help *you* just as it helped Ned Tyson. It will help you to have the happy home—the bigger salary—the comforts you'd like to have. Start today to make good. At least find out what this great school can do for you.

from Mert, and he says it's warmed up again, and he and Frank Kirsted are going to take a few days off and go camping over Labor Day."

"Yes?" I said absently. "It wouldn't be an extravagance, in the long run, because I could wear them for dress all winter, and then they'd be stunning with my tan suit in the spring."

"And they want us to come back and go with them," Will went on.

"They're specially treated," I said, "so they won't crack."

"If it isn't luck," said Will, "that we left everything all packed up, the blankets and cooking tools and everything."

"I won't spend the money, though," I said, "if you feel that it would be extravagant."

"Extravagant!" Will exclaimed. "Why, it wouldn't cost us hardly anything! We'd even go up in Frank's car."

I CAME to earth suddenly, as you do when a chair's been pulled out from under you just as you're sitting down. As suddenly and with as great a feeling of outrage.

"Will Horton," I gasped, "do you mean to tell me that you want to leave Chicago—now?"

"Wel-ll," said Will doubtfully, as though making a great concession, "we might wait till morning, as long as we've got tickets for a show to-night."

"Leave Chicago in the morning!" I cried. "But the party! The luncheon the Janssens are giving for me!"

"Oh, you can get out of that."

"Get out of it!" I could feel my voice getting higher and thinner. "I don't want to get out of it!"

"You mean"—Will's face dropped like a cake that didn't have enough flour in it—"you mean you want to pass up a chance to go camping, and stick here in Chicago, just for a party three days off!"

"Not just for the party," I wailed. "I'd want to stay if there weren't any party at all!"

Will stared at me, horrified. And I was as horrified as he was.

"Leave Chicago, to go and sleep in a leaky tent and eat burnt bacon and fried potatoes, three times a day! With three men, who don't want to do anything but tramp millions of miles, and fish!"

"Pass up camping!" said Will. "To stay in this filthy city! With three women who don't want to do a thing but trail from one store to another, and eat whipped cream in tea-rooms!"

And there we were! Right down to bare facts, without any pretty veils of pretending and being good sports. "I always thought you liked good healthy outdoor fun," said Will. "I do," said I; "but I always thought you wanted to see something of life outside Montrose." "I do," said Will; "but—"

But! There was no getting beyond the "But" for either of us. The more we talked, the more excited and the further apart we got. Why, before we finished, we were arguing about things that had happened before we were engaged. It was as near a real quarrel as really nice married people ever get.

It was Will who finally suggested a compromise.

"Well," he said at last, "why don't I go back and go camping with the boys, and you stay here the three days and have a good time with the Janssens?"

It was a perfectly sensible solution, and we both knew it. There wasn't a reason in the world against it. We stopped arguing and began planning how we could manage. It would be easy as anything. In the planning we got perfectly amiable again. And by the time Will caught the four-o'clock train for Montrose, everything between us was as smooth and sweet as maple mousse.

On the surface.

Underneath, I couldn't help feeling a little hurt at Will. I didn't want Will to stay in Chicago if he didn't want to—there's no fun for anyone in that—but I wanted him to *want* to. And I could see that he felt a little hurt at me. He knew that he'd really be better off camping with just Howard and Frank, who would never in the world get blisters on their heels. But he wanted me to *want* to go.

If it hadn't been for this little feeling of hurt, my three days in Chicago would have been heavenly. But away down underneath, taking the edge off all the pleasure, was that sore feeling that Will had been perfectly willing to spoil it all for me.

If it hadn't been for the luncheon in my honor, that feeling of hurt might have actually ruined things for me. But the luncheon was so important that I had to put everything else aside to get ready for it.

They played contract bridge in Chicago, and I bought a book of rules and studied it after I'd gone to bed, so I wouldn't be a disgrace as a guest of honor. I bought the beige patent leather slippers, and then had to get stockings dyed to order so they would be a perfect match.

Labor Day morning, I went down to the hotel beauty parlor and had a fresh finger wave and a manicure. I allowed myself loads of time to dress, and when I was ready to start I studied myself in the long mirror in my room, and from the top of my wave to the soles of my beige patent leathers, there wasn't one single snappy detail lacking. I had everything but a Paris divorce!

I HAD allowed myself so much extra time for dressing that when I got down to the hotel mezzanine, I was twenty minutes ahead of time. I didn't want to kill the effect by arriving early, so I bought a newspaper and sat down to wait.

I glanced at the front page and then turned to the ads. Leaving for home that night, of course the ads weren't really anything to me any more; but you know how it is, you always like to read them anyway. I was studying the prices in a fur coat sale, when in a column beside it a familiar name leaped out and caught my attention. It was Lake Winneposocket.

Casually, I began to read the little item.

Suddenly, everything in the world stood still. In icy horror.

Three young men who have been camping for a few days on Stony Point, Lake Winneposocket, were drowned late yesterday afternoon when their boat capsized off the point.

Stony Point! Where the boys had been going to camp.

The tragedy was witnessed by Sam Brado, a farmer who had seen them put out earlier in

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

the afternoon, and who was watching their struggle with the storm when the boat capsized. Until midnight none of the bodies had washed ashore, and a search of the camp they left disclosed nothing by which they could be identified, except for a Masonic emblem on one coat. Brado described them as being between twenty-five and thirty years of age. Two of them he remembered having seen on the lake in previous years. Most of the campers on the lake, he said, came either from the nearby towns in Wayne County or from Chicago. The station agent at Dawson said that several parties of campers had come from Chicago lately, but no party of three that he could recall.

The work of dragging the lake for the bodies will commence to-day.

I don't know how long I sat there, numb to everything. Then I came to in the panic of terror. What should I do? I stared around the mezzanine, people sitting, walking about as though nothing had happened. I couldn't do anything here, in this queer place, among all queer strangers. I must get back to Montrose. Right away.

I tried to see the time; but my wrist watch shook and was queer and blurred. Finally, I made it out. Just twelve minutes before the one-ten train. I dashed through the hotel lobby, out onto the crowded street. Some people were just getting out of a taxi, and I jumped in.

"The Union Station," I said to the driver. "I've just twelve minutes to catch a train. Can you make it?"

He shrugged his shoulders and started off. Dodging in and out among the cars, cutting corners wherever he could. There was a terrible time while we had to wait for a traffic signal. One-eight-and-a-half when we reached the station. As though there weren't another soul in all that crowded place, I ran across the great concourse, not little, hurrying, woman steps. I ran the way I used to at home when Will and I played in the same kid games and the leader shouted, "Run, Sheep, Run!"

The light over the train gate was already out, the gate was being shut; but the man saw me coming and held it open an extra second for me.

WHEN we were rolling along and my heart had at last slowed down so that it didn't shake me all over, I remembered all the things I should have done. I hadn't any ticket. I hadn't paid my hotel bill. I hadn't got my baggage. If I'd had time, I might have telephoned Montrose, long distance. What good would that have done, though? Whom could I have telephoned? The boys hadn't planned to come home till late to-night. Who would have known where they were?

And where were they? The tears streaming down my face, I read over and over the paper I had clung to. At first, I tried desperately to think that it might be some other three campers. Lake Winneposocket is a huge lake; there must have been lots of other campers. But three young men! And Stony Point! Will had said they would camp on Stony Point. A Masonic emblem on one coat. Will's lodge pin.

It must have been his old gray coat. There would be his pipe in the pocket, and the two buttons off. I must sew on those buttons. He'd kidded me about them, and it had got to be a joke, so I hadn't done it. I must sew them on. They were

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The microscope shows why Barreled Sunlight is so easy to keep clean

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keep clean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

ANY interior surface can be kept cleaner and more cheerful—for a longer time—by painting with Barreled Sunlight.

When dirt mars its satin-smooth surface, a damp cloth instantly restores it to spotless beauty.

Preferred by thousands to the most handsome enamel, Barreled Sunlight costs less and requires fewer coats. *Guaranteed to remain white longest.*

Beautiful tints can be obtained by mixing oil colors with Barreled Sunlight. Ask your dealer about the new, easy-mixing Barreled Sunlight Tinting Colors in handy tubes.

Quantity for quantity, Barreled Sunlight covers a larger area, and the extreme ease of applying it by brush or spray saves many labor-hours.

In Gloss, Semi-Gloss, and Flat finishes. Cans and drums. Where more than one coat is required, apply Barreled Sunlight Undercoat first.

U. S. Gutta Percha Paint Co., K-16 Dudley Street, Providence, R. I.—Branches: New York—Philadelphia—Chicago—San Francisco. Distributors in all principal cities. More than 7000 retail dealers.

your dog

He May Be A Hero Tomorrow

Philadelphia News, Feb. 21st, 1927.

"Eleven persons were rescued and ten others fled through smoke and flames early today after a police dog's incessant barking sounded an alarm."

Almost daily some faithful dog saves human lives. Your own dog is a potential hero—ever watchful and faithful and true.

Take Good Care of Him

A DOG can't tell you what's the matter when he's sick nor what to do to relieve his suffering. Fortunately, you do not have to be an expert on dogs to know exactly how to care for him and treat all his ailments. Nor does it cost any money to find out the best treatments for all dog diseases. There are safe and effective remedies for every dog ailment and it is a simple matter to find out when and how to use them.

All dogs, puppies especially, should be wormed. Reasons are given on page 15 of Polk Miller's Dog Book.

Famous Dog Book Free

Our staff of expert veterinarians has compiled a book of intense interest to dog owners. It contains the accumulated knowledge of fifty years. In clear and explicit language, it tells the symptoms of dog ailments and explains the best treatment for each. There are articles on feeding, breeding and the rearing of pups. This famous book, which has been used as a guide by millions of dog-lovers, is revised each year and kept strictly up-to-date. It has saved the lives of thousands of valuable dogs. We urge you to write for a copy. It will be sent FREE to anyone who cares enough for his dog to write for it.

Fleas make dogs miserable and may cause serious skin troubles. Kill fleas with Sergeant's Skip Flea Soap or Powder as directed on page 42 of the Dog Book.

Expert Advice, Free

If your dog develops a condition not fully covered in Polk Miller's Dog Book, *write us at once.* State age, breed, sex and all symptoms. Our expert veterinarians will answer personally, sending, without charge, complete instructions for care and treatment. Sergeant's Dog Medicines, standard for more than fifty years, are sold by dealers everywhere. If you cannot obtain them, write us direct. Address Polk Miller Products Corporation, 1564 W. Broad St., Richmond, Va.

Mange is highly contagious among dogs. Proper treatment is given on page 27 of the Dog Book. Use Sergeant's Mange Medicine and Sergeant's Arsenic and Iron Pills.

Write for your free copy of Polk Miller's Dog Book.

Sergeant's DOG MEDICINES

"A medicine for every dog ailment"

Write for FREE Sample of our No-Tar-Odor Mange Medicine for Human Hair and Scalp.

in the little ivory pin box on our bureau. I must sew them on. I kept thinking about those buttons—I had to keep thinking about them. If I hadn't, I would have had to think of never sewing a button on a coat for Will again. I must sew— And suddenly, I couldn't think of this any longer.

I shrank back against the car seat and put my hands over my eyes. Trying to shut out the thought. Life without Will.

Despair isn't always black, as they say. It isn't any color. It isn't anything. Just emptiness.

Would I go on doing things, in that emptiness? Putting the babies to bed? When they had finished their supper, they always ran over to the window in their sleeping suits, and I would sit down on one of their little chairs and we would watch out the windows, down Water Street, for Daddy to come home. What would I do now? How could I put them to bed now? How could I tell them Daddy wasn't ever coming home any more?

How could anything go on if Will never came home again? Could I go on, setting the table for a summer breakfast on the porch, and not put any chair there for Will? When my work was over, what would I do, what would I wait for, if I was never to hear his whistle again? Our big two-some chair in front of the fireplace, with the little clock ticking in the stillness of a winter evening, the little mantel clock, that Will and I had wound and set to ticking, together, on our first night in our own home . . . and Will not there . . . never again . . .

I pressed my hands tighter over my eyes, but I couldn't shut it out. That awful emptiness of despair. The conductor called "Montrose." I had to take my hands away, and in the sudden blinking light, I felt my way down the train aisle, down the train steps.

THERE on the station platform stood Will!

I can't remember what he did or said. It was a long time before I realized that he was clinging to me in the same frightened, unbelieving way that I was clinging to him.

"I was just petrified," he was saying. The dearness of a familiar voice when you had thought you might never hear it again!

"Just called you up, long distance, when I heard of the accident at Stony Point! Thought you might hear of it and think it was us, and be frightened. And you weren't there! They were terribly worried—they'd called the hotel and you weren't there—girls have just disappeared like that in big cities, and never been found—"

Will's arms tightened around me, those strong arms I had thought I would never feel around me again.

"Lord, but I was so scared!"

"But how did you know that I was coming on this train?" I asked, bewildered.

"I didn't." Will's face was still a little grayish around the mouth. "I never thought of such a thing. I was waiting to catch the five-three. To hunt for you."

The sun shone bright and warm over us, the very planks on the station platform floor seemed different from any planks I had ever seen. Glorious, happy planks!

"I CALLED the Janssens long distance, first, of course," Will was going on. "I thought you'd be there at the party."

"The party!" I exclaimed, bewildered.

And suddenly it dawned on me. The bridge party the Janssens had been giving for me!

I had the briefest moment of feeling guilty—it was too bad not to have let the Janssens know. But only the briefest moment. Standing there on that happy platform in the sunshine with Will's arms around me, I suddenly saw, for a moment, just how little things like bridge parties or camping trips or Chicago count. A blister on my heel, Will's hating tea-rooms, taking our vacation together or separately—I could have laughed at the idea of having given a moment's concern to things like that. Only when I tried to laugh, I began to cry again.

Our vacation, stumbling around in a dark room, forgetting where everything that counted was. And then, like a revealing flash of lightning, that moment when I saw Will standing on the station platform. A bright, quick flash of lightning that lit up every shadowy corner.

You couldn't live all the time in such a dazzling light, of course. I suppose we'll be like all married people, tripping up now and then over some silly trifle. But it will be a long time before I'll forget the lay of the room again!

I'll be able just to close my eyes and see that dazzling flash. And know where all the big, important things are standing.

I Gave Up My Law Books for a Cook Book

(*Continued from page 34*)

involving millions of dollars were won and lost.

After a year, the largest bank in Brookline, Massachusetts, requested him to name a lawyer for the position of legal adviser. I was much complimented when he recommended me for the position.

I had to prepare myself in thirty-six hours to answer questions that the bank or its clients might ask of me. And the job was not made any easier by the fact that it was income-tax time; indeed, it was the first year of the Federal Income Tax, and all the explanations were confusing, even to the tax experts from Washington. The most perplexing as well as the most amusing questions were asked me, not only by timid elderly ladies, but also by presidents of corporations and heads of business concerns who were clients of the bank.

And it was while I was in this responsible position that I was asked to undertake the duties of marriage.

This was the most difficult question to answer that had yet been asked me. Here was I, in the midst of my career,

Digitized by Google · Original from STATE UNIVERSITY SYSTEM OF FLORIDA

able to give myself the luxuries that I loved, and living a life that I was none too ready to sacrifice. Moreover, the young man whom I loved was a writer, and a long way from a famous writer.

This meant that I must either go on earning my income in order to have the things I had been accustomed to, or I must give it all up and be poor, for a few years at least. The latter course seemed at the time impossible, so, since we were at war, I was obliged to decide in twenty-four hours whether I was to continue my successful legal career without husband or love, or to attempt to combine my status of a lawyer with that of a wife. I knew that to keep my place among so many others I must work early and late, and that my mind, like the minds of all successful lawyers, would be occupied by my work. The usual argument, "I can get a competent servant to run my house for me, thus leaving me free to devote all my time to my profession," did not deceive me.

For I intended if I married to have a *home;* and no maid could be hired who could give me, unsupervised, the home that was to be ours. I had always lived in a real home. It was so essentially a part of myself that, without it, I could never be content. I knew, too, that a writer-husband must have just such an environment, if he were to do his best work. The creation of such a home would mean the expenditure of much time and thought. The question resolved itself into this: Would whatever I might find necessary to give up from *my* life be repaid by what he gave me in *his*. I decided upon marriage *and* a career. I have never regretted this decision, so hurriedly made, though it entailed deeper sacrifices than I was able to foresee at that time.

In three weeks, my husband was sent to France, and so was spared my earliest efforts at the lawyer-wife combine. The war made the future so uncertain for all of us that I determined to save as much of my earnings as possible. I took an apartment with an unmarried sister. From the first, I attempted to do nearly everything myself.

MY PRINCIPAL interest was still, of course, the law, and I went on with it as enthusiastically as I had before marriage. I even added to it a war job with a committee headed by a member of another large firm of lawyers in Boston. This committee was formed to collect subscriptions for Liberty Loans among citizens of foreign birth or descent. It needed many helpers, and I was asked to enlist for them the services of the women lawyers and organize them for this work. Also I worked evenings upon the local draft board as one of its legal advisers.

My sister also had a job; she did not have the incentive to learn housework that I had, so I intimately got my taste of an attempt to combine home-making and profession-making. Actually, there was no home, simply a place to sleep, frequent meals outside to prevent us from starving, a fairly decent apartment, and money going out all the time for laundry, food bought at the delicatessen shops and tea rooms, and undirected cleaning about half done. Yet I was determined to make a success of it; the war might be over any time and my husband return. I *must* learn.

This new Way

avoids all discomfort breaking in New Shoes

Wherever the shoe causes you any discomfort, apply Dr. Scholl's Zino-pads to the tender spot. Instant relief is your reward—and at the same time every possibility of a corn, callous, bunion or blister removed. Dr. Scholl's Zino-pads stop the *cause* of these troubles—friction and pressure of shoes. They are thin, medicated, antiseptic, protective, healing. Cost but a trifle. Sold everywhere.

For Tender Toes and Corns

For toes that are inflamed and sore, (the first sign of corns), apply Dr. Scholl's Zino-pads (Corn-size). Pain stops instantly and corns positively prevented.

Burning Soles—Callouses

For Callouses here or burning sensation or soreness—apply Dr. Scholl's Zino-pads (Callous size). They stop the cause, and end the pain at once.

For Sore, Tender Heels

Blisters and tender spots on the heels prevented and all soreness removed, by applying Dr. Scholl's Zino-pads (Callous or Bunion size).

Preventing Bunions

Apply Dr. Scholl's Zino-pads (Bunion size). They stop the pressure of the shoe, and prevent and relieve bunions.

For Tortured Instep

For painful ridges on the instep, caused by tight shoes, use Dr. Scholl's Zino-pads (Callous or Bunion size). They prevent blisters and quickly heal.

----MAIL COUPON FOR FREE SAMPLE----

The Scholl Mfg. Co., Chicago, Ill.

Without cost or obligation, please send sample package of the three sizes of Dr. Scholl's Zino-pads and circular, "How to Make New Shoes Give Old Shoe Comfort," and Dr. Wm. M. Scholl's booklet, "The Feet and Their Care," to

Dr Scholl's Zino-pads

FOR CORNS, CALLOUSES, BUNIONS, TENDER SPOTS

First of all, I did not have the least idea of what was necessary even for light housekeeping. I thought in despair of the kitchen closets in my former home, clattering with pots and kettles of all sizes, and table drawers full of cutlery. Even had it been possible to buy them, what would I have done with them? The apartment had yawning kitchen drawers, and empty hooks cried aloud for pots and pans.

I took my mind away from the legal case then interesting me and went into conference with my kitchen. With paper and pencil I sat down and thought of each meal, setting down a list of what must be necessary for its preparation. I went to a large department store and put myself in the hands of a kind sales girl. She evidently knew her job, for I still have those same utensils, and have added very few to them, though I have greatly increased the variety of my menus.

With a beautiful gas stove and all those shining kettles, it seemed a fascinating game to get our own meals; but it proved more difficult than fascinating. My first attempt had been a cup of tea. It tasted like nothing at all, for I had not waited for the water to boil. My toast was all burned, even on my electric toaster. For many days I could not discover how to use the oven or broiler of the gas stove.

I HURRIEDLY added to my essentials a splendid cook book, and it was from this that I learned how to do everything, except to scrub floors, wash clothes, clean and keep my kettles bright. And, alas, how to live on the budget system!

I studied that book as if it were a textbook on Real Property or Contracts: I learned what frying, baking, and broiling meant, and how to light the gas stove. These lessons brought forth food of varying degrees of attractiveness. I attempted the simplest of dishes at first; but with each success I became bolder, and soon was willing to try any recipe. The secret was the same as in mastering the law: study and complete concentration.

And, all this time, where was my law? It was constantly with me, in thought and actual labor. Every evening, Saturdays, and Sundays, home came my work, which I found I was more and more often too tired to complete.

Gradually it came over me that the concentration necessary for the least possible amount of housework was taking away my concentration upon my legal subjects. Had I a job requiring no creative or personal strain, or had I had more physical strength, it might have been possible to go on doing justice to both my jobs. But I found myself too tired to be reasonable, patient, or efficient at either my home work or my legal work.

So in the first thirteen months of my attempt I found that one or the other of my jobs would have to come first. My husband had returned and the problem became more serious. Should I go on as I was, and give him a makeshift home?

We were still far from that mythical competent maid, for the war had set back his progress, and my income would have to be stretched a long way to cover part of our expenses and her wages. The part-time maids had proved unsatisfactory, and my supplementing them had changed me from the woman with a career into a woman with a part-time job.

I knew that some women expected their husbands to help; but if it had affected my powers, would it not even more affect the powers of a man? I had accepted marriage only after due consideration, and had voluntarily pledged myself to the duty of providing for my husband everything he had a right to expect in the normal home. I believed that the man who had offered me the greatest opportunity for happiness in life deserved something from me in return. I had chosen him partly because his tastes were like mine, and the only home that I had been able to create would never satisfy his needs, any more than it had mine. Where were beauty, inspiration, and serenity—the requisites of a home; what had I, after my day's work, to offer him, or anyone? After these months of experience, I had at least learned the lesson that, whatever sacrifices our life together was to demand of us, it must not be the *home*.

It was not only the question of a career and a makeshift home; it had become a question of which one was to have the career. The continuance of my established career demanded that we stay in Massachusetts, where I was a member of the bar; but the attainment of my husband's career demanded a residence near New York. So, with the desire for a true home, and the confidence that, given the proper environment, my husband would "arrive," I made my final decision to give up my career, in the faith that my compensation would be found in his.

We moved to New York, and his health required a place in the country. We would be poor without my earnings, so I must do everything. Gone would be the work that I so loved, my interesting contacts with business and professional men that I had found so stimulating and inspiring. Gone would be the luxuries bought with my income, my expensive clothes, my imported hats, my pleasures, my travels, and my little extravagances.

And what was I to get in return? I would find happiness in the home that I knew I could create, the home that was to be an inspiration for my husband. I would gain satisfaction in being perfect at one job at least, in conquering the problem of housework that had baffled me, and in striving to make the husband I loved happy. With my decision I put all regrets behind me and set out to make myself a success in my new rôle.

NOW my real test began. Apartments were not for us, we must have a house. We found only an old Colonial house at our disposal, beautiful to look at, full of that inspiration that I had desired, but rambling and devoid of any modern aids to housework. I had to add to my other duties, then, that of laundress, gardener, carpenter, plumber, and even glazier. For one of the first things I had to do was to set a pane of glass. My husband had just put it in before a trip to the city, and I, handling my broom most awkwardly, put the handle right through that very pane.

This must never be known, for was it not enough to upset any husband? And I knew he had a humorous article to grind out that evening. All his tools were—where the tools of a recently finished job by every husband always are—very close at hand. I spent long moments discovering how it had just been done, and with-

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

out handing myself any bouquets I must have done a good job, because it never caused any comment.

My husband took over completely the earning of our daily bread and butter, and I felt that in return I must give him absolute freedom from the petty annoyances of the home. This undoubtedly spoiled him, but it also brought him success more quickly, and it gave me the satisfaction of feeling that I had helped to expedite it.

The most perfectly happy man is the one who lives in a servantless home, running smoothly on invisible wheels, his own precious things allowed to remain untouched, without the threat of a duster, even though they accumulate the dust of ages. I can see one of those supreme moments of happiness come into my husband's life when he returns from town, throws his hat upon one table, his gloves upon another, his overcoat on one chair, his bundle of manuscripts upon another, and departs to his room, sacred to himself and his possessions, after a hasty kiss given me as I emerge from the kitchen followed by odors of dinner cooking.

It can with justice be said that this servantless bliss was forced upon us; but I am proud and happy that I have never asked my husband to live in a light-housekeeping apartment. I am convinced that his love, his good disposition, and his excellent digestion have survived because he has room to stretch in.

I am also glad that my husband's health prevented me from allowing us to form the habit of his helping with the dishes or scrubbing the bathroom floor. We started out on our married life with the clear idea that he had his job and I had mine, and that there was a dead line between them.

I REMEMBER my battle royal with the coal stove. My husband had courageously invited his family and relatives to our first Thanksgiving dinner. The turkey was too large for our kerosene stove, so it had to be cooked in the primitive coal stove. The owner of the house had told me that it went beautifully, except when the wind was east; and it was with a heart of true thanksgiving that I arose that morning to find the wind blowing briskly out of the west. I read and reread my precious cook book on how to build a fire. How glad I was that it assumed that I hardly knew how to scratch the match! I gathered the fuel, the kindling, and the paper; twisted the paper, laid each stick of wood and each piece of coal as described, and soon I had a cheering blaze.

Then to the turkey! To my horror, I found it had not been cleaned. What was to be done! I turned to the book once more, and though I found my memory of biology was very vague, I did as I was told, step by step, and the turkey was not spoiled. Indeed, nothing was spoiled, not even my first pumpkin pie or my pudding sauce. I was very proud, because I knew that my husband's family did not share my theory that learning to do one thing gives you the power to do another, no matter how unrelated; and so I was glad for his sake that his lawyer wife had been able to give them a real New England Thanksgiving dinner.

I even learned to run the furnace in this

You brush brush! brush!!

.... *but still*

"YELLOW MASK"

THAT unbecoming yellowish tinge on your teeth—how you have slaved with toothbrush and toothpaste to remove it!

Why have you failed? Why does dentifrice after dentifrice deny you the glorious whiteness that is your birthright?

Here is the answer—candidly. Only one substance can remove that "Yellow Mask" *safely*—and that is "Tri-Calcium Phosphate", a marvelous substance that foremost dentists use for cleaning teeth. Ordinary dentifrices do not contain it—hence your constant failure to regain glistening whiteness.

But now, dental science records a remarkable success. It has perfected a pleasant, tasty toothpaste composed of this magic "Tri-Calcium Phosphate." Its name is ORPHOS Tooth Paste. Thousands now use it—dentists everywhere recommend it. It imparts beauty effects that delight and enchant. Pearly whiteness now is obtainable—quickly. "Yellow Mask" vanishes like a movie fade-out.

Try this marvelous ORPHOS. Buy a tube at your druggist's or mail coupon below for FREE 20-time tube. Teeth beauty now awaits you . . . will you accept it?

old house. This I did by diagrams of drafts and dampers and currents of air, and, I must confess, by varied experience. Cannot everything first be worked out by theory? I admit some theories do not always work out when put into practice; but I found that the woman equipped with theories has a much better chance of doing what she has to do.

When I was up against a stiff problem I often encouraged myself with the memory of how I had been taught to run a car. My uncle, who was a lawyer, drew me a picture of the insides of the car, and showed me just what happened when I did certain things with my feet and hands, and why. After studying all this very carefully on paper, and getting my lesson letter-perfect, I was put into his car. It was high-powered, four-geared, and his property stood on the edge of a precipice dropping into the sea. But he told me to back it up, turn it around, and repeat. After two days of this, I was able to drive that car anywhere.

ONE of the most difficult things I had to cope with was the problem of nourishment—how to plan it, and what to purchase at the market and the grocery. It was difficult not only because the money must go as far as possible but also because I knew absolutely nothing of marketing or the value of foods. I naturally followed the menus in my own home, as nearly as I remembered them, but this proved expensive, and so I scoured all the women's magazines for suggestions and diets and laws of calories. I tried out the cheaper cuts of meats and all the substitutes on sale, and borrowed recipes from my equally poor but more experienced friends. In these first days of my inexperience our diet was sometimes reduced to bread and potatoes; but I studied very hard at this really interesting subject, and, aided by my husband's never-failing patience and encouragement, and, above all, his sense of humor, our marital happiness weathered these storms.

I learned the art of dressmaking, and made all my own clothes and some of my husband's. I was even guilty of wearing a home-trimmed hat, and it was quite chic too. All patterns have diagrams to go with them, showing the simplest-minded person how to cut the cloth; almost how to thread the needle.

Perhaps it was well for my growth and the enlarging of my abilities that my husband's confidence in me never flagged. Sometimes it put me to the severest tests, however, by its sudden and unexpected demands. One day he announced that he was going to bring home with him a rather formal, although charming, Englishman, whom he had met through his work but who was a total stranger to me. This gentleman awed me by accepting the invitation to dinner with the question whether should he bring his dinner coat.

The day was very hot. I selected the simplest meal as the least likely to get spoiled in a crucial situation, and put my whole concentration on it. I greeted him with a composure and costume which would give him the impression that I had never seen a kitchen. When my husband took him for a swim, I fled to the kitchen, and on his return the dinner was on the table. I was still wearing the summer gown of a lady of leisure and, I hoped, my air of composure. I have been rewarded for this effort by our guest often telling us that that dinner was one of his pleasantest memories in America. It is also one of my pleasantest memories, for it has ever been my ideal to acquire the ability to cook a full course dinner for our guests, and yet appear a cool, calm, and care-free hostess.

AT THIS time we had the brilliant idea that all my husband's earnings and all my efforts might just as well be going into our own home. Up to this time we had been renting. We looked everywhere for a little old house to do over. This was somewhat forced upon us by the size of our bank account; but it was also our ideal. At last we found a poor, little, old Colonial home, standing forlorn and unwanted. We gathered about us all the things gleaned from the attics and cellars of our combined families, and sat down to look at them. They looked almost as woebegone as the house, which was a mere skeleton.

Our savings must be stretched to include the price of the house, all modern improvements, the dressing-up of this old furniture, and all my new electric maids. I was to be so rich in maids—an electric laundress, ironer, vacuum cleaner, and even an electric cook. With all these servants I should have to be only the gardener and carpenter and plumber and painter and electrician.

The thought of the time and the labor that would be saved gave me courage to pledge all my energies to the interior painting of the house, and the redoing of all the furniture. My first efforts at painting were among my failures. The floors never dried that first year; but I have always consoled myself with the conviction that it was the fault of the painter who advised me. He told me how to get the dark blue that I desired, but forgot to mention drier or varnish; so, for twelve months the floors were sticky whenever it rained.

I learned how to scrape and refinish the old Colonial pieces of furniture; they had been abandoned so long that they were now fashionable and beautiful. I learned how to make slip covers, how to turn old vases into lovely lamps, and make shades for them; how to make hook rugs, and how to do needle-point for the chairs and footstools.

None of this could be taught me by demonstration. I was never able to be long from home, for there were three meals to prepare and clear away, and even those perfect "maids" had to be started and directed. As I could not go to the department stores for lessons, I sent to the magazines for instructions, studied them carefully, and did exactly as I was told. Soon we had a very charming and interesting home.

Thus I found that I had acquired my ideal. And it has been done through my theory that the way out of every problem could be found by study and the concentration of all one's training and intelligence. I found that three years in a law school helped me to become a successful wife and home-maker. Indeed, the mental training I got there rather made up for the fact that I was not a "natural-born" housekeeper and had had no experience in that field. Not being born

STATE UNIVERSITY SYSTEM OF FLORIDA

with a measuring spoon in my mouth, I had to approach each job with my brain, as the solution was not instinctive with me. And so I have blessed many times my confidence, and my ability to study my way out of difficulties, both of which had been developed in those legal experiences.

I HAVE often been asked if I would like to be an active lawyer now; if I did not regret having given it all up, and feel that I had betrayed myself. My answer has always been, "No."

I have a complete life in my home and husband—and in the appreciation that I have fulfilled an aim in life. Is not that what we are all seeking?

A suitable environment must start in the home. What does any man work for but for a home for himself and his family? All our ambitions are inspired by personal aims, and whatever our calling and duty in life, it cannot be nobler than the creating of a home that is an inspiration to someone else. Careers are all very well; but they do not always combine with a love deep enough to demand unselfishness.

My personal satisfaction lies in the home that I love and which is attractive to all our friends, speaking a charm that can be given only by personal thought and effort and love. I realized that my years of labor and all my sacrifices had not been wasted when, one day, a stranger coming into my house, a distinguished Frenchman who had been entertained and fêted in homes far grander than our little place, involuntarily exclaimed, "Oh, what a charming home; it is the most charming that I have seen in America; it is so full of peace and sunshine!" As it was raining at the time, and the gray sky shed no sun through our many windows, I felt this sun shone from within, and, in that moment of seeing my accomplishment through the eyes of another, I knew what my heart had told me many times—that I had made no mistake in giving up my career.

I have gone through drudgery and considerable routine. But I have a husband who is the most interesting man I know, and a happiness that might be equaled, but certainly not surpassed, by success in a legal career. From close observation, I am convinced that we owe our years of complete happiness largely to our home. And I know that my husband's recognition came much more quickly through this happiness. In his frequent acknowledgment that without me and what I have given him it might never have come at all, I have reaped my rich reward.

IN "It Took Gary 43 Years to Beat the Family Luck," you'll read, next month, the astounding story of Theodore Gary, president of the Kansas City company which bears his name. His father played in bad luck all his life; and it looked as if Theodore, his son, would do likewise. How Gary finally turned the tide in his favor, until to-day eighty per cent of the world's automatic telephone equipment is supplied by the companies controlled by Gary and his associates, makes unusually interesting reading.

"Hot water or cold — it works swell with either!"

Your Best Pal on Any Outing

Roughing it is bully. But after you've been in camp two-three days, doesn't a nice clean shave feel great? *Barbasol's your best pal then.*

And you know if you let a couple of women within hailing distance of any summer resort, they'll get up a dance. You've just got to slick up and go. *And you want Barbasol then.*

Or is touring your game? Why, there isn't a run by car or train that isn't ended better by a cool, smooth *Barbasol shave.*

So take Barbasol with you on your trip. It helps you to travel light. No brush to pack or lose. Just your dandy old razor and *Barbasol!* Look here:

1. **Wash the face** (and leave it wet)
2. **Spread on Barbasol** (but don't rub in)
3. **Shave!**

And what a sporty shave! All silky smooth and cool. For Barbasol leaves the natural oils right in the skin—takes nothing away but the whiskers. Send for the sample—try Barbasol three times according to directions—and you'll be glad forever.

Mister, you're next.

Barbasol

For Modern Shaving

IF only someone knew that Mickey *really is* sick—with a parasitic disease as common to dogs as fleas and a hundred times more dangerous.

Affection Cannot Take The Place Of Necessary Care

DO you know the disease which infects most puppies at birth—shortening their lives, spoiling their dispositions and leading to other more serious and often fatal dog diseases?

It afflicts almost all dogs at all ages. *It is worms.*

Yet every dog authority knows the remedy. It is sold at all drug stores, at pet shops and kennels. Anyone can administer it easily. Glover's Vermifuge or Glover's Worm Capsules.

You Owe It To Your Dog

Puppies should be treated monthly and older dogs four times a year. Affection cannot supplant this vital care. Dog fanciers, breeders and kennel owners would not be without these approved worm medicines. It isn't fair to your dog to delay this safe and simple treatment.

Watch For These Symptoms

Is your dog's sleep restless? Does he drag his hindquarters? Are his appetite and bowels irregular? Give him Glover's Vermifuge or Worm Capsules at once, according to directions. Then you will have a better and healthier dog.

GLOVER'S
IMPERIAL
DOG MEDICINES

These few of Glover's medicines for the remedy and prevention of dogs' most common ills should be in every home that has a dog. Get them from your drug store, pet shop or kennel.

Used for more than 60 years by dog lovers everywhere.

Glover's Vermifuge	65c
Glover's Worm Capsules	65c
Glover's Condition Pills	65c

Quicksand

(*Continued from page 43*)

finest grade of flour. Put it in your tongue and you feel no sharpness. Bite your teeth on it, you feel very little grit.

"But it is only the minute size of the grains that makes them seem unlike sand. Tested by chemicals they are found to be quartz, and of a flintlike hardness.

"I have many times examined quicksand under the microscope, and a peculiar feature is the shape of the grains. They are globular, like microscopic marbles or ball bearings. When water is added to a mass of these infinitesimal ball bearings it acts as a lubricant, and the sand will flow long distances.

"This is true quicksand that I am describing, the type that we find underlying the surface of the lower Mississippi River valley. But there are also other forms of soil which will flow when saturated with water. Some twenty years ago, a large grain elevator near Winnipeg, Canada, sank twenty-nine feet on one side, and leaned at such an angle that it was in great danger of tipping over. The engineers who righted the building and restored its foundations to level reported that it was not quicksand, but a flow of soft clay, that caused the trouble.

"SOME engineers say that almost any kind of sand will flow and be troublesome under a foot or more head of water. Indeed, it is true in a sense that quicksand is not any particular material but rather a condition of material. No quicksand is 'quick' except when saturated with water, and any soil that will flow when saturated may be regarded as in the same class with quicksand.

"In New Orleans we find that many of our pockets of quicksand seem to be connected with the Mississippi River. When we make a test boring, and strike quicksand, the quicksand usually rises in the bore hole until it reaches the same level as the water in the river. The height of the river varies considerably at flood seasons. Between high and low water there may be a difference of as much as twenty feet. But whatever the river level, the quicksand generally rises to the same level. This seems to indicate that most of our quicksand pockets have underground connections with the river, and that it is the pressure of the Mississippi which causes the quicksand to flow.

"Some years ago I was hurriedly called into consultation by the owners of a large industrial plant in this city. Their building had a ground plan in the shape of a large U. In the courtyard between the two wings of the building they had started to dig a pit in which to place a big fuel-oil tank. When the excavators had gone down six feet they struck quicksand. They began to bail, but the sand flowed in as fast as they could remove it. And soon the surrounding walls of the building showed a tendency to move toward the pit. It was at this stage I was called in.

"What had happened was obvious: the building rested on fairly firm soil; but this soil, in turn, rested on the pocket of quicksand. As the sand flowed out of the pocket into the pit, the upper soil lowered to fill the cavity. If this continued, the brick walls were likely to collapse.

"In a situation of this kind the first thing we do is to drill a two-inch pipe into the ground by the side of the excavation. This is a test boring. We note at what depth the pipe enters quicksand, and we keep on driving, and taking samples at every foot of descent, until we pass into the material that underlies the quicksand. Thus we find out the thickness of the layer of quicksand. In this case, it was about seven feet.

"Our next step was to shut off the underground flow. We did this by driving layers of planks all around the pit, so that it was boxed in and, of course, the quicksand was boxed out. The planking—or sheet piling as it is called—was driven deep enough to enter the more solid earth under the quicksand. Thus, the underlying earth formed the floor of our box, and the walls of tight-fitted timber formed its sides.

"After this, it was an easy matter to dig the pit down to the required depth, install the steel oil tank, cover it over with earth and fill up the pit. Thus the courtyard was restored to its original surface condition, and the walls were at rest.

"But there remained one question that interested me: The foundations of the building were several feet underground, and I wondered how the original builders had got around quicksand trouble in laying those foundations. I looked up the records, many years back, and found what I suspected. Our work had been done at a time of high water; but the foundations had been laid during a period of low water. And at low water there was no river pressure on the quicksand, and so no flow."

IT IS generally dangerous to try to clean out a pocket of quicksand, Mr. Coleman said. "For one thing, the task would be an endless one," he explained, "because usually the pressure of the river or some other nearby body of water is back of the quicksand, and you would have to pump or bail until you had emptied the body of water down to your level.

"For another thing, the surrounding surface ground is likely to be undermined by the draining off of its under support of quicksand. As long as its pocket remains unpunctured, quicksand provides resistance to the weight of the earth above it, and has great sustaining power.

"We were driving test piles recently, as a preliminary to putting down a foundation for a very heavy structure. The piles had been going easily, an inch or more at each blow of the pile driver. Suddenly, the hammer gave a rebound that showed a change in conditions down below where the point of the pile was being driven into the soil. We let the five-ton weight of the hammer drop again, and again there was a rebound. It was as though the pile had reached a ledge of granite or some other hard material; but we knew that the 'ledge' was only a pocket of quicksand.

"Quicksand always resists a heavy blow in that way. In order to get the pile

That's What This Store Did In a Year —In a Town of Only 13,610!

"The Largest Small-City Store in America"

ARE YOU a dealer in one of the smaller cities—say of 25,000 population or less? Do you feel that there is just so much business in your town—that you're getting your share of it—and that it's hardly possible for you to get any more?

Then—there's a big merchandising idea for you and every other retailer in the methods which this big Wisconsin store uses to draw in trade from a 60-mile radius.

This is the store that was called "the largest small-city store in the world" at the London Advertising Convention last summer.

How it Grew—

Can you imagine how a store—in a town of only 13,610—could run its sales up to more than $4,000,000 a year? Is this an example of luck?—*or is it shrewd merchandising energetically applied!*

Ask any one of the four merchants who direct the policies of this big small-city store. What he'll tell you will run something like this: "It isn't so much the profit per sale. A hundred times 1 cent makes only 1 dollar. But a million times ½ cent makes $5,000!"

And this is the same business principle that a famous automobile manufacturer used to build up the biggest fortune that the world has ever seen amassed by one man!

Where the Extra Volume of Sales Comes From—

"That principle is easy enough to understand," you'll say. "But where can I *get* a bigger and bigger sales volume, so that I, too, can double, treble and quadruple my store's earnings?"

To find the answer to this question of yours is exactly why Farm & Fireside, The National Farm Magazine, sent its special interviewer out to visit this big store—to find out the secrets of its merchandising success and pass this valuable information on to you and other progressive dealers throughout the country.

Get the Full Story—

There isn't space enough on this page to give you the details of this story—you'll have to get it from the illustrated folder which we have specially prepared for you.

Use the coupon—send for the folder which tells *how* this big store extended its trading area—How it penetrated farther and farther into the rich rural sections—How it went after more farm trade *and got it!*

This is another of Farm & Fireside's *successful-dealer* interviews. Others will follow throughout the year. And thus, in making available the business methods which successful merchants have used in building up farm trade, Farm & Fireside is simply meeting an obligation to retailers and advertisers which its leadership confers.

But—getting these interviews and publishing them is only a part of Farm & Fireside's service to retailers.

Farm & Fireside's Bigger Service to Small-City Retailers

The biggest benefit comes when the dealer ties up closely to the products that are offered in Farm & Fireside's advertising pages—and specially displays and features them.

As every dealer knows, Farm & Fireside is a real force for influencing farm people to buy. And the yearly growth of advertising in Farm & Fireside proves that manufacturers recognize this fact, too.

A glance through a copy of Farm & Fireside quickly tells *why* its advertising pages register in more than 1,200,000 farm homes—for here is a 100-per-cent *personal* magazine—edited straight to the individual—and read with *warmer interest* than any other farm publication.

Original from STATE UNIVERSITY SYSTEM OF FLORIDA

down we have to 'nurse' it; that is, tap it down gradually by quick, soft blows. Sometimes, if progress is too slow, we may also 'jet' it. To do this we run a small pipe, about two inches in diameter, down the side of the pile and pump a stream of water down the pipe with considerable pressure. The water increases the saturation of the sand at the point of the pile, and thus, by 'jetting,' we may make better speed.

"Quite in contrast with this stiff resistance is the rapid flow of quicksand as soon as it is released. The pressure of the earth overlying the quicksand pocket tends to flatten it down like a punctured automobile tire.

"An instance of this occurred in Providence, Rhode Island, some years ago. An excavation for a large sewer struck quicksand, and the slush filled the ditch. One Saturday, a pump was set to work, pumping out this soupy material and discharging it on the off side of a railroad embankment.

"The following Monday, the contractors were startled to find that about a quarter of an acre of nearby forest had sunk several feet, uprooting many large trees. And on the other side of the railroad several acres of meadow were covered with more than a foot of quicksand, from the discharge of the pump. Test borings showed that the pocket of quicksand extended in one direction four thousand feet, and had the pumping been continued a considerable area would undoubtedly have been undermined.

"An even more spectacular example of what may happen when a pocket of quicksand is punctured, comes from Silesia, in Prussia, where an artesian well was being sunk. At a depth of one hundred and sixty-seven feet the artesian fountain began to play, but it was not pure water. A geyser of liquid mud spouted up, and with such force that it blew out the drill and rigging. And while this rain of quicksand was spreading over the countryside, the ground beneath the city of Schneidemuhl cracked, sank, and broke, causing much destruction of property."

A SOMEWHAT similar devastation resulting from the release of quicksand occurred in the city of Boux, in Bohemia, some years ago. A large part of the city overlies lignite mines. At ten o'clock one night, lights suddenly went out in the whole northern section of the city, near the railroad station. Presently the ground began to move, lamp posts tottered and fell over, houses began to sag, to lean, and here and there walls collapsed. Until ten o'clock next morning this movement of the earth continued.

Of course pandemonium reigned in the city. To add to the terror of the sinking earth, a violent storm blew up, with rain and lightning. A contemporary account in the Paris paper, "*La Nature*," said:

> It was a true apocalyptic night—families leaping from bed and escaping half naked to the street; people, panic-stricken, rushing from falling houses, flying from danger without knowing where safety lay; not recognizing the deformed streets, falling into muddy crevasses, blinded by rain, darkness, and lightning. Incredible as it may seem, only two persons lost their lives in all this destruction, though the property loss was considerable.

Not until next morning were the authorities able to determine that they were not the victims of an earthquake, but merely unsuspecting residents above a subterranean lake of quicksand. It was a pocket sixty-two feet thick that lay below the surface of the streets—but above the deep tunnels of the mines—and its existence was entirely unknown until the catastrophe revealed it. Some weak spot in the walls or roof of the mines had broken, and through this vent more than three million cubic feet of quicksand poured into the lignite workings.

"FIFTY years ago prospectors were exploring for petroleum in southern Louisiana," said Mr. Coleman, "and discovered large deposits of sulphur far underground. Sulphur was every whit as profitable as oil; the prospectors were delighted with their discovery, and began to sink a shaft. But soon their digging came to grief from the uncovering of quicksand. Eventually, the unfinished shaft had to be abandoned. From time to time other attempts were made to get a shaft down to the sulphur beds, and several men went broke in these projects, for always the quicksand was uncontrollable.

"Finally a man got the idea that if he ran an iron pipe down to the sulphur deposits, and inside this pipe lowered a smaller tube carrying a jet of steam, the steam would melt the sulphur, and its pressure would force the liquid sulphur up. He tried this scheme, and it worked, and has been working for a great many years now, to the profit of the inventor and his successors.

"Many other ways of coping with quicksand have been tried. One of the most novel is the so-called freezing method, which was first used in England back in 1862. Coils of pipe are inserted into the quicksand, and a solution of brine at a low temperature is circulated through the coils. The effect is to freeze the quicksand into a solid wall or block. When the material is frozen, the shaft or pit can be excavated by the use of pick, hammer, chisel, and dynamite, with no danger of a flow of soil.

"Another method of confining quicksand to permit excavation is to inject cement and grout into selected areas of the flowing sand. The cementing material unites with the grains of quicksand to form a concrete, and thus sections of the quicksand may be converted into walls of hard concrete, which, it is claimed, will withstand considerable pressure. This method is still in a somewhat theoretical stage.

"The freezing method, however, is expensive. The average time to make the freezing, as reckoned from twenty-one jobs, was ninety-four days; and in one case, a full year was required.

"In New Orleans, we have never used either of these methods, to my knowledge. When we have to confine quicksand we use sheet piling. The sheet piling may be of steel, it may be carefully tongued and grooved lumber, or it may be ordinary planks driven in two or more overlapping layers. Any combination that will prove water-tight, and that is strong enough to withstand the pressure, may be used.

"But most of our heavy foundation work here requires no deep excavations, and therefore no extensive sheet piling. The piling that is called for most in our foundation work are the long piles, such as are used to support bridges, docks, and wharves, piles made for the most part of straight trunks of pine trees.

"For all buildings of six stories and higher we drive piles into the ground, sixty to eighty feet deep, rest our buildings on these forests of piles, and count on the friction of the earth to support them. Some of this subsoil is quicksand, and most of what is not quicksand is soft. So engineers and builders find it advisable to allow a wide margin of safety in loading foundations. Our margin is four. If we find by test that a certain length of pile in a certain bit of ground will support sixty tons, we load it with only fifteen tons.

"There have been some difficult experiences with sinking buildings as a result of overrating the sustaining power of the soil. A striking example is the old New Orleans Cotton Exchange, a massive building which was erected in 1881, before piles came into use as a foundation arrangement. Even before the workmen were through with it, this building began to settle. It continued to sink unevenly for forty years, going down twenty-nine inches at one corner and eleven inches at another. Its walls, more than twelve inches out of plumb, were held together, at the last, by iron rods. At this stage the building was pulled down, and the present thoroughly established and substantial building was erected on the same corner. The new building rests on a series of sixty-foot piles, and is secure, though it is a larger and heavier structure than the former one.

"NOT only heavy structures, like office buildings and industrial plants, create special foundation problems in soft soil, but even such works as railway roadbeds. A stretch of about fifteen miles of the Louisville and Nashville Railroad entering New Orleans from the east, is through marshy land which contains material that acts like quicksand. There have been occasional settlements of the roadbed as much as two to three feet at a time in places—the displaced material bulging up on each side of the sunken track.

"The difficulty and danger of quicksand depends on the position and size of the pockets in which it exists, and on their condition, whether confined or free. Sometimes a pocket of quicksand is only a few inches in thickness. More usually it is several feet. The thickest I ever encountered was in southwestern Louisiana which was seventy-five feet thick.

"Quicksand complicates our foundation problems, but it hardly ever is an insurmountable difficulty. It is practically always possible to sink a foundation pile below any stratum or pocket of quicksand that may be encountered. And in no case does the presence of this flowing sand endanger a foundation, provided the material that underlies it offers the necessary friction. It makes us more cautious, less open to the temptation to take a chance. But in no case within my own experience has this material, treacherous though it be, proved a bar to safe foundation construction, although it does put a fairly definite limit on the weight of the structure to be supported."

Above the Shriek of the Wind Came the hiss of a Cobra

CLAYE clung to the edge of his bunk, limp with fright, his eyes trying to pierce the blackness that hemmed him in. Was it all worth it? The girl was pretty, but after all only a half-caste—and now he was on his way to marry her. Then there was that cursed bell. He could hear it tinkle in the dark as it slid back and forth across the careening deck. He stretched out his hand to grasp it—then he heard—what *was* that sound? It was more than he could stand — he burst out of his cabin in a frenzy. You may well wonder how this adventure story of the British East Indies ends. Full of the inscrutable romance of the tropics, mysticism, superstition and above all the supreme sacrifice of a princess of the South Seas. Here is a short story that will keep you on the qui vive from start to finish.

"Scotch Valley"

(*Continued from page 61*)

something nice. We have 'America' in school. And I like 'Fly, Fly, Little Bird.'"

Gladden was grim about it. The only way to teach children to like good music is to make them listen to it. He played "Beau Soir" until the record began to pop and scratch. But he couldn't make any of them like it, except Henry.

Henry waited for the word chanticleer, which, as Gladden had explained, means rooster. When De Luca sang the word, Henry always yelled, "There's the chicken!" and flapped his arms. This was as far as Henry's musical education progressed.

But Gladden turned to the little instrument for satisfaction of his own thirst. He carried it down to the arbor, and made Pete grind out "Parsifal" while he himself grubbed and sweated in the muck at the bottom of the well. Little by little, with a primitive, homemade rigging, he was approaching the new water level.

If he persisted, there would be enough water to drink, enough for keeping clean, enough for the thirsty animals. He had never seen a dog with a thirst like Billoo's. (Who on earth named him Billoo?) He lapped up the precious quarts with lolling tongue and grinning mouth.

To add to Gladden's troubles, he found a mother cat and a nest of scrawny, thin-tailed kittens in the barn. They, too, had to be fed. Born unaware of man's charity, they fled from the food Bertha brought them; they spit and clawed and suffered acute feline panics.

Bertha, smitten, impassioned, lay on her stomach, and crooned, "Here, kitty, kitty, kitty!" Inch by inch, she approached with manna.

"I'll get them yet, Jim," she told him. "There are four of them. I'm going to build a house for them. With bins for milk. And a fish pond!"

SHE was so fascinated that Gladden's second extravagance failed to interest her.

He had decided that she must have a decent dress and a pair of shoes. She might hate him, but he couldn't let her go around in an assortment of gray rags.

"I can't leave the kittens," she said, when he went to fetch her. She was lying in the dusty hay, her braids in a tangle of quills and burrs. "They need me, Jim. One of them licked my fingers. If I try hard enough, they'll love me."

"You get up and come with me!" Gladden said sternly. "I'm going to buy you a dress."

She didn't want a dress. All the way into Vaccatown she explained why: "I like to get as dirty as I please, and if I have a new dress I've got to keep clean."

"You're almost grown up, now."

This infuriated her. "I'm not going to grow up!"

When she saw the dresses in the store window, she weakened. She had a vision of herself in the red dress with the wide black patent-leather belt. She entered the store shyly, suddenly conscious of her lack, hating to be stared at, hanging back. She tried to gather the rags together, to hide her bare brown feet.

The dresses hung limply on a revolving stand. A saleswoman spun them 'round and 'round for Gladden's inspection.

"This is a nice little dress," she said. "Not too fussy. Sixteen-seventy-five. Or this one. Twelve-eight. Reduced. It's for the little girl, ain't it?"

"I want the red one," Bertha whispered.

"I wouldn't, if I were you," Gladden said. "Ladies don't wear red."

"Who does, then?"

"Well—near ladies. Would-bes, who don't know any better."

"I want the red one!"

"For heaven's sake," Gladden said to the saleswoman, "find something that will fit. And shoes. And a hat. Whatever else she needs. I'll wait outside." He threw over his shoulder with finality: "Only, not the red one!"

HE WAITED an hour in the strip of shade offered by a narrow awning. When Bertha emerged at last she was wearing the red dress and carrying the bundle of rags, neatly wrapped in brown paper.

Gladden pretended to be furious. He had no other protection against his surprise and his chagrin. Because the mysterious alchemy of clothes had transformed the skinny, pale child. A spark, struck at random, had fallen. She had taken fire. The drab child had been burned away by a bright dress, a pair of slippers, and a hat.

"Well," Gladden said crossly, "I hope you're satisfied!"

"You see," Bertha explained. "I'm not a lady, anyhow!"

Gladden was embarrassed. He had not reckoned on a child as old as this. He felt certain everyone on the main street of Vaccatown was craning and whispering.

The high heels of Bertha's new slippers gave her a frivolous gait; she no longer shuffled on rough bare soles. Ten minutes had sufficed to teach her the coquetry of shoulders, flanks, and ankles. Her yellow braids had been pinned up out of sight beneath the small round hat, revealing the nape of a dirty but very appealing neck.

Gladden caught her stealing glimpses of herself whenever a plate-glass window offered a reflection. She flaunted the gaudy dress in the sunlight like a banner. She seemed anxious to advertise her grown-up-ness.

"But people don't grow up in ten minutes," Gladden was saying to himself. "What a fool I was to buy her a dress!"

"Olive Smith has a red dress," she said suddenly.

"That's different. She's old enough to wear what she pleases. But you're only a kid. You have to take my advice."

There was really no answer. Yet Gladden sensed the currents of revolt that were charging her silence. He was sorry, because he wanted her to like him. He wanted her, above all, to remain herself. She had a right to grow up, heaven knew—but not too suddenly.

There are always gossip-mongers in a small town. They might make capital of her womanhood. They might drive him away. He must keep her, misty and featureless, a little longer. He must encourage her to stay what she was.

An unpleasant fear groped about his mind, formless and nameless, seeking the materialization of words. He did not want any of these children to know ugliness before they had to. Remembering his own disgust, he was ready to resort to trickery, to downright dishonesty, if only he could save Fred Smith's children from the contamination of smut and suspicion. He thought of Mrs. Pelgram. There wasn't a chance that she would fail to notice the change in Bertha. And make capital of it. He simply couldn't let Bertha grow up.

He said suddenly, with what he thought was a propitiating smile: "You can wear the dress on special occasions. The rest of the time, any old dress will do."

He saw the shadow of renunciation gathering in her eyes. "There aren't any special—special—"

"A picnic," Gladden promised recklessly. "We'll go to the beach some day."

He was horrified when he saw that things were moving too fast for him. Bertha caught his arm, pressed her face against it, and kissed and kissed the stuff of his sleeve.

In spite of himself, sick with shame because he did not want to be self-conscious, and was, he drew away. "Don't do that here! Someone will see you."

SHE changed the dress for the gray rags so much too large for her, the calico rags left from the garments that had clothed her mother's body as she moved from one hard duty to another. But the change was deeper, more penetrating than Gladden imagined. Bertha sat before a full plate that night, not eating, caught into a very personal, haunting dream.

Life had brushed by. She had caught the reflection of herself in a plate-glass window; the reflection of a living color, as if a dream of herself moved behind the glass, remote, unreal, beautiful, as if to herself she were saying, "I might be. I could be. I will be!"

She did not eat the dinner Gladden cooked. Instead, exercising the feminine habit of rubbing things in, she told the others about the picnic.

"Jim promised! We're going to see the ocean."

"The Atlantic or the Pacific?" Pete asked out of his very sketchy knowledge of geography.

Bertha didn't know. "An ocean," she said with finality.

Nancy was washing her face with grape jam. She presented a terrible, congested countenance to Jim. "Let's go tomorrow!"

"Not to-morrow. You've all got to be good for a week. First off, you're all going to have a bath."

"Gosh!" Pete slid out of his chair. "No, sir. I ain't going to take a bath!"

Lily shrieked.

"All right, then. No picnic!"

"But that ain't fair, Jim. Manuel never made us take baths!"

Gladden used the picnic as a disciplinary measure, resorting, like most parents,

ADVICE TO YOUNG WIVES . . .

WE HAVE a little secret for young married women. Hold this magazine close and let us whisper it—for this little truth must not be allowed to cry out too loudly. *The burden of making a marriage successful must always be chiefly on the woman.*

Does that have an unpopular sound in modern ears? Then modern ears are no longer fine enough for little whispering truths—perhaps they are too full of the loud shout of theories.

Yes, it is you who must do it. You must manage him, humor him, guide him subtly in the ways of common sense, inspire him to success, *take care of his health.*

And for the last item, do not forget ENO. It has been an aid to wise wives for more than fifty years—this world-famous sparkling saline. When he is grouchy, dull, listless, unambitious and generally pretty impossible, remember that a sluggish intestinal tract may be more often the cause of these troubles than a naturally bad disposition.

So persuade him to take a dash of ENO in a half-glass of water every morning for a while. Perhaps he'll say: "This tastes too good to be any use as a laxative." But just insist, for ENO *is* a laxative—the nicest, the most refreshing, the pleasantest he ever tried, and yet as thorough as anyone could wish for. ENO will quickly prove to him—and to you—that harsh-tasting, nauseating, drastic laxatives are quite unnecessary.

Get a bottle today. It's one of the fundamental steps in managing homes and husbands.

ENO, world renowned for over half a century, at druggists, 75c and $1.25 a bottle. Prepared by J. C. Eno, Ltd. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Bldg., Madison Ave. at 34th St., New York.

ENO
THE WORLD-FAMED EFFERVESCENT SALINE

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

to bribery. He hated picnics, even the luxurious imitations staged by his stepmother. And this picnic promised to be a riot of sand and hysteria.

The bathing went off without any serious rebellions. Pete was sent to gather firewood, and the stove was stuffed with eucalyptus twigs: a sweet incense, a lovely pungence drifted between the red-hot lids and filled the kitchen.

Every available pot and pan was filled with water, the kettle steamed and the bathtub—a wash boiler—was placed behind an improvised screen made of sacking stretched from chair to chair. Pete was first. He used up an entire cake of soap. Once started, he enjoyed himself.

And, rinsed, rubbed dry, clothed in Gladden's gift of flannel pajamas, he turned out to be three shades lighter than usual. It was worth a lot to see Peter Smith chastened and softened, sanctified by soap and water.

Lily was next, but she wouldn't be bathed, not even for a picnic. She didn't know what a picnic was. She sat on Bertha's lap, opened her mouth wide, and yelled. She wouldn't take a bath unless someone told her a story.

"Tell her a story, Bertha."

"I don't know any."

"Do you mean to say, you don't know about Little Red Riding Hood, or Jack and the Bean Stalk, or anything?"

"I know about Henry the Eighth."

"That's no story for a baby!"

"Well, you tell her one."

Tempted, Lily held her breath. But she kept her mouth open, against a possible disillusionment. Henry, who had insisted on undressing out of turn, left the stove, his teeth chattering, and moved into the circle of possible novelty.

"Well," Gladden said, "there was once a little fellow called Jack. He lived in the suburbs in a concrete bungalow, with asphalt pavements in front and a frame garage in back. There was nothing unusual about him except that he was mighty little, and had an imagination. His imagination made him unpopular. He was always boasting that he could lick Henry Ford at his own game, if he only had a chance."

"Gosh!" Pete said.

"Well, first he took a bean seed and then he took a morning-glory seed and he planted them together in the back yard."

"No, he didn't," Henry said.

"Well, where *did* he plant them?"

"In the front yard."

"All right. In the front yard. He dug pretty deep and sprinkled some gasolene on top and a handful of TNT."

LILY showed symptoms of restlessness at this point, so Gladden hurried toward the climax:

"Well, the seeds began to grow. And they grew and grew and grew. . . . Sit down, Henry, and stop shivering. . . . They grew 'way out of mind. They grew so tall no one believed in them. People looked right at them and refused to see them. They walked right by with their noses in the air, and poor Jack was more unpopular than ever. But he believed in his vines, so one day he started to climb, straight up into the sky, hand over hand, as fast as he could. His mother cried, and his Uncle Stevenson was terribly angry."

"Why?" Nancy wanted to know.

"Well, he hated to see his nephew doing anything original."

"Gosh," Peter said, hitching his chair closer, "this is a fine story. Go ahead!"

"So Jack climbed up until he came to a big shelf at the top of the sky, and there he stepped off—"

"Off?" Bertha interrupted.

"I mean on. He stepped onto the shelf. And there, about ten feet away, was the biggest man Jack had ever seen. In fact, a giant. So Jack went right up to him and socked him in the eye."

"With what?"

"A bean-shooter. The big man fell down, and Jack counted twelve, but it was no use. He had put the giant to sleep. So Jack moved into the big man's house and ate his dinner and married his wife. This was because he had an imagination. He didn't believe in failure."

"Tell it again!" Lily said.

"No. This time you play square. You take a bath!"

Bertha was last. "I won't unless Jim goes out."

"Of course," Gladden said. He went out of the steaming kitchen into darkness that seemed cold in comparison. Here, in the very middle of his complicated affairs, was another, deeper problem: Bertha in a red dress. Then his steadying humor came to his rescue.

HE CALLED the dog and walked over to the ford. If there was light enough, he'd level those planks, lay them flat for once and for all.

Something was coming toward him. At first, in the dim glow of stars behind high fog, he thought it might be a stray animal.

Then he saw that it was a woman, and Mrs. Pelgram laughed: "That you? It's dark, isn't it? Makes me creepy. Here, take my hand!"

He pulled her up beside him on the bank. "It's nice of you to come. But do you think you'd better?"

"Still scared of me?" She laughed again, close to him. Her fingers clung to his a moment, then fell away slowly finger by finger. "Russell's away. I was lonely. I wanted to talk to someone. What are you doing down here at the ford?"

"I was going to fix those planks. They aren't safe. I'd like to know who laid them in the first place."

"Fred Smith. He was the laziest man in the Valley."

"I don't believe that. He was the best man in my company."

"Well, it only goes to show you never can tell about men. They act like fiends at home, and put on wings in public. He was mean to his wife, and he used to beat his kids. I stopped him once. He was using a strap on Pete. Pete wasn't so very big then, and he was bawling something terrible. Honest. You don't think I'd lie to you, do you?"

"I don't see why you should," Gladden said politely.

And then he told her about Fred Smith and the German dog: How a lot of Germans were lost, cut off from their lines, hungry and scared, and how they tried to send a dog back with a coded plea for help.

"They pushed him over the top and he started, ears back, tail down—in the wrong direction. He hadn't understood, I guess. We were lying in shell holes, and a corporal, a fellow named Cohen, lunged at the dog with a bayonet. But he didn't get him, because Fred Smith caught him by the leg and threw him flat on his face. Cohen, not the dog."

Mrs. Pelgram leaned toward him. She pressed her shoulder against his. Her hair brushed his cheek. "I'm not *that* dumb. What happened?"

"Fred Smith brought the dog back himself, and while we were deciphering the message, he tried to make the poor fellow eat and drink. The dog wasn't a thoroughbred; he was just a mixture of police pup and collie, and courage and pitiful shame. He knew that he had betrayed his outfit. He wouldn't let Smith or anyone else touch him. Smith was so sorry for him, he cut him loose that night. He said he couldn't bear to see such courage and shame tied up to a stake. He cut him loose, against orders, and smacked him on the thigh and sent him racing for the German lines. I hope he got there!"

"Well, that doesn't sound like Fred Smith. I bet you made it up."

"It's the truth."

"Well, I'll keep it to myself. You couldn't make my husband or the Warner bunch believe anything good of Fred Smith."

"The Warner bunch? Who are they?"

"They own the land along the mesa. Old man Warner, his two sons, and his son-in-law. When my husband gets this ranch, they're going in with him, fifty-fifty."

"Your husband isn't going to get this ranch!"

"Don't be too sure. They've got you framed already. I'm warning you."

She put her arm through his. "You listen to me, and you won't get into trouble. I don't exactly hate you, you know!"

This was probably just another way of striking him: Pelgram had sent Delilah with her shears! They were in full view of the road, and yet, with a pretty lift of her head, she offered her lips again. "I don't exactly hate you!"

Gladden moved aside.

"I'm grateful," he said. "But I don't need any help. You'd better not come here again, Mrs. Pelgram. I've got to go back to the house now. Lily and Nancy are afraid of the dark."

Mrs. Pelgram glanced toward the bright kitchen windows. Her hand, lifted in readiness to slip around Gladden's neck, went instead to her hair and she rumpled the bright curls forward, over her eyes. "Is Bertha scared, too? I suppose you hear her prayers and tuck her into bed! You poor boob, you're so simple you're funny!"

"I'm afraid I'm too simple to understand what you mean."

SO, IT had happened! His frayed ideas had assembled into the whole fabric of an ugly insinuation. Two sorts of mind are safe to deal with: the child mind, uncomplicated, transparent, and the sophisticated mind, as many-sided as a cut diamond, as flexible as a stingray's tail. Anything in between is dangerous.

Beyond the prattle necessary to express the fundamentals of hunger, thirst, and exchange, there is no universal language. He spoke a tongue utterly foreign to this woman.

Standing near her in the cool darkness,

he had the sensation of dread a hunter in the jungle must feel when a stray wind carries the scent of some lurking beast, some prowler, some nocturnal threatener. He noticed an odor of cheap sachet, the heady smell of attar of roses. He shied away from it as the startled hunter might shy away from a whiff of hyena.

"Bertha's a child," he said.

"Is she? Well, the court will decide that! They're going to make you prove that you have a right here—living in the house with a young girl, buying her clothes, giving her money! You wait! You think you're going to get away with it. Well, you ain't!"

She spared Gladden the necessity of ordering her off the place by running swiftly back across the ford. He watched until the blurred flutter of her white dress was lost in the dark; then he went very slowly back to the house. Before he opened the door he tried to erase from his face the look of disgust he knew must be there.

Bertha was playing "Beau Soir." She had appropriated the blue dressing gown. Gladden noticed, with a burst of thankfulness, a devout heart-pain of gratitude, that she had braided her hair again.

"That's a pretty tune, Jim." Bertha looked up at him. "I guess I could like music, all right, if I tried!"

"Chicken! Chicken!" yelled Henry from up-stairs.

SEPTEMBER came in, cool and gray. A blanket of vapor drifted over the sun, tempering the heat of day and clearing at night to disclose a veritable conflagration of stars. Manuel had planted a vegetable garden behind the barn, and here a few pumpkins ripened, a few ears of corn matured within silken wrappers, and tomatoes glowed in a tangle of vines.

Precious gallons of water, brought all the way from Vaccatown, consummated the miracle, and for the first time in his life Gladden had the satisfaction of "living off the land." He began to appreciate the wealth hidden in that dry soil. Like all Californians, he dreamed of water, water, and more water.

As he dug deeper into the well, the precious mixture receded. He brought it up, a bucket at a time. Pure and cold, it held promise of release and victory.

Hansen advised him to get a job with one of the road gangs. A new highway was lifting itself coil by coil over the Soledad grade, and there was plenty of work there for an engineer of Gladden's experience.

But he could not leave the ranch. From dawn until long past midnight of every day he gave himself to small and vital duties. He had to feed the goat, the cats, the dog, the children, and himself. He acquired, besides, for the sum of five dollars, a broken white horse that had been condemned and was about to be shot.

She cropped the "standing hay" on the slopes when she could; but Gladden had no faith in its sustaining qualities. He gave her oats and corn, a mash of his own that seemed to agree with her, since she grew coquettish and liable to displays of equine temperament.

Pete rode her, bareback, his heels and elbows flapping. It was a sight to see her gallop, gingerly and stiff, playing the great game of Wild West for Pete's sake and trying to look like a pinto.

Because she was blind in one eye, they called her Tuerta. She was supposed to be a plow-horse; but there was no plow.

"You sure there was a plow here when your father went away?" Gladden asked.

"Yep. It was here last winter. I helped Manuel plow the 'cots."

"Who took it?"

"I dunno. Pelgram, I guess."

"I'll go see."

They climbed under the barbed-wire fence and slid down a steep bank into the rancher's pasture. Pelgram, mounted, was driving some white-faced cattle into the corral.

"I've come after the plow," Gladden said cheerfully. "I need it."

Pelgram hesitated. Then he said, "You'll find it on the dump down behind the new dam. I *don't* need it. We use power on this ranch." He jerked his head toward a caterpillar tractor that was dragging itself up and down the orchard like a wounded beetle. A great cloud of dust powdered the trees, but as the tractor crawled along it left the earth turned back, clean, dark, and deep.

Gladden salvaged the rusty plow from the dump and for the first time harnessed Tuerta. The plunge of the plow's nose into that flintlike soil sent him staggering to his knees. Tuerta dragged him over and he cut his face and arms.

When he got to his feet to make another start, there was blood on his lips, and no skin at all on his elbows. He had heard too much profanity in France to find it a relief, but now he cussed like a marine, as men through the ages have cussed the earth's resistance.

Tuerta tugged and braced; he could see the veins in her thighs tighten and swell. To her this was an old story. Fortified by love, reclaimed, grateful, she quivered and strained, arching her neck. The plow plunged, staggered, buried itself in the great clods that were like boulders. And Gladden's hands ached from pressure.

When at last the furrow opened, and Tuerta, with a snort, dragged the plow through straight and clean, he shouted aloud. It was a shout wrung from the very sweat of victory. The earth was his enemy. He had conquered.

HANSEN was deeply sorry for what next occurred. Some question, he told Gladden, had been raised as to the legality of the young man's guardianship.

"Pelgram has approached the superintendent of schools and the clergyman—Pelgram, mind you! The skunk!—and the sheriff, with a complaint. In other words, Who are you, and why?

"We can beat them at their own game. But you'll have to take the matter to court and have yourself regularly anointed, as it were. I'm sorry. Human nature remains just cussed human nature, no matter what we do.

"Perhaps you'd better look through the house for records. You say the old lady left a will? She is buried in the churchyard behind the mission. But they never got the father's body."

"That's funny," Gladden said. "He died at Beaumont, in the hospital."

"Well, they left him there. Not all of them were lucky enough to come home."

Gladden began a systematic search for personal records of this, his family. The births were noted in an old Bible. To Frederick and Mollie Taylor Smith, a daughter, October the Seventeenth, Nineteen Hundred and Two. A son, a son, a daughter, a daughter. Dates. The grave business of creation resolved at last into a faded line of writing. Lily, the baby, August, Nineteen Fourteen.

"So little a while ago," he thought, "and already the creator is dead. I mustn't think of these things. It does no good to think. I cannot alter the mystery. Lily is alive, so there has been no break. This is perhaps all we are meant to know."

He emptied old boxes and bureau drawers, ransacked trunks, examined the dusty rubbish in the attic, and found nothing.

His was apparently a family sprung full-fledged from the blue. Pete denied having any relatives. Bertha remembered a long journey in a train. Beyond this, they had no consciousness of any past outside the ranch.

"YOU told Pelgram that your mother wrote something before she died," Gladden said to Pete.

"Sure. I've got it."

"Will you let me see it? Do you trust me?"

He made the discovery that he cared a great deal whether Pete trusted him or not; he was tempted to cry out, "Go easy! You can hurt me like the very deuce!"

But Peter did not hesitate. He went to the cupboard and took down the luster teapot, placing it on the table before Gladden. The precious sheet of paper was rolled tightly and concealed in the spout.

Upon examination Gladden found that Pete's mother had written her last instructions in pencil: "Pete, be a good boy. The ranch is yours. Keep it. There is oil. Obey Manuel. With love, your Mother."

"Is there anything else?"

"Yes. These." And Peter produced a deed and the copy of a mortgage. The documents, mildewed and crumpled, had been hidden beneath a layer of tea.

Fred Smith had deeded the property to his wife before he went overseas. A year and a half later, under stress of what circumstances Gladden could not imagine, she had mortgaged everything—acres, buildings, orchards, oil, minerals, water—to Pelgram.

Gladden figured desperately with a pencil. "Keep still, all of you!" he ordered. He felt their eyes on him. They knew something was wrong.

And something *was* wrong. Gladden had just discovered that the annual interest payment on this mortgage was due in three days.

"I've got to raise a hundred dollars, or we're ditched," he said. "We're homeless. We're done! Pete, Pete, why didn't you show me these papers?"

Lily, sensing tragedy, began to cry. Bertha's white face twisted with a sudden, unspoken fear. The dog got up from beneath the table and attacked a flea at the root of his tail. As well a million dollars as a hundred! No wonder Pelgram laughed.

Gladden swept the papers toward him, and started up. "Pete," he said, "you were right. I'm a poor father! I'm afraid we'll have to scrap for it. I'm going *gunning* for a hundred dollars!"

"Can I come?" Pete wanted to know.

DON'T JUST BUY "UNDERWEAR"!

Buy FIT—WEAR—COOLNESS—COMFORT! See that you get them ALL—and EACH at its very best—by INSISTING on the red woven "B.V.D." label!

It's the all-around satisfaction behind that label which has given it years of world-leading popularity.

Let the verdict of millions of satisfied wearers assure YOUR comfort!

The B.V.D. Company, Inc., New York
Sole Makers of "B.V.D." Underwear

How To Be Properly Fitted

Famous-fitting "B.V.D." Union Suits, with their exclusive construction at shoulder, waistband and crotch, are made in over sixty sizes to fit men of widely varying builds.

Be sure to take advantage of this unequalled size range by being correctly measured. Three simple encircling measurements—chest, waist and trunk—can always determine your proper size.

If you have any difficulty in obtaining your proper size, send your three measurements to the B.V.D. Service Bureau, 350 Broadway, New York, who will be glad to advise you.

"B.V.D." Union Suit
Men's $1.50
Youths' 85c

"B.V.D." Shirts and Drawers
85c the garment

This July, Be Sure

JULY is a poor month in which to "take a chance" with money you hope will provide for after years. So are eleven other months, beginning with August and ending with June.

Better, a sound investment, where safety of principal is guarded by judgment and experience, and assured earning power provides maximum income.

This House, specializing in first mortgage securities upon improved city real estate ever since its foundation in 1882, is in a position to suggest particularly attractive investments for July funds. Properties securing current issues, located in the larger cities, indicate ample margins of safety in valuations as well as earnings. The interest return averages 6%. Bonds are available in denominations of $1,000, $500 and $100.

THE FAMILY'S PROBLEMS

Mother's Day Comes Once a Week at Our House

THERE isn't a servant in the world who could be hired to work every day in the year. Everyone wants, and needs, a certain amount of time away from his work—time he can spend exactly as he likes without accounting to anybody. Yet thousands of wives and mothers are so tied at home with small children to look after that they never have a minute away from their jobs. If more families would realize the mother's point of view there would be fewer nervously exhausted, nagging, irritable wives, and more happy and harmonious homes.

Before our marriage, my wife went to a university, joined a sorority, and was accustomed to plenty of social life, with freedom to come and go as she chose. Even after we married, and the children came, we were able to go about quite a bit, for we lived in town, and could get a dependable woman to come in now and then and stay with our boys.

But when sickness forced us to move out into the country—or as near the country as I could commute from—my wife was simply stranded, day in day out, month in month out, because there was no one near us to come in and stay with the children. And, of course, going out with two small and extremely lively boys isn't exactly a rest for a tired mother. She couldn't get into town after I came back in the evenings because the trains stopped running at eight-thirty.

Nan never complained, but I could see she was getting fagged. She missed the little outings we used to have much more than I had imagined she would, and the children were getting on her nerves.

One Sunday I suggested that she go into town for the day, leaving the children under my care.

At first she was shocked at the suggestion. "Why!" she exclaimed, "I wouldn't *think* of going off, and leaving you here to look after the boys, when you work so hard all week! I couldn't enjoy myself a minute!"

Then we had a serious talk. I told her that, since it was impossible for us to go out together, we would have to do the next best thing and go out separately. It was absolutely necessary for her to get away from her nerve-racking job as mother and maid-of-all-work. She was going stale. She needed this relaxation and change, in order to bring the best she had to her important job. It would, I pointed out, be a kindness to all of us, for it would give her a new viewpoint, and freshness and serenity with which to greet the new week. Finally, we reached an arrangement: One night a week I stay in town, attend a lecture course, and go to the Armory, where I am a clerk in the National Guard. That's my change and recreation.

Sunday belongs to Nan. She goes whenever and wherever she likes. On Saturday, she prepares our Sunday dinner. Our eight-year-old son is responsible for finishing the job on Sunday, and takes a great pride in his work. She may go into town on the seven-o'clock train, leaving us still in bed. But we are sure to find waffle batter all ready to put on the griddle, bread sliced for our toast, and the coffee-pot ready to put on the stove. If she stays until the last train in the evening, she leaves a kettle of soup, or a pot of baked beans for supper.

The day is wholly hers. Sometimes she goes to church, to the library to read, or to a movie show. She may drop in for a chat with friends. Always she comes back to us brimful of interesting news, enough to last out the whole week.

And I plan to get the children to bed before she gets home, so her day will be completely without family responsibilities. We spend the evening together, listening to the radio, or reading aloud.

This plan has worked wonders with Nan's health and spirits, and I have got something out of it I hadn't counted on—and that is real comradeship with my boys. We are three men together on Sundays; we have our masculine ideas and interests and outlook on life. The boys enjoy these stag parties as much as I do.

Just so everybody will get an even break in our new scheme of things, Nan plans one day in every week especially for the children. It may be a day at a playground, a trolley ride, a boat trip. Sometimes it's a picnic lunch in the woods, or a marshmallow roast around a big campfire. Always it is some mild diversion, not too tiring for excitable little minds and bodies, and usually in the open air. The children get much more fun out of these little jaunts than they did when Nan tried to fit them into her plans for visiting, going to a show, or to church, for these things were too tiring for such little lads.

I SUPPOSE our neighbors pity me as a poor, henpecked husband, being left with the children on Sunday while my selfish wife goes gallivanting into town. Last Sunday one of them hailed Nan as she was hurrying to catch a train.

"You go to town real often, don't you? Almost every Sunday?"

"Yes," Nan said cheerfully, "I'm kept at home so much during the week that it's a treat to be able to get away."

"Well," our neighbor remarked disapprovingly, "it's nice if you can do it. *I* could never go off and leave my children like that when they were little. I was such a devoted mother that I was just a *slave* to my family for fifteen years."

Nan was telling me the incident that evening. "That," she said, "is a form of self-pity I cannot indulge in. I have no desire to be a slave to anybody. Stepping out alone now and then does give me a wonderfully free-and-equal feeling."

"Of course it does," I replied, "and I'd be willing to bet that you're ten times better at your wife-and-mother job than she ever was, just because you do get away and she never did." E. A. S.

Hard-Boiled

By Albert Payson Terhune

HE WAS right disreputable in appearance. He had the look of being tied together with frayed strings. My only mental criticism of his attire, when he hove in sight, was that he looked *too* disreputable. There seemed too much artistic completeness to his get-up.

Six of us were coming down Broadway from a club dinner. The hour was one A. M.; the night was sloppy and chill. The derelict accosted us. I knew he was going to. Men sauntering along together in evening dress at that hour are rightly supposed to be mellow of mood—which is another way of saying they are generous.

"F'r Gawdsake, gents!" he croaked hollowly, barring our way. "Gimme a dime, to save the wife and the baby from starving. Me, I don't care do I starve or don't I starve. I'd be better off dead than like this. It's them I'm prayin' to you for; for her and Baby! F'r *Gawdsake!*"

There was a passion of appeal in the hoarse voice. It was aquiver with earnestness. But the loose mouth was placid. The eyes showed none of the sick dullness that goes with despair. His suit was picturesquely ragged. But his shoes had sound soles, in spite of their tattered aspect; and their laces were new.

Also, though he wore no tie and had on a filthy shirt, yet the edge of his dirty collar was not frayed, nor had its points worn frayed spots on the shirt. His face was screwed into a doleful pucker. But under the eyes it was neither hollow nor dark; nor were there lines of hunger, nor of fatigue, nor of misery at the mouth corners.

Now, I knew by experience that shoe laces break and need knotting long before a pair of shoes begin to fall apart. Nor do the shoes' uppers go before the soles. Also, the chief handicap to keeping up a decent appearance on an old and meager wardrobe is the fraying of collar edges. Next to that is the fraying of an old shirt from constant rubbing of collar corners.

Long-sustained hunger or despair do subtle but readable things to the human face, if one has the wit to know how to detect them.

My five friends dug deep into their pockets and began exhuming silver pieces or small bills. They pressed these on the weepingly grateful derelict. Then they noticed that I alone had not swelled the collection.

"Broke?" one of them asked me coldly.

"No," I made answer. "I'm just stingy."

"You can stand by and not raise a finger to keep a fellow from starving?" demanded another, with booze-born fervor. "You can let his poor sick wife and his baby die of hunger? Thank heaven, I'm not as hard-boiled as you are!"

The rest echoed his virtuous tirade. Even the derelict glared at me in mute rebuke. The term "hard-boiled" was repeated most often and most accusingly of all the several reproving epithets launched at me by my indignant friends. The accusation was not new to me. I had been its recipient more than once. It did not seem to call for defense; so I made none. But as the derelict shuffled away with his handful of silver and bills, I stopped him.

"You've got all you're going to get," I said. "So you can give yourself the luxury of telling the truth, for once. What are you going to do with the bunch of cash these saps have given you? Come across. I'll see they don't take it away from you."

For a moment, he seemed about to burst forth into whiningly righteous indignation. Then perhaps he recognized in me a kindred soul. For he grinned up at me, and said:

"If Judgment Day don't happen till I can walk to the nearest speak-easy, I'm going to get so drunk I won't know am I in Palm Beach or in last Tuesday. So long, Hard-boiled! So long, Saps!"

No, I was not hard-boiled. If I had been, I would have turned him over to a policeman who came sauntering along. I would have had him punished by the law as an impostor. Instead of that, my heart warmed to the miserable chap's flash of impudence; and I hurried the others away, lest they, too, see the policeman and want revenge for their lost money.

WHICH brings up an often-discussed question as to just what a man or woman must do or be, in order to merit that hackneyed invective, "Hard-boiled."

In oviology, the difference between a three-minute egg and a thirty-minute egg is merely twenty-seven minutes, plus edibility and non-edibility. Applied to us humans, the two terms have perhaps two thousand differentiations.

Those five men thought I was hard-boiled. The derelict branded the five at once as easy marks, and scorned them accordingly. I think the reason why so few people agree on the meaning of the phrase is because so few people recognize the vast difference between a hard-boiled brain and a hard-boiled heart.

Without a hard-boiled brain, it is as difficult to go through life, unsmashed, as for a three-minute egg to go scathless through a stone crusher. A hard-boiled heart is a far different proposition. It is as much of a curse to its possessor as to those around him.

I am sentimental enough to believe that

A Thirty-Minute Head and A Three-Minute Heart

"HARD-BOILEDNESS," says Mr. Terhune, "should be used as a defensive, not an offensive weapon; to guard its owner from a million useless troubles that beset him on every hand; not to make the world less happy and less comfortable for others. Hard-boiled heads, soft-boiled hearts—that's the right combination!"

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

not one mortal in five hundred has a really hard-boiled heart. But a brain and a judgment that are not hard-boiled are wont to become mushy and scrambled. Do you see the difference?

Not only in self-defense must the judgment be hard-boiled, but sometimes out of kindness to others. The dentist who pulls your back tooth halfway out, and then stands weeping with sympathy for your sufferings, is far less kind to you than is the hard-boiled tooth-yanker who goes at his murderous job as quickly and as thoroughly as possible. It is so all through life.

A MAGAZINE editor gave me two instances of the cruelty of being soft-boiled at a time when the exercise of a thirty-minute-boiled brain would have been more merciful.

"Some months ago," he said, "a man came to me with some manuscripts to sell. I was courteous to him. Perhaps so courteous as to give him unconsciously the impression that I was an easy mark, and that his manuscripts were already as good as sold to me. That is where I made my error.

"I read the manuscripts. They were impossible—at least for our magazine, and, I think, for any other magazine of high standards. I had to tell him so. His face fell. He and his wife had come to New York to 'crash the gates of glory' and of literary success. They had not done well in the uphill fight for recognition.

"Then, when I was courteous to him and seemed sympathetic with his efforts, his hopes had run high. He and his wife had believed that the long period of probation was ended and that they had 'arrived.' They celebrated their coming triumph by blowing themselves to a party or two that they couldn't afford. Then the blow fell.

"The husband declared I had misled him as to his stories' chances. I had not intended to mislead him at all. I had felt sorry for him, and so I had tried to show him I would give him every possible consideration his work deserved. He mistook this for a sure sale. I would have been kinder if I had been hard-boiled with him from the start.

"A friend asked me, as a favor, to read a manuscript novel written by an acquaintance of his. I ought to have been hard-boiled enough to say, 'No, I have enough manuscripts to read in the course of my daily work. I won't take the trouble to read this one.' I consented to read it. I had one of our magazine's fiction readers go through it too; and then I tried to get a literary agent to sell it to some publisher.

"In all, I must have given a full day's time to the thing—a full day outside of my regular working hours. My efforts were vain. The novel, so far as I have heard, never sold. My reward was that its author's wife has been telling people, more or less publicly, that I stole the plot of her husband's book and that I sold the story, thinly disguised, for my own gain.

"Both of these times I should have been hard-boiled; and I wasn't. Both times it would have been kinder. I wasted time and labor; and made enemies by doing it."

Unquestionably, life would run smoother and more pleasantly, all around, if everybody knew when to be hard-boiled. Just think for a moment of a few gorgeous things that would happen:

If I dared to go into a barber shop, get my shave and hair-cut and facial massage and shampoo, and my boots blacked, and then pay the checks and walk out without giving an extra penny to barber or bootblack—think of the cash I'd save, and the self-respect as well!

If I had the sublime hard-boiledness to go into a restaurant and eat and pay for a meal, then go out leaving the waiter tipless and without giving a grudged and unearned coin to the hat boy or hat girl—!

Suppose everyone was hard-boiled enough to do these and similar heroic but supremely common-sensible things? Don't you see what would happen? Well, among other results, we should all be far richer at the end of the year; and we should be richer, too, in the knowledge that we had not cringed in cowardly guise to pay undeserved cash tribute.

Also, barbers and waiters would serve all customers alike and not neglect a small-tip patron for a slinger of huge tips. Their tyrannical power would be gone. The hat-check girl or boy would have to go to work somewhere for a living; and might in time become a contributing member of the human race.

MOST of the petty nuisances of life would dissolve under the brave sanity of a world full of thirty-minute human eggs!

And, mind you, that would be a case of hard-boiled brain and judgment; not of hard-boiled heart. None of those people and others of their kind—barbers, hat checkers, waiters, Pullman porters, taxi drivers, and the like—none of them are objects of charity. We tip them through cowardice, not from generosity. All would get fair pay in wages if their employers did not trade on the soft-boiledness of patrons to eke out the employees' incomes.

If we did not tip, the employer would have to pay better money to these and other workers. We are not helping them. We are helping him. Besides, the habit of taking tips, even when they are necessary to one's living, is not good for the self-respect of the tip taker. He would be better off if he got his money in wages, better off in his own esteem and just as well off in money.

You did not give a quarter to the man who sold you the necktie you bought to-day or a five-dollar bill to the clerk who sold you a ticket from New York to Chicago, nor a penny tip to the bus or trolley conductor. But custom says you must pay it to the barber and the taxi man and the waiter. So, being soft-boiled in judgment, you pay it. (So do I, to my shame.) Perhaps someone will object that a restaurant keeper would have to charge his patrons more if tips were abolished, for he would then have to pay his waiters more. All right. Let him charge more, if he must. At least, we could pay the added cost with no loss of self-respect to anyone.

The truly hard-boiled-brained man is the sworn, if unconscious, enemy to "bunk" in all its myriad forms. And, if he be consistently hard-boiled, he does not lose popularity by it in the long run. Half the world trades on the soft-boiledness of the other half.

The string twanged on hardest and oftenest is our sense of the Pathetic. Hence, the avalanches of hard-luck stories that precede each "touch." Steady of mind is he who can go through life listening to an endless succession of these hard-luck tales without losing his own faith in the inherent squareness and sweetness of human nature.

Sentimental gush and hard-luck stories; —how many hundred million dollars, I wonder, have they wheedled out of folks who could not afford to pay so high a price for the privilege of listening to such slush!

I am not talking about cases of true charity, where the heart is involved and where your hard-boiled mind tells you to yield to your soft-boiled heart and to go to the rescue. I am speaking of the traditional and chronic and worthless hard-luckers and sentimentalists. The only possible armor against such a bombardment is a thirty-minute-boiled judgment.

And it works inversely too. A mighty weapon in the hand of an employer is the appeal to his workers' soft-boiled side: whether for extra toil or a temporary cut in pay, out of loyalty to the dear old firm; or by the testimonial dinner wherewith a long-service employee is rewarded. This latter is, to me, one of the most pitiful impositions of the lot.

John Jones has been working for the Ironsoul Pump Corporation, from the time he entered the place as a twelve-year-old office boy until his scanty hair has grayed through fifty years of stanch laboring for his boss's betterment.

Mr. Ironsoul is reminded that Jones has worked for him for a half-century. Something ought to be done. Besides, here is a chance for a bit of free newspaper advertising. Ironsoul turns the matter over to his secretary with instructions. Presently, word runs around the works that a semi-centennial dinner is to be tendered to good old John Jones of the export division; and that the boss will appreciate it if department heads and seconds-in-command will attend. (Tickets $3.50; except to John Jones, who for once gets something free.)

JONES sits at the right of the boss, while several hand-picked speakers tell him how fine he is and how lucky to work for such a firm. Ironsoul himself pays him a high tribute, and winds up with glowing eloquence about the beauties of loyalty. If enough has been subscribed, Jones may even be presented with a very thin silver loving cup, rendered unpawnable by reason of the mass of engraved lettering on it.

Jones goes home that night, carrying the cup (or the handsomely engrossed vellum testimonial, if not enough cash was raised to buy a cup), and he has a choky feeling in his throat as he remembers the wonderful things the Big Boss said about him. It makes up to him for his half-century of grinding toil—his Golden Wedding to grim Labor—and it is lucky it does make up to him; for that is all he has to show for his fifty years of loyalty and sweat.

The hard-boiled boss has put it all over the soft-boiled wage slave. Now, if Jones had had a thirty-minute-boiled brain, he would have spoken somewhat as follows

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

when the Big Boss broke the news to him about the testimonial banquet:

"Mr. Ironsoul, that is a first-rate idea. I've got it coming to me, along with a lot of more worth-while things. I've saved you many thousands of dollars in my day. I stood by you, at low wages, during the three panic years when you were almost down and out. I stopped that strike of the puddlers, eighteen years back. I showed you, several times, how to save big wads of money, by minor efficiency stunts I had worked out.

"I've done all this and a lot more. I've been loyal to you. But, just remember that when loyalty is all on one side it stops being loyalty and becomes servility. In view of my record, I am glad to accept the dinner; and I am sure you'll make announcement during the evening that you are taking that occasion to present me with three hundred shares of your company stock, or with a substantial pension of some other kind, as a slight recognition of my long and valuable service.

"I can't do you the injustice to believe that you are trying to get away with your tremendous debt to me by tendering me nothing more than just a measly dinner and a twenty-five-dollar silver cup. So in advance I thank you for the pension. Without it, the dinner would be a cruel practical joke."

Does Jones say that? And does his employer come across? If he does, it never gets into print; though I have read a score of newspaper items telling of just such dinners to faithful old workers.

© PIRIE MACDONALD

Albert Payson Terhune, distinguished author, whose dog stories, novels, and other writings are widely known

A FEW years ago, a play, "To the Ladies," summed up this hard-boiled trait far better than can I. The president of a great piano company was speaking at the annual dinner of his office and factory force. I quote from his oration:

"It has long been the hope of the Company to do something for its faithful employees—something in recognition of the services they have given. I am glad to announce that that moment is now at hand; and that our employees, particularly those who have been with us for a number of years, are to be recognized.

"Beginning January first, every man who has been with the Company five years or more will be entitled to" [here a pause, and breathless eagerness from the hearers], "will be entitled to wear a button—a solid silver button. . . . We feel that money is a poor return for loyalty. So we have devised this little silver button, which will be marked by one gold stripe for each five years of service."

Could anything be more sublimely and yet more smoothly and adamantly hard-boiled? In both head and heart?

Then here is another instance (a true one, and not culled from a clever play, like the foregoing), of something we were speaking about earlier in this article, the dangerous folly of not being hard-boiled enough at any given time.

A man who worked on the same newspaper with me, some quarter-century ago, could have won any office prize for one hundred per cent unpopularity. Everyone loathed him. At last came the glad word that he had accepted a job on another paper and in another city. It seemed almost too good to be true.

Instead of sitting tight, in safe hard-boiledness, members of the staff were so grateful to him for going away that they gave him a farewell dinner. This same rejoicing at the prospect of losing him made the evening's speakers praise him highly and say that his departure would gloom the whole office.

In the midst of these laudatory and regretful speeches, he arose and left the room. Three minutes later he came back, aglow with happiness. Addressing the assemblage he shouted:

"Did you boys think I'd really leave the dear old paper, now that I know how you all feel about me? I was only going because I thought I wasn't liked. Now that I know how much I'm loved by all of you, I'm going to stay as long as I live. I've just sent a telegram, refusing my new job. Any man would be an idiot to leave a staff where he's so popular."

And stay he did—thanks to our exhibition of soft-boiled brains.

WHEN you go to your tailor and merely order one suit, does he never intimate to you that a man with any sort of claim to good grooming ought to have several business suits? And if he does intimate that, aren't you sometimes soft-boiled enough to increase your original order? Have you the hard-boiled nerve to say to him:

"That is an old wheeze that you tailors have agreed on among yourselves. It's no business of (*Continued on page 82*)

There Will Always Be Something New To Do

"You can't tell what the future has in store for you," says M. H. Aylesworth, president of the National Broadcasting Company, "and that's part of the joy of life—I started in the old profession, law, and here I am in the newest business, radio"

By Bruce Barton

ONE Sunday evening less than five years ago I crossed the river to Newark, New Jersey, drove out to a drab factory building, and in company with some friends climbed two flights of dusty stairs. We were ushered into a long, narrow room, which had been formed by boarding up one end of the factory. The walls were unpainted, the floor was rough, and the ventilation was none too good. An orchestra of half a dozen pieces was huddled around a piano at one end; that curious contrivance called the microphone stood in the middle of the room, and there were a few uncomfortable chairs at the rear. We had come to see Ed Wynn and members of his company broadcast their comic performance of "The Perfect Fool," the first time in history that a Broadway show had ever been put on the air.

I remember well the look of mingled awe and incredulity on the faces of the actors—it seemed so unbelievable that anybody could possibly be hearing them. I remember Ed wiping the sweat from his face and shaking his fist at the unresponsive tin receptacle that swallowed up his jokes and gave nothing back. "You're a devil of a thing to get a laugh out of," Ed said. The whole situation was curious and quaint, but so crude that one wondered. Was this merely a new novelty with which the public would amuse itself for a while and quickly tire of, or was it the beginning of a great new force?

The next afternoon I sat with Owen D. Young in his office. He settled down into his chair, stretched his long legs out on the desk, lit his pipe, and talked about the future of radio. About the day when every farm would have Grand Opera; when every country school would receive its instruction direct from the great scientists at the state universities; when the voice of the big preacher would carry a thousand miles, and the President of the United States, sitting in his office at Washington, might lift the telephone receiver and speak directly to every home in the land. It was a wonderful dream as he unfolded it, and to me, with the fresh memory of Ed Wynn sweating away in that rough factory room, it seemed a bit too wonderful. Maybe there was some future in this thing, something which the eye of the moment could not discern, but as for the tremendous development that Young pictured! After all, a magazine writer must be reasonably conservative. So I took Wynn and Young in about equal portions, rolled them up together, and wrote for these pages one of the first magazine articles on radio ever published.

That was less than five years ago.

On November 15th of last year, I put on my stiff shirt and went down to the Grand Ballroom of the Waldorf-Astoria Hotel to attend the inaugural program of the National Broadcasting Company. There were perhaps five hundred other stiff-shirted gentlemen there, and as many ladies in evening dress. Down in front was Walter Damrosch with his orchestra, playing the accompaniment for Titta Ruffo, Metropolitan Opera star. Harold Bauer, the famous pianist, came in a few minutes later. His ship had been delayed, and a special tug had been sent down the harbor to hurry him to the dock, so that he might appear on this program at the exact minute announced. Following his performance was a second's pause, and then suddenly, as clear and strong as though the voice were there beside us, the announcer—"Ladies and gentlemen: We are now in the Drake Hotel, Chicago, in the parlor of Miss Mary Garden. Miss Garden will sing."

And Miss Garden did.

Another second's pause, and again a different announcer—"Ladies and gentlemen: We are now in Independence, Kansas, in the dressing-room of Mr. Will Rogers. Mr. Rogers will speak."

And out of the air about us came the unmistakable tones of Will, who said he was traveling around the country as "God's gift to those who had failed to see Queen Marie."

I WAS sitting in Mr. Young's box, and while Will Rogers was still speaking, a messenger entered and passed us a photograph. A photograph of Mary Garden before the microphone in her parlor at the Drake Hotel; a photograph taken less than half an hour before and sent to us over the wire. I passed it back without any comment. What comment could one make that would not be inane?

"Where's Deac Aylesworth?" I asked.

"Down-stairs," somebody answered. "Weber and Fields are to wind up the program. They have never been in front of the microphone, and they're scared half to death for fear they won't remember their lines."

I went down-stairs. Behind a big screen in one of the dressing-rooms I found the veteran comedians, studying bits of paper like schoolboys cramming for an examination. And with them M. H. (Deac) Aylesworth, holding their hands and telling them not to worry, (*Continued on page 162*)

Don't Think Too Much Of the Future

"I SUPPOSE I used to wonder occasionally what was going to become of me," says Mr. Aylesworth. "Every man has his day dreams. But mostly I was busy just doing the next thing that had to be done. We hear a lot about the importance to young men of thinking about the future. I sometimes think that too much is said on that subject. There are thousands of young chaps who are looking so hard at the future that they forget to make any real dent on the present."

Merlin H. Aylesworth

AS PRESIDENT of the National Broadcasting Company, Mr. Aylesworth is one of the big figures in radio entertainment. He was born in Iowa forty years ago, the son of a minister, and at the age of twenty-four was admitted to the practice of law. From the law he went to the public utility field, and from that into radio. In the accompanying article "Deac" Aylesworth describes the commonest mistakes made by people in using their radio sets, and suggests some of the wonders yet to come out of radio development. "We know for certain," says Mr. Aylesworth, "that great things are just around the corner, and we expect that even more exciting wonders are not much further off."

PROFESSOR WILLIAM HENRY PICKERING is an explorer of the moon. For more than thirty years he has studied it, first at Harvard College Observatory, in Massachusetts, then in Peru, later in southern California, and for the past fifteen years on the island of Jamaica, just south of Cuba. In 1899, Professor Pickering discovered two of the ten moons of Saturn, which he named Phœbe and Themis. He is the author of several books and numerous articles on astronomical subjects. (Above) "Woodlawn," the Pickering home in Jamaica.

ON THE left you see a part of the moon as astronomers see it when they look through the telescope on the Mount Wilson Observatory. The larger craters are as much as sixty miles across, with sides many thousands of feet high. The white splotches distributed in a semicircle about the bottom of the picture are the summits of lunar peaks. This photograph was made when the moon was in its last quarter.

Marvels Of The Moon

What science has discovered about our nearest neighbor, which could be reached in forty-six days by an airplane flying two hundred miles an hour—Evidences of animal and vegetable life, and a glance at the far distant day when the moon will always occupy the same place in our sky

By George W. Gray

SOUTHWARD, down the Gulf Stream, plowed the ship. By its side, like a shimmering silver scarf flung upon the sea, traveled a broad band of dancing moonlight. Passengers paused in their promenades, caught by the brilliance of the spectacle. Involuntarily their gaze traveled upward to the moon, floating serene, mysterious, and lustrous in the tropic sky.

"Is there any star, sun, or comet as beautiful?" exclaimed one beholder.

"A year ago I saw a giant meteor over the Azores," said a ship's officer. "It was a fireball—looked like a big yellow star. I talked of that sight for weeks, and people listened in open-eyed amazement. But"—and he threw out his hand in a deprecatory gesture—"that was tame to this. The trouble is that we see the moon too often.

"Suppose the lunar goddess should appear only once a year, what a fuss we'd make over the annual marvel!"

"And if the moon were visible from only one place on the earth," said another enthusiast, "what a popular place that would become. Hotels would be built, steamships and railroads would run excursions there, and people would travel long distances to see the moon."

The earth-lit new moon ("the old moon in the new moon's arms"), showing the darker portions faintly illuminated by the sun's light reflected from the earth. The bright edge is lighted by direct rays from the sun

ONE of the interesting discoveries of modern astronomy is that the moon at present is gradually receding from the earth, and in so doing is slowing down the speed of the earth's rotation. Eventually, the earth will turn on its axis at exactly the same speed that the moon revolves around the earth. When that time comes, the moon will always occupy one fixed place in our sky, and will be visible only from one side of the earth.

When will that time come? How will these peculiar changes in position and motion affect our earth and its inhabitants? Has the moon any inhabitants, any form of life? What is the very latest news of this Queen of the Night?

Most astronomers have centered their attention on the sun, planets, stars, and nebulæ; and during the past half-century only a few solitary watchers here and there have turned their telescopes upon the more obvious moon. Perhaps the most persistent and successful of these lunar explorers is the American astronomer, Professor William H. Pickering. For more than thirty years he has been observing the moon, first at the Harvard College Observatory in Cambridge, Massachusetts; then in Arequipa, Peru; later from a station in southern California; and for the past fifteen years, from a height on the island of Jamaica, south of Cuba.

Thus it was that the silver trail of the moon led me to the tropics, where she rides resplendent. There, the night sky is almost always cloudless, and the atmosphere is of a clearness and steadiness that is scarcely ever realized in northern latitudes.

The full moon, illuminated by the direct rays of the sun. The images made upon the human eye and upon the eye of the camera differ considerably

Indeed, it was the superior quality of the "seeing" that brought Professor Pickering to Jamaica. He established his home and observatory in the village of Mandeville, two thousand and sixty-five feet above the blue waters of the Caribbean Sea, which is only eighteen miles away. And there, on an ancient plantation, where he grows his own coffee, pineapples, bananas, plantains, yams, pawpaws, coconuts, and other tropical fruits and vegetables, he lives and studies two planets—the moon and Mars.

There is a charm in this tropic home, with its flower garden of riotous color both of blossom and of foliage, shaded by lofty palms and giant banyan trees—but that is another story. I can only suggest the picturesque setting in which Professor Pickering works and from which, through the silvered mirror of his telescope, he sallies forth into space to explore the lunar landscape.

"TO OUR earthly view it is the best-known landscape in the heavens," said Professor Pickering. "Its more prominent features have been known to scientists for hundreds of years. In fact, more than two thousand years ago the Greek philosopher Anaxagoras was accused of impiety and banished, because he declared that the moon was not a goddess, as was commonly believed, but a world, with mountains, valleys, plains, and perhaps rivers and living creatures.

"When the telescope was invented, in 1608, and Galileo turned his lens upon the moon, he was able to confirm much of Anaxagoras's guesswork. Galileo made a map of the moon, which later astronomers revised and improved. To-day we have the lunar surface mapped more accurately than are many remote regions of the earth.

"One side of the lunar globe we know intimately. The other side we know nothing of, for the moon rotates on its axis in exactly the same time that it travels around (*Continued on page 144*)

Helga

Her romance—the first of a group of stories about the Linds of Sweden Hollow

By Nelia Gardner White

ILLUSTRATED BY VICTOR C. ANDERSON

IT WAS one of those antagonisms that grow up between parents and children more often than mothers and fathers are willing to admit. It had cut between them like a sword since Helga was six. The folks up Sweden Hollow saw Emanuel Lind as a stooped, mild, industrious little man; a good neighbor who minded his own business, toiled hard and had a good deal of bad luck.

Helga saw him otherwise. She had come up once to the little storeroom, off the bedroom she shared with her sisters, and had found her mother kneeling over an old chest, come with them from Nördland, weeping hard, bitter, unaccustomed tears. Helga fixed blame at once upon her father. Though no one ever heard her say so, Helga knew suddenly that her mother had not wanted to come to America.

There was plenty to make the antagonism grow. The Linds had a hard time of it on their stony forty-acre farm. For herself, Helga Lind did not really mind. It took more than responsibilities to crush the youth in her; but sometimes, when she saw her mother growing old under the endless labor of the farm, she would hate her father.

Once she heard a neighbor say, "Mis' Lind's got more'n her share with all that raft of youngsters to look out for!" And Helga laid that, too, at her father's door. There shouldn't have been so many of them!

One year there was the blight that spoiled the oats; another year there was a bad freeze in apple-blossom time, and their little orchard yielded nothing. Helga remembered the sacrifices the buying of that orchard had meant, and she would look at her father across the table with her gray eyes hard.

She could not know, of course, how, the night of the frost, Emanuel Lind had come out to the kitchen late and found his wife fixing the fire; how he had taken the coal scuttle from her hands and said, in a troubled voice, "Guess I did wrong to buy the trees, Anna."

"Oh—they'll bear another year!" she had answered.

"We'll be short of money—I wanted you should have a new coat."

"I can get along. I wish, though, that we could keep Helga in school regular. She'll have to stay out."

"Yes, I'd thought of that!" His voice had been heavy with the sense of his responsibility.

There were three different times when Helga had to stay out of school for a year. Once something got in among the sheep and killed six of them. Once Emil, the littlest one, was in bed for months, and there were heavy doctor's bills.

"It puts it too hard on Helga," her father said. But she, not minding the work, only thought of it as one more thing against him.

She was rather tall, and she gave you the impression of strength. Her hair was the lovely color of ripe oats and she never cut it. Her sober eyes had dark lashes. She did not know how like her father she was within: sensitive, but enduring; imaginative, but courageous and uncomplaining; willing to see trouble, but unwilling to let trouble ride her.

She would not have wanted to owe anything to her father. He had brought her mother over here away from home and friends, to a hard land. He barely made a living for them. They had to take their schooling when they could work it in between farm disasters. Her mother's hair was gray and her shoulders bent, her face tired and lined.

BUT Helga showed no one her heart. If her father, even, knew her feelings it was by intuition. She was what you would call a good daughter. She would hurry home from school—she walked the four miles from town—and gather up the ends of the day's tasks at home as if it were the fresh beginning of a day.

If little Emil was cross—he was never very strong—she would tell him a story as she got supper. She knew a thousand stories, Helga Lind—mostly myths from the Nördland. If her mother seemed more tired than usual, she would make her sit down with the farm paper while she sprinkled the clothes. If her father was busy with harvesting or planting and his hours of daylight were precious, she took his place at milking time.

She did her lessons at night, after the younger ones were in bed. She loved books, and it was always with a quick breath of anticipation that she settled to studying, no matter if her sturdy shoulders ached with weariness. But even in her studying, that feeling against her father would surge up. If he had only got ahead better, she could have had plenty of books—maybe have gone to college.

Sometimes Carl, the sullen, black-haired Lind boy, would come home from school with a bloody nose and swollen lip, and Helga would be the only one who could find out the trouble. She would tend to his face, laughing at him a little sorrily as she did so.

"Somebody knock a chip off your shoulder, Bud?" she would say, so no one else could hear.

"Ed Vickery called me a 'sour-faced Swede'!" he would mumble, his black brows knitting into a fierce frown.

"Well," she would say, with a soft laugh that was partly tender, partly reproachful, "if you looked as you do now, Bud, don't know as I blame him! And folks think that Swedes and Norwegians are all the same—that's nothing to be cross about. If you're a regular American, you'll just have to show 'em, Carl!"

And Carl would look ashamed and grin at her, the best he could for his swollen lips. He would try, too, for weeks, not to be so touchy and resentful about things. You see, she *was* an understanding person. But Helga would look away from Carl sometimes to the still, blue-eyed man who was her father, and resentment would be like a fire within her. Carl didn't belong here. He was like his mother, and he belonged in the Nördland he had never seen. He would never be an American—never.

It was the same with Anna. Anna was thirteen, and she was always wanting to go off to parties in the country. But Emanuel Lind was a firm man. Once a week, on Fridays or Saturdays, Anna could go, and that was all. Anna was not patient, like Helga. She would cry and plead and get stormily angry. And Helga, sensible about most things, would grow fiercely resentful because of Anna's wistful grief.

NO ONE disobeyed in that house; but Helga was always trying to make it up to Anna. She would go up in the attic and get down popcorn, send John down-cellar after apples, have Emil get out the big pan for the corn, tell Carl to open up the drafts in the kitchen stove and let the fire hum, call to Hilda to get some butter melted.

The kitchen would suddenly come alive with warmth and laughter and chatter, and Anna would be drawn into it, whether she would or no. It would be like a party, and Anna's pillow would not be wet with tears that night. Such nights were really battlegrounds on which Helga fought her father.

She fought with him too, in her heart, about Emil. Emil was five and had never seemed sturdy like the rest. There would be nights when Emil would droop and be sober, and Helga would take him into her arms and draw a rocker up by the kitchen stove and sing to him or tell him stories. Helga had a voice for lullabies, very deep

STATE UNIVERSITY SYSTEM OF FLORIDA

and tender. Many a night Emil slept there in her arms when his tired little face said that, alone, in his bed in the upper hallway, he would not have slept for hours.

But as Helga looked down on him there would sometimes flame up, past the tenderness in her heart, anger. That year before he'd come had been such a hard year: she had stayed home from school, some of the hay had spoiled, everything had gone wrong. And her mother had had too heavy a load. No wonder Emil was thin and weak! And the winters were too fierce up Sweden Hollow. If they were in town now—

Perhaps the difference that came nearest to an open quarrel was about the pine trees. There was a field adjoining their farm in which about a hundred pine seedlings had sprung up. Some of the neighbors had had a chance to sell trees at Christmas time, and one day a dream came to Emanuel Lind's heart, a dream of a time when he could raise trees for a living. He talked to his wife about it. They would have to borrow money to buy that field. When Helga knew of it, she looked at her father with a kind of still, hopeless anger.

"Another debt?" she asked. And her voice was cruel.

They bought it, though, the field. They paid a high price for it too, because 'Dolph Bennett from town had made an offer for it.

Anna Lind tried to speak to Helga about it.

"I think your father's right, Helga. It'll bring in good money in a few years."

"It's always 'a few years'!" Helga said bitterly. "You can't stand so many more hard years, Mother!"

IF SHE had seen her father standing one day, down in the pine lot, his hard hands touching a little pine tree as if they loved it, she might have felt softer toward him. She would have seen that those trees meant more than money, that they meant the pines of his home country, meant a kind of release from the drudgery of the past years; she would have seen that they were alive to him, as the great hills bounding Sweden Hollow were alive to her. But she did not see him.

Perhaps it was unfair to both of them that it happened to be Emanuel Lind who told Helga the next and last time she had to stay out of school. It was soon after the purchase of the pine lot, and the sting of the knowledge of that new burden was still in her heart. Helga came home from school that day and went out to the barn to find her mother. Her father was there, instead. He was standing, quite idle, by the back door.

If it had been anyone else, she would have been touched by the discouraged droop of his shoulders, by the old bend of his head, by the queer longing of him as he stood staring down across the garden to the orchard. But she felt only a swift irritation that he should be standing there, doing nothing. He turned and saw her. His blue eyes beneath his bleached hair were dull, and his voice was harsh with feeling:

"Well—guess there's no school for you next year—Bess and Nil died this morning."

THEY were their two best milkers. Helga's heart began to pound. She, who understood Carl, who had a tenderness like a mother's for Emil, heard only the harshness in her father's voice. Years of little resentments stood between them. His hand tight on the door frame, gnarled with its years of farming, did not move her.

"Well, that won't be anything new!" she said evenly, and walked out of the barn.

Helga stayed out of school that year and took new burdens on her young shoulders. But the next year she was back again, swinging along in her home-knitted sweater and cap, head up, eyes straight ahead—still eager for learning. It was her last year. She was nineteen. She resented the fact sometimes that she was so old. In reality, she brought to her studying a maturity that made her see deeper, that made books have a real meaning for her.

It was during that last year in school that she came to know Rell Stannard. She had known him, of course, before. He had been for a year the principal of the little high school in town. But one night she had to stay to catch up on some laboratory work, and before she knew it the schoolhouse had grown still and the early winter dusk had fallen. She hurriedly put away the things she had been using in the laboratory and went to get her books.

It was then that Rell Stannard came up the stairs after some Latin papers he had forgotten.

"Oh—Miss Lind!" he said in surprise. "Still working?"

"Just through," said Helga.

He got his papers, and Helga her books. He walked down-stairs by her side.

"You have a long walk ahead, haven't you?" he asked, with polite interest.

"Yes; but I don't mind," she answered.

"Let me take you up," he said. "I have Wright's cutter here, and I was just going for a little ride before supper anyway."

Helga never made fusses.

"Why, that would be fine!" she said.

SO THEY drove off into the winter dusk, with the horse's bells making pleasant chiming in the frosty air and the lazy snowflakes brushing their cheeks.

Rell Stannard thought himself too sophisticated for that town. It was an interlude between his A. B. and his M. A. The girls liked his amused superiority, the older people not so well. He had never noticed Helga Lind before, any more than to be relieved when she recited in classes. She never made mistakes.

Helga knew he was not conscious of her, but she did not care. They made commonplace remarks about classes, the school play, the new room for gymnasium work. Then they fell silent. The road was good now, hard packed, and they hurried along with the pleasant sound of the bells taking the place of conversation. Neither knew why they could be silent, but both thought it pleasant. It was when they came to the little patch of woodland before the Vickery place that Helga put out a mittened hand suddenly to his arm.

"Stop!" she commanded.

He stopped, bewildered.

"What is it?" he asked.

"Hush!" she said, as if he didn't matter.

It was very lovely there in the woods—whiteness everywhere—the trees still and frosty—the rail fence edged with moonlit snow. Just themselves, alone, in the midst of the still, snow-bound woods.

"I always stop here, if it's night, for a minute," she said, letting him go on. "If it's winter, I mean!"

It was very lovely there in the woods—whiteness everywhere—the trees still and frosty. . . . Just themselves, alone, in the midst of the still, snow-bound woods

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

He looked 'round at her face beneath her white knitted cap. There was something beautiful about it.

"It's like a Robert Frost poem," he said, knowing quite well she had never heard of Robert Frost.

But he had seen the real Helga Lind, and she was not a person to forget.

He took her home again one night the next week, and then he asked her to a church social in town. One night he came and talked to her as she worked alone in the laboratory, and she became confused. He brought her some test tubes, and as his fingers touched hers she could feel fire stinging up into her cool cheeks.

It was spring, though, when he walked up with her one afternoon and, when they came to the woods—all young leaf-green and adder-tongue-yellow, and arbutus fragrance now—took her suddenly into his arms and kissed her.

Her hands paused as she stared off across the fields with a terrible bitterness in her eyes

PERHAPS Rell Stannard did not quite realize what he had done. But he knew well enough, later, that he was letting Helga think he was planning to marry her. He had no such plans. There was a girl back home; there was his master's degree. But he found Helga strangely stirring and beautiful.

It was one night, after she had begun making new clothes, that the Linds had him to supper. When he had gone, Emanuel Lind, white-faced, said to his daughter, without preliminary, "You'll never marry that man!"

Years of antagonism made a flame leap into Helga's gray eyes.

"Won't I?" she asked, calmly enough.

"No." His own voice became even. "No, you won't. I won't let you! He doesn't look straight at you, Helga."

Helga proudly lifted her lovely head with its bright braids.

"I'm going to marry him," she said.

Then Commencement was over, and Rell Stannard came to see her for the last time. He had not planned to tell her it was the last time; but her honesty made him. Helga did not cry. She never knew it, but that was his greatest punishment—that she did not cry.

But Helga Lind, instead of hating Rell Stannard, hated her father for having divined the truth of him.

IN THE morning her blue-gray eyes were black, and when she came down to help with breakfast Anna said, with the cruelty of thirteen, "Been crying because Prof's going, haven't you?"

"Anna!" her father said sternly.

But Helga said numbly, "No; I haven't been crying." She wouldn't have his pity! He'd driven Rell off with his dislike!

She did not see him as he sat on the edge of the bed that night, his fair head bent in his hands.

"She's young, Emanuel," his wife said. "It seems awful to her now; but she's very young—it won't hurt her forever."

"She's never liked anyone else," he said. "She feels it terrible. I feel like I could kill him, Anna!"

She put out a hand to him, touched him comfortingly.

A few days later, he said, "Things are letting up a little now—why don't you go somewhere for a visit, Helga?"

"And leave Mother with all the canning?" Her deep voice was unwontedly sharp. "Where would I go, anyway?"

"I don't know," he said helplessly. Of course, all the relatives were in the Nördland, and all Helga's friends were in town or up the Hollow here.

But one day she sat in the kitchen doorway shelling peas, and her hands paused as she stared off across the fields with a terrible bitterness in her eyes. Her father came and found (*Continued on page 134*)

Life's

By Archibald

PHOTOGRAPHS BY

MY CASUAL acquaintance on the train that was speeding across the autumn landscape seemed thoughtful, reflective, a little wistful as we talked about the things we saw from the car window. At last we came to a big meadow wherein were grazing half a hundred beef cattle. I said something inane about the prosperity of the country, the glowing future of the live-stock industry, and so forth. "Look at those little daisies," he said, pointing to a bright patch of them in a far corner of the meadow. Then he added, "Cattle somehow can't thrill me. There's more hope for humanity in a wild flower than in tons of beef."

Long after he left me, I kept thinking of what he had said, wondering just what he had meant. His idea, of course, was that a wild flower is one of life's extras, one of those things that we do not *have* to have but which we enjoy all the more for that very reason.

The more I thought about this, the more it appeared that Creation supplies us with only two kinds of things: necessities and extras. Sunlight, air, water, food, shelter—these are among the bare necessities. With them we can exist. But moonlight and starlight are distinctly extras; so are music, the perfumes, flowers. The wind is perhaps a necessity; but the song that it croons through the morning pines is a different thing.

The fascinating part about all this is not the tabulating of life's necessities and life's extras; it is rather the question, Who put them here, and for what purpose? Furthermore, shall we not find, through some stories of personal experience, that the curious and significant remark of my casual acquaintance was right? I do not presume that my actual living this mortal life has in any way been unique, especially as regards this matter of life's extras; yet, if I can tell what they have meant to me, I shall perhaps be voicing the experience and the hope of many.

I remember one October night visiting a friend who was lying very sick. There was a full moon that night; and as I walked down the village street on my sad mission I felt the silvery beauty of it quiet my heart. The world lay lustrous. There was no scrawny bush nor ugly clod that was not transfigured in that glory. A little breeze over the brimming salt tide brought aromatic marshy odors. It seemed to me that

Extras

Rutledge

JOHN KABEL

some power was trying to make beauty take away my sadness. I found my friend not less aware than I was of the beauty of the night. He could look from his window and see the argent glamour of it all: how it flooded the gleaming tide with celestial lights; how it ran long white lances through the swarthy cedars; how it tinged with soft radiance the locusts and the mimosas. He felt the breeze too, and delighted in the odors that it brought of the happy world beyond his window.

As I sat beside him, a mocking bird began to sing in the moonlight, chanting divinely. I know the song reached our spirits. On the table by the bed were all the necessities for a sick man; but he had small comfort from them. But the moonlight, and the hale fragrances, and the wild song of the bird—these brought peace to his heart.

Long afterward he said to me, "Do you remember that night? I thought it would be my last. But from the time the bird-song came through that window I felt that I would get well. I don't talk much about these things, but I felt that all that beauty and peace were really the love of God. I guess He does not love us with words: He loves us by giving us everything we need —in every way."

It must be as he said.

AT ANY rate, I know that a thoughtful consideration of life's extras has done more to give my faith in God actual conviction than all the sermons I ever heard. My knowledge of theology is hardly more ample than that of a bushman of Borneo; but I am absolutely unshaken in my faith that God created us, loves us, and wants us not only to be good but to be happy. He ministers to our bodies by the necessities that abound in the world; and to our spirits by the beauty that adorns creation. One has no difficulty in discovering, in the vast scheme of things, an extraordinary, an exciting, provision and prevision. As philosophy, I know not if this will stand; but I do know that a belief in it has brought me close to God.

I cannot regard the "fiery funeral of foliage old" as accidental, nor the gorgeous pageantry of sunset as anything but the manifestation of divine art. I stood recently on the shores of a mountain lake at sundown after a heavy rain, and watched for an hour the magnificence of the west; the huge clouds smoldering, the long lanes of

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

emerald light between them, then isolated clouds like red roses climbing up some oriel window of the sky, the deep refulgence behind it all. Superb as it was, momently it changed, so that I saw in reality a score of sunsets. I looked across the lonely, limpid lake, past the dark forest, far into the heart of the flaming, fading skies. I was sure that God had done that; moreover, that He had done it for a purpose. When did He ever do anything idly? And what was the purpose? Surely to fill the hearts of his children with a sense of beauty and of awe, and to teach them of His loving care.

Neither a day-dawning nor a sunset (with all its attendant beauty) is really a necessity. It is one of life's extras. It is a visit to an incomparable art gallery; and no one has to pay any admission fee. The human mind, being somewhat proud and perverse, may be inclined to reject this kind of proof of God's love. But the human heart can hardly do so. And in things spiritual I do not know but that the heart is by far the better guide.

NOT long ago, I visited a lonely cabin in the North Carolina mountains, whence the owner had just been taken, charged with murder. He and a neighbor had had a fatal altercation about a line fence, and he had "drawn" more quickly than the other. The accused had borne a good reputation up to this time. Both men had seen service in France. I was rather well acquainted with both families.

As I went up the old gullied mountain road toward the home of the first, I noticed in the wild glen, down which a white stream gurgled and spurted, incessant, vehement, and joyous, that the rhododendrons were in blossom. There may be a more beautiful flower, but I have not seen it—taking it all in all, and considering the wildwood setting in which it invariably grows. To look at this wondrous flower and not to feel that God exquisitely designed it, and did it not merely as a vagrant artist but with precision and nobility of purpose is to me incredible. Ere long I reached the cabin, and one of the man's sisters greeted me and talked with me. Over the humble mantel I saw a crude little photograph of him in his uniform; and beside it, in a small bottle that functioned as a vase, I saw a sprig of rhododendron blossom. I looked at the picture; then I said something casual about the flower.

"I don't know why," my hostess said, "but to have it there helps me. It 'minds me of God."

I have always loved the eloquence of simple people. What they say, coming from the heart, often goes straight to the heart. "It 'minds me of God"! I never see a rhododendron without remembering that. And are not all of life's extras reminders of the love and the yearning compassion of God?

I mentioned sunsets and sunrises as extras. Almost the whole complex and wonderful matter of color in the world seems an extra. The color of the sky might have been a dingy gray, or a painful yellow, or a plum-colored purple. But it is sapphire; and my philosophy makes me believe that such a color for the sky is by no means the result of mere chance. Granted that it is the result of the operation of certain laws, forces, and conditions; yet behind it all, back of the realized dream, is the mighty intelligence of the Creator, the vast amplitude of the dreamer's comprehension. And let us not forget that the two colors at which we can gaze longest are blue and green. There is about them a coolness, a serenity, a spirit of fragrant peace. And as the blue prevails in the sky, the green does upon earth.

I HAVE often heard people say that they would like to remake the world. Well, I am glad that we don't have to live in a man-made world. If we consider merely the least of the marvelous provisions for our comfort and our happiness, we can realize how impossible would be an earth and a scheme of life that man had made. And we should feel, also, that David was right: "For as the heaven is high above the earth, so great is His mercy toward them that fear Him." How high is the heaven? Illimitable. And so is God's love.

To a sophisticated person, this sort of belief may seem too childlike. Yet I have the gravest suspicions of sophistication. I have never discovered it in nature; and to me it seems that instead of being a proof of enlightenment (*Continued on page 96*)

"Me And My Flapper Daughters"

I have found the key at last to the rebellious spirit of these amazing young girls of to-day

By W. O. Saunders

I AM the father of two flappers: trim-legged, scantily dressed, bobbed-haired, hipless, corsetless, amazing young female things, full of pep, full of joy, full of jazz. They have been the despair of me for two or three summers; but if they don't fly off and marry and quit me before I'm a century old, I'm going to know those girls.

I used to think I knew my girls. A lot of foolish parents make that same mistake; but it remained for Elizabeth, the elder of the two amazing young persons, to open my eyes and show me up in my ignorance.

For instance, I thought my girls were different from the average run of wild young things. My own childhood was spent in a righteous, church-going, psalm-singing little country town, where young folk were taught "to be seen and not heard," and where a game of croquet on Sunday afternoons was an abomination in the sight of the Lord.

I assume that I am just an average adult and parent. I was fetched up by a modest mother who wore three petticoats and a floor-sweeping skirt, and by a father who kept on his trousers to bathe his torso, and put on his shirt before bathing the rest of him. I never learned from either parent whether I was male or female, or that there was such a division in the human species.

I came up with some old-fashioned ideas about women and woman's place in the world. There was nothing frank about the age in which I was brought up. It was not even decent to concede that women were bipeds.

I have worked hard all my life, and while there was a brief period of romance in my life culminating in marriage to a beautiful and sensible girl, I set out rather matter-of-factly about the business of establishing a family. Like most American Babbitts, I have had my nose to the grindstone all my days, and thought I was doing pretty good when I put three square meals on the table, kept the furnace going, and paid my building and loan instalments.

I rustled for the food for the pantry, the coal for the cellar, the ice for the ice box; I worked for the tailor, the dressmaker, the butcher, the baker, the electric-light maker, the cinema man and the gas-filling stations. And I thought that was job enough for me. I threw over all the work of keeping house and raising the children to my uncomplaining wife.

I guess it is the way of us males to pay the freight and let our wives haul it. The wives have the harder job; but we don't think much about that. I didn't; and I didn't think much about the children. The girls were their mother's children, and a mother could understand girls better and train them better than a man, anyway. And so I lived on in the same house with two growing-up flapper daughters, and never began to know them until that elder one, Elizabeth, gave me a jolt that "flappergasted" me and almost paralyzed my wife.

As I said a moment ago, like most fond parents, I had kidded myself with the notion that my girls were different from other people's girls. I had seen other parents' girls smoking cigarettes, "necking" in automobiles on the highways, wearing rolled stockings, or shamelessly promenading on Main Street without stockings at all.

But I had never observed my girls on the street with their stockings rolled, although I had raised hob ofttimes about the careless way they disposed themselves in chairs at home with their short dresses that wouldn't stay down over their knees when they sat. I felt some relief whenever I came upon them in public with their knees hugged close together. I thought it must be an awful nuisance to a young girl to have to pose like a knock-kneed something every time she sat down; but I was glad my girls posed that way in public, and not in the way they postured themselves at home.

I WAS sure my girls had never experimented with a hip-pocket flask, flirted with other women's husbands, or smoked cigarettes. My wife entertained the same smug delusion, and was saying something like that out loud at the dinner table one day. And then she began to talk about other girls.

"They tell me that that Purvis girl has cigarette parties at her home," remarked my wife.

She was saying that for the benefit of Elizabeth, who runs somewhat with the Purvis girl. Elizabeth was regarding her mother with curious eyes. She made no reply to her mother, but turning to me, right there at the table, she said:

"Dad, let's see your cigarettes."

Without the slightest suspicion of what was forthcoming, I threw Elizabeth my cigarettes. She withdrew a fag from the package, tapped it on the back of her left hand, inserted it between her lips, reached over and took my lighted cigarette from my mouth, lit her own cigarette and blew airy rings toward the ceiling.

My wife nearly fell out of her chair, and I might have fallen out of mine if I hadn't been momentarily stunned.

"Smoking is no longer a novelty with girls, Mother," said Elizabeth. "I have been smoking for two years, myself. That's one thing I learned at college."

There was a (*Continued on page 121*)

Children Should be Seen, Heard, and Reasoned With

"MY DAUGHTERS are opening my eyes," says Mr. Saunders. "I am determined that the ancient rule that 'children shall be seen and not heard' shall not hold in my house. When I have what I consider cause to criticize my children, or give them a command, I frankly tell them that I may be wrong; but they must show me wherein I am wrong. I invite them to talk back, to be fearlessly candid with me, to state their case and defend it. Then we understand each other. Many times they force me to abandon an untenable position. They do not think less of me for that, and there is no sullen resentment, no secret bitterness, no veiled spirit of determination to thwart me behind my back when I win over them."

The Gobbler Of Thunderhead

A Story

By Herbert Ravenel Sass

ILLUSTRATED BY CHARLES LIVINGSTON BULL

THE Old Man, they called him; and they devised many schemes for his undoing and spent considerable time plotting against his life. But for the better part of a year he was too clever for Joe Garey and Crowley Masterson. Crowley gave it up after a time. He was a little dark fellow with a strain of Romany blood in him, and when, upon three separate occasions, he nearly lost his life while following the Old Man's trail, his Romany blood whispered something about omens. Joe Garey, who had only the superstition native to the Overhills, laughed at his friend's fears and pursued the Old Man more relentlessly than ever.

The Old Man knew it. He knew that his two worst enemies were Joe Garey and Lantern Eye.

It was Joe Garey who named Lantern Eye, and it was Joe Garey who named the Old Man. He had a habit of bestowing names, and his names, though seldom poetic, were generally appropriate. Lantern Eye was a big bay lynx who lived in a deep valley of the Cowee Overhills under Thunderhead Mountain, and whose palely glaring eyes Joe had seen one night in the light of a pitch-pine torch. The Old Man was a wild turkey gobbler. As for Joe himself—lean, taciturn, a little under middle height, tough as hickory and wiry as jack-vine—for about twenty of his twenty-six years Joe had been a hunter. If he lived to be one hundred and twenty-six and was able to sight a rifle, Joe would be a hunter still. It was bred in his bone.

There was something else that was born in him. Around the slope of Thunderhead ridge, following a sinuous valley that led up from the foothills into the heart of the high Cowees, wound a narrow, deep-worn trail. It was more ancient than any other trail or road in all that mountain country, and time had obliterated most of it, so that only here and there could one trace its course through the woods. But Joe Garey knew it better than any other man, and he used to sit beside it sometimes, when Crowley Masterson was not with him, and see visions.

No human hands had cut that trail. It had been trodden out by the hoofs of thousands of buffalo, for time was when it was the main buffalo road across the mountains—the highway of the herds as they passed back and forth across the Cowees and the Blue Ridge on their journeys between the Western grasslands and the cane savannas of the Atlantic plain.

That was long, long ago. Even the great chestnut oaks and towering tulip poplars along the old buffalo path had forgotten the shaggy herds they had seen in their youth. But Joe Garey could sit beside that path in the dusk of a spring evening, his rifle across his knees, his gray eyes half-closed, and see shadowy armies of buffalo troop past under the ancient trees—beast after beast, bearded, high-humped, tremendous, strung out in a never-ending line behind the master-bull, and he could hear the noise of their hoof-beats as they tramped along the path, and could smell the hot smell of their bodies, and feel in his nostrils the dust of their passage.

THAT was the kind of hunter that Joe Garey was, a hunter who could look back two hundred years. But the Old Man did not know this, and if he had known it would have made no difference. He would still have feared Joe just as much as he feared Lantern Eye, who never saw visions. And he had good reason to fear Joe Garey, for Joe—in spite of Crowley Masterson's defection—had made a bargain with himself to kill this gobbler, the first wild turkey seen in the Cowee woods in a dozen years. He never doubted his ability to carry out that bargain. His only fear was that Lantern Eye would get the Old Man first.

When the faint pink of April dawn tinted the sky above the distant ranges to the east, the Old Man awoke. For many minutes he remained motionless on his perch in a tall pine on the wooded slope of Thunderhead ridge; then, just as the curved edge of the sun peeped over the horizon, he crouched low, spread his broad wings and launched outward. His long neck outstretched, his tail spread behind him like a half-opened fan, he planed on stiff pinions down to the flat top of a great buttress of rock—Hanging Rock, it was called—which jutted outward from the mountainside and overlooked the deep valley.

Pale eyes hidden in a clump of woody vines watched his descent; a long, tawny, furry body, faintly speckled and barred, quivered momentarily, then grew hard and tense. It happened that, after hunting all night, Lantern Eye had found himself, when the dawn came, within a hundred feet of Hanging Rock. Being tired from his hunting, and well fed to boot, the lynx had decided to spend the day where

Lantern Eye waited and watched. He knew that he could not stalk the big bird successfully on the bare platform of rock where he strutted in the sun

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

The great days had come back! Along the old buffalo road a herd of buffalo was marching through the Cowee Overhills—the first buffalo that had trodden the ancient highway of the herds in two hundred years

he was, instead of pushing on to the great rhododendron thicket beyond a shoulder of the ridge, where he usually passed the daylight hours. He had lain down, therefore, in a tangle of vines which seemed a safe hiding place, and he was just dozing off when his quick ears caught the swish of wings.

PEERING outward from his leafy shelter, he saw, planing down through the air, the wide-winged bulk of the great wild gobbler who had been living on Thunderhead ridge for the past ten or eleven months, and whose cunning and wariness had so far baffled the lynx's skill as a still-hunter.

Lantern Eye's drowsiness fell from him and, well fed though he was, on a sudden he was hungry again. He lay motionless in his ambush, waiting, watching; and the sight that he saw, although not sensible of its splendor, was the finest spectacle to be seen that April morning in all the wooded wilderness of the Cowee range.

On the flat surface of Hanging Rock, thrusting outward above the valley, the Old Man paced to and fro in the full flood of the morning sunlight—a superb twenty-five-pound wild gobbler in the pride and ecstasy of his nuptial dance. His wings were drooped until the ends of the stiff feathers scraped the rock; his tail was spread like a fan and erected at right angles to his body; his neck was thrown back until the head almost touched the shoulders; over his shoulders and back the feathers stood up straight and stiff until the big bird seemed almost twice his natural size. Back and forth he paced and strutted, while the sunlight, striking his plumage at different angles, turned it now bronze, now copper, now purple-green, now gold. As he strutted he gobbled; but even in the exultation of that spring-time ecstasy the Old Man was wise.

So low was his gobble that it could scarcely have been heard thirty feet away. He was calling to the turkey hens, the hens that had never come to him, because, years before, the mountain hunters had killed out the turkey flocks which once ranged the Cowee Overhills. The Old Man knew that they would not come. Since he himself had found his way to the Cowees from the rugged fastness of the Great Smokies he had seen no sign of another bird of his kind. But it was not this knowledge which quelled in his throat the amorous calls which ordinarily would have carried at least a mile in the still air. The Old Man had learned what not one wild turkey in a hundred ever learns; namely, that to send those love-calls rolling loudly through the woods was to court death.

LANTERN EYE waited and watched. He had hunted the Old Man again and again, and he knew that he could not stalk the big bird successfully on the bare platform of rock where he strutted in the sun. Perhaps five minutes passed; then suddenly the light in the lynx's fierce eyes grew more intense. A new sound had reached his tufted ears. The strutting gobbler, too, had heard it—a faint, far-off, plaintive cry several times repeated—the mating call of a wild turkey hen.

A moment the big bird stood perfectly still, listening—a bronze-gold statue gleaming in the brilliant light. Then, caution and all else forgotten, he sent his love-call ringing outward over the abyss of the deep valley and rolling and echoing along the steep, wooded mountainside. Again and again he gobbled with all the

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

force of his lungs; and meanwhile, with redoubled energy, he strutted up and down and around and around on the flat surface of Hanging Rock, puffing and clucking and booming, the long pendent caruncle on his head jerking this way and that, his eyes ablaze with excitement, his whole body quivering and throbbing in a frenzy of fierce, passionate joy.

A SHAPE moved out of the vine tangle where Lantern Eye had been lying hidden—a long, brown, faintly barred and speckled body, flattened close to the ground. For a distance of fifteen feet it moved forward swiftly, soundlessly; then for a minute or so it lay utterly still. Lantern Eye's cunning was not the calculating wisdom of a fox, but he was wise enough to know that he must act now or not at all. Something, whether instinct or experience, told the lynx two things: that within a few minutes the great gobbler would take wing in search of the turkey hen whose mating call had come from across the valley, and that, meanwhile, in the increased frenzy which now gripped him, the gobbler was off guard and oblivious of danger.

There was no cover to hide Lantern Eye's advance. Under ordinary conditions the lynx would have had no chance of success; but fortune favored him and he played his game skillfully, darting swiftly forward when the strutting gobbler's back was turned, lying flat and motionless on the brown surface of the rock when the Old Man faced toward him. In less than two minutes he had reached a point within twelve feet of the gobbler, standing, with his back to the lynx, near the edge of the cliff.

Lantern Eye crouched, his strong legs bunched under him, his muscles taut for the spring. When, in another moment, the gobbler turned and strutted toward him, the lynx would strike his victim down.

Crowley Masterson grinned. Yes, he would take the chance. It was too good a chance to miss. He had been a fool ever to suppose that there was bad luck in hunting the Old Man. The things that had happened to him while he had followed the Old Man's trail with Joe Garey—the rattlesnake bite, the unaccountable discharge of his rifle, which had blown a hole in his hat brim, the dead poplar limb which had fallen on his shoulder and dislocated it—all these, as Joe had insisted, were just ordinary accidents. And, besides, on this morning Crowley had not been hunting the Old Man. He had gone out after squirrels in the woods on Thunderhead ridge, and hearing, to his amazement, a turkey gobbling furiously, he had walked toward the sound. There, on the summit of Hanging Rock, within fairly easy range, he saw the Old Man strutting and gobbling in the sun.

Yes, he would take the chance. If there was bad luck in trying to kill this wild gobbler, he would know it in about sixty seconds.

Crowley raised his rifle and, bracing the barrel against a hickory sapling, sighted carefully. His smile had vanished now, but his black eyes twinkled as he thought of how Joe Garey would look when he heard the news. The Old Man was standing motionless close to the edge of the cliff, his bulky body sharply outlined against the sky and about on a level with the spot on the wooded mountainside where Crowley stood. The gobbler was a perfect target. Crowley knew that he could not miss.

Crowley's muscles tightened. It came to him suddenly that the gobbler was about to take wing. His finger curved around the trigger.

WHAT happened happened so quickly that it left Crowley dumb. He saw a long brown shape spring upon the Old Man from behind, saw a mighty threshing of wings at the very verge of the precipice of Hanging Rock, saw a big black and brown object—turkey and lynx inextricably fastened together—fall over the edge of the cliff and crash into the tree tops two hundred feet below.

Hurrying down the mountainside, Crowley reached the spot within five minutes. Thirty feet up in a dead chestnut tree he saw a big lynx hanging lifeless from a broken stub, the sharp, hard point of which had (*Continued on page 151*)

Another "Just Folks" article

The Poor He Has With Him Always

The world abounds in youth, prosperity, and independence, but Francis Bardwell prefers to work among the aged, the poor, and the dependent—"It so happens," he says, "that I get more out of life by making other folks comfortable than I could by paying more attention to my own comfort"

By Mary B. Mullett

DO YOU happen to know Francis Bardwell?" I inquired of a certain Boston gentleman.

"Indeed I do know him!" he replied with emphasis. "Do you?"

"No," I admitted; "not yet."

"Well," said the gentleman, "let me give you a bit of advice: Some of these days you may find yourself old, lonely, and without money. If you see that time coming, and if Francis Bardwell is still alive, move to Massachusetts! Then you can get into one of our poorhouses, and Bardwell will sometimes come to see you.

"I'd be almost willing to go to the poorhouse myself," he added, "if that were the only way to keep up my acquaintance with him."

A day or two after this conversation, I climbed Beacon Hill to the State House and hunted up Room 38, the office of the State Visitor of Almshouses, who is Francis Bardwell himself.

I never have been one of the officials who have to deal, in wholesale quantities, with the poor and unfortunate. But I can imagine how hard it is, under those circumstances, not to become a mere bureaucrat.

I can see how one's sympathy might be dulled by the constant demands on it. I can understand how one might get tired of hearing hard-luck stories, impatient with human frailty and human folly.

Yet for years Francis Bardwell has listened to these stories, borne with these frailties, and dealt with the results of these follies. But they have not dulled his sympathy nor calloused his kindly understanding of human nature. When necessary, he can talk as practically and as statistically as anyone about the Causes of Indigence, the Sociological Aspects of Poverty, and subjects of that sort. Deadly dull as these topics usually are, he somehow succeeds in making them interesting.

But you feel the real heart and soul of the man not when he talks about "The Poor" as a class but when he takes you right into the life of one human being after another, and shows you the pathos, the courage, the folly, the humor; in short, the whole drama of the human heart.

People are trying now, and wisely, to do away with the word "poorhouse," to substitute for it the simple word "home." But, with due apologies, I am going to stick to the old term in this article.

PHOTOGRAPH BY BACHRACH

Francis Bardwell has for the past eighteen years been Inspector of Almshouses in Massachusetts. One hundred and thirty-seven of these institutions, which annually care for about ten thousand persons, are under his supervision. Mr. Bardwell was born in Boston, and started out to have a mercantile career, but abandoned this to enter the work that appealed to him most

IF YOU would like to know how to grow old happily, how not to be friendless and lonely and unloved in the twilight of your years, let Francis Bardwell here and now take you by the hand, metaphorically speaking, and introduce you to people who have met old age more or less successfully in the poorhouse itself.

If you want to know how to get along with the old folks in your own family, let him help you to understand them. In fact, this Key of Understanding, which has opened to him the hearts of the old and the poor and has shown him their hidden hopes and fears and longings, will serve equally well to unlock *any* human heart.

I went to see Mr. Bardwell because I had been reading a book he recently published, called "The Adventure of Old Age." In it he tells of some of the men and women he has known in the course of his years as an almshouse visitor.

These little portraits in words are vivid pictures of human experience. For instance, he will tell the story of some man, or some woman, who would seem to most of us to be just plain "cantankerous." But his sympathetic understanding has unlocked

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

their hearts, and they have shown him what we would not have discovered for ourselves—the hidden source of this surface "crankiness."

The poorhouse is not the only place where you will find these tired, lonely, defeated—but perhaps still struggling—spirits. They are all about us; even in our own homes. Even, for that matter, within ourselves! Francis Bardwell can help us to understand and to be understood.

I have often heard people speak of someone's "unreasonable whims." That is the way we, of the younger generations, dismiss most of the desires and notions of the old folks. But to Mr. Bardwell there is always some reason, even for the "unreasonable." And when you have found the reason, then the thing ceases to be unreasonable.

Just to show you what amazing and beautiful "reasonableness" we might discover beneath these "mere whims," if we would but use the warm light of sympathy to find it, I am going to tell you the story of Aunt Ann. Or, rather, I shall let Mr. Bardwell tell it; for, with his permission, I have taken it almost bodily out of his book:

"WHEN one's 'best dress' has been, and still is, one's *only* best dress, it is but natural that such a garment should be cherished with reverence. Not that it was a wonderful gown—black alpaca, cut full, as was the bountiful fashion of the seventies, severely plain; but it had served its purpose for over forty years.

"And now Aunt Ann had decided it was to be an everyday dress. So she sat in her rocking chair, very stiff and prim, but resolute; for Aunt Ann had developed the spirit of revolt. No longer would she be concerned about the cleanliness of the kitchen floor, or the dishes which, thrice daily, someone had to wash and wipe and put away. *Aunt Ann was through!*

"She had so announced; and, having delivered her ultimatum, she had retired to her room, opened the bureau drawer, taken out a bundle pinned up in a white sheet, and, presto! the best dress came forth.

"Never had she dared to wear this garment, save at funerals; but now she sat all day in her room, adorned in her best; sat and primly rocked. She went to her meals, but hurried back to the sanctuary of her room and to the rocking chair.

"And now, to-day, she knew there would be a caller; one who had been summoned to inquire into the reason of her revolt; and she waited for the expected knock.

"She bowed with serenity as the caller came in. Sitting in state, with the best dress as an armor for aged dignity, she received her visitor.

"'My! but you're dressed up, Aunt Ann!'

"'Yes; from now on I'm always going to be!'

"'No more help?'

"'No!' the monosyllable was snapped out.

"'Is that fair?' queried the caller.

"'Yes! Ain't it time? How long should a body work? If I'm to rest ever, it must be from now on.'

"This was delivered serenely and in measured tones. Although she had begun to wonder at her courage, she would not weaken; she would see it through.

"'You're too young to quit, Aunt Ann. Just a few years longer, a little help to the others here, and then the best dress and the folded hands!'

"'Go on!' she taunted; 'the best dress and the folded hands and people saying, "Ain't her smile natural!"'

"'Oh, I've heard it at many funerals where I've helped. Perhaps you don't know about me. If you did, you'd know I should have quit years ago. I don't look my age, but I'm eighty-four. If I'm ever going to sit and rock and rest, isn't it from now on? Fourteen years I'm living on borrowed time. So I'm through!'

"She paused and looked out of the window. The spirit of revolt was gone; and the tears rolled down her wrinkled cheeks.

"'I just want to be took care of; only that!' she said.

"THE caller laid a kindly hand on her shoulder. 'Tell me all about it, Aunt Ann,' he said.

"''Tain't as if I'd ever seen better days, like some that come to the poor farm,' she explained. 'I've *always* been poor and misfortunate. We was fishing folks; and you know what that means. It's different now; but in my childhood, fishing and poverty run hand in hand.

"'I was the oldest of ten and I never had no real childhood. I always had care and trouble and almost starvation.

"'What do you, or anybody, that ain't been through it, know about poverty? No money, no food, father at sea, mother sick, no doctor—and all coming on Ann! Ann couldn't be spared, even to go to school.

"'Do you wonder I ran off at seventeen and got married, to get away from it?

"'Get *away* from it! I was in worse! I became the mother of many children; and many of them died. My husband meant well, but he too was a fisherman. We were so poor that when one baby died we couldn't even pay for the buryin' of it.

"'My husband made the little coffin; I lined it with the only whole sheet I had; and at night we carried it to the buryin' ground ourselves.

"'We weren't church folks; so we just stood there and held hands; and I know I asked God to take the baby and do well by him, and I guess my husband asked the same.

"'Later, my man died. I worked to keep the children going. But them as was good all died; and the others married and multiplied!

"'My path has always been *up-hill.* Never any level stretches! Never any hand reached out to help me over the rough places! It was always *my* hand that was stretched out, a-pulling someone else up.

"'I was always takin' care of myself and of other folks. No one ever asked me if I was tired, if I was spent, if I wanted help. And always the path went up and up, till it seemed as if I *must* get to a place where there'd be rest for me.

"'Always, for seventy-five years, children's fingers have been tugging at my skirts. Babies' fingers that somehow you can't unfasten! And now—now—Oh, I want to be *took care of!* Only that! Can't you understand?'

"SHE rocked back and forth, back and forth, smoothing the white apron with her wrinkled hands.

"'Yes, Aunt Ann, I do understand,' the caller said. 'You see, you have wandered away from us all. You have gone up and up, until you have gained the mountain tops, which so few of us ever reach. It is because you are so far above us all that we have lost sight of you. But now we do want to take care of you, Aunt Ann.'

"'I *felt* you'd understand,' she went on. 'But I don't know nothin' about mountains. I never saw one.

"'What I want,' she said, 'is a long and lingerin' sickness at the last. I want to lay on a clean white bed, in a pleasant room, where I can look out at the low hills.

"'I want a nurse, in a blue uniform, with a big white apun and a teeny cap. She'll open the door quietly and say: "Good-mornin', Aunt Ann!" You've seen 'em, haven't you?

"'I want to have my victuals brought to me on a tray, with a white napkin. And I want a vase of flowers. *Real* flowers! Not the kind that folks have in gardens and settin'-room windows; but the kind that's bought for big funerals—roses and tuberoses and such, that smell so sweet you can sniff the odor in parlors for weeks after the buryin's over.

"'And I want to linger and linger; and have folks ask after me, ask if I had a good night and if I took nourishment and if I'm wastin' away.

"'Now you understand; *don't* you? . . . I want to be *took care of!*'

"Only a few months later, they wrote the caller that (*Continued on page 108*)

How to Escape Loneliness

"IF ANYONE should ask me," says Mr. Bardwell, "how to escape the loneliness which comes to so many people, young as well as old, I should say, 'Learn to fit in! Learn to change your point of view! Learn to give; and learn, also, to receive. Admit that you are not infallible. Give the other person's opinion the benefit of the doubt. Take life as it comes to you. And, no matter how it comes, don't despise it!'"

"Wichita Bill," Cowboy Artist, Rode Into The Halls Of Fame

To his old-time friends he is "Bill," but in the world of art he is John Noble, famous for his marvelous paintings of the sea, of Breton ships, of Kansas scenes, of the New England coast, and of the "Magic City," New York

By M. K. Wisehart

NOON! April 22d, 1889! The Kansas plain! A brilliant sun—high and clear! Sand blowing across the waste in horizontal ribbons. . . .

For days the Federal troops have been holding back the eager homesteaders, gathered by thousands along the Kansas line. A signal is given. . . . The troops make way. . . . The frontier yell rings out, "Yip! Yip! Ki! Yi!" It leaps from throat to throat for miles. There follows the headlong sweep of a dun-colored multitude. The famous Oklahoma "run" is on!

A young man with a wildly flowing scarlet neckerchief, a cattleman's hat, and chaps—he has just turned twenty-one—rises in his stirrups above an iron-gray broncho. Almost obscured by the dust, the actors in this great drama press on. They surge at his right and at his left—in waves that reach as far as the eye can see. Bronchos and thoroughbreds, oxen and mules! Here a woman in a blue sunbonnet clings to the seat of a careening wagon! There, a white mule, its ears laid back, whipped to the fore by a man in a red sulky! Vehicles of every description—buckboards and canvas-covered Conestoga wagons! A dismantled gambling-house laden on wheels! All plunge forward in a wild, mad race for the best town lots and homestead lands!

For the first twenty-one miles the run lay across the Cherokee Reservation. There were creeks and rivers to cross. One of these creeks, with steep banks, was known to have but one ford. The hard-riding host converges in a wedge-shaped V! Thus, some who sought homes, found death! Cries and groans! The shrilling of terrified and injured horses. Smashed heads! Battered wagons! Dashed hopes!

All this you will find in your history; the essential facts, if not the spectacular details seen by an eyewitness. You have read how the unoccupied Territory of Oklahoma, staked out in claims and thrown open by President Harrison's proclamation, was settled almost within a day. Overnight, that no man's land acquired a population of nearly twenty thousand!

But what of the young man on the iron-gray broncho?

Having started from a point near Caldwell, Kansas, he was two hours and a half reaching the Oklahoma line. Many were ahead of him. Some were already plowing. They were the "sooners," who, by hook or crook, had got in ahead of the noon-time signal. It was eighteen miles farther on to the south and west, where he found an unoccupied claim.

That night he slept on the ground. It was as dry as a bone. There were stars . . . the Big Dipper and the Little Dipper and the Milky Way, sidereal phenomena of which the cowboy-adventurer had learned something during a few months in school. And he had his dreams. For him the "run" was a mere adventure, not a home-seeking quest; and his dreams were not of plowing the land. Of all the dreams that may have visited the sons of the new-born Oklahoma that night, his was perhaps the most strange. A dream of art! Of a career as a painter!

Lo and behold, when morning broke, a curious discovery: A covered wagon had arrived in the night and had camped on his claim! He unhobbled the broncho and galloped across to inspect the invader. At the sound of hoofs, a small girl stuck out her head from behind the canvas curtain; then a woman in calico. Gray hair streaked her face. "My husband couldn't find no claim!" she said. "We ain't had no luck!" Then appeared the husband. An old-timer, he!

"There ain't gonna be no dispute about no land!" said the cowboy-adventurer and would-be artist. "Take it! Gimme a drink of water, and you can have the claim!"

And he vanished!

Seventy or eighty miles he rode that day, arriving at night at Oklahoma City, where he saw more history in the making: The new-laid streets were alight with the flare of kerosene torches, gambling houses were already in full swing, water was ten cents a cup, and any other drink was a dollar.

I WAS talking the other day with that cowboy adventurer in his studio in East Fiftieth Street, in New York. A world-renowned artist now, around sixty years of age, tall, a little stooped, a pleasing, childlike simplicity in his blue eyes, his hair long after the fashion of the plains and touched with silver; he is known where art is known as John Noble. To some of his friends he is Bill—"Wichita Bill." And he is famous for marvelous paintings of the sea, of Breton ships and peasants, of Kansas moonlight, of the Oklahoma "run," of Provincetown, Massachusetts, and of the "Magic City," New York.

One picture on his easel the day I called on him was "The (*Continued on page 66*)

The Three Periods of an Active Life

"AND now I am around sixty," says John Noble. "I have seen much! I have lived much! The autumn years have come! In the art world they say that the life of every artist worth his salt falls into three periods. But I would say that these same three periods occur in the lives of all who try to do and be something worth-while.

"First, those early years of trouble, of youth, of searching, of groping uncertainty. Through this maze of doubt we grasp one or two essential facts, and what each grasps varies according to the law of his being. Second, comes the period of effort, of striving for that which we think is worth-while. And somewhere around forty this phase merges into the third. By now a man knows whether that which he seeks is worth seeking. He begins to see more clearly. He renews his effort; he gets a strong hold; his course is charted. As he matures and ripens and saddens, he has his hours of gayety. He works with faith in the pain that has gone before."

John Noble

BORN among the buffalo wallows of the American Panhandle, John Noble, painter, has followed a winding trail that has led him from the West to Paris, to the coast of Brittany, to Picardy, to London, and back home to fame. He was recently elected a member of the National Academy. At fourteen, Noble was herding sheep on his father's ranch near Wichita, Kansas. When he was eighteen, or thereabouts, he had six months in a Cincinnati art school. The following ten years he spent in wandering from town to town in the Southwest, doing portraits in crayon and painting pictures on saloon walls. He was twenty-nine when he went to Paris to study, and he was nearly forty before anybody paid much attention to his work. His most famous studies are of the sea, of Breton ships and peasants, of Western pioneer life, and recently of Provincetown and New York.

Theodore Gary

MR. GARY is head of the Kansas City company which bears his name. Since he entered the telephone field, thirty years ago, as the owner of a single small independent unit, he has been an outstanding figure in linking up local telephone units with those of the country at large. To-day, eighty per cent of the world's automatic telephone equipment is supplied by the companies controlled by Mr. Gary and his associates. The son of an Ohio house mover, Theodore Gary followed his father's trade until he was twenty-four years old. Then, thrilled by an intensive survey of the resources of his community, he went into the real estate business. He was forty-three when he bought his first telephone company. Mr. Gary is now seventy-three years old. His home is in Macon, Missouri.

It Took Gary 43 Years To Beat The Family Luck

By William S. Dutton

BACK in the "old days" of American telephone development—when competition between the Bell and independent telephone interests was little short of actual warfare—a group of linemen employed by a Mid-West independent company spied a roll of Bell wire unguarded in the street.

One of the linemen was a newcomer to this particular company's pay roll, but he was not new to telephone work and the common practices of the time. Without a word, he hefted the roll of wire to his shoulder and tossed it into the company wagon.

"Good wire!" he grinned.

"Put it back!" roared the old Irish foreman. "What kind of a thavin' outfit trained ye? I say, put it back!"

The new lineman's jaw dropped in astonishment. "But, Boss, can't you see it's Bell wire?" he protested. "Bell wire, and brand-new?"

"That's the very r'ason," the old foreman thundered, "why ye've got to put it back!

"Ye're a Theodore Gary man now," he added grimly, "and if ye want to keep your job and a whole hide ye'll protect Theodore Gary's honor the same as he would himself. If Mr. Gary found ye had swiped that wire, or any wire, the whole gang o' us'd be fired!"

That anecdote, related to me by one of his associates, gave me my first glimpse of Theodore Gary, of Missouri, to-day an outstanding figure in his state and country.

My second glimpse affords another revelation of the policy and the character of the man: Mr. Gary wanted an executive to fill a very important, highly technical, position in his organization. Such an executive was not easily found.

"I've a man in mind," remarked an associate, "but it is hardly worth while mentioning him. He has little or no education and no technical training. In fact, he is not much more than a laborer."

"Then why is he in your mind?" Gary inquired.

On several occasions, the other explained, this man, little better than a laborer, had attracted his attention by the peculiar aptitude he exhibited for technical work.

Gary's keen eyes lighted. "Is he honest?" he asked. "Is he industrious? Is he bright, clean, courteous, alert, and sound in limb and in mind?"

"More than that," said the associate. "He is also ambitious."

"Then," decided Gary instantly, "I want that man. Training, the one thing he lacks, can be supplied; but what he already has no school in the world could give him. Hire him. Send him to school. Let the expense be his salary. When he comes back, the job will be awaiting him. Any man who has aptitude, character, health, and ambition is well worth waiting for."

That ex-laborer rose to one of the highest posts in the vast Gary organization, which, at its peak, employs upward of twenty-five thousand men and women.

But wait! I got still a third glimpse of Theodore Gary preliminary to meeting the man.

One day, Gary, in company with the general manager, visited one of his various telephone plants. It was morning, and a new superintendent had just taken charge. Quite casually, Mr. Gary pointed out some work he wished done, and departed. He had issued no out-and-out orders.

Later in the day, while revisiting the plant on another matter, he noticed that the superintendent had not yet started the work discussed that morning. A little sharply, he directed the new executive's attention to the fact. "Get that work *done!*" he finished.

Taken aback, the superintendent went to the general manager. Mr. Gary had told him about the work only a few hours before, he complained. "And I planned to get men at it the first thing to-morrow. How fast does Gary expect a man to move around here?"

The general manager, who had grown gray in the Gary service, smiled. "Gary doesn't believe in to-morrows," he said dryly. "He is the kind of a man who wants things done yesterday!"

TO-DAY, at seventy-three years of age, Gary's name is linked with a hundred-odd enterprises extending into every part of the world, and the Mid-West points to him as one of its ablest business men. Last year, he and his associates, operating as Theodore Gary and Company, with headquarters in Kansas City, Missouri, did a business in excess of one hundred and fifty million dollars, and through control of the International Telephone Sales and Engineering Corporation and of the Automatic Electric Company of Chicago, and affiliated companies, supplied eighty per cent of the world's automatic telephone equipment.

In addition, they controlled Kansas City's largest bank; the British Columbia Telephone Company of Vancouver, and other widely scattered properties. Behind them, over a quarter-century of Gary leadership, was an unbroken record of brilliant business strokes, including consolidation of the Kansas City Home and the Bell Telephone (*Continued on page 139*)

Tips for Young Men from One Who Knows the Ways of Business

"NEVER do business on a hunch," says Mr. Gary. "Investigate. Get the facts.

"Determine to be prosperous. Without this determination, you stand still. Stand still, and you go backward, for time and other men keep moving.

"Hold your temper and your tongue—even when it hurts.

"It is not enough to be truthful. Try to find out what the truth really is. Never cease to ask questions, and to listen to the answers. Keep your mind open.

"If you are earning one thousand dollars a year and spending one thousand dollars a year, don't waste time thinking how you can save one hundred dollars. Use your energy to figure out how you can make eleven hundred dollars.

"Don't depreciate your own importance and ability; but don't appreciate them too much. Honesty, like charity, should begin at home.

"Every man should be equipped with reverse gears, so that he can back up and start over again when he finds himself on the wrong road.

"Eighty-five per cent efficiency is great, but one hundred per cent integrity and loyalty is imperative."

The Thing To Do

A story in which the son of a quitter loses—and finds—everything

By Drew Hill

ILLUSTRATED BY T. D. SKIDMORE

HE HAD been waiting twenty minutes: a well-dressed boy of nineteen, with sandy hair, a sensitive mouth, and clear blue eyes, now staring vacantly at the center of the Oriental rug that stretched across the anteroom of Trelfall's office. Trelfall, the attorney.

Niel Chetwood remembered that it wasn't so very many months ago when he had entered this same anteroom with his father—and been admitted to Trelfall's private office at once. It had always been that way wherever he went with his father. He had come to expect it, like so many other things that went with wealth.

But there was a startling difference, now that his father had lost everything, and disappeared. It had all happened so suddenly. Just nine days before, as Niel was racing across the snow-covered campus of St. Matthew's School to his last class of the day, someone handed him Trelfall's telegram. A terse, brief message stating that Chetwood and Company had failed—insolvent—dismissed from the Stock Exchange.

Niel Chetwood never attended his last class. He took the first train for New York and went home; only there wasn't anyone in the big, richly furnished apartment on Park Avenue when he got there—not even a servant. Twelve empty rooms. And an hour later, Trelfall, in that smooth, suave voice he affected, told the boy the rest of the story: John Chetwood had walked out of his Wall Street office the day before—and no one had seen him since. No trace had been found of him. He had left no word. He had left nothing.

And for nine days Niel Chetwood had wandered aimlessly through those twelve silent rooms—waiting—expecting every hour to hear from his father. But no word ever came.

So Niel had come down to see Trelfall for the third, and, he hoped, the last time. A girl emerged from the inner office.

"Mr. Trelfall will see you now," she told him.

Niel went inside and sat down facing Trelfall's narrow, hatchet-jawed countenance, from which the eyes regarded him impersonally.

"Ah, yes—Chetwood. I—ah—regret to say that we still have received no information concerning your father. Despite the redoubled efforts of my friend, the police commissioner, not the slightest trace of—ah—Mr. Chetwood can be found. It is, of course, very unfortunate."

The boy ran nervous fingers through his sandy hair.

"But isn't there something I can do, Mr. Trelfall? I hate just sitting around like this—doing nothing—not knowing where to turn. I'd so like to find him."

The attorney shrugged slightly.

"Naturally—naturally," he said. "But for you to search for him would cost—ah—" He paused and rubbed one hand along the edge of his mahogany desk. Then, "Exactly how much money have you, my boy?"

Niel Chetwood frowned at the term, "my boy." After a moment, he replied, "About two hundred dollars."

"Well—ah—I'm afraid you couldn't go very far on that amount. Furthermore, I would strongly urge you to make it last as long as possible, because there is no place that I know of where you—ah—can secure any more. Your father lost every dollar that he owned—every cent, to be precise."

"But the things at home—" Niel began.

"Ah—to be sure," interrupted the attorney. "I'm sorry to have to tell you that everything there will be taken over by the creditors, and sold at public auction very shortly."

THE boy's mouth opened a little in hurt surprise. He leaned back in his chair, and his chin sank slowly against the collar of his overcoat.

"Oh—I—I see," he presently murmured, fumbling with his hat. "Then you—then that means I'll have to get out right away, doesn't it?"

Trelfall coughed delicately. "Well—ah—I wouldn't say that exactly. Another day or two won't make a great deal of difference."

Niel Chetwood rose suddenly to his feet.

"Mr. Trelfall, I—I won't take up any more of your time," he faltered, glancing down. "And I'll send you my new address, in case—"

"Of course—certainly. Yes, do—and call on me any time for—ah—advice, my boy." He stopped and pulled open a drawer of the desk. "Oh, by the way"—he extended a sealed envelope to Chetwood—"here's a letter to my friend Wilkinson, president of the First National, you know. He'll be glad

The girl kept glancing around with half-expectant eyes—serious eyes. "Connie!" Niel could have yelled it; but the name barely left his lips in a broken whisper

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

He was conscious of a pair of blue eyes meeting his own—of the pressure of a firm handclasp—of his apparent inability to speak a word

to—ah—employ you in some capacity, I'm sure." As the boy took the letter and mumbled his thanks, the lawyer added, "Let's see; you were going to enter Princeton next fall, were you not? That is, if this—"

Niel nodded dumbly.

"Too bad, too bad," Trelfall went on, busying himself with some papers. "College means so much to a man. Well—ah—good luck, my boy."

Niel Chetwood walked out of the office, down two flights of marble stairs, and out of the building. As he reached the corner of the street he halted, jerked the letter from his pocket, and tore it up—the pieces scattering over the dirty slush at his feet.

He found a place to live over on West Eighty-third Street the next morning—and moved in. A room with one window overlooking several dirty brownstone houses and a corner of Amsterdam Avenue. And all the rest of that day Niel sat there in front of the window, with his unopened suit case beside him, staring out at the sodden grayness of the January afternoon.

One fact which the boy could not seem to reconcile himself to was that in ten days' time everything that he had known had been swept away from him; everything had changed. That this should have happened to him—and that not one of all his father's "friends," only a few of whom he knew by sight, had come forward with a kindly word—did not seem possible. His own friends were a handful of wealthy, immature schoolboys whose homes were in the four corners of the country. All his possessions were in this cheaply furnished room, and in the trunk that was being sent here. His home—or, rather, the twelve rooms that he and his father had used as a place to go to whenever they wished—was gone. His father, whom he saw a few weeks out of every year, and whom he never really knew, had disappeared. He could not remember his mother.

And that which he had looked forward to with the greatest pleasure and anticipation—four years at Princeton—could never be.

But there was something else.

It came to the boy suddenly—and with such force as to overwhelm all those other poignant thoughts with which his mind

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

had been filled for so long: A seventeen-year-old girl, Constance Dana, whose father had been head master of St. Matthew's ever since Niel had entered the school at the age of eleven. A black-haired, vivacious, laughing, teasing girl whose blue eyes had, in the last year particularly, upset the hearts of nearly every boy in the upper classes. Niel Chetwood worshiped her. And he suddenly realized that he had not heard from her.

Other letters had come—from Dave and Stony and Tommy De-Witt, well-meaning, though strained, carefully written letters. Yet, it had not struck him until just this instant that the forced tone of those letters might have been due to the statements published in some of the newspapers soon after his father's disappearance: "Over-speculation;" "questionable business methods;" "further investigation by the district attorney;" "strange disappearance."

NIEL stood up and pressed his hot forehead against the window-pane. That was it!—the fellows at school felt contempt for him. Because his father had failed—and quit. They were thinking him the son of a quitter. He could hear them saying it:

"Imagine Chet's governor doing a stunt like that. Pretty shady!"

Shady! Quitter! That's what they were . . . but not Connie Dana. Why, they'd played around together since they were kids. He'd taken her to the first school prom he'd been allowed to attend. She liked him better than any other chap that had ever come to St. Matthew's. She had told him that. No!—Connie wouldn't think . . . but wouldn't she? The Danas came from the best families in Massachusetts. They were well-to-do. Connie was proud—had a right to be . . . and she hadn't written.

Something snapped inside the boy. He gritted his teeth and pressed quivering lips to the cold window to fight it down. His clenched hands beat against the dust-covered ledge. But it came on—in quick, choking breaths and tear-clouded eyes. It had to come, all that welled-up disappointment, confusion, chagrin, pride, loneliness—broken loose, at last, by the thought of a winsome, blue-eyed girl who had once told him he was the finest boy she had ever known.

He tried to speak her name, but his voice caught, choked, and, turning swiftly away from the window, he dropped face downward on the narrow, creaking bed back of him, his whole body shaking with the gulping, broken sobs that came from his throat.

At what seemed, to Niel Chetwood, many hours later, he felt a hand touch his shoulder, and a gruff voice say:

"Listen, Buddy, I been a-hammerin' on yer door fer 'bout five minutes. Gotcha trunk outside—"

Niel slowly raised his head and looked up through swollen eyes. A middle-aged man with small, twinkling eyes and a ruddy complexion was regarding him with a quizzical expression.

"Well, now, it sorta looks to me as how yer a little mite homesick—that right?"

The boy sat up and dropped his arms listlessly against the side of the bed. He made no reply.

"Say, don't let it git yer, kid," the expressman went on with a kindly smile. "I know how 'tis meself, seein' as I come here thirty years ago right smack from home. Just 'bout yer age, too, I was. An', cripes! I sure did miss the folks. But say"—he leaned forward and placed a gnarled hand on Niel's shoulder—"know what I done? I says to meself, 'Joe Calder, the thing fer you to do is to take this here town by the seat o' the pants an' hold right on till they recognizes yer fer what yer worth, an' welcomes yer. Then,' I says, 'ye'll be too busy to be homesick.' An', by Judas, I did! Sure!"

Niel glanced up with a wan smile, and shook his head.

"Thanks, but I'm afraid you don't—"

The expressman straightened and grinned. "Sure I do! Here—wait'll I drag yer trunk in. Be a dollar-fifty, kid."

As Niel reached for his wallet and counted out the money for the trunk, he was again reminded of his dwindling finances. This wouldn't last very long . . . have to get some kind of a job pretty soon.

He was still gazing abstractedly at the contents of his open wallet when Calder entered with the trunk and set it down before him.

"There y'are, son," grunted the expressman, and walked over to take the money from Chetwood. "Thanks. Now, just sign"—he paused, glanced from the receipt book he held to the wallet in Niel's hands—and then squinted around at the trunk he had just carried in. "Sort of a swell place I brung this trunk from, weren't it?"

"Yes," said the boy quietly, "it was."

The expressman looked down at Chetwood again with slightly puzzled eyes. "It ain't none o' my business. But if yer asked me I'd say yer was a darn sight better off right here"

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Musta been mighty high livin' there?"

"Yes," said Niel again, "it was."

The man looked down at Chetwood again with slightly puzzled eyes, and rubbed the back of his head with the stub of a pencil.

"Well, I'm kinda mixed up, an', anyways, it ain't none o' my business. But if yer asked me I'd say yer was a darn sight better off right here." Then, as Niel gave the receipt book back to him, Calder abruptly inquired, "Got a job?"

Niel was a little surprised at the question. Inquisitive old duck, he thought, and yet—

"Why, no," he replied pleasantly. "Guess I'll start hunting one to-morrow, though."

Joe Calder studied the boy for a moment in silence. He seemed to be running something over in his mind, and a little hesitant about saying it.

"Now, I ain't a-sayin' yer cut out fer my kind of work, specially," he finally remarked; "but I own a mighty good express business, only 'bout four blocks away. An' everybody on Amsterdam Avenue knows Joe Calder. Sure!" He paused again. "What I mean is that yer a husky lad, an' I sorta like yer looks. Now, if yer need a job real bad, I can fix yer up over at my—"

Chetwood rose to his feet and stepped over to the window.

"Why, that—that's very decent of you," he mumbled in an embarrassed manner; "only I— Well, you see, I thought I'd look around first—"

"Sure!" broke in the expressman heartily. "Tha's all right. Well, if yer ever over my way, an' nothin' else to do, just drop in. So long, son."

Niel smiled a response over his shoulder, and then gazed out at the darkening street again. Another night to go through, with nothing to do but think, think. . . .

Somehow, though, he felt a little better about things, and as he watched Calder climb into his wagon outside and drive off, Niel's eyes followed him until he turned the corner and disappeared. It was not until a half-hour afterward, while he was eating at a small restaurant down the street, that the thought came to Niel Chetwood that the only person who had spoken a decent word to him since he had left school was—an expressman. He could still feel the friendly pressure of the man's fingers on his shoulder.

Niel paid his check and walked out to the street again. He didn't care particularly where his footsteps led him, except that he knew he didn't want to go back to the dreary silence of his room—not yet. It wasn't so bad in the daytime—out where he could see people—and keep his mind on other things. But at night—wondering where his father was and why he had gone . . . the fellows up at school who used to be his friends . . . fellows he'd known two years, three, four . . . what were they thinking about him? . . . and Connie Dana. . . .

Connie used to say to him: "Goodness! But won't you be the important old thing when you get to Princeton—"

A bulky figure knocked against Niel suddenly, and broke in on his thoughts. "Hey! why'n thunder doncha look where yer goin'?"

Niel did not even glance around. He turned into Broadway and walked on—shivering slightly at being jarred out of his reverie, and conscious that he was feeling cold. But he turned up his overcoat collar and kept on. He wasn't going back—no, not yet.

IT WAS three days later that Niel, returning from an unsuccessful search for a job down-town, got off at the Seventy-ninth Street subway station, and walked over to Amsterdam Avenue. He had come that way before; but not until this afternoon did he recall that Joe Calder's express office was somewhere in this vicinity. And for some reason he had a curious desire to drop in on the expressman—well, just to say hello. After some of his experiences that day he was almost tempted to ask Calder for a job, at that. After all, what difference did it make, anyhow? . . . Lord, what a kick the crowd up at school would get out of it if he did! . . . Slinging trunks! Niel smiled bitterly at the thought.

A few steps farther on he saw a man climb out of the rear end of a wagon. It was almost dark, so that Niel wasn't sure it was Calder until he walked closer.

"Hello," said Niel, a little awkwardly.

The expressman turned around, squinted at him an instant, and then grinned.

"Hello, young feller! Didn't know yer at first. Well, how yer makin' it?"

The boy smiled slightly and shoved his hands into his pockets.

"Oh, all right." (*Continued on page 76*)

You Can Keep A Youthful Figure If You Treat Your Muscles Right

An interview with Milton H. Berry

As reported by Magner White

DISTRIBUTED over your body in an amazing network are approximately six hundred and eighty-two little braces composed of the most remarkable active substance in the world—muscle-fiber. Remove a few of these braces from around your abdomen, your groins and thighs and, no matter how efficient the muscles in your leg might be, you could not walk.

Muscles give you your shape. They give you, in one sense of the word, your personality. There is no more striking thing in the world than the marvelous complexity of your muscular system. The muscles of your body come in all sorts of shapes and sizes, ranging from the sartorius—a long, flat ribbon-like muscle on the front of the thigh which flexes the leg or thigh, rotates the leg outward and makes it possible for you to cross your legs—down to the stapedius muscle in the ear, a tiny little fiber, so small that anatomists were a long time in recognizing its importance.

Muscles are of two main types: voluntary and involuntary. The voluntary muscles are those you can move at will; the involuntary are those not subject to your will or control. By far the greater number of muscles in your body are voluntary.

Few people, unfortunately, realize how many of their muscles are voluntary. When we do nothing to exercise a muscle, it begins to lose its power. Some of my patients, or students, as I prefer to call them, have laughed at me when I asked them to try to move the muscles of the abdomen. They thought such muscles involuntary. Many healthy persons who have lapsed into indolent habits, have the same erroneous idea.

As an example of what can be done by training the voluntary muscles, most of us have seen athletes on the stage who could move the muscles of the back as easily as you or I move the muscles of our hands. And who doesn't remember the little boy in school who could wiggle his ears, and make his scalp squirm?

To a great extent the difference in bodily appearance in people is due to the variations in the conditions under which their voluntary muscles have been developed. From the instant we are born we start developing these muscles. One child will show an aptitude in one direction, another in another direction, and although all of them have started with the same general equipment at birth, within five years a very great difference in contour and appearance is apparent.

No one knows exactly how many muscles there are in the human body, for the simple reason that the number varies with age. The approximate number, as I have said, is six hundred and eighty-two. But no human being of record has ever reached adult life with every one of his muscles developed to the fullest extent. A man with every one of his muscles fully developed would be a veritable superman. And he would also be a strange-looking creature: great, bulbous, cord-like knots all over his body—something like a gorilla!

But, as it works out in real life, there is a wide variation in muscular development. One group of people, engaged in a particular occupation or specific activities, will develop and bring out muscles that in another group, in different lines of work and activity, will be atrophied or underdeveloped almost to the point of nonexistence.

One of Nature's outstanding traits is her efficiency. If a muscle isn't being used, she gets busy diminishing its size, so it will not draw on the system for any more sustenance than its activity entitles it to. She plays no favorites, and she is particularly harsh in her treatment of the muscles of paralytics. Paralysis reduces a muscle to a state of complete inactivity, with the result that the muscle wastes away; then, when the cause of the trouble has finally disappeared, the muscle is in such a condition that it takes hours and hours of patient exercise and *thought*, to bring it back to normal.

THOUGHT, by the way, is very important in the development of your muscles, even if you are a perfectly healthy person and are exercising only to keep up the general tone of your muscular system. Let me describe a commonplace little experiment which will show you the power of thought when concentrated on your muscles:

Hold your hand out before you. Open and shut the fingers. Now that was a simple mechanical action, not fatiguing, and, through years of habit, requiring no vividly conscious effort on your part.

All right! Now close your fist. I take hold of your fingers and try to open them, but you *resist*—consciously and determinedly. You are not going to let me open those fingers. Now I have stopped trying to open your fingers, and you open them yourself. What do you feel? What has happened to your hand?

Did you see the muscles in your forearm tighten? Did you feel the quickening of your pulse, the rush of blood to your hand, the lashing of your nerves as your mind again and again sent the impulse to resist into your fingers—the general summoning of strength for the task of keeping your hand closed?

Your mind—your thought—did all that. Your mind will always do that if you "put it on your muscles" when you exercise. Of course I am not speaking now of the kind of exercise you might get in a football game; but even in that kind of exercise your mind goes through the same process of summoning strength for the series of crises, although it acts a bit subconsciously.

The kind of exercise I mean is the ordinary bending, twisting and turning exercises known as "setting-up" exercises, exercises taken deliberately for that specific purpose. Conscious thought, added to the process of going through the motions, will increase the value of this kind of exercises a hundred per cent.

OUR muscles are wonderfully coördinated. I don't know of any voluntary muscle that operates by itself. Give your wrist a twist, as far as possible: Twenty muscles participated in that movement, the twenty muscles of your forearm.

If a set of your muscles has become weak through inactivity, you can "approach" that set in your exercises and gradually bring them into line by starting first on the muscles that coördinate with them. Let me make that clearer:

Suppose a person is so paralyzed he cannot walk. It's an impossibility to get action into the paralyzed muscles of his legs; but he can first be taught to move the muscles of his abdomen, which coordinate, in the act of standing up, with the muscles of the hip, thigh, and groin. His thought is concentrated on moving the muscles of the abdomen. After a while, he can move a muscle a little farther down, and later, still another muscle, until finally he has extended the conscious control of his muscles to include the ones that have been paralyzed.

The point of interest in this, to a normal person, is that if you will start on any set of your voluntary muscles, you can keep exercising and training yourself through conscious effort until finally you have control of your entire body. You have power, and you know it, and, consequently, a vast improvement in your mental state takes place. You find yourself with a new confidence in your ability. You don't tire so easily, and you get more done in a day.

People ask, is there any difference be-

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

tween the muscles of men and those of women. There is a common belief that men's muscles are coarser in texture than women's.

A half-century ago, when most men worked outdoors, there was a difference in texture—but it was only an occupational difference. Men worked at tasks that demanded and developed big, coarse muscular systems. In these days of women athletic stars, there are many women whose muscles are stronger and of a coarser texture than those of the average business man who spends most of his time in a store or an office and takes but little exercise.

The remarkable endurance that women sometimes show under great strain and fatigue is often commented upon. Women have this trait of endurance principally because of the development throughout their bodies of scores of obscure muscles through constant daily use. They have for example, a great hidden source of energy in the muscles developed in their daily household chores. They walk considerably, lift, and stoop, exercising constantly the muscles that count most in endurance—those of the back, the abdomen, and under the arms and downward across the ribs—in general, the muscles of the torso.

If men would take exercises to develop the same muscles they also would develop a similar reserve source of energy.

THE endurance of youth—we hear much about that too. People past thirty think endurance and strength are inherent in youth. To a certain extent they are, but the real reason young folks are universally stronger than older folks is that their interests keep them more active. Activity is the secret of the endurance of youth. Nature adores activity. She rewards it wherever she finds it. Young people hop, jump, and run, and engage in athletic sports continually. Their minds are constantly driving their muscles into play. The result is muscular reserve and that quality called "pep" which all of us admire so enviously.

But as the young folks grow older and larger there is more weight to be moved when the body is moved. The urge for exercise as a means of enjoyment has passed away; and new interests that do not demand constant, *thorough* exercise have come to replace the old ones. The instinctive something that will make a five-year-old child hop up and down ceaselessly, and apparently without cause, is gone. The muscles which that hopping and jumping developed begin to waste away, until they reach a stage consistent with the exertions incident to the adult's activities.

Children are usually straight and erect. Adolescents begin to get round shoulders and are a trifle stooped. By thirty an insidious warping process has begun. Through occupational habits, a set of muscles on one side of the body gets more exercise than the corresponding set on the other. The strong muscles pull the body in their direction.

Why do old persons generally stoop? It's because the muscles on the sides and front of their torsos are stronger than the muscles on their backs! The back muscles are tired, because they are weaker. It happens, also, that the abdominal muscles have had more exercise in life.

The first thing a baby tries to do, after he begins to get control of himself, is to rise up. He keeps tightening his abdominal muscles and the allied muscles under the arms and down the sides until he finally accomplishes it. Long before the back muscles come into play he has begun to develop those muscles that help him to sit up. The first four or five attempts to sit up usually result in a backward tumble. That's exercise for the back muscles. After a while they are stronger, and he sits up a few minutes longer before he finally falls back again.

He learns to walk, half stooping. His back muscles still aren't in full play. But they are coming rapidly. He uses them in keeping himself erect, in lifting objects and in moving his arms from the shoulders. As they get stronger, his figure—his carriage—is more erect.

He becomes a strapping young fellow, plays football, swims, and goes through a period of several years of rather strenuous exercise. Then he gradually begins to slow down. He is approaching the prime of life, and is coasting on the reserve strength left over from his late teens and twenties.

He has passed his prime. The days of straining and activity, which have so much to do with development of the back muscles, are over. As they become less and less active, the mind withdraws its control and direction. The stronger abdominal muscles begin to pull. Standing erect is an effort. The body finally gives in to the constant strain in front, and the figure becomes bent.

Of course not all old people stoop forward. But trace back the history of those who do not, and often you will find that in youth they were active in pursuits that required constant use of the back muscles.

THE time to get ready for a spry old age is before you are thirty. Watch yourself around twenty-five, particularly. That's the age when many people begin to slow up in their physical activities. They work all day, and are "too tired to do another thing." Well, they may be too tired to exercise the same muscles they have been using all day; but there are other muscles that are aching, not from fatigue, but for want

(*Continued on page 112*)

For over twenty-five years Milton H. Berry, of Hollywood, California, has been studying the muscles of the body. He is not a physician nor a physical culturist. He terms himself a physical reëducator. Nearly seven hundred former cripples, victims of paralysis or withered muscles, have exercised their way back to health under his direction. People go to Mr. Berry for treatment from all over the world, and his waiting list is already filled up for two years ahead

A Home Without Children May Still Be A Home

By Thomas Arkle Clark

Thomas Arkle Clark, Dean of Men at the University of Illinois, though childless himself, has had more intimate contact with children than many fathers. In thirty-five years of teaching, he has enjoyed the confidence of thousands of young people, and he can hardly go into any corner of the world without finding some of the boys and girls who have lived in the Clark home, and who seem as though they were his own. Writing of the relations of young people and their parents, Dean Clark says that if one must be childless there are certain compensations of which one can take advantage; and that only when childlessness is coupled with absolute loneliness is it really to be dreaded. Dean Clark is sixty-five years old. His home is in Urbana, Illinois

FROM the first year we were married, Nancy and I took a great interest in the children we should have. She was the youngest of nine and I the youngest of seven, so that we were both completely sold on the idea of having a good-sized family. In fact, we had them all named and their individual careers planned out and settled, as most parents do, without reference to their individual characteristics or preferences. These children were to accomplish the things in which we had failed. And here we are—youth gone, middle age fast passing, with only the children of our imagination to gather 'round us, like the dream children of Charles Lamb. But there are compensations. I do not say it is better to be without children; but I do say that childless couples need not lead dreary lives.

CIRCUMSTANCES have brought me into personal contact with a great many children of all classes and ages and, because of my particular position, I have, perhaps, met as many boys of high-school and college age as anyone in the world. However, in the eyes of most parents, this does not fit me particularly to understand young people or to appreciate how a parent feels about his child.

I was speaking to a mother not long ago concerning the activities of her son, which had been social rather than intellectual. He was a spoiled child who had been given too much money and too little work, and who had done little thinking for himself. She followed my suggestions with interest and attention. I was making an impression on her until she asked the fatal question:

"Do you have children of your own?"

I shook my head, rather sadly I suppose, for I had very much wanted a boy, though Nancy says I would have spoiled him hopelessly if I had had one. "We have never had any children," I had to confess. She looked at me with a good deal of pity and condescension.

"Then you don't know anything about how difficult it is to bring them up properly, and you can have no conception of how a parent feels."

Possibly. At any rate, I soon saw that, being without children of my own, nothing that I might say would have any impression upon this parent.

It is generally admitted to be little short of a tragedy to be without children. All my married friends with families tell me so, and there are times when I am willing to admit it.

We spent a few days with the Porters last winter. They are about our own age, and have three boys between the ages of ten and twenty-two and a girl of sixteen. The children are all alert, good-tempered, and courteous. There was complete unity and good feeling in the family. The children seemed quite devoid of the selfishness which we so often see in young people, and which very often makes family life so irritating. We came away from our visit feeling that in not having children we had missed something very beautiful and very precious.

I watched Mary Russell not long ago with her three babies about her—or so they seemed to me, though the oldest is five. I could imagine how it would feel to have their soft little arms about my neck, to have their bright curly heads snuggling down against my breast, and their sweet warm lips upon my cheek, and to realize that they were mine—bone of my bone and flesh of my flesh. I knew by the thrill that went through me how much it would add to life not to be childless.

"You have missed a great deal by not having children," a friend said to me recently; but as I realize what sort of household he has, I am more resigned to what I have missed than I might otherwise be, for he and his wife get really very little comfort or pleasure out of their children. Their boy is stupid and lazy. He quit school when he was sixteen, a burden and a worry to both his father and mother. The girl is extravagant, disrespectful, extreme in her dress and vulgar in her manners. If half the things that are said about her are true, we have missed nothing but responsibility and sorrow and trouble in not having children like these.

CHILDREN are not always a comfort; sometimes, when I look around and see what trouble and worry and sacrifice they entail upon their parents I am more resigned to my fate. They may act as a disciplinary agent to their parents; they may teach their elders economy and patience and unselfishness and self-control; but these virtues may be acquired by other and less strenuous means. One does not have to be a parent to learn discipline; the proper sort of wife is an ideal disciplinary agent.

The Gardiners have been more than ordinarily happy in their marriage relations; but they have had no children, and this fact has taken away from them

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

much of the satisfaction of life. But there have been compensations in this loss which the Gardiners do not fully appreciate. He is a student who loves quiet and isolation; he has earned for himself a nation-wide reputation as a writer, which he would have found it difficult to attain if there had been a house full of children, as he and his wife had hoped. Children would have made the house a bedlam at times, and Gardiner would have been driven into a nervous headache when he was trying to write. Children would have made it almost impossible for his wife to minister to his comfort as, without them, she has been able to do. And I doubt that it would have been possible for him to have done the really great work which he has done, and from which he has derived great pleasure and honor, if he had been called upon to devote himself to a young family. Being childless, he has found happiness in another field of work.

"WHO is going to look after you when you are old and cannot look after yourself?" I am asked by anxious friends who see my hair turning gray and my complete dependence upon spectacles.

A neighbor of mine, eighty-three and childless, was building a considerable addition to his already roomy house.

"Why are you building now, Judge?" I asked him as together we were looking over the addition.

"Well," he replied, "Mrs. Cunningham and I have been talking things over, and we realized that when we get old we shall have to have someone take care of us; so I thought I might better begin early to make preparations."

Fortunately, the judge never grew old; he was still a boy when he died at eighty-seven, and he never needed anyone to look after him. Perhaps, like the judge, I shall never need anyone to look after me.

Youth is not always considerate of old age; it has its own serious problems to solve, and even when it gives its attention to old age it not infrequently does it grudgingly, and with little real kindness of heart. Even if one has children he cannot take it for granted that his old age will be a sheltered one.

An acquaintance of mine, at seventy-five, has just been brought back from California to the village of his birth, to be laid beside his wife. His last years were weak and sickly ones, but they were not spent with his children; no one of them, in fact, was with him when he died.

His daughter was married and had small children of her own. Her house was barely adequate for her own household; she could hardly, within reason, be expected to saddle herself with the additional burden of a sickly and irritable old man. The oldest son was engaged in an engineering project in the far Northwest. Besides, his wife wasn't strong, and would have had to go to a sanitarium herself if she had been called upon to minister to her ailing father-in-law. The youngest boy was a traveling salesman and had no settled home, so that let him out. There was obviously nothing for the old gentleman to do but to look after himself. As he had never been used to being waited upon, and as he had a comfortable income, which made it possible for him to pay for what he needed, I have no doubt he was fairly contented with his way of living. For the last few months of his life a cousin ministered to his wants, and finally closed his eyes when the end came. The children got what money he had left and sighed that "poor Father" had gone.

THERE is, of course, not infrequently, devotion in children so self-sacrificing and so unselfish as to make them forget that they have their own lives to live. If I had a child, I hope I should not be willing that he should give up his own home life in order that he should devote himself to me. I have seen a good many such cases. There is one before me now as I write this—an old woman, gray, bent, not so strong as she once was, eighty years old perhaps, and a younger woman, tall, strong, wholesome-looking, and infinitely tender to the older woman. They are staying at the same hotel where we are spending our vacation. They are mother and daughter, without a doubt, and there is something about them that suggests that they are quite alone in the world.

I have seldom seen such devotion as the daughter shows. During the sunny mornings she walks with the older woman, and points out to her all the varied beauties of the surrounding scenery. In the evening, when a pleasant coolness comes into the big lounging-room where we are all sitting, she tucks her into an easy chair and seats her near the blazing logs, and shows her the most constant and delicate attentions.

It is not altogether an easy task which the younger woman has set for herself. Old age is beautiful, but it is not always docile. The (*Continued on page 100*)

If You Ask Me:

The shortest distance between two points is not always the surest

FROM a hill above the sea, in northern Syria, I watched a native fisherman walking along the sands from his boat to his hut. He moved at a good pace; but he took what looked to me like an absurdly circuitous route, which made him cover twice as much space as seemed necessary.

"That fellow doesn't seem to realize that a straight line is the shortest distance between two points," I commented to my host, who also was a native of the region.

"Other people realized it, some years ago," dryly answered the Syrian, "and they did not live to repeat their experiments in applying geometry to real life. That strip of shore line is honeycombed with quicksand patches. He is skirting them."

Memory of the incident has come back to me fifty times in the past few years; and most keenly when I hear this modern talk of "self-expression" and of "the junking of silly old conventions," and the modernizing of morals and of behavior.

To an ignorant onlooker, some of the rules for morals and for conventions and the like must appear as ridiculous as that Syrian fisherman's circuitous walk appeared to me. But there is one thing to remember before sneering at the good and safe old ways:

Every rule for morals and for decent conduct and for courtesy was made in an effort to avoid a pitfall into which some preceding wanderer had stumbled. The wise man who came after him skirted the pitfall; and blazed thus a safe bit of path for those who were to follow.

In time, thanks to these wise folk and to the bad luck of pitfall-ignorers, the whole road lay safe and charted. True, it was not always the shortest distance between two points. But, invariably, the past had shown it to be the *surest*.

Yes, it is a smart-seeming thing to laugh at morals and conventions and to go your unguided way. But don't forget you aren't the first nor the millionth to do it. You don't see the others who tried it before you. The Syrian fisherman didn't see the folk who had been sucked into those quicksands. But they were there, none the less.

Tales Of The Wayward Sea

By J. E. Macrae

PHOTOGRAPH BY EDWIN LEVICK

Masthead men aloft on a fishing schooner

GALES off Hatteras, typhoons in the China Sea, West Indian hurricanes, pamperos off the River Platte, dull, deadening fogs among the ice floes off the Straits of Belle Isle—these things I have seen. And whether the sea be lashed by winds that shriek like ten thousand demons let loose to destroy, or croons like a happy mother as it laps on a coral beach, it has a charm, and a fascination, and a mystery which will be with me as long as I live.

The sea is a cruel and exacting mistress. Her hardships and deprivations are to all who follow her, and her rewards are only to the few.

I went to sea for the same reason that a duck takes to the water. My earliest recollections are of ships and sailormen, and hearing about how my father came home from the West Coast of Africa in a leaky ninety-ton schooner, the "Helen Macgregor," that had to be pumped all the way from Old Calabar, and just managed to remain afloat long enough to reach the Tail of the Bank. I don't remember the time when I didn't know the difference between a ship and a bark, and all the subtle variety of rigging that denoted a brigantine, a schooner, and a ketch. I could always find the clew lines and bunt lines, the braces, topping lifts, and halyards; and the first time I can remember being disciplined was for trying to build a boat on the Sabbath Day, in Scotland, where I lived as a boy.

Without doubt, I would have been apprenticed and become a brass bounder and found my way to the quarter deck or the bridge; but I was always near-sighted, and so that road was automatically barred to me.

However, when I left school, I went into a shipbuilding yard, where I soon worked my way into the personal office of Sir William Pearce.

Now, Sir William, in addition to being the leading shipbuilder of his time, was also a ship owner and a director of many shipping enterprises. He had a fleet of steamers on the China Coast, with strange names, and eyes painted on the bows, like junks. He put on steamers that opened up the transpacific trade for the Canadian Pacific Railway.

IT WAS to one of these I got my appointment as purser when I was twenty-one, and crossed the Atlantic and Canada to join her at Vancouver. After two years on the North Pacific, where I got my sea legs and weathered my first typhoon, I was sent back to England and came out in the "Empress of India," one of the most beautiful steamers ever built. Her first voyage was to Hongkong by way of the Suez Canal and Red Sea, and that completed my first trip 'round the world.

After four years between Vancouver, Japan, and Hongkong, I left her to help develop the Northern Pacific Railway Company's Pacific service, this time on shore—first at Hongkong and then at Tacoma. Here I took out my citizenship, and so began my service under the Stars and Stripes, which afterward carried me to many parts of the world.

The thousand miles between Tacoma and Skagway, Alaska, became as familiar to me as my own street, and at one time or another I got to the head of every sound and inlet in a yacht, a tug, or a cargo boat.

Later I was a purser again, in the steamers of the U. S. Steel Corporation, and made many voyages to South America and the Caribbean, including one which took me down through Magellan Straits (I've taken my hat off to Magellan ever since) and back by the Panama Canal.

I BELIEVE one is safer at sea in a good ship than on the streets of New York amidst the perils of motor traffic. I have traveled about three quarters of a million miles by sea, and never got my feet wet. Still, there is no absolute safety at sea any more than on land. Any ship can sink, no matter how large or well built. The "Titanic" is the classic example of that. On the other hand, there is the old "Victoria," still making her regular voyages between Seattle and Nome. Built in 1870 as the Cunard liner "Parthia," she ran across the Atlantic till 1885. Then she made a voyage to Egypt and one to Australia; and then for more than fifteen years, she was a transpacific liner and a troopship to the Philippines during the Spanish-American War. For more than twenty years she has been running to Nome.

She is now fifty-six years old—possibly the oldest steamer afloat. She has carried many thousands in safety during these years, and to the best of my knowledge has never lost a life. How many ships has she seen come and go!

Three years ago I suddenly became blind, and found myself alone, my former means of livelihood no longer possible. Then it seemed a providence to me, and to my friends, that I had had sufficient sea service under the American flag to qualify me for Sailors' Snug Harbor. There for a time I remained, until circumstances brought me back to the life of competition again. (The Sailors' Snug Harbor on Staten Island, New York, is a home for seamen.)

When one can get the men in Snug Harbor to talk, there is unfolded a wealth of stories of adventure and high enterprise, of hunts for lost treasure and fishing for pearls, of love, and life, and death.

I have heard stories of the winter fishing that make me wonder how it was possible to get men to undergo such terrible hardships; of heaving decks slippery with ice, rigging thick with snow and frozen hard, so it would not render through the blocks; of men taking fifteen-

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

PHOTOGRAPH BY EDWIN LEVICK

minute tricks at the wheel, with another man standing by in the shelter of the companionway to watch that the steersman's face did not freeze.

There seems to be no relation whatever between the hardships endured and the compensation received. Money would not tempt men to live a life so hard; so wanting in all the ordinary, everyday comforts of our times; so apart from all that we value most in wife or child or home; so barren in material prosperity.

WHY do men do it? Well, it's a man's life. It's a free life in its way, and it's a life lived in contact with the great forces of nature. It's a hard life, but it's a clean life; and the wide expanses of ocean, the untrammeled breezes, the sunrises and sunsets, the sense of adventure, the eternal vigilance, which is the price of life, and the constant struggle against great odds—all these attract a certain kind of adventurous soul to whom the life is the thing, the reward not to be considered.

The loneliest and most forlorn sight in the world is a ship's boat seen all by itself on an empty sea. It is not only that it looks so small and helpless, but that the nearest land may be hundreds of miles away.

Once when we were crossing the Pacific in the "Abyssinia" a boat was sighted by the officer on the bridge just before noon. In a few minutes everybody on board knew there was a boat ahead on the port bow, and the clatter of fire shovels coming up through the fiddley told that the engines were being opened out to reach her as soo as possible. It was a fine summer day and the steamer swung a bit to bring the boat dead ahead. We could feel the throbbing of the engines racing at full speed.

Captain Smith, the veteran sailor who guides visitors over The Sailors' Snug Harbor on Staten Island, New York. Though seventy-seven years old, he puts in a full day and works a full year. The Sailors' Snug Harbor was founded in 1801 by Captain Robert Randall, who gave a farm for its maintenance. This farm is now one of the most valuable pieces of real estate in New York City. (At top of page) The mighty lift and heave of the open sea; an unusual photograph of a scene familiar to all sailormen

SOON she was clearly visible from the deck, a little dark speck with a mast from which the sail had been lowered. She seemed to be waiting for us; soon we could see there were men in the boat, and then we could see there were three of them.

As we drew nearer we could see them moving about, one in the middle standing up. It didn't look like a ship's boat, but what else could it be? We couldn't make out what it was at all.

Everybody was on deck; everybody was excited at the prospect of a rescue. The engine-room bells clanged, the engines stopped, and the ship slid up within a few yards of the boat. The men in it were dressed in jerseys and sea boots, the boat was a brown-painted dory.

Our captain leaned over the bridge rail, a little annoyed that they made no move to pull their boat alongside. "Do you want any help?" he hailed them.

"No! Can't you see we're sealin'?"

The engine-room bells clanged again;

the crowd on deck laughed, and we swung away on our course for America. Half an hour later the topmasts of a schooner hove up over the rim of the horizon, and soon we saw her jogging under her four lower sails. She was at least fifteen miles from her boat, and out of sight; and it did seem to us steamship sailors that these men were taking a big chance. Everyone to his own trade, however. No doubt they knew what they were doing.

THERE is a man in Snug Harbor who once shipped on a whaler out of San Francisco. They wintered at Herschel Island after the first season, and that was not so bad, he said. But they got caught by the ice to the eastward of Point Barrow at the end of the second season, and had to put in another winter at Herschel Island.

The end of the third season found them back there again, and by this time he was getting desperate. He got a letter through the Mounted Police post at Herschel Island telling him his youngest child had died, and that his wife and other daughter had been very ill.

He left the ship, hauling a little sled with a scanty stock of food, and mushed to Fort Macpherson on the Mackenzie River. From there he marched with a Mounted Police Patrol to Dawson on the Yukon, and thence over the winter trail to Skagway—more than twelve hundred miles.

I never got a coherent story of that long tramp through the arctic cold and darkness, but it surely would have been worth hearing if he had been able to tell it. From Skagway to Seattle, and Seattle to San Francisco was easy. He arrived in San Francisco two days after the destruction of the city by earthquake and fire in 1906. He never found his wife and daughter. He shipped again on a whaler into the Arctic.

He is a gentle old man with little to say; but he goes down every night to make sure the lightship on the lake has its lights burning.

A recent picture that carries much of the romance of the old sea; the steersman of a sailing vessel working through a fog

IT TOOK me a long time to get a story out of Cap'n Bill, a fellow sojourner of mine at the Harbor: His name was William Scott and he had a British master's certificate before he came to this country and worked up to his American master's license. Bill has passed away now, and so I'm glad he told me the story. He was an old man when I knew him, close to eighty—but hale and hearty.

I used to call him the stormy petrel, for, unlike most seamen, he seemed to like to go out and walk in the wind and rain. He had his sight, and used to take me walking, when he found I liked to feel the rain in my face. I think we began to be friends from the day I told him a story about "Daddy" Nash of the "Alcibiades," who was well known in China and Japan in my young days. He had been with Captain Nash and knew my story to be true, and from that day we were firm friends.

It was a wet and blustery afternoon when he found me in the smoking-room in the long corridor. The wind blew in with a taste of the North Atlantic on a December day. "Come on," he cried. "We'll go and visit the farm and see the cows and the pigs and the chickens." It was the kind of day that sets the blood tingling, and we were swinging along together when he suddenly stopped and hit the ground with the point of his stick and snuffed the air, as if sniffing for a familiar odor. "Strange," he cried. "Strange! Do you notice that smell?"

I had to confess that I did not—nothing but a whiff from the chemical works at Bayonne, and the nearer, warm, pleasant smell from the cow barns.

"Man, it's strange how a smell brings things back to your mind! I wasn't thinking about a thing but the Harbor here and the farm—when that smell blew across my nose, and I saw the Crozets again. Did you ever see the Crozets? No! Of course you didn't! You always went to sea in those steam-heated hotels of yours, sticking to a track like a railroad train."

I protested, and said I knew about the Crozets, down on the sailing-ship (*Continued on page 157*)

You Can't Live Your Own Life!

By Edgar A. Guest

I DON'T care what people think," said a high-strung, temperamental young friend of mine the other day, "I've got my own life to live."

Foolish boy! He didn't realize that he was talking nonsense. We *can't* live our own lives in the selfish sense he meant, for the simple reason that they aren't ours to live. My life belongs to my wife, to Bud and Janet, to my friends. Yours belongs to another group of persons.

Our slightest act affects those who love us and believe in us. There isn't a life on earth so humble, or seemingly so insignificant, that it doesn't touch some other life. Indeed, there are few individuals who aren't the most important persons in the world to somebody.

Years ago, when I was a police reporter on the Detroit "Free Press," I was attracted early one morning by a crowd gathering near a street-corner patrol box. I stepped across the street to see what was happening. I found a very much intoxicated and belligerent young man in the custody of an officer.

"Just a common drunk," said one of the bystanders as I elbowed my way into the throng.

The boy was putting up a fight against arrest. His clothing was torn and his face was scratched and streaked with dirt. Suddenly the belligerency died out of him and he began to cry.

"Please let me go home, Officer," he pleaded like a child. "I don't want to disgrace my family. This will kill my mother."

"Yeah," growled the officer; "but the trouble with you guys is you don't think about your folks soon enough."

Somebody in the crowd laughed. At this point, a patrol wagon arrived and the boy was taken to the lock-up.

It was only a trivial incident in the life of a big city, but I have never forgotten it. Probably I never shall. I have heard that cry, "This will kill my mother," countless times since. It is often the first sentence to fall from the lips of young offenders who have been caught.

But young people are not the only ones who do their thinking too late.

"I could stand the punishment myself," said a once prominent citizen of a Mid-Western town who had defaulted and had been brought to justice, "if I didn't have to think of what my wife and children must suffer while I am in prison. I wish I had died before I stole that money."

He had remembered too tardily that his life belonged to others; but he was right when he suggested that his death would have been easier for his loved ones to bear than the disgrace he brought upon them. There are griefs more bitter, and hurts more cruel, than those inflicted by death. There are sore spots which never cease to be sensitive; wounds of the spirit which never heal.

Sometimes we get downhearted and allow ourselves to feel that we do not count for much. In this thought lies tragedy. The older I grow, the more firmly convinced I become of the tremendous importance of the individual.

Nature's interest is not in the individual but in the species, say the scientists. And in the natural world that may be true. Certainly, nature seems to kill off the weaklings that the sturdy may thrive.

Instinct prompts animals to fight for food and for their lives, but I do not believe that they know *why* they fight. Cats and lions have no desire to improve themselves or to give happiness to others. Bugs and birds and fishes have no high dreams and aspirations. They are not sensitive to shame and sorrow; memory does not perpetuate their heartaches. By a single selfish or ignoble act no beast of the field can bring disgrace and humiliation to his fellows.

With human beings it is different. Every baby comes into the world laden with a cargo far more precious than silver or gold. In its tiny, helpless fingers lie the hopes and dreams and happiness of many others. Its birth makes father and mother of husband and wife. The parents of husband and wife become grandfather and grandmother. Down the line are uncles and aunts and cousins and old-time friends and neighbors, whose lives are touched and changed by the arrival of this new life.

It is important to all these people that the baby shall grow into healthy, happy childhood, and later make of its life something in which they can all take pride. The infant does not know this, of course, nor does the child at first. Often the adult does not realize it until too late. But the truth remains that each of us is a tremendously high-powered instrument of joy or sorrow to others.

I TRIED to give this thought to a high-school graduating class last June. There were a hundred and thirty boys and girls on the platform and the auditorium was filled with admiring parents and friends. The scene is a familiar one, but it always takes hold of me. On this particular morning, my throat seemed to be somewhat lumpier than usual. I fancied that I knew what was passing through the minds of all those fathers and mothers out there. I could see myself sitting some day in such a throng, and my own boy a member of such a class. I wondered just what these boys and girls behind me were thinking of. By the time my name was called, all that I had *planned* to say had left me.

"Boys and girls," I began impetuously, "you are looking into the faces of your fathers, mothers, and friends. To-day their faces are bright and smiling, because they are proud of you and of your achievement. You can see for yourselves how happy you have made them. This is a great day for you; but it is a greater day for them, because it marks the fulfillment of one of their dreams for you. Presently, when you receive your diplomas, you will hear your dear ones cheer loudly, and you will see them exult.

"What a wonderful thing it is to have the power to make so many people happy! But, oh, what a tremendous responsibility such power carries with it! For if you break faith with them, if for one minute you forget that what you are and do is important to them, if for one careless, selfish moment you slip into shame and disgrace, the lives of all these happy people will be saddened. Remember this scene as long as you live. It will help to keep you faithful to the trust that rests in you."

The other day at my club, a friend who sat with me at luncheon called across the room to another friend, "Your son dropped in to see me this morning. What a fine boy he is!"

What a pity that youth could not see his father's face light up with pride and satisfaction. In that one glance, the boy would have realized how much hinges upon him. Pride in his son is the greatest happiness that can come to a man. And the lad who determines to give his father that joy will achieve much for himself.

DRUNK though he was, that boy at the patrol box realized that he was important to somebody. Up to the moment of his arrest, his conduct had seemed to him his own private affair. Whose business was it whether or not he got drunk? He had his own life to live, and he would live it to please himself. But when he was brought up short by the hand of the law on his shoulder, his imagination showed him his mother's face and the truth—too late.

I am going to try to help my boy and girl use their imagination early in the game of life. I shall teach them to ask themselves to-day and every day, "Is this a wise thing to do, or a foolish one? Do men prosper and grow in the esteem of their neighbors this way? Are women who conduct themselves thus and so respected and admired? Is this the road to a happy, comfortable, friendly life, or does it lead to scorn and degradation?"

I believe it is one of the chief duties of parents to help their children use their imaginations. The other day, I heard a fine story of a father who understands his job. This man is a house painter by trade, untutored in books, but very wise nevertheless. He had put his son through high school, and on the evening the lad came home with his diploma the father called him into his bedroom.

"My boy," he said, "the time has come for me to have a talk with you. To-morrow you are going out to look for work, and from then on you will be living by your own efforts. I have done everything I can for you. Now, this is what I want you to know: There are just two jobs in the world, and you must choose between them.

"At one of those jobs you will have to work eight hours a day, for six days a week. You will receive a man's pay, and you will be free (*Continued on page 166*)

The Boy And The Wind

The story of a boy who set out to follow the long, long thoughts of youth

By Edmund Ware

ILLUSTRATED BY COURTNEY ALLEN

NOBODY knew the boy . . . nobody at all.

He sat on a pipe-rail fence in front of a store in a shadeless Nebraska town. Dust and sand whirled about him in the strong wind. The wind, he thought, did not fall from gust to friendly breeze the way it did around his own home. In Nebraska the wind just seemed to blow all the time and send the sand biting at you.

He looked out into the street. A man went riding by. That was one of the things he wanted to see and to do. He wanted to live in a town where people rode around on horseback just as if it were nothing unusual. That was one reason why he had run away from home. Other reasons were that he didn't like school. He couldn't stand being ordered around, couldn't stand moving and stopping at the command of bells which sounded arrogantly down long corridors. He wanted to see sights, to go places, and to be independent.

"I've got the wanderlust," he thought one day. "Wanderlust, wanderlust, wanderlust." He repeated the word to himself again and again, until it sent its pictures dancing through his mind. Sometimes when he was solemn and stern the picture was of Sir Galahad mounted, in full armor, looking far away toward some purple mountains. But generally the picture embraced a hazy land of cactus and sagebrush, and great wastes where men rode horses—where they rode and rode and rode.

One morning in October, without telling anyone and without making many plans, the Boy boarded a Chicago-bound train at his home town in Massachusetts. It was raining and the smoke of the trains hung low along the tracks. He heard the conductor shout, "'Bo-o-o-o-rd!"

From the car window he looked down and saw an old lady hunched under her umbrella. She was walking slowly and carefully, her eyes intent upon the ground. He didn't know who she was, but he had seen her frequently, so frequently that she seemed a distinct part of his life. He thought, "Well, p'raps I won't ever see the old lady any more now. I guess she's a pretty nice old lady, too."

Through the upper end of town the train gathered headway. The Boy noticed factories with tall, familiar stacks; a pond, gray and brooding under the damp sky. He saw streets where he had tramped with friends. Very, very vaguely he knew that "he had left too many fragments of his spirit in those streets . . . that he could not withdraw from them without a burden and an ache."

Five days, a hundred towns, a million people who did not speak. High land, low land, flat land. Trees, fields, and plains. Five days of mighty change.

And now, in a little Nebraska town, the Boy sat watching a smaller, more compact section of life. He moved slightly, frowning at the dust which came in thick puffs, making him squint his eyes. A team of horses was approaching, their hoofs kicking up a thin brown spray of sand. The horses were straining under a load of wheat. On the driver's seat of the long box wagon sat a man who whistled merrily. As he passed he looked down at the Boy and winked.

The Boy stared. "He prob'ly thinks I'm just a kid. Well, I'll bet I've traveled a lot more than he has."

The load of wheat groaned its way on toward a tall grain elevator down the street near the railroad tracks.

JUST across the street stood the post office. As the Boy looked a woman came out and behind her the door swung slowly to. In her hand was a letter. She tore a piece from the envelope and let it sail from her in the wind. Unfolding the letter, she walked slowly away, reading as she walked.

"I guess p'raps I ought to write a letter," thought the Boy. "It isn't quite fair for me not to let them know I'm all right. They might be worrying about me. They might even think I was dead or something." He looked again at the post-office door. "I guess I'll just write them a little note." He stood up, stretched his arms and legs, and went across the street, brushing at his wrinkled clothes.

He wrote:

DEAR MOTHER and FATHER: I couldn't stand school any longer. Of course you'll think I'm crazy and ungrateful to you, but I'm not. I don't know when I'll be home—probably in a few years. But don't worry, and don't chase me, or try to make me come home. I didn't pass my exam in algebra, and that's another reason for leaving. I'm all right here and you needn't worry about me. I'm really sorry I'm so unworthy of you. I'm in Black Springs, Nebraska. I went through a town named Broken Bow. I like the names of the towns out here. Love to you both.

Dropping the letter through a slit, he turned slowly and stepped into the street. He noticed the team of horses standing in front of the general store. "That man must be inside," he thought, and drifted toward the store. As he approached, the man came down the wooden steps, shouting some cheerful banter to the storekeeper. He dumped an armful of packages under the wagon seat, placed his foot on the hub of the near wheel, and gathered up the lines, which were looped over the brake lever. He was about to climb up when he saw the Boy looking at him.

"Hullo there, son," he said, smiling.

"Hullo," said the Boy. It was the first word he had spoken in days, and the sound of his own voice startled him.

"What's your name, son?" asked the man.

The Boy told him, then asked, "Where are you going now?"

"Why, home."

"Have you got a ranch around here—a cattle ranch?"

"Well, some cattle, some hogs, some wheat, some corn and sorghum. Why?"

"Do you need anyone to work for you? I want a job. I'm nearly out of money."

"How old are you?"

"I'm almost fifteen."

"Where do you live, son?"

"Oh, around. I've just come from Massachusetts, just now." The Boy moved his arm in a casual gesture.

"Massachusetts!" cried the man. "Great heavens, boy! You're a powerful long ways from home, ain't you?"

"Oh, not so awfully far, two thousand miles or so."

"Two thousand miles! You're an Easterner, then, ain't you?"

"Well, yes, I guess I am; but I like the West better. I'm going to live out here. What's your name?"

"Hatt; Bill Hatt."

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"Oh. What's your brand?"

"Lazy H. Cattle left ribs, horses left hip."

"Lazy H, huh? That means the H is lying down on its side, doesn't it?"

"Yuh."

"Well, Mr. Hatt, do you think you could use me? I'm a pretty good worker."

The rancher regarded him interestedly. "Well," he said, "s'pose you climb up, and we'll drive along out to the farm. Then we'll see."

Bill swung up onto the seat, which teetered under his weight, and the Boy climbed up beside him. "C'mon, fellers!" Bill cried to his team. "Git a wiggle on you!"

The empty wagon began to rumble.

"I'm on my way to a ranch," thought the Boy. "The Lazy H—and I'm going to ride and ride and ride. . . ."

NIGHT had come. Bill Hatt whistled once, and the wagon stopped, so that the Boy could no longer hear the tinkle of trace chains or the creak of harness. Everything was quiet except the wind. The Boy wondered if the wind would ever be still. He looked all about him in the gloom, trying to see things, then up at the stars. He seemed not to be anything or anybody when he looked at them—just two eyes feeling and staring. He wondered if other people felt that way—his mother and his father? He guessed they did. They prob'ly were looking up at the same stars.

"Come on, young feller, let's unhook." Bill Hatt had climbed down from the wagon. A clank and a rattle came from where he fumbled at the doubletree.

"Oh, sure!" said the Boy, and he too climbed down. He didn't know much about unharnessing a team, but he tried to see what Bill was doing, and to do the same on his side. Bill, watching, chuckled under his breath.

The Boy followed Bill toward the house, where shone a yellow, friendly light. As he crossed the threshold behind Bill he turned for just a moment to search the darkness. He saw a dim silhouette where the rim of the table-land stretched brokenly across the sky. He saw the pale stars, untroubled by the wind, or by anything that he could guess. He smelled the cold, clean air, and heard in the distance the sound of a coyote—a wail of great hunger and loneliness.

Bill called to him and he stepped quickly inside, shutting out the night and its thoughts. Everyone in the lighted kitchen was looking at him. A very old woman with thin gray hair and spectacles dropped some sewing to her lap as he entered. She peered at him with eyes so old and tired that he thought they had probably looked at a million scenes. A younger woman sat in a chair at the other side of the table. In her lap was a huge basket of washed socks. She had been fishing among them, but her hands were now motionless beneath them.

"That's my mother," said Bill, gesturing toward the old woman. "And yonder's my wife, Miz' Hatt."

"I'm glad to meet you," mumbled the Boy, his fingers twitching nervously. "It was pretty nice of Mr. Hatt to give me a job."

The old woman dumped her sewing onto the table and walked crookedly to the stove. She moved a big iron kettle over the fire. "You'll want tea," said the old woman, without turning toward them. "You'll want tea," she repeated, as if to make herself sure that she had said it, and that people knew what she was about.

"This boy's from the East," said Bill to his wife. She and Bill looked at him curiously. "He's going to stay here a spell with us," went on Bill. "He's going to work for us a spell."

"The up-stairs room's ready," said Mrs. Hatt, speaking to Bill.

"Well, thank you very much," said the Boy. "It's just like home to have—to have everything—"

"Oh," said Mrs. Hatt, "that room's always ready."

The old woman removed a stove lid and stuffed in some corncobs. The light from the fire shone on her face, making her look old and terribly wrinkled, like a witch.

The Boy sat down in a chair, looking from corner to corner of the room. He noticed the corncob fuel, a leather quirt hanging on the wall beneath an enormous calendar displaying some farm machinery; a long rifle hanging on pegs above the door; a wide felt hat, and a pair of goat-hair chaps thrown in a corner. He heard outside the sounds of cattle, a windmill creaking and whining, and the wind besieging the hills beyond.

That night the Boy slept for the first time on a corn-husk mattress. The husks rustled and creaked under his weight, even when he lay perfectly still. He tried to lie so still that they wouldn't creak; but he couldn't make them quiet. He was alone, all alone, in a room heavy with darkness. He was too tired to think, his mind exhausted with the march of new impressions. . . .

It seemed he had hardly been asleep when he felt someone shaking him. "Come on! Time for breakfast," he heard Bill's voice repeating.

HE JUMPED up, shivering in the chill of morning. He wondered if, after all, he really had a job on a ranch, if he was going to punch cattle, if he was going to ride those dusty trails that criss-crossed his imagination. As the heaviness of sleep left him, he grew happier and happier at the prospect. He wondered if Bill would let him wear those goat-hair chaps he had seen in a corner, and the broad hat. He went down to breakfast; but he was whirring with excitement, so that he ate little.

Bill finally licked his lips, piled his dishes in a neat stack, and pushed back his chair. "Come on," he said, and did not seem to see the women-folk at all as he strode toward the door.

Outside the Boy looked ravenously about him—at the windmill, the fences and sheds, at the color of land and sky. "What do you want me to do to-day?" he asked eagerly. "I can ride pretty well. I've done it a little before. I think I can catch on to it all right."

"Well, you needn't worry, anyways," said Bill. "You won't have to ride. The corn's cut and bundled up on the table-land, and we're going to shock corn, son."

"Oh."

They climbed the yellow hill back of the house, the Boy striding silently beside the man. When they came to the rim of the table-land the Boy looked down and saw the house, the windmill, and the enclosure. Beyond the outbuildings grazed three or four cows.

"Are those your cattle?" he asked, pointing.

"Sure are," answered Bill.

"Is that all? Haven't you got any more than that?"

"Yes, a few up here on the table. Five cows and a heifer."

"Oh—I don't suppose you need to hire a cow-puncher to look after them, do you?"

Bill laughed. "Cow-puncher! I should say not, son. Them cattle's all under fence, anyways."

At length they came to the edge of a great field, where bundles of cornstalks lay in rows as far as the Boy could see. To him the scene was like that of a battlefield, and all the bundles lay like the bodies of dead men.

"Well, here we are," said Bill. He took off his coat, laying it very carefully on the ground near a twisted fence post.

They worked down the field, taking three rows at a time, shocking the bundles, tying each completed shock with a thin stalk at the top.

The rows seemed dismal, regular, and endless. The Boy had never known of anything so endless and so regular. And all the rows were exactly alike, each shock, each bundle, and each stalk identical.

AT NOON they sat behind a corn shock and drank from a bottle of water, and ate some sandwiches and pie which Bill's wife had prepared. When they had finished the meal, Bill lay down on his back and put his hat over his face. The Boy sat and watched him, wondering if it were possible for Bill to know what he was thinking, or to know that he was looking at him. It angered the Boy a little to feel that Bill was so contented.

In the afternoon they continued up and down, up and down, up and down the rows. By sundown the Boy looked out over a wind-rustled regiment of corn shocks and saw behind them the orange sky.

"Let's call it a day," said Bill. "You tired?"

"No; I'm not very tired. I'm not tired at all."

Bill picked up his coat and they scuffed back over the way they had come, through the cold dusk. The Boy's feet felt heavy and clumsy; his face and mouth were relaxed with fatigue; his body seemed to be one great tired ache.

"Forenoon, afternoon, and night". . . a week passed. Each day they shocked corn in endless regular rows, or else they dug potatoes from rows as endless and as regular. Always the wind attacked, from daylight to daylight, to daylight. . . .

The boy thought that it was going to be forever and forever that he would work among the rows and shocks, among the battlefields of fallen corn. But one day Bill said, "We're going to town, come noon, to get some flour and some beans."

The rattle of trace chains; the plodding of heavy hoofs through sand; a small boy and a big man on a high seat; the long, long road to town; Bill, whistling through his teeth, interrupting himself to grunt at the horses, whistling on from where he had left off. Town at last.

At the post office the Boy found a letter waiting for him, and he knew by the

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

writing it was from his father. He did not want Bill to know that a hurt was in his throat, or that his hands trembled. "I wonder who could be writing me," he said. The pounding of his heart sounded in his ears, and suddenly, as he began to open the long envelope, his thoughts flamed with fragments of favorite scenes and special places. There was a line in the letter. . . . "Anyway, I think Mother and I understand why you ran away, because there have been many times when we felt that way, too. . . ."

For the past few days home had seemed shadowy and remote; but the letter, the letter made it come terribly, wonderfully close, so that he could see it and feel it reaching out to him; but he could not touch it.

THE Boy was quiet as the wagon rumbled slowly and stolidly back to the ranch. Beside him on the seat sat Bill, droning a ragged tune. He wished Bill would stop humming. It seemed to tear his thoughts away from scenes he yearned to dwell upon. There was his special attic room at home where he kept all his things. It was just under the roof and smelled cleanly of cedar shingles. The big yard where now they would all be burning grass; the dying birch leaves on the uplands; his father coming up the street popping a newspaper against his leg, his Mother's voice asking them not to leave the supper table until after she had folded her napkin . . . that was the signal.

From every point in the past flocked the scattered fragments. They made him wonderfully happy. He was at home. He was talking about his adventures in the West. He was smiling and laughing with friends.

Then, without warning, it was all gone—everything. He heard the wagon's groaning, Bill's humming. And the wind! Oh, the wind! His fingers twisted down over the thin iron arm of the seat. He was hundreds and hundreds and hundreds of miles away, in a flat country without elm trees.

He had come here to ride, to ride to the swing of a galloping horse, to ride to the rhythm of furious feet, to smell the smoke of branding fires on a great ranch, to feel the dip and surge of adventure, and to sing songs at night with bronzed men around a fire.

Instead, he had shocked corn, drilled winter wheat, and walked in the dirt of harvest fields. (*Continued on page 103*)

It was hard, he thought, to be like a knight when your horse joggled up and down so much. A little panic flashed into his mind, panic at the night, the nervous horse, and at the voice of the wind

"All Crumbs Thankfully Received"

Charles F. Noyes opened his first real estate office in a basement below two big operators—"Crumbs," said he, "might fall from the rich man's table." Recently the business he built from these "crumbs" was sold by him for $2,400,000, but he still remains its active head

By Keene Sumner

A SHORT time ago I had a brief but interesting experience. It lasted only a few minutes, but it was like looking through a peep-hole into the background of a man's life. The man was Charles F. Noyes, one of the most famous names in the real estate world.

His company occupies a building in the financial center of New York, and this building is owned by Mr. Noyes. The main floor is one big room, filled with rows of desks, and in the rear of this is Mr. Noyes's private office.

However, the door of this private office is seldom closed. The president of the company is not inaccessible, nor even invisible. The desks in the outer room face his open door. And whenever his men look up from their work, they see that their chief is working too.

The other morning I was sitting beside one of these desks, talking with Edward J. Crawford, who has been with the Noyes organization for many years.

It happens that Noyes and Crawford came from the same town. Both were born in Norwich, Connecticut. Both attended the Norwich Academy. And as I sat there, beside Crawford's desk, he talked of the days, more than thirty years ago, when he and his present chief were boys at school together.

"The first time I took any particular notice of 'Charlie' Noyes," he said, "was during my senior year at the academy. He was a freshman then, about fifteen years old. I was three years older.

"Among the athletic events at the school there was to be a bicycle race, this being in the early nineties, when bicycling was all the rage.

"It wasn't in my line, however, so I didn't compete. But I was rooting strong for another boy whom everybody expected to win. We didn't think any of the fellows had even a chance to beat him.

"Well, the race started, and gradually one boy pulled ahead of the rest. When it came to the finish, he was out in front, *away* out in front! And I'll never forget my amazement when I saw that this boy was Charlie Noyes!

"Up to that time, he had seemed to me nothing out of the ordinary. But from that day I began to watch him; and I found that he *put through* whatever he undertook! If he went into anything, he went into it tooth and nail.

"He ran the school paper, and made a success of it. He was on the football squad; and he played as if his life depended on winning the games. He was elected captain of one of the strongest teams ever put out by Norwich; and he also managed the baseball team. Before he took charge of it, there had been a deficit every year. He not only came through without a deficit but also made enough money to put up a building for the team. The building is still in use.

"He is the most loyal man I have ever known. Loyal to his town, to his school, and to his old friends.

"The big ambition of recent Norwich Academy athletic teams has been to beat Bulkeley High School, of New London. Recently, for several successive years, they were defeated in baseball. Mr. Noyes wanted to spur them on, so he offered them a prize of five thousand dollars if they would win. In spite of that, Bulkeley made him their guest of honor at a reunion not long ago! He's a fighter; but he's a *square* fighter. And even competitors and rivals respect and like a man who fights squarely.

"When he asked me to come into his organization, he did it because I was an old friend. He said he could give me an opportunity, but what I *did* with it would depend on me. Well, I'm one kind of human being, and he's another kind. He *likes* to carry the big load, to run the hard race, and to play the stiff game. I'm happier where I am; more or less on the side lines."

AS I sat listening to Crawford's reminiscences, I seemed to be looking, not down a desk-lined aisle to the president's private office, but down a long aisle of years to the time when both these men were boys.

Then, as now, each of them was where he wanted to be! One was on the side lines, rooting for somebody else. The other was in the race, fighting to win—and winning—for himself and others.

Before my talk with Crawford, I had spent an hour in that alleged private office. "Alleged" is right. I hadn't been there fifteen minutes before I wanted to start a Society for the Prevention of Cruelty to Telephones. Even a telephone ought to have an occasional rest. The one in that office is scandalously overworked. I was told that Noyes sometimes uses it continuously for five hours at a stretch, dealing in millions over the wire.

The morning of my visit, I thought one of these five-hour 'phone sessions was under way; but he finally told his secretary not to turn in any more calls. Then, just as I was drawing a breath of relief, a newspaper photographer turned up with a camera and flashlight. The result was a general veto of *all* interruptions. So, at last, our interview really got started.

Charles Floyd Noyes—just remember that middle name—was born in July, 1878; which makes him now just forty-nine years old. He is one of the big men in American business who started as a newsboy. But wait a minute! He was not a waif, nor a street gamin, nor even a poor boy. He had a good home and there wasn't any wolf sitting on the doorstep.

He could have had, merely by asking for it, all the money that a boy needs. And yet, from the time he was ten years old, he has earned his own money. Like many other small-town boys, he started by having a route for delivering papers. When I asked him why he did this, he hesitated before replying.

"Well," he finally said, "I went to work then for the same reason that I keep on working now. I *like* to work. More specifically, I like to work at what we call business. I like to build it up and make it achieve something. That happens to be what I most enjoy doing.

"It was mere chance that I started by delivering papers. Chance has played a great part in my life, as it does in most lives. But having taken this chance step into the newspaper field, I went still further and became an editor and publisher when I was twelve years old.

"This new venture was a little monthly paper which I called the 'Norwich News.' I was the whole staff: editor, reporter, advertising solicitor, business manager, typesetter, pressman—everything, including the office cat.

"Meanwhile, I kept on with my regular paper route; which meant that I had to get up every morning at four o'clock to be on the job at four-thirty. I also went to school; but the less said about my prowess as a student, the better the truth will be served.

"WHEN I was fourteen, I got the concession to sell newspapers, candy, and novelties on the steamer which ran from Norwich to Block Island in the summer. I built up a good business and soon controlled the concessions on two steamers, operated two stands on Block Island and got the privileges in two leading hotels of the island. I also published a copyrighted souvenir and guide to the island.

"But I worked hard for all this. In order to get the New York Sunday papers to the island ahead of my competitors on other steamers from Providence, Rhode Island, I had the trainmen drop the bundles at Stonington. Then I hired the

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

owner of a lobster boat to take me and my stock of papers to the island every Sunday. In this way I reached there several hours ahead of the regular steamers. I had some pretty rough trips in that old lobster boat, but we always managed to make it.

"I got seventy-five cents a day when I started my first paper route. Five years later I was making twelve hundred dollars a year from my Block Island business, in which I employed twenty or more other boys; and I also earned something as Norwich correspondent for the New Haven 'Register.'

"IN THE meantime, I had spent two years at the academy, without doing myself or the school much credit, except in athletics. None of my teachers shed any tears when I left at the end of my sophomore year.

"My middle name is Floyd, after an uncle of mine who was living at that time in New York. He had charge of the dining and parlor cars on the New York, New Haven and Hartford Railroad and also ran the fruit stand in front of the Grand Central station.

"As I happened to be his namesake, he took a special interest in me; and when he found that I was determined to leave school, he said I could have a job with him. So I came to New York when I was sixteen years old.

"Uncle Floyd believed that a boy should learn to work; and the fact that the boy was his own nephew didn't alter this belief. After a little training, I was given the job of buying provisions for the dining cars, the Grand Central restaurants, and the fruit stand. My pay was to be twelve dollars a week.

"The buying was done in the wholesale district, down around Washington Market. As I boarded in Harlem, seven or eight miles up-town, I had to get up at three A. M. in order to reach the market section by four. After doing the buying, I went to the station, where I superintended the unloading of the provisions. Then I worked at the fruit stand until twelve in the evening.

"On alternate days I worked from one-thirty P. M. until six o'clock at night. So you can see that I averaged a thirteen-hour day, six days a week; which was pretty fair for a boy of sixteen.

"At the academy, I had played on the football team, and I was still keen about athletics. So it occurred to me that on my day off I might play in semi-professional football games in New York.

"You remember what I said about chance? Well, by chance I answered an advertisement for a football player, and so met Irving P. Lovejoy. He was on the team which I joined, but I knew him only slightly, for I played but two games. With my daily schedule of work, I had almost no time for practice, so I gave it up. But that chance meeting was to affect my whole life.

"I stayed with my uncle almost a year. By that time I had changed my opinion about the value of a school education, and was willing to go back and finish my course at the academy.

"But Doctor Keep, the head of the school, was by no means overjoyed at the prospect. He was a stanch believer in Latin and Greek as essentials of an education. I had not shone in any studies, and least of all in Greek and Latin. So Doctor Keep advised me to go to some other school for a year, to bring myself up to grade. I took his advice and went to one in Philadelphia.

"The result was another of those important chance incidents which I mentioned. When I came back from Philadelphia, on my way to Norwich to take my exams for reëntering the academy, I passed through New York; and as I was crossing a street near the ferry a young man stopped me and called me by name. I didn't recognize him until he explained that he was the Irving P. Lovejoy of my brief football experience.

"We talked only a few minutes, for I was in a hurry. I never had had any intimate association with him, anyway. But, in view of our previous acquaintance, I made the remark which is usually made under similar circumstances.

"'If you are ever in Norwich,' I said, 'look me up.'

"With that, we separated and I promptly forgot about him.

"That fall, I reëntered the academy. This time, I tackled my studies in good earnest; but I kept up my outside interests too. I worked as a reporter for the Norwich 'Post' and still ran my Block Island newspaper business. When I was graduated, I remained on the 'Post' staff.

"THE summer that I was twenty years old, Lovejoy again turned up. Those chance meetings were beginning to bear fruit.

"I was too busy to see much of him; but every time we were together he insisted on talking about a new idea of his. He was working then for a New York man, Henry L. Goodwin, who owned a number of business buildings in the lower part of the city. Lovejoy kept the books and also collected the rents.

"In this way he had learned something about real estate; and he had come to Norwich, on his vacation, hoping to persuade me to go (*Continued on page 88*)

I Have The Most Useless Memory In The World

By F. P. A.

(Franklin P. Adams)

DRAWINGS BY R. M. BRINKERHOFF

I HAVE the most useless memory in the world. And because of it, I have acquired, without wanting it, the reputation for having a marvelous memory.

The only thing marvelous about my memory is its uncanny faculty for retaining the trivial.

My mind lets go a thousand things,
Like dates of wars and deaths of kings,—

but it holds onto a thousand others.

Whenever I see an unimportant mistake in a newspaper or a book, I correct it—usually in the column that I conduct in the New York "World." The writer may manhandle his theme as a whole, but the thing for which I pillory him is his misquotation of a line from a Gilbert and Sullivan ballad, or his ignorance of the fact that Frank Leroy Chance, often known as the Peerless Leader, played first base for the Chicago Cubs in 1908.

Years of this sort of checking-up have given me a reputation for more than a good memory. Sometimes, from the things people ask me, about the population of Saginaw or what Nebraska's average annual rainfall is, it would seem that they thought I had omniscience.

And my ability to remember the things I do remember does me no good. Recently I took Mr. Mark Sullivan to task for some errors in "Our Times," his book about the nineties. Mr. Sullivan wrote to me, telling me that I had a "fly-speck memory," and he wants me to help him read proof on his next book. I suppose I have a fly-speck memory. But elephants walk over that same memory and make no impression.

Of course, I make some use of the things I remember. Because I remember the German and the Latin I learned at school, I make translations of German and Latin poems, and these translations often have filled up space in my enormous daily column. I remember lots of things about the Chicago World's Fair, and they came in handy last summer whenever I wrote about the Sesquicentennial. I remember how to play pool—now called pocket billiards; and the silver cup I own—through having won it three times—is one of the best flower vases we have in the house, though my wife always sticks it so far away that visitors never say, "Oh, a championship cup!" It's just a flower receptacle to them.

Among the few important things I remember, however, is a recent visit to the offices of THE AMERICAN MAGAZINE. The talk ran to babies, baseball, the gay writings of the late George Fitch, the number of readers each copy of a magazine had—and my ability to remember certain things.

"You have," said the Editor, in his kindly way, "positively the most useless memory in the world. Why not write a piece about it?" . . . And that is what I finally have remembered to do.

MY MEMORY is spilling over with such irrelevant memories as a clear impression of the velvet suit I wore at my uncle Henry's wedding, March 5th, 1888. It was a Lord Fauntleroy suit, and there was a shirtwaist with a starched, frilled collar, and a red sash, and patent leather pumps. The soles were slippery, and so was the waxed floor; and I had great fun sliding along the floor, much to the annoyance of what I considered the silly old waltzers.

They waltzed to "The Skaters," by Waldteufel. I remember that, because ten years later I heard an orchestra play it, while a juggler—Frank Latona was his name—was doing his act. I was sitting in the front row of the Olympic Theatre, Chicago, in a thirty-cent seat, and I could see the cornetist's music sheet, and I knew that I had heard that waltz at Uncle Henry's wedding.

You who remember what happened at the Battle of Stonehenge will probably agree with the Editor that I have the most useless memory in the world. [You certainly have. There was no Battle of Stonehenge.—ED.] (Well, isn't it better to have a useless memory than one that remembers battles that never even occurred?—F. P. A.)

I do not remember what happened in the Fall-Doheny Case—whether the jury disagreed or voted unanimously for acquittal. I cannot recite a whole poem through, though I remember the beginnings of hundreds. A constant theatre-goer, I have to look up in the telephone directory the address of the theatre before I leave the house, although I may have seen half a dozen plays this season in that theatre. I never can remember the difference between "subjective" and "objective," though I have looked the words up a dozen times. I cannot remember where the semicolon on my typewriter is; I cannot remember the words of Irving Berlin's "Remember?"

BUT I can tell you the name of every teacher in Douglas School, southeast corner of Forest Avenue and Thirty-second Street, Chicago, from 1889 to 1895; from Miss Graham in Room 24 to Miss Ellen M. Stowe in Room 1; and that includes Miss Werkmeister,

I used to time my departure from home so that I might walk behind Corinne Zimmerman

I had great fun sliding along the floor, much to the annoyance of what I considered the silly old waltzers

Miss Emily Freiberger, Miss Levy, Mrs. Kewley, Miss Fox, Miss Laura M. Hull, Miss Thiel, Miss Pierce, Mrs. Lester, Mrs. Swarthout, and Miss Shoemaker. I know all the others, but I thought a recital of their names might sound pedantic.

I can tell you—and I could sing them for you, too—the words of all the songs we sang in school, from "My Little Lamb" to "The Landing of the Pilgrim Fathers;" and that includes "Where Do All the Daisies Go?" "Night Winds," "Good-by to Summer," and "Old Jack Frost Has Come to Town, Boys." I can tell you that Appleton's Second, Third, and Fourth Readers had brown board covers; that the Fifth Reader had a maroon cover; and that Robinson's Elementary Arithmetic was maroon too.

But Barnes's "History of the United States" was light brown, with gold letters, and it was the only book you could carry that proved to anybody who was watching that you were no child any longer, but somebody in the eighth grade. The first day I carried it I felt certain that the windows of all the houses on Grand Boulevard, from Thirty-seventh Street to Thirty-fifth Street, and on Calumet Avenue from Thirty-fifth Street to Thirty-third Street, were crowded with eager watchers saying to themselves, "There is no possible doubt that that boy is in the eighth grade."

I REMEMBER the book too. But of all its contents, what I remember best is that Ethan Allen asked somebody at Ticonderoga to surrender "In the name of the great Jehovah and the Continental Congress!" And that Charles C. Pinckney said, "Millions for defense, but not one cent for tribute," and that the quotation was at the bottom of a left-hand page, in small type, as a footnote; and that somewhere in the book, though in connection with what I don't know, it said, "The effect of this brilliant event was electrical." And I remember particularly a picture, "John Smith Showing His Compass to the Indians."

I remember thinking that General Philip H. Sheridan was the greatest of generals, and that "Sheridan's Ride" was the greatest poem, and I know it was because my little sisters had a nurse whose name was Maggie Sheridan. It was Maggie Sheridan who taught me to read, and the first book I remember reading was "Davy and the Goblin," which I considered the greatest and most comical book ever written, or ever could be written. Another child who felt the same way about that book (another boy who, reading "Alice's Adventures in Wonderland" later, thought it was stolen from "Davy") was Henry G. Rice of Nashville (before he dropped the Henry and called himself Grantland), and he also received his first desire to write verse from reading

The night was thick and hazy when the Piccadilly Daisy
Carried down the crew and captain to the sea.

Childish? I read it over and over again, and I know no better illustration of the bafflement of humanity than the Butterscotchmen, who couldn't run unless they were hot, and who couldn't get hot without running. I can quote the whole book (so can Grantland Rice), but if I did, it might disprove the Editor's point that mine was a useless memory. Certainly I have diverted many children and won their affection by telling them about Davy and the Goblin. And I submit that is far from useless.

I CAN remember the youngsters who sat near me in school, and what they all looked like; but I cannot remember what I read yesterday about Nicaragua and Mexico, and I cannot tell you precisely what the Baumes Law is, or how many Representatives there are in the House, or how many signers the Declaration of Independence had, or who is Premier of France, or President of the German Republic. I don't know the tune or the words of a single popular song written in the past ten years. But I know every note and word of "After the Ball" and "The Little Lost Child," and "My Mother Was a Lady." I cannot tell you the plot of the play I saw last night. Nor do I know, as a rule, who was in the cast. But I know who was in every vaudeville act—variety, we called it then—that played at the Olympic Theatre from 1895 to 1898.

I know the overture to "William Tell" note for note, because I heard the Three Avolos play it on xylophones. I know "Sweet Rosie O'Grady," words and music, because they were sung by Lottie Gilson, the Little Magnet, in a blue dress four shameful inches above her ankles.

I remember seeing "Robin Hood" one night in December, 1897. It was the night before an (*Continued on page 126*)

"Scotch Valley"

A story you will never forget

By Mildred Cram

ILLUSTRATED BY W. H. D. KOERNER

"You got it?" Pete asked. "No," Gladden said, avoiding the boy's eyes. "I didn't dare to ask for it"

"BUT why," Gladden demanded of Hansen, "but why, if Pelgram thought I couldn't meet the payment on the mortgage, did he offer five thousand dollars, cash, for the kids' ranch?"

"He was testing you out. He doesn't know how much you've got. Besides, if they foreclose day after to-morrow, the ranch goes to the highest bidder. He might not be able, then, to get it for five thousand. Pelgram's no fool."

"Do you think there's oil—"

Hansen raised both hands. "Oil! Oil! Oil! Everyone in this state is oil crazy; they overlook their greatest treasure, their surest source of income: the fruit of the soil! Forget the possibility of oil, and reclaim the trees!"

"That's good advice. But can it be done without water?"

"Let me see that deed!"

Hansen scrutinized the faded, blotched paper.

"Well," he said, after a moment, "it looks to me as if you had Pelgram on the hip. This is the original deed; it dates back twelve years. A man by the name of Sandow owned Pelgram's property when Smith bought his. While Sandow lived there, he respected Smith's water rights, and the water kept coming, winter and summer.

"Then Pelgram moved in and built a dam. In the beginning, Smith piped his supply across the canyon, through the orchard to the trough. You've seen the trestles. But then Smith went overseas. He left his wife sitting pretty, with Manuel to do the hard work, and while he was at Camp Kearny Pelgram lay low. Smith was too near home!

"As soon as they knew for certain that he was in France, Pelgram dynamited. He took the creek for himself. But the law states that he took what didn't belong to him. It remains for you to prove it."

"You mean I can prove that Pelgram was dishonest?"

"You can, in court. These things take time, and they cost money." Hansen leaned forward. "Don't misunderstand me, Mr. Gladden. My fee is of small consequence. No one need pay me who can't afford to. I have no wife to make a Shylock of me against my inclination. But you must consider the chances of losing, of counter-suits, litigations. You must be prepared to stand behind yourself, and to pay, if necessary, for defeat."

"If the right is on my side, I'm willing to take the risk. I'm foolish enough to believe in justice!"

Hansen laughed, shaking loosely within his mountainous flesh. "I was not referring to justice, but to the law. Many an honest man has lost himself in that maze! Have a cigar?"

"No, thanks."

Gladden got up. He was embarrassed, uneasy. He had intended to borrow a hundred dollars from Hansen, but now he found that he couldn't; he was too aware of the lawyer's shiny clothes, his well-worn shoes and frayed cuffs, the atmosphere of dusty, genial poverty in the office.

"Perhaps I'd better tell you, Hansen," he said, "that I've made an enemy of Pelgram's wife."

"How's that?"

"I don't trust her. I think I told her so. At any rate, I drove her off the ranch." This was not quite true, but Gladden felt better for having said it. "And I told her not to come back," he added darkly.

Hansen's jaw fell. "You want to get yourself shot?" He tossed his half-consumed cigar into the brass spittoon beneath the desk. "Say! I wouldn't be

---

Synopsis of Three Preceding Instalments

CAPTAIN JAMES GLADDEN came home from the war pledged to find and care for the destitute wife and five children of Fred Smith, about whom he knew nothing except that Smith had died in his place in France. In New York, Gladden turned down his uncle's offer to establish him in an engineering office, and set out upon his pilgrimage to Scotch Valley, California. He had been reared in luxury, but his father's whole estate had gone to his stepmother, and he had only a few hundred dollars with which to discharge his trust.

He found Scotch Valley, and the families of two Fred Smiths who had died in France! But oil had made one family the richest in the valley, and the other family was starving, so that problem was easily settled. He found the five children, but no mother. She had died some months before. Bertha, almost seventeen, and Pete and Henry and Lily and Nancy had been left in the care of old Manuel, a Mexican; but he was dying now. There was no food. The well was polluted. And the town was ten miles away.

Gladden went doggedly to work to carry out his promise. He learned that Pelgram, a prosperous rancher and the nearest neighbor, had cut off the water from the place, and was trying to starve the children into giving up the ranch to him. Pelgram offered him five thousand dollars if he would turn over the Smith ranch, and have the children sent to the County Home.

Gladden refused. He had old Manuel buried in the orchard, spent all the rest of his money in supplies, and consulted Hansen, a lawyer in the town, who told him Pelgram's motive. It was a desperate situation, made more desperate to Gladden by his meeting Olive Smith, the lovely daughter of the *rich* Smith family. But he had no thought of giving up. He cleaned up the place, dug out the well, gathered and sold the English walnuts in order to get more supplies.

As soon as he could, he made Bertha go to town to buy new clothes—and to his consternation, she walked out of the store transformed from a rowdyish little girl into a young woman. This presented a new problem—the problem of gossip and vicious tongues. There wasn't a chance that Mrs. Pelgram would not notice the change in Bertha—and capitalize it. And that very night his fears were confirmed. He was strolling at bedtime along the edge of the Smith ranch—and Mrs. Pelgram came to him out of the darkness. He was sickened by her attempts at flirtation, and could not conceal his feelings—with the inevitable result. She flung in his face the taunt that he had no legal place in the Smith ménage.

However, he went on his way, used some of the walnut money to purchase an old horse, plowed up the fields—and waited. Then Hansen told him a complaint had been lodged and he would have to be appointed legal guardian. In his search for records, he found Mrs. Smith's will, leaving the property to the children, a deed putting it in her name—and a mortgage she had given Pelgram on the place and everything that it contained.

And then Gladden discovered that an interest payment on that mortgage was due in three days. One hundred dollars—"As well a million dollars as a hundred!" thought Gladden bitterly. Then he started up. "Pete," he said, "I'm going *gunning* for that hundred dollars!"

"Can I come, too?" Pete wanted to know.

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

surprised if you'd get your head blown off! Pelgram's crazy about her. The queen can do no wrong . . . that sort of thing."

He followed Gladden to the door, grumbling and puffing. "You still want to fight him? Take him to court?"

"Certainly."

"All right. All right. I'll go ahead. And how about this interest? This hundred dollars? Want me to take care of it for you?"

Gladden hesitated. "I'll give you the money to-morrow," he said.

For the first time in his life, he tasted the peculiar humiliation of an acknowledged impotence. He couldn't reach into his pocket for a check book and scratch off a hundred dollars with the careless gesture of a man who has money in the bank. His balance amounted to twelve dollars and forty-eight cents, and an uneasy awareness of the fact was written already on his face.

Hansen wiped his face again, and said, "You spent all the walnut money?"

"Almost. But I'll get more. I'll be here, to-morrow, at four o'clock, sharp."

Pete was waiting on the corner.

"You got it?"

"No," Gladden said, avoiding the boy's eyes. "I didn't dare to ask for it. I've never borrowed money in my life, and I don't know how. We'll have to look somewhere else." Noticing Pete's quiver of disappointment, he added, "Hansen didn't have it, anyhow. He is as poor as we are!"

UNDER the circumstances, the bank decided, a loan was impossible. In the office of the president, a sharp-faced French-Canadian, Gladden heard the word collateral repeated with a trace of professional anxiety. Under the circumstances—well—no—not without some guarantee. . . .

Gladden rose suddenly. What in heaven's name was the good of collateral in a case like this? If he had collateral, he wouldn't be in need of a hundred dollars. Five children were in danger of starvation, or worse. Knowing them, Gladden knew also that starvation would be less irksome to them than imprisonment in a County Home.

"Surely, with your connection in the East—you can manage—"

But Gladden avoided the president's outstretched hand, and fled. The hot glare in the street was actually a relief: it made his own burning face seem cool in comparison.

"You got it?" Pete asked, shuffling at his side.

"No."

"Gosh!"

THEY walked up one side of the street and down the other, in silence. The world had suddenly become a place in which everyone except himself had plenty of money. If he wanted a hundred dollars he must either steal it, borrow it or earn it, provided, of course, that he couldn't inherit it. And there seemed little chance of that. He felt naked and ridiculous.

He couldn't steal, because he was honest. He couldn't beg, because he was proud. Whichever way he turned, he was blocked by his own superiority.

"I'll sell the car," he said with a sudden inspiration. "Come on, Pete!"

They climbed into the old vehicle with heavy hearts. Pete stroked the cracked leather cushions and sounded the horn.

"Later, of course," Gladden said largely, "we'll buy another"

"I like this one," Pete said.

The old machine slipped backward out of its right-angle parking at the curb, and with a smooth purr, miraculous in one of its years, rolled into the nearest garage, into a dark, echoing cavern full of blue gas fumes and grease.

Gladden explained to the proprietor that he wanted to sell his car for as much as he could get, cash. It must be cash, and it must be immediate. The proprietor reached forward over the door and touched the throttle; a great roar and complaint echoed against the steel rafters and the grimy skylight windows. The man cocked his head to listen; like the leader of an orchestra he could determine flaws in the rhythm, remote and unmistakable lapses.

He shook his head, and shouted, "She ain't much good!"

"She'll do Soledad in high," Gladden shouted back.

"Well, mebbe. For you. She may know her master's voice. But I ain't her master. I'll give you twenty-five dollars cash, and fifty on a new car. That's a generous offer. You can't do better than

Gibbs turned as Gladden came forward, and, giving his hat a backward thrust, said, "How d'you do? Looking for me?"

STATE UNIVERSITY SYSTEM OF FLORIDA

that, in the city, nor anywhere else."

"Not enough," Gladden said. He drove out again into the glare of day.

Pete grinned. "Guess she acted up because she didn't want to be sold," he said. "Gosh, Jim, we've still got her!"

Gladden shared Pete's elation.

"I tell you what we'll do," he said, making a spectacular left-hand turn. "We'll go to the circus. I always say, Pete, that the time to spend money is when you're broke. Worry is like a tack driven into the mind. It paralyzes. I read that somewhere. It's impossible to worry while watching a four-ring circus. Maybe I'll think of something terrific, something to save us! All I need is a clown, a trapezist, and an elephant. Come on!"

They drove out of town toward the city. The highway skipped between the yellow hills, leaped dry rivers, coiled up and uncoiled down again. It was a blue-black asphalt road, and down its shining length motors sped like scuttling beetles. The world was on wheels pursuing forgetfulness, running like mad away from facts; everyone, young and old, dashing from place to place, as if one place were any better than another.

All the fretting, fussing humans whizzing up and down the blue thread of road, while the tawny topaz hills sprawled asleep in the sun, and just beyond the roar of wheels, the reek of gas, the laboring of engines, cattle grazed, and the figures of men mounted on lean ponies, dwarfed by the immense height of the sky, moved in a silence flawless and encompassing as a globe.

The highroad drew the city out across the land. Oil stations, shoddy sandwich stands, signboards, a litter of paper, like the slimy, defacing trail of a slug. Cars darted and labored, while men, secure in a chaos of their own making, ignored the significance of things, refusing to pause or to think until overtaken by the puzzling reality. All this seemed strange to Gladden; to Pete, it was usual. He accepted turmoil as one born to it.

Billowing canvas bubbled over half an acre of field on the outskirts of the town. The afternoon show was about to begin, and a great shouting of barkers drew the crowd to the entrance.

"Here you are! Two dollars in the boxes. A dollar and a ha-alf in the stands. Fifty cents in the benches! Babies free! The Midway to your left! Twenty cents! Babies free! Step up! Step up! Two dollars!"

THE freckled man in the derby caught sight of Gladden. "Two dollars each, sir. Best seats! Right down in front. Here you are!"

A five-dollar bill changed hands, and Gladden received two red tickets and a silver cartwheel.

Pete's eyes were large and black with excitement. It took a great deal to stir Pete, but now Gladden could see that he had forgotten everything except the glamour and strangeness of the scene.

The big tent shut out the glare of the sky. Within, the light was tempered by the spread of canvas; the ring and the crowded tiers might have been at the bottom of the sea, in a pale flicker of light falling through water. It was suffocatingly hot. A band blared, and a clown in a red suit gamboled languidly in the thick sawdust of the arena; he paused under Gladden's box and stuck out an enormous tongue at Pete.

Pete cackled. He was too excited to laugh. When the white horses appeared, he yelled, and then sat perfectly still, holding his breath. Gladden enjoyed watching Pete's shoulders tighten, his eyes dilate, his chin tremble. Emotions ran across his face like rain on a window.

But he said nothing, after that first primitive shout of gratification, and steadily his fingers dipped into a bag of pop corn, making blind but accurate journeys to his mouth.

Ten white horses, like figures in a slow-motion movie, benign, gracious, and mild, circled the arena. Equestriennes in violet spangles, with lovely muscular pink silk legs, balanced on broad dimpled backs and kissed palms at the crowd. The smiles of actresses! Painted on, not of this earth! Their curls and graces! One of them stood on her head and her tulle skirts unfolded like a blown umbrella. Another skipped rope. The horses shook their manes and rolled their eyes, solicit-

It was characteristic of the malicious stars then in ascendency that Olive Smith should come . . . and he could not run to meet her. The best he could do was to drag himself to his feet, hanging on to the railing with both hands like a paralytic

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ing applause. And a little ballerina with red hair turned a somersault through a hoop.

Then there were clowns. Raucous, ear-splitting fellows with obscene hoots and whistles. Little fat fellows with loose paunches. Great brooding white-faced fellows, leading toy poodles or driving teams of grinning dachshund on long ribbon streamers. And one was dressed like a woman: he minced through the sawdust on high heels, throwing kisses.

Then came the lions in gilded cages with scarlet wheels..

"They make the rest of us look like amateurs," thought Gladden. "Perhaps it's because they don't have to worry about mortgages! But I was going to forget about that hundred dollars."

The idea, however, had crept in, and now it persisted. Gladden watched the thrilling plunges of the trapezists with but half of his mind; the other half was struggling with the personal problem.

"Pete," he said, when the show was over, "I lost out. I couldn't think of a thing. We're just where we were."

But Pete had an idea—not to let the magical moment go, to prolong it.

"Here you are, sir! The Midway! See the Fat Lady, Princess Irene, the Tattooed Islander, the Leper, the Snake Charmer, the Strong Man, and Alonzo, the Intelligent Ape."

"Let's!" Pete said.

The silver dollar became a fifty-cent piece and a dime.

"I hope there's gas in the tank," Gladden thought.

He purchased a package of gum, and a box of molasses kisses. Ten cents. Half a gallon of gas. Eight miles to the good.

"A hundred dollars! A hundred dollars to the man, woman, or child who can lift the weight six inches off the floor! Challenge! The strong man's challenge! This way, sir. Admission ten cents!"

"You stay here, Pete," Gladden said. "I'm going to try this."

There may have been a flash of anxiety in Pete's eyes. Or else it was youth's instinctive dislike of being in the company of conspicuous or ridiculous elders. He drew back and let Gladden pass into the strong man's tent.

RED baize cast a sultry, an unearthly light; it was the lurid glare of an infernal cavern. And hot! A few perspiring spectators sat dumbly on crude wooden benches, waiting for the strong man. Gladden slipped into an empty place and tried to appear disinterested.

The weights, great bulging iron bars, were on a sort of platform. Presently, in a hush, the curtains behind the platform parted and the muscular prodigy appeared. He rippled as you looked. His legs were like trees; no, like pillars; hairless, white, hard as stone. His waist curved in beneath the casement of his ribs. He flexed his arms, and the muscles ran beneath the flesh like mice in a cage.

Golly, what a chest! It swelled out and out. He moved his small, water-licked head from side to side. Then he turned his back, and you saw a tattooed mermaid, her head on his shoulder, her tail coiled around his waist.

"Ladies and gents," he said, facing the audience again, "I challenge you. To the man, woman, or child who can lift this weight, I will give a hundred dollars. Fair and square!"

He rubbed his hands together, bent forward, planted his feet well apart, and with no indication of effort other than a tightening of his lips, swung the largest of the weights above his head.

"Six inches only, and I will pay a hundred dollars!"

With a grunt he let the great bar down, set it gently on the floor.

Gladden was on his feet, crowding forward through the benches to the platform. He felt himself suddenly caught into an intangible solitude, alone with the great bar.

"Ladies and gents! This young man has accepted my challenge. . One hundred dollars."

"Take off your coat, kid!"

"It's a fake!"

"Sure. They plant 'em."

Gladden removed his coat, folded it carefully and gave it to the strong man. Close at hand, the prodigy was less impressive. He smelled of garlic and hair tonic. His flesh was just flesh. His strength was not a beautiful thing; it was an accident, a freak of nature, like a harelip.

A calliope brayed in the Midway. "I'm making a fool of myself, to music," Gladden thought. "The thing's probably fastened to the floor. But I'll try. I can't refuse to try, when Fate offers a way out. Here goes!"

THE bar seemed rooted. His hand closed around the cold metal and he threw his whole strength into the effort to lift that insensate weight an inch, two inches. He could feel his arms tearing at the sockets. Blood spurted darkly into his finger tips. Something split below his shoulders. Not his shirt. A tendon. A ligament. Hot pains stabbed and stabbed. He tried to straighten up, nauseated, dizzy, blind, and groped for his coat.

"You see, ladies and gents, it is impossible! Impossible! I remain the strongest man in the world! Anyone else? One hundred dollars if you can lift the weight six inches off the floor!"

Pete was waiting. He threw the taffy kisses away and took Gladden's arm.

Ann Left a Stuffy Office To Paint Houses in the Sun

PHOTOGRAPHS BY D. JAY CULVER

(Left) Ann Derickson, of Bedford, New York, tried working in an office when she left school. But she never got a chance to be out in the sunlight, so when a neighbor's house needed a coat of paint, she volunteered to do the job. Now she gets contracts for all kinds of painting jobs in New York and Connecticut. (In oval) Miss Derickson with two of her twelve girl helpers

EVERYBODY seems to know Ann Derickson as she goes riding down the street in her old touring car, curtains flying, ladders tottering, with a broad smile and a wave of her hand to every policeman she passes. Her girls are perched wherever they can find a foothold—front seat, back seat, on the floor, or on top of the ladders.

Miss Derickson is a painter of houses, barns, schools and factories, and a professional at that. She doesn't really look strong enough to carry a bucket of paint up a ladder. But she does a man's job every day, and she gets man-size wages for it.

Why shouldn't she? Her best girl helpers earn union wages, just as the men do. The work is expertly done. She specializes in jobs for women. She knows exactly what blend you will want for your bookshelves, in your linen closets, kitchen and workshop. She's just finished working out an entirely new shade—the color you see only on real old Sèvres china.

Although Ann Derickson was born in New York she is a small-town girl, because she chooses to live in the village of Bedford, forty miles from New York, where she and her mother keep house in a beautiful little home tucked away among the trees.

When Ann first came out of school at Carmel she tried office work. But she found it hard, nerve-racking and none too highly paid. Besides, when she started off in the morning the sun was scarcely up in the sky. And when she closed her desk at six o'clock, the loveliness of the day was almost gone. She wanted to live out of doors. So she and her mother moved to Bedford to run the "Jumble Inn."

Still, Ann was restless. She used to do all the painting around the place. She enjoyed it. And, furthermore, the longer she painted the more interested and proficient she became. One spring day five years ago, an architect bought a piece of property near the Inn and built himself a house. He came over and asked Ann, "Where can I find a good, all-'round man to paint my house?"

She looked straight at that architect, and said, "I can paint. I'll do it for you."

It was February and cold. All the painters he had inquired about were overfull with spring contracts. He would be taking a chance, hiring a woman. But he needed his house. "All right," he said; "go ahead. But, remember, I've got to have it in a very few weeks."

"It will be ready," Ann answered firmly.

And, strangely enough, it was ready, on schedule date. But what a time she had finishing the job! In her desire to do the painting well, she worked slowly and fearfully. But before it was half completed she decided she could never finish it on time without assistance. And she couldn't get a single good workman to help her. In despair she hired a "handy man about town" who declared he was a master of the art. But he wasn't. He couldn't paint on the ground, because the snow "froze his feet." He wouldn't work on the ladders, for fear of "straining his sides." So Ann had to fire him and finish the job alone. Beginning long before sunrise, and painting inside long after dark, she toiled on—numbed, cold, and weary. But when the first spring day peeped over the garden wall the architect's little white house was shining and dry, ready for the owner to move in.

After that Ann got more work. First, she bought herself an old touring car for sixty dollars. Every morning, long before seven o'clock, in the hot summer and through the next winter, a particularly cold one, she chugged up the road in her battered car. Before long she was in demand all over Westchester County, and clear up in Connecticut. Then New York heard of her. A most conservative children's school on Twelfth Street engaged her to keep the building in condition under a yearly contract. Soon Brooklyn desired her services. "I have painted New York red, white, and blue," Ann says, "by contract."

Naturally, she couldn't manage all the work herself. And for the first year she depended entirely on men to assist her. But early the next spring she drove her old car into New York and up to Barnard College. There she asked the Occupational Bureau for three undergraduates who could paint or were willing to learn to paint. Her request was unusual, and they didn't know if they could procure what she wanted, but they would try. Ann re-

STATE UNIVERSITY SYSTEM OF FLORIDA

ceived sixty answers. Out of this number she selected three, and started off.

She still has her original trio, Barnard graduates now, and nine others besides—mostly college women. Not only do these girls actually enjoy their work but four have decided to make it their vocation. For twelve dollars a day, with Saturday and Sunday free is "not so bad" they say to their less fortunate sisters. "Sixty dollars every week. Try to earn that writing poems or secretarying in Wall Street, and see how you fare."

Clad in stout blouses and knickers, heavy shoes and stockings, one or four sweaters, according to the season, with their red silk bandannas bound 'round their bobbed heads, they stand on the scaffolding and work and sing, and sing and work, summer and winter, winter and summer.

"We are happy," says Ann, "to be earning our living under healthful conditions. One girl came to me weighing only ninety pounds. Now she weighs one hundred and ten. We brighten up a lot of corners with our brushes, and we get many an honest thrill looking over a home we've just painted, or an office we've redecorated."

In the winter, if the girls are working in New York, they live in modest but comfortable hotels. And for diversion, they prefer the opera and fencing lessons!

In the summer time, when they are so fortunate as to be working in the country, they live with Ann's mother. If there are too many girls to sleep in the house, the overflow goes into the barn across the road.

"There are hardships too," Ann says. "Last summer, in Bronxville, New York, we had a job to finish in double-quick time. It meant working for a whole week from six in the morning until one o'clock the next morning. And just this past winter we were painting in Connecticut a big old house which hadn't been occupied for over a year. We built huge fires, but even after our work was done, we couldn't get the place warm. That moldy house was so cold we went outside to change our clothes. Even in the snow, it was warmer than in the house."

Perhaps if you should happen up Bedford way one of these summer evenings, you'd hear a song drifting across to you from the distance. It would probably be Kipling's "Gypsy Trail," the gang's favorite. They shout it as they ride home in that old car—tired and hungry but lusty with the freedom of the open air.

ROSA REILLY

He Brings the Outside World to Lonely Districts

ON THE Southern Railroad there is a baggage man running from Atlanta, Georgia, to Salisbury, North Carolina, who has evolved an unusual scheme for helping those living along his route, especially the ones in remote and isolated mountain sections.

Robert M. Cobb goes through the train, gathers up the papers and magazines that the passengers have thrown aside, straightens them out into readable shape, ties them in bundles, and throws them out at the points where he thinks they will be most appreciated.

People soon learned of this free delivery, gathered at the outdoor offices, and waited for the train that put them in touch with the outside world. This splendid service, for which no one is paid, has been in active operation for twelve or thirteen years, and bids fair to continue as long as this man with a heart can manage to dodge the pension regulations.

Most of those he serves are strangers. The only glimpse they ever have of him is when his train thunders past, and the bundle of reading matter comes sailing out and lands in a swirl of dust and cinders. But he has his regular customers too. There is an old couple who cannot read, for whom he prepares a collection of illustrated papers. A large share of the comic papers goes to a family with several children.

When I asked him how the happy idea occurred to him, he said it was at the time of the breaking out of the World War, when people hungered for news as they had never hungered before. When he saw the papers and magazines that were left on the seats being swept up and destroyed at the end of the run it looked to him like a sinful waste, when there were so many who would have been glad to have them.

So, right then and there, his free-delivery service was born, and Mr. Robert M. Cobb automatically became the head of the system.

Like many other innovations of moment, it began in a small way. At first he threw out papers only to the families of section foremen—people that he knew. But the service widened and spread until it included many families and small communities all along the route.

Later, when America entered the war, Mr. Cobb realized how much more news meant to the people, as everyone was personally interested in what was happening, and all were eager for the very latest from the front.

PHOTOGRAPH BY LANE BROS., ATLANTA, GA.

Robert M. Cobb is a baggage-master on the Southern Railway between Atlanta, Georgia, and Salisbury, North Carolina. He collects magazines and newspapers that passengers on his train discard, and throws them from his car to the isolated sections along the route

When construction work began on Camps Sevier, Wadsworth, and Gordon, all three directly on the main line of the Southern, it opened up wonderful opportunities for this baggage-man's labor of love. In each camp were some thirty thousand young soldiers in training, and every one of them wanted tidings from the fighting line.

He distributed more papers at Camp Sevier than at any other point. As the troops there were recruited from North and South Carolina, Georgia and Florida, and many of the newspapers found were published in those states, the soldiers often found copies of their home town papers in their bundles.

By this time, Mr. Cobb was well known along his route. Many people who received the papers wrote in to thank the unknown benefactor, and inquire his name.

Now he often gets letters telling him how helpful the reading matter has been, and how much the writers appreciate his kindness; and the children remember him with little gifts of candy and cake. Some of the boys on his route keep his table well supplied with rabbits.

One day he was presented with a basket of fruit and vegetables. An old man traveled forty miles in a buckboard with them. When he reached Spencer, North Carolina, he found he would have to wait two days before Mr. Cobb's arrival. He waited, and Mr. Cobb got the basket.

Mr. Cobb told me that when the great war was over, and the training camps abandoned, and there was less demand for news, he selected certain families in lonely districts, and kept up his free delivery to them.

No one will ever know the brightness he has put into lives that were gloomy and shut-in, the drab days that he has changed into sunshiny ones, the lonely hours he has cheered, and the hearts he has helped.

One would hardly look for many thrills in a day's work made up of pulling and pushing trunks through a baggage-car door, but Mr. Cobb gets more out of it than just his living—he gets the satisfaction of having done to others as he would be done by.

Mr. Cobb got his first job with the old

Richmond and Danville Railroad, now the Southern, in 1887. For forty years he has been listening to the clicking of the rails, and watching the red hills slide by. So by now he knows every lone chimney, farmhouse, and cotton field.

He is a wiry, bronzed man, who looks you straight in the eye, and whose firm, quick step belies the fringe of gray that shows below his cap; in short, he is a typical railroad man—and I know no finer type.

He was left an orphan at an early age, his father, an officer in the Confederate army, having died of wounds received in battle, and his mother dying soon after. He was born at the old Cobb homestead, long a landmark in De Kalb County, Georgia. At the age of twelve he moved to Atlanta, and has been there ever since.

CHARLES A. DAVID

Melton Knows His Onions

ON HIS farm in Devine, Texas, Clyde H. Melton grows one hundred and twenty-five onion plants annually for every man, woman and child living in the United States.

It all started when he was a small boy. He left his home in Dallas, Texas, to visit an uncle in Cotulla. This uncle had six acres in onions, and the boy watched and helped from the time the seeds were planted until the crop was harvested and sold. The process was so interesting to the city boy that he decided he would some day have a farm of his own.

His family moved to San Antonio, and he went back home. He tried going to business college, but he didn't like it, and one day he left home for Cripple Creek, Colorado, where he got a job in the mines as a day laborer. After two years of this kind of work, he went to New Mexico as a contractor, to help open up some new mines.

When he was returning to Texas, he met a girl on the train whom he had known all his life. A few days later they were in a train wreck, and sat in a depot most of the night talking, and before the trip was over they were engaged.

After they were married, Mr. and Mrs. Melton went to New Mexico to a mining town.

"It was hard for Mrs. Melton," Mr. Melton told me. "It was lonely and dreary—but nothing to what was in store for us."

They sold out, and moved to Devine, Texas, where they raised their first onion crop. They made some money, and started another crop; but the seed was not good, and the second crop was a failure. Then they went to Old Mexico for four and a half years.

"We had been lonely in New Mexico," Mr. Melton said; "but Mexico was a thousand times worse. We made money, and had every convenience—gas, a comfortable home, a private yacht—but we didn't have anyone to talk to.

"I didn't speak Spanish, and the men I had on the job spoke nothing else. My wife knew Spanish, so when I could not show my men what I wanted done, I went into the house and told her what I wished to say. She translated it into Spanish, I wrote it down as it sounded to me, and read to the Mexicans what I had written."

The last two years had been turbulent ones. Because of the Mexican revolution, they were in constant danger. The company Mr. Melton worked for kept a yacht ready to take them away at a moment's notice, and they had been compelled to leave, temporarily, four times.

"I breathed a sigh of relief," Mr. Melton says, "when the work was finished and we started home. No ocean traveler ever felt gladder to be on the soil of the U. S. A. than we were."

LEWISON STUDIO, SAN ANTONIO, TEXAS

During the season, Clyde H. Melton markets millions of onion sets a day. He also raises sweet potatoes, roses, and pecan trees on his farm in Devine, Texas

This time they were in Texas to stay permanently.

"I wanted a farm; but I didn't have money enough to buy the one I wanted and run it until harvest time. Finally I got a job as manager of a store in Devine. I didn't know anything about running a store, but I needed the money."

With the money he saved, he bought a twenty-acre farm, and Mrs. Melton ran the farm while Mr. Melton managed the store. That first year, after the field was set with onions, some plants were left over. Mrs. Melton advertised them for sale in the San Antonio paper. The returns were so big that they decided to grow more plants for the market. From that small beginning, they started a plant industry that has grown beyond their wildest dreams.

As soon as he could, Mr. Melton gave up his store job, and they both gave all their time to plant growing and marketing.

For the next three years, Mr. Melton experimented with every known variety of onion. Finally, he selected what careful and scientific testing convinced him were the best varieties.

In 1920, Mr. Melton sent a case of his onion plants, free, to every agricultural station in the United States. He asked only that they be planted, and a record kept of their harvest, as compared with that of other varieties. Nearly all of these stations commended the quality of his plants, both as to keeping quality and tonnage per acre.

"As a method of advertising," Mr. Melton says, "nothing could have been more effective. Now, almost every agricultural school in America orders its plants from me.

"I have contracted for seventy-five per cent of all the onion seed produced in the Bermuda and the Teneriffe Islands. I have already spent three hundred and seventy-five thousand dollars for seed alone for the coming season. We will be able to supply one hundred million plants daily during the shipping season next year."

In addition to his onions, Mr. Melton will sell twenty million sweet potato slips this year, nearly as many cabbage plants, and thousands of sweet peppers.

He has four hundred thousand pecan trees in the nursery. Within five years, he expects to have a million trees for sale.

Mrs. Melton has a rose garden, from which they sell field-grown rose bushes of numerous varieties.

The Meltons have their own printing plant, which occupies the entire second floor of the Devine bank building.

They employ three or four thousand Mexicans, and in the busy season six or seven thousand.

OLLIE COCHRAN DAVIS

How often do you enjoy this delicious Vegetable Soup?

12 cents a can

SOUP

and the prettiest girl in the office

SAID a girl about her job at the office: "It isn't the work I mind—it's the competition!" Very well. Notice that "prettiest girl" at lunch sometime. You don't find her eating just anything she sees. She is little Miss Careful, and about as sleepy as a fox in taking care of her complexion and her figure. Trust her to follow every hint about eating the right things to keep her trim and attractive. Every famous beauty in history has watched her food as carefully as her mirror!

"Paint your cheeks from the inside" was the advice to the girls at a great college recently. Eating the proper food was shown to be one of the biggest helps to the charm that wins—the glow and beauty of sparkling health.

"EAT SOUP and keep well" means for many a girl, "Eat soup and keep pretty." For soup is not only delicious—it's a food you should eat regularly every day to help keep yourself alert and vigorous and healthy—the foundation of all good looks.

Remember this when you sit down to your meals. Enough food is essential, of course. But it is equally important for you to have *the right kinds of food.* The food experts, in their lectures and their books, emphasize the value of attracting the appetite with foods that appeal to your sense of taste, please it and satisfy it.

Soup provides real, nourishing food. Soup refreshes and revives you. The hot liquid is a wholesome "pick up" in the middle of the working day or at the end of it. Soup helps to keep your appetite normal and aids your digestion. And how it tempts and satisfies you, either at luncheon or dinner or supper. The important thing for you to keep in mind is that you should eat soup regularly every day, and not just occasionally. For if you are to get the full benefit of soup, you must allow it to invigorate you *daily.*

YOU KNOW some of the "health rules" are tiresome and hard to follow. But eating soup regularly is so very easy and convenient—and so enjoyable. Luncheonettes, cafeterias and restaurants everywhere serve these famous and delicious Campbell's Soups, which are the last word for splendid quality and appetizing flavor. They are sold in every food store. And it is so easy and convenient to serve these soups (which only require the addition of an equal quantity of water and a few minutes simmering) on the family table regularly.

WITH THE MEAL OR AS A MEAL SOUP BELONGS IN THE DAILY DIET

"Wichita Bill," Cowboy Artist, Rode Into the Halls of Fame

(*Continued from page 34*)

Mystery Ship," inspired by the legend of Edgar Allan Poe. A full-rigged ship, sailing on and on against the wind! Sailing? Soaring! In an unearthly way, with something of the supernatural in the atmosphere and much of that indefinable quality—genius! Another in his studio was "The Wreck," a Provincetown picture, with the wizardry of rosy sunrise illuminating the stranded vessel's frozen rigging. Still another was a Kansas scene, a small picture with great depth of color, and with the vastness of the plains stretching away in a ghostly light.

At a one-man show of his work in a New York gallery thirty-seven other paintings were being exhibited—the work of years, including "Brooklyn Bridge," "On the Marne," "Fisher Folk," "The Old Boat House," "Frosty Night," "Cape Cod," "Berkshire Hills." There is not space to record here the honors and awards that have been won by the genius of this Westerner's brush. Enough to note what one celebrated English critic wrote:

> John Noble is one of the greatest of living artists; one of the very greatest America has produced, not excepting Whistler, Ryder, or Thayer. A man with a powerful feeling about nature, and an immense power in expressing it. He paints the sea as no one else has painted it. He has within him a surge like that of the ocean, and, like the ocean, he has his placid moments. America claims Noble; but the world claims him also.

His pictures are sought by collectors and leading museums. They are acknowledged as masterpieces. What worlds to span between those raw, crude, exciting frontier days and this acclaim!

It is a unique story of a man baffled, tormented, sad—the story of a long quest, of hope deferred, of toil, sweat, grime, and grind. Recognized abroad, his pictures hung, his art acclaimed, he worked on for twenty years almost unknown at home. Isolated! Exiled! At fifty came an offer that would have made his future financially secure, but he turned it aside and sailed to the West. These things, that homecoming, the ultimate triumph, make the story I want to tell. But the trail to follow is a winding way—from the old, old West, to Paris, to the Brittany coast, to Picardy, to London! Then home and the stars!

BACK in 1873, a boy of five was playing with his sister in the buffalo wallows of the northern Panhandle. They were the days of Empty-Sleeve Sal and Butcher-Knife Ann! (In Ann's cellar were found the bodies of five cowboys, slain and robbed.) Wichita, Kansas, was then known as Poker Bill's.

The boy's father was born of Scotch parents, in Ohio. The zest of the pioneer was in his blood. The son was brought up to think of himself not as an American citizen but as a Southwesterner. The days of free range! Of bloody antagonism between cattle men and Federal troops.

By the time the lad was fourteen, his father had a ranch west of Wichita and beyond the Cimarron. At this age he was leaving the ranch-house at four A. M. to ride six miles and let the sheep out of the corral. His days were spent in sketching. Sketching had begun at five years. At twelve, he was eager to catch the ponies in action and to get their legs right. Now he was trying to get people's heads, and the character in their faces. In the small library at the ranch-house was an illustrated set of Shakespeare. He copied the pictures. His mother thought they were wonderful. So did the boys of the ranch. His father felt that it wasn't a man's business at all. . . . And the boy grew older. Newspapers of Wichita and Kansas City printed his sketches.

"There was a cowboy around Wichita named David B. Leahy," said Mr. Noble. "We called him Dynamite Dave! He could spin a pretty good yarn of the half-truth, half-fiction variety. He would tell me what a picture ought to look like to illustrate his Indian stories, and I'd do it. These stories were printed in newspapers East and West.

"A cheap artist passed through Wichita, working in pastel, doing portraits for a few dollars. He had some tricks, and I picked up what he knew. He told me where to get crayons, and immediately I became fascinated with work in color. Eventually I got as much as twenty-five dollars for a portrait.

"I WAS engaged in this kind of thing when, in a spirit of adventure, I joined the rush into Oklahoma. I packed my stuff and went down to Caldwell, where I picked up a bronc. I had a dim notion that moving around was a good thing for a fellow who wanted to be an artist; that I ought to get a great deal of experience and store up memories. 'The Run,' which is the title of one of my later canvases, is a stored-up memory picture of that mad rush into Oklahoma. But what was it all for? I kept asking myself. So I went back home to Wichita. Father, as I have already told you, didn't think much of art as a man's business; but he finally consented to let me go to Cincinnati to attend the Eden Park Art School, and helped me."

Six or seven months, and the would-be artist gave up art school and returned to Kansas. Years went by. He referred to a tremendous experience he passed through during these years, and I asked him to tell me about it.

"They were years of futility, or so I thought then," he said. "Everything that was going on outside of me was entirely different from what was happening within. Understand! Nobody seemed to mind very much nor think it particularly queer because I wanted to be an artist. I got along all right. I was a gay young fellow, moving around, seeing the sights. I was known here, there, and everywhere. They called me 'Wichita Bill.'

"Wild Bill Hickok called me into his place one day and showed me a nifty device. 'Bill,' he says, 'talk about art! I got it!' He had a spring attached to his left shoulder to hold his six-shooter. A hunch of the shoulder—of the whole body—and the spring was released, and hand and gun came together. It was the ideal quick draw. Bill had been practicing with the thing in front of the mirror in the living-room at home. He'd turn around from the mirror like a flash and pepper the opposite wall with a pattern of bullets. The idea was to hit the same pattern each time.

"ANOTHER time, when I was restless and moving around on the lookout for something to sketch, I stepped into a bar at Kingfisher, Oklahoma. As I entered, a fellow who had been at the bar stepped back into a corner. He'd already pulled his six-shooter. The next minute he saw who it was. 'Hello, Professor!' he said. 'What'll you have?'

"That was Bob Dalton of bandit fame, the former United States marshal, noted for his raids on the Santa Fé. I'd met him in Wichita the year before.

"At this time I was working hard; but I was also reading—Plato! Aristotle! Dante! Diderot! Voltaire! Robert Burns! Wordsworth! Now and then I took a trip with my father. Once, with John Fory, I brought up a small drove of Texas steers six or seven hundred miles over the Chisholm Trail.

"What was I painting? Anything! The saloons wanted big pictures. For forty or fifty dollars I'd do a big canvas ten by three feet. They were bad, I suppose; but I tried to make them alive. One saloon wanted a copy of the nymphs and satyr picture that hung over the bar in the famous Hoffman House, in New York. Another I did was a copy from a print of Grützner's famous Three Monks. While at the Cincinnati Art School I had done a thing in the mode of the day—'Cleopatra at the Bath.' It was purchased by the Carey Hotel, in Wichita, and it eventually aroused the ire of Carrie Nation. One day she rushed out and gathered a bagful of rocks and hurled them at my picture. She put a hole in the center, and it made a big sensation throughout the country. Nobody took the trouble to find out who had painted it. Nobody cared.

"Yes, that upset me some. I was dazed. Slinging rocks at my picture! Well, the day might come, I hoped, when pictures of mine would compel respect.

"In the attic of a two-story house in Wichita I had a kind of studio. At night, when I worked by lamplight, I could look across the way into a room where two of my friends were working by a similar yellow light. Hour after hour, they pegged away, writing—Dynamite Dave and Victor Murdock. One detail of that scene I shall never forget. Always, as they wrote, their shoes were on the table.

"One day 'Vic,' as we called him, spoke of having read a book by Berkeley Smith,

We Amaze Men

with this Shaving Cream, whatever they expect

GENTLEMEN:

It's hard to make you realize that the five superiorities of Palmolive Shaving Cream aren't just "selling talk." They sound too good to be true. Yet they've tempted millions to ask for samples.

On that sample our whole case rests. We let you prove to yourself that our claims are justified.

And we *do* make good. Even the most skeptical are amazed. And *they* are greater advertisements for Palmolive Shaving Cream than anything we know.

It took years

Palmolive Shaving Cream is a sensational success. Few creations ever won so quickly such multitudes of boosting friends.

We knew that any shaving cream to win today must excel all others. First we learned the 5 things that men wanted. Then we worked for years, experimenting. 129 formulas failed—the 130th is the Palmolive Shaving Cream you get when you send for the sample. All our knowledge of soap, gained in a lifetime of study, has gone into this shaving delight.

5 exclusive features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

All we ask is a chance

While your present method may suit you well, still there may be a better one. This test may mean much to you in comfort. Send the coupon before you forget.

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILL.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you. Clip the coupon now.

the author-son of an author, F. Hopkinson Smith. It told of the life of the art students in the Latin Quarter of Paris. 'Bill,' he said, 'why don't you go over there and make something of yourself? You might turn out to be a *real* artist.'

"Paris! What would I learn over there? I knew that something was wrong. I didn't seem to be getting anywhere. I thought about it quite a while. But once I had made up my mind I didn't lose any time. I scraped some money together and landed in Paris in the spring of 1897, with ninety-eight dollars and sixty-four cents in my pocket.

"Like the other students at the famous academy, Julien's, I worked all week. The work was criticized on Saturday. The best I got for quite a long time was 'not so bad.' My teacher was Jean Paul Laurens. I took a fancy to him on sight: a heavy, bull-jawed fellow who looked more like a bricklayer than an artist. I thought if anybody could teach another how to paint it would be a man like him.

"How did I make a living? Once in a while I heard from home. Expenses were low. Moreover, it got around Kansas that 'Bill' was in Paris, and folks sent me photographs from which to make likenesses in oil. These brought in forty or fifty dollars apiece. Sometimes I hired out as guide to the tourists, and occasionally I sold a tourist a sketch.

"American art students who go to Paris when rather young are likely to lose themselves in the glamour of the atmosphere over there. But I was a grown man, nearly thirty. Goatees and velveteen pants couldn't knock me out.

"I hadn't lingered in the East long enough to lose any of the Western atmosphere which clung to me. I was John Noble, Southwesterner. I didn't quite realize it at first, but later I saw that my style didn't fit in with the prevailing mode. My hair was long, not in the style of the art students but in the fashion of the plains. I wore my broad-brimmed cattleman's hat—not the high-crowned affair you see in the movies, but a low crown, with a wind strap. My necktie was a rattlesnake skin and my vest was of similar skins, with elk teeth for buttons! I still toted my six-shooter!

"THERE were some big men in the Quarter at the time, and a lot of little ones. With the bigger men I got along all right. Some of the others joked about my hat, drew pictures of me as a wild Indian, and called me a Kansas Cyclone in a way that wasn't as happy as it might have been. So I thought I would stage a little come-back. I got a horse from the abattoir, removed the bullets from the cartridges of my six-shooter and packed them with finely-chopped bacon rind. That night I rode the horse into the Rendezvous de la Ruche, a café of the Quarter. When the old frontier yell rang out—'Yip! Yip!'—and the lights were shot out, one after another, they scattered! The next morning, the authorities fined me forty francs, and the Hole in the Wall coterie invited me in to sit in the chair Robert Louis Stevenson had occupied.

"Things went all right after that. But it had one result I didn't anticipate! For a period of six months it paid my board! The proprietor of the Boule Miche beckoned me over one day and said that if I would sit on the terrasse in front of his café, I could have all I wanted to eat. All I had to do was to wear that Western hat and look as though I had just dropped in! As the Kansas Cyclone that had blown in on the Café de la Ruche I was a trade attraction!

"But life wasn't all play. Work! Sketches, sketches, sketches! By scores, hundreds! Work all week on a sketch, then rip it up to start the fire with in the morning! You couldn't have asked for an exhibition of harder work than the serious-minded fellows gave.

"As for art, method, technique, there were times when I didn't know whether I was afoot or a-horseback. That riotous event in the history of art—impressionism—was in the air. We experimented with all the 'isms;' and painted in crazy ways. I grew restless. I left Paris for Brussels. Then I began going to Brittany, and in 1905 I settled there for an indefinite period in a town known as Pont Croix. Here I found myself.

"BRITTANY! Is there any place in the world more desolate in its way than this part of northwest France? But it has its spell; it is old; it is soaked in tradition. There the people are as they were in the fourteenth century. The Pont Croix chapel dates back to the Druid age! The house in which I lived was built in the fourteenth century—of stone, with walls four feet thick.

"In Brittany they wear wooden shoes. You soon learn why. No leather can withstand the climate. It rots. Inside the wooden shoes, over the socks, one wears chausettes of wool to protect the ankle joints from cold.

"Rain? In the winter season I have known it to rain for thirty-five days and nights. If not a downpour, a kind of drizzling mist, and during all that time the sun hid his face. The walls of the house where I lived were damp without and within. I whitewashed the walls of my studio when I first went there. One of the four walls is not dry yet; at least, it didn't dry during the nine years I stayed.

"There is a pervading sadness over everything. The fisher-folk are sad with the burden of years. The horses are apathetic and sad. Even the boats with their bright-colored sails have a melancholy droop. I would get up at four in the morning in the vain hope of seeing the sun rise, and it would rain, drizzle, and mist. I, too, became sad, and have never been so sad before nor since.

"To the Paris Salon of 1907 I sent two canvases, pictures of Pont Croix and Audienne. They were hung. This was encouraging. I fell to work on a picture called 'The Benediction of the Sea.' It shows the procession of Breton peasants taking part in their traditional ceremonial of blessing and thanksgiving to the sea, which is at once their life, their hope, their dismay, and their tragedy. There are white-surpliced priests; women in ancient headdress. They bless the sea to overcome its terrors. It is ironic, pitiable, sublime. . . .

"Before I had finished that picture I was at the end of my resources, and had run out of colors. Madame Glaguan, my landlady, had let my bill run six months. She lent me enough to get to Paris, and I consulted the color merchant. 'Make no trouble over it!' he said. 'Take what you want! Pay me when you can!' I told him I was up against it, and didn't know when that would be. He spoke of my pictures of Pont Croix and Audienne, then added, 'You can pay me when you die!'

"So 'The Benediction of the Sea' was finished and exhibited. The color merchant sent me a telegram of congratulation. 'A complete success,' said his message. There were people in Paris who said that with this picture I arrived. It became easier to sell."

Before those nine years were up the American correspondents in Paris began sending home cables about the artistic success of the boy from the Panhandle. But in the life of the artist such an event doesn't necessarily mean Easy Street. It's a way the gods have of saying, "Keep on working! It might happen yet!"

"I was continually hoping that something might happen to make it financially possible for me to return home," went on Mr. Noble. "This longing for home finally became an obsession. Did you ever hear of 'loneliness' as a fatal disease? Once, back in the days when Father and I were bringing up long-legged sheep from Mexico, we picked up a man near Las Vegas who had lost his way. He was in a terrible state. It wasn't the result of his being lost. He had 'loneliness!' Born on the plains, you get accustomed to them. But on people not born there the plains sometimes have an appalling effect.

"You look on, on, on, out into space, out almost beyond time itself. You see nothing but the rise and swell of land and grass, then more and more grass—the monotonous, endless prairie! A stranger traveling on the prairie would get his hopes up, expecting to see something different on making the next rise. To him the disappointment and monotony were terrible. 'He's got loneliness!' we would say of such a man. Sometimes, if he couldn't get away, the lonely man would shrivel up and die. And this fellow whom we picked up at Las Vegas had it. He died in the night.

"Loneliness of that kind got hold of me in Brittany. Only I *wanted* the plains again. The longing was terrific. I dreamed of standing in the tall prairie grass in the moonlight: I saw it stretching around me on all sides; I was hungry for it, sick with yearning!"

"WHY didn't you come back home?" I asked. "Somehow or other couldn't you have raised the money for the trip?"

"I wanted to come; but although I already had standing in France and England, I wasn't known back here. And I had to rely on the sale of my pictures for my living. There were a good many years when I never had cleared a lump sum large enough to pay for a trip home and back."

"What was the effect of this experience on your art?"

"I believe it taught me to understand the sea. I began to feel that the vastness, the bulk, the overwhelming power of the prairie is the same in its immensity as the sea—only the sea is changeless, and the plains, as I knew, were passing. Those lines of Lord Byron kept running through my head, pounding in my brain:

"Roll on, thou deep and dark blue Ocean, roll!
Ten thousand fleets sweep over thee in vain!
Man marks the earth with ruin, his control
Stops with the shore; . . .

Thy shores are empires, changed in all save thee—
Assyria, Greece, Rome, Carthage, what are they?
Thy waters washed them power while they were free,
And many a tyrant since; their shores obey
The stranger, slave, or savage; their decay
Has dried up realms to deserts:—not so thou,
Unchangeable save to thy wild waves' play;
Time writes no wrinkle on thine azure brow;
Such as creation's dawn beheld, thou rollest now.

"It was at this time that some of my fellow artists began to speak of the way I was painting the sea. It was said then, for the first time, I think, I was painting the sea as no one else had painted it."

A friend, a fellow artist, came from Paris to Brittany to see Mr. Noble. "Come on, Bill," said he. "You've been sticking too long in this damp hole! Let's get out and see the world!" It was winter, and the friend took Mr. Noble to the Riviera, where the sun was shining. There he met a young woman from Alsace.

"She knew a good deal about pictures," said Mr. Noble. "And I found she had a good deal more than a knowledge of art. She had courage too! Lots of it! I was fifty dollars ahead when we were married. Things had to be a little different after that. I became very economical. We stayed in Brittany one year more. It was no place for a woman. Then we went to Picardy, where there was sunshine, vineyards, and flowers."

Some time after this there was a brief trip home—in 1912. The ovation he got was from his mother. "I knew you'd do it, John!" she said. "I knew it when you were a boy!" She knew that he was already a big man, having read what was written of him in many magazines and journals abroad. There was an exhibition. Not a picture sold. He went back with a hopeless feeling of exile. Immediately he sold six pictures, two in London, two to a South African millionaire, two in Paris!

THE rest is soon told. More years in Picardy. A boy was born. In August, 1914, at Étaples, Mr. and Mrs. Noble and others were superintending the hanging of the exhibition of the Society of Artists of Picardy when news of war came. Not a soldier was left in the district. The British landed at Boulogne. The silver and other valuables belonging to the Nobles were buried in the garden of the rented house. With his wife and child, he joined the tide of refugees. Except for twenty-four canvases which he had stripped from their frames and rolled tight, he was wiped out.

"I'll tell you what to do, Bill," said one of the leading painters of England who got in touch with Mr. Noble shortly after their arrival in London. "Take my place at center in the International!" That meant that forty square feet were at the disposal of Mr. Noble for exhibiting his work in one of the most important annual art exhibitions in the world. It was just about to open. As a result of that generous act three of the American's canvases were sold. Once more he was on his feet.

He rented Sir Thomas Barclay's house in Earl's Court Square. Wealthy South Americans in London were spending a good deal on art at just that time. As the war drew to a close, there were other notable successes.

He had triumphed in a manner that few American artists have equaled abroad. He had fourteen thousand dollars clear! He could afford to come home! Moreover, he wanted his boy to grow up an American. And he, himself, wanted to be an American artist, doing American scenes.

Home! New York! Kansas! Provincetown! On Cape Cod he organized a group that built a museum for the exhibition of American paintings. His work became known and loved. His pictures fetched big prices.

"I had always known that I'd never be content until I had made good back here," he said. "It was a long time coming, but it proved worth waiting for when it came."

AS MY talk with Mr. Noble drew to a close, he was slowly pacing the room, his hands thrust deep into the side pockets of his coat. Again I was struck by the Westernness of the man—the openness, the cordial charm. My remark was to the effect that it was surprising a man who had lived so long abroad should be so American in feeling.

"Sure! I'm American! Future expatriates aren't born in Kansas! I sometimes say to young painters who ask me about going to Paris to study, 'You can go there and paint till you're blue in the face, but you can't bring back anything worth-while that you didn't take with you!' It's the young fellows who get swamped in the atmosphere of Paris and lose their identity.

"Why, I had to go to Europe to learn that Walt Whitman was our real American poet. Longfellow? Put him in a library of English poets, and you lose him. He fades into the English shelves because he was made by English molds.

"Do you know that wonderful thing of Whitman's, 'Bivouac on a Mountain Side?' What art! How skillfully he takes you up, up, up, over the mountain, firmly, strongly, as though by the hand. It's like magic. One night in London when I read those lines to John Runciman, the greatest music critic England ever had, the tears streamed down his face:

"I see before me now a traveling army halting,
Below a fertile valley spread, with barns and the orchards of summer,
Behind, the terraced sides of a mountain, abrupt, in places rising high,
Broken, with rocks, with clinging cedars, with tall shapes dingily seen,
The numerous camp fires scatter'd near and far, some away up on the mountain,
The shadowy forms of men and horses, looming, large-sized, flickering,
And over all the sky—the sky! Far, far out of reach, studded, breaking out, the eternal stars!

"And now I am around sixty. I have seen much! I have lived much! The autumn years have come! In the art world they say that the life of every artist worth his salt falls into three periods. But I would say that these same three periods occur in the lives of all who try to do and be something worth-while.

"First, those early years of trouble, of youth, of searching, of groping uncertainty. Through this maze of doubt we grasp one or two essential facts, and what each grasps varies according to the law of his being. Second, comes the period of effort, of striving for that which we think is worth-while. And somewhere around forty this phase merges into the third. By now a man knows whether that which he seeks is worth seeking. He begins to see more clearly. He renews his effort, he gets a strong hold, his course is charted. As he matures, and ripens and saddens, he has his hours of gayety. He works with faith in the pain that has gone before.

"So it is in any work that counts—in any life worth-while! The one rule—be yourself! Pick the goal which has a meaning all its own for *you!* Get your schooling! Make it hard! Hang on! Hew to an originality of purpose determined by the burning fires of your own troubles; shaped by the powers of your own gods; beaten out of your own brass! Be confident that in *you* there is a concrete, living individuality as distinctive as in the poetry of Walt Whitman.

"Nearly sixty! I am just beginning to understand what life means! And because that is the law of my being, I never wanted to be an artist so much as now! Every day the desire and vision grow stronger. I want to tell the story of the mood, the feeling, the thing that sings for me. . . . I've never worked so hard! There's something in the air here at home! And I want to do more. . . .

"TWO scenes come to mind. They're always hovering near. One comes like a radio flash from 'over there.' In Brittany, you know, for pulling their boats up on the shore or into the sea at low tide, the fisher-folk use white or gray-white horses. Always light-colored horses, because the army takes the dark ones. How many times I've painted the old boat horse! Patient, tired, weary, worn, and hard-worked horse! To me he's a symbol. And when the day comes that I have spread on canvas the last bit of color it will be my part to paint, they can carve on my tombstone a good gray horse! No use to look 'round for an epitaph! What I'd like to have said, I'll say here:

"'Here's John Noble! Bill! He had his faults! Enough of 'em! He loved the poetry of Walt Whitman, the sea, the West, his own home country! And when it came to hard work, he was steady! A plodder! He was a good gray horse for work!'

"And that other picture? A buffalo! Scion, symbol, and song of all that was, and will never be again! I never did see that famous herd of three hundred thousand buffaloes, which vanished just before my time. But Father saw it. Mother saw it. I knew many men who had seen it. The biggest herd I ever saw was three thousand. They were crossing a river at night! What a sight! You might paint the buffalo in several ways. You might put many in the picture, a great herd stretching away in a vast perspective. Or you might paint three. But as I feel it, I shall paint *one!* One buffalo standing there alone, knee-deep in the prairie grass under the moon! A mighty fellow, he! If I can, I'll make him stand for all those millions that are gone!"

"Scotch Valley"

(*Continued from page 61*)

thought, might discourage the pain, or at least give him resistance enough to bear it. He drove back to Vaccatown and stopped before Luis's Mexican Table d'Hote. Luis, a mulatto from New Orleans, would accept a check where the Italian proprietor of the gaudy cafeteria across the street would not.

"What's the matter, Mr. Gladden? Hurt your back?"

"I guess I twisted it a little. Coffee. And pop for Peter."

Luis leaned confidentially across the counter.

"I've got something a little stronger than coffee. . . ."

It proved to be rye with a hint of paregoric; it burned through Gladden's veins like hot vinegar. It occurred to him that, provided he lived through the first dose, he might achieve a complete detachment by finishing the bottle. He waited, staring into space, and listening for symptoms. Presently he developed a stomachache.

"No more," he said, and pushed the empty glass toward Luis with the tips of his fingers. However, a certain carelessness had been arrived at. He wrote a check and succeeded in getting to the door without walking on all fours.

Now he had two pains instead of one, but his head was clear; the pain, he realized, was in his body, not in his brain. He could think apart from his muscles and his stomach.

TWO men were entering Luis's as Gladden and Pete went out. There was a polite dispute as to the screen door, which swung both ways, and Gladden stepped aside. The first man was short and broad beneath an enormous gray hat; his tall companion Gladden recognized as typical of the country, with his celluloid eye shade and oil-stained overalls. They were continuing a conversation which had apparently begun outside.

The broad man said, "Evening, Luis. Fine weather. Two tamales and make 'em hot. . . . I tell you, I'd give a hundred dollars . . ."

"I thought you had Emerson over to look at it."

Gladden struck a match and lighted a cigarette.

"Emerson? Sure I had him over. Twice. Both times he had the pump up and put in new bearings. Both times he got her started, and both times she stopped as soon as he was out of sight."

The little man climbed on one of the revolving counter stools and pushed his hat back with a gesture of desperation.

"I'd give a hundred dollars— These hot, Luis?"

"Sure, Mr. Gibbs."

Gladden stepped outside. "You heard that, Pete?"

"Gosh!"

"When they come out, I'll offer my services. We must be on the right side, after all!"

The sun was setting in a milky haze, the smoke from small bush fires that crackled over the dry fields and in the yards and gutters of towns. There was a new sharpness in the air at sundown; the cool breath of fog rolling from the sea.

Gladden braced himself against the crumbling 'dobe wall. When the two men finally came out, the tall one was saying, "Of course I'm not an engineer, but I know a lot about electric pumps. I'll be around to-morrow to see what I can do."

Here was a delicate ethical problem.

"I can't speak to him now," Gladden said. "We'll follow and see what happens. If he shakes the other fellow, I'll introduce myself."

The two men walked up the main street side by side. They paused on a corner and the man in the gray hat engaged in a long monologue, to which the eye-shade man was patiently attentive. Gladden lingered before a jeweler's window, pretending to be fascinated by a display of alarm clocks.

Eventually, the short man finished his story and they moved on. Th s time they went into a frame office building and stayed an hour. Pete was sleepy. He had to whistle to keep awake. The devils were at Gladden's back again, and now that the stomachache had worn off the original pain was more personal, exquisite and insistent.

It occurred to him that perhaps he was sicker than he realized; for a moment the fear made him feel faint. He mustn't be sick, now, with a hundred dollars upstairs. . . .

"You go back to the car, Pete," he said, "and try to sleep."

When the man Luis had called Mr. Gibbs reappeared, he had shaken the fellow with the eye shade but had acquired a young woman. Gladden hesitated to offer himself, under the circumstances, as an electrical expert in need of a job. He had time to slip behind the door while the two passed.

They entered the motion-picture theatre, and Gladden followed, sinking with an audible groan into a seat beside them. It was a close, hot, dark cave of a place, smelling of humanity and cheap soap. Gladden tried to forget the pain in his back. He slid down; he sat up again; he turned sideways; he wriggled and twisted.

Nothing did any good. He was fit for nothing but bed and a porous plaster and a hot-water bottle. He reminded himself that defeat is always expensive. He hung on, gritting his teeth.

WHEN Gibbs and the young woman left the theatre, Gladden was just behind. It was nine o'clock. The little crowd, still husky and wet-eyed, scattered, returning to their orchards and pastures animated by contact with an art as universal as the need for laughter.

The young woman lived in a boarding-house on the skirts of the town. Rooms to let. A palm tree. A great flowering bougainvillea climbing over the fret-saw ugliness of a porch built during the Cleveland era. A patch of grass, blistered on the corners.

The two sat on the steps, close together. The murmur of the fat man's voice ran on and on like a shallow stream.

"I hate to spy on his private life," Gladden thought. "I wonder if Pete's asleep. I wonder if Bertha fed the children and the goat. I wonder if Tuerta got any water when she came in from pasture at sundown. I wonder what Gibbs would do if he knew I was squatting here in the dark watching him make love!"

Time was passing. Eleven o'clock. Twelve o'clock. The fat rancher made no move to leave. Presently Gladden sat down under a palm tree, and then he lay down, and then, in the middle of watching a flicker of stars in the brittle fronds above his head, he fell asleep.

IT WAS dawn when he woke. The hills at the end of the street were purple-black against a lemon sky. A milk cart rattled by, and a cat, returning from incredible adventures, passed on like a black shadow.

Gladden found Pete, crumpled and dazed, on the floor of the car. He opened his eyes to disappointment.

"You lost him! What time is it?"

"Five o'clock."

Gladden was ashamed to look at Pete. They drove to the ranch through the deepening gold of sunrise without exchanging a word. Pete was well acquainted with disappointment; but he had hoped, this time, for a miracle. Not even the astonishing feat performed by the car in carrying them the last quarter of a mile on a mere gas-fume could shake him out of his lassitude.

Bertha and the children were on the porch, huddled in blankets, sleepy-eyed and bewildered. When she saw Gladden limping across the yard, Bertha ran to him and caught his arm.

"Jim? You hurt?"

He reassured her: "I twisted my back, that's all."

"I'll rub it."

"Let me!"

"Let me!"

Gladden shook his head. "You all run away while I get breakfast. Pete will tell you about the circus."

Pete entered the circle of attention with a self-conscious grin, a transparent unwillingness to part with his knowledge of unattainable delights. He had been to the circus. He had seen a blood-sweating hippopotamus, a leopard, and a man-eating lion. He had had pop at Luis's Table d'Hôte. He had spent the night away from home. He was a being apart.

He moved away, and the children, silenced, followed him to the corral behind the barn. Presently Gladden heard the riotous and earnest beginnings of a home-made circus. He knew that breakfast would be an anti-climax.

He let himself down on the lowest step, carefully, carefully, enjoying to the utmost an unguarded groan. It was a relief to suffer out loud after twelve hours of heroic repression. He was both humiliated and chagrined, since he had not only lost Gibbs and Gibbs's hundred dollars, but he also had no idea where to find either the man or the reward.

And it was characteristic of the malicious stars then in ascendency that Olive

If you could only *see* a Burroughs Portable *in the making*

If you could only see a Burroughs Portable in the making and follow, step by step, the processes by which raw metal is transformed into this miracle of fine adjustments and enduring strength, you would wonder no longer why every kind of business is adopting this machine — why there are already over 70,000 Portables in the hands of satisfied users.

Dies for every part of the Burroughs Portable are tested under a special microscope and light device which magnifies a hair to the diameter of a walking stick. Parts produced from these dies are more accurate by far than those made to ordinary micrometer standards.

The Portable needs no "breaking in." Each part operates on another with almost friction-free smoothness. Each will withstand wear, even abuse, for many years. For there is built into the Burroughs Portable the recognized quality and workmanship of Burroughs highest priced machines. The same workmen build it. It passes identical inspections. It carries the same guarantees—the same nationwide personal and mechanical service. You will find it invaluable, whatever your enterprise.

BURROUGHS ADDING MACHINE COMPANY, 6228 SECOND BLVD., DETROIT, MICH.

Smith should come. The hoped-for, incredible reappearance, and he could not run to meet her. What a scurvy trick for fate to play. What a base betrayal.

Olive had come of her own accord, at six o'clock in the morning. She left the red-wheeled roadster at the ford and ran across, as light as a dryad, a creature part human, part element, part goddess, altogether brave, lovely and desirable.

And the best he could do was to drag himself to his feet, hanging on to the railing with both hands, like a paralytic!

Six o'clock in the morning is a very special hour, neither of the day nor of the dawn. No one comes casually to see you so early in the morning. Love or need brings them, never greed or curiosity. It is an hour purified by darkness. It is a fresh page, a clean slate, a beginning and a promise. It is, again, illusion.

Gladden thought: "I'd like to run away. She mustn't see me tied in bow-knots like a German Christmas cake!"

But she had already seen him. She came swiftly across the yard, waving. "Hello! You!"

He was amazed to discover how well he remembered her. The provocative little strut, the level brows, the thick, straight hair. And her voice, with the upward lilt: "Hello! *You!*"

"Hello!" he said, and tried to come forward, figuratively, with hat in hand. He couldn't. He could only hang on to the railing and grit his teeth. "I twisted my back," he said.

She stood before him, slim and straight, her hands clasped behind her. "I know. I saw you. Last night at the circus! I was waiting for some city slicker to come along. Country boobs know better!"

"I'm a guileless fool," he said.

"And so you broke your back for a hundred dollars. You needn't be ashamed. You needn't be proud. What's a hundred dollars to us? We have thousands of hundred-dollar bills, going to waste." She held out her hand: "Like this. It isn't for you. It's for those kids. Take it, please. And forgive me if I've embarrassed you."

"You haven't embarrassed me," Gladden said quickly. "Only I have the money already. I was going to fetch it. Do you know where a man by the name of Gibbs happens to live?"

"You mean Hawthorne Gibbs?"

"Why, yes, I think I do." He was actually walking; he was actually smiling.

HE HAD left the car on the highroad. To reach it, he must slide down the bank, cross the ford, climb the opposite bank, and haul himself into the car. Apparently nothing was too hard for fate to set up as an obstacle. This was a fantastic arrangement of hazards. Just as he was about to surrender comfortably, half a dozen reasons for not surrendering made surrender seem ridiculous.

He could not accept the money offered so generously by Olive Smith, because, later, he might fall all the way in love with her. There was nothing for it; he must find Gibbs.

"I was on my way. It's awfully good of you, but I don't need—"

This girl had the uncanny faculty of guessing what lay behind the silly artifices of polite pretense.

"You're going to fix Gibbs's pump!"

"Why, yes," he said. "I am."

He was crossing the ford. He thanked heaven that she made no move to help him. She pretended to be unaware of his crooked progress, and tempered her pace to his own.

"But I'm glad—" she began.

"You're glad?"

"Glad you're going to get the money yourself. It sort of—sort of makes the pattern—clean!"

He managed to get into the car by crawling on his hands and knees.

Any other woman would have voiced her sympathy. Olive Smith, who had a genius for friendship, said simply, "I'll drive you over to Gibbs's ranch, if you like. He lives about two miles beyond the State Highway, on Pepper Road. He calls his place El Encanto Ranch."

IT WAS then that Gladden realized that the tank was empty. It contained no more than a reminiscence of gasolene. The car would not move.

"Or you can take my car," she said carelessly. "I'll stay here with the kids."

"If you will—" Gladden said.

He found himself at the wheel of the roadster. The engine leaped into being at a touch. The tattoo and throb of that perfect machine had a vitality that gave Gladden courage. He forgot the pain in his back.

"You all right?" Olive asked.

She could smile without a trace of pity or amusement. At Gladden's gesture she gave her hand into his, and he felt the warm, heartening clasp of her fingers.

"Good luck, then," she said. "I'll hold the fort. You don't mind, do you, if I clean the house? I love to scrub. I wasn't meant to be rich and idle."

She gave him the look with which beautiful ladies must have heartened their knights for the long, long trek to the Holy Cities.

"If it were only a Crusade," Gladden thought, "instead of a broken pump! I don't deserve such a look for such a puerile undertaking."

The look went around him. He held her hand, drawing her closer, and his foot on the throttle called forth an angry shout from the engine; a glorious, passionate, and violent uproar. The car pranced and pawed like a restless horse. The moment of enslavement became the moment of escape.

"I am beginning to be lucky," Gladden thought. "I am wearing her guerdon!"

He stooped quickly, kissed the back of her hand, and leaped away. He could almost hear the striking of sparks beneath brazen hoofs.

Life seemed at that moment to be beginning all over again: this was a new world. He flashed beneath trees. Tore through a patch of gravel. Leaped a bridge. Crossed the highway traffic like a flung spear, and came, before he knew it, to a road called Pepper and a gate marked "El Encanto."

Ten or fifteen men were standing around the well, which was in a field behind the ranch-house. Among them, Gladden recognized the eye-shade man. Gibbs himself, chewing a cigar, turned as Gladden came forward, and giving his hat a characteristic backward thrust, said, "How d'you do? Looking for me?"

"Yes, I am. I'd like a chance at that pump. I think I can fix it."

Gibbs laughed. "Is that why you followed me last night? Say, young fellow, I sat you out! You fell asleep, didn't you?"

"I'll admit the joke was on me."

The eye-shade man was on his knees beside the bearings. Now he straightened up, brushing himself vigorously. All the men grinned and exchanged amused glances.

"You think you can fix the pump, eh? The best engineer in the country failed twice."

"I may be a better engineer than the best in this country," Gladden said pleasantly. "Will you let me have a look at it?"

"Look? Sure! Sure! Step right up! Get out of the way, fellows, for a genu-wine engineer!"

The man, in the eye shade, whose name turned out to be Erler, or Jake, rubbed his nose with the back of a greasy hand and said, "Can't make head nor tail of it myself."

The well was fifty feet deep; but a brief inspection convinced Gladden that there was more water to be had in Scotch Valley, at the foot of the mountains. Here, the land lifted toward the sea, then slid down again into a great waste of white sand, immaculate dunes, ribbed like the Sahara, lonely, beautiful, remote.

To conceal the state of his back, his need to groan with every shift of position, Gladden whistled. This gave him a wholly theatrical aloofness. He had heard of great surgeons who always whistled during an operation. It was steadying, and eliminated self-distrust. The circle of men closed in.

Gladden examined the shaft and the bearings.

"Yes," he said, presently, "I can fix your pump. To-day. For a hundred dollars."

"Go ahead. But, let me tell you, if you're a faker, our acquaintance is only just beginning. You damage the pump, over what it's damaged already, and you'll know me too well before we say good-by! That understood?"

"Quite. Do you know what the damage happens to be?"

Gibbs hesitated, and the men laughed.

"Well, no," he admitted. "I don't. That's your business, not mine."

GLADDEN turned his back. He took the measurement of the bearings and found that they were badly wiped. Sand had cut deeply into the metal. The journal of the shaft had frozen in the bearings.

He turned to Gibbs. "Can I have an old automobile tire, a portable vulcanizer, and some rubber cement?"

"I guess you can. But I'll be darned if I can see—"

"Give him his head, Gibbs! He's running away from you!"

Gibbs and Erler left the group, grumbling and arguing. They returned with the material Gladden had requested. There was a good deal of laughter among the others when Jake rolled the tire into Gladden's outstretched hands.

The sun had climbed above the trees. It was blistering hot in the field. Even the wind was hot and dry.

Gladden cut a strip of rubber out of the tire. He sliced it down to the required three-by-seven inches. One knife did not suffice; he used half a dozen. The men

Mobiloil flies with Lindbergh

3700-mile flight gives lubrication its greatest test in history

Capt. Lindbergh has cabled us as follows:

"Vacuum Oil Company
New York

In my flight from New York to Paris my engine was lubricated with Gargoyle Mobiloil "B" and I am happy to say that it gave me every satisfaction. My engine functioned perfectly.

Charles A. Lindbergh"

NEVER before have the skill and daring of a single man gripped the world as did Captain Charles Lindbergh in his flight from New York to Paris.

In 33½ hours he flew 3700 miles—alone in a single-motored plane—through fair weather, storm and sleet—straight to his goal and fame.

Success!

Gargoyle Mobiloil "B" lubricated the engine of Captain Lindbergh's plane, "The Spirit of St. Louis." And what a test of lubrication! That single engine must function perfectly. The slightest mishap meant instant danger, perhaps the end of the flight in the waters of the Atlantic.

The engine did function perfectly. The flight was a success.

When Commander Byrd flew to the North Pole — he used Mobiloil "B."

When U. S. Army fliers flew around the world in 1924 — they used Mobiloil "B."

When Lieutenant Maughan flew across the United States "from dawn-to-dusk"—he used Mobiloil "B."

When Captain Lindbergh made his flight from San Diego to New York—he used Mobiloil "B."

And now when Captain Lindbergh flies from New York to Paris he uses Mobiloil "B."

In a press interview Lindbergh said, "We had the worst possible weather for over 1000 miles over the open sea. I cannot say too much for the way the ship and the motor stood up under all this punishment."

Science Wins!

The Gargoyle Mobiloil Engineers are constantly and directly associated with aeronautic developments just as they have been with automobile developments from the beginning. Their Chart of Automobile Recommendations is approved by 182 manufacturers of automobiles and motor trucks.

The Mobiloil "B" used by Lindbergh *was not a special oil.* It was the same Mobiloil "B," which with the other grades of Mobiloil, is for sale by good dealers everywhere.

were silent. One of them, touching Gladden's shoulders, said, "The shaft's got to turn in that bearing, son."

Gladden whistled. Then he said, "Where's the grindstone?"

Gibbs led the way to the tool house behind the barn, the whole crowd following; there was an emery wheel in the shed. Gladden wrapped the rubber strip around a stick and pressed it against the wheel, grinding the rubber down to a uniform thickness equal to that of the old bearing. This was a lengthy and odoriferous process. Fumes of scorched rubber drove the crowd out of doors again.

Gladden then marked off the pattern of a spiral groove. This he cut by hand, using the sharpest blade he could find. The inner surface of the sleeve took form. He worked steadily, trying not to think of his back, of his audience, of anything save the job in hand.

When he emerged from the tool shed with the grooved sleeve, the men followed him again, trailing like a tournament grand-stand. "What you got, son?"

Gibbs puffed and fumed.

"I'll bet ten dollars he's pulling our leg!"

"Taken," Erler said promptly. He was smiling in the green light of the eye shade. He winked at Gladden, a fraternal and comprehending droop of the eyelid.

Noon. The sun high and stationary, like an electric hot-plate. Sweat rolled down Gladden's face; he tasted it, acrid bitter, on his lips.

He vulcanized the seam of the sleeve, before an audience that was beginning to understand. "He's making a rubber bearing!"

"Sure, didn't you know?"

"If it works," Gladden thought, "the water will circulate between the shaft and this bearing. The grooves will take care of the sand. There'll be no cutting or erosion. If it doesn't work—" The idea trailed off. The end of the job, the trial, the proof, was at hand. He had still to cement the circular sleeve into the housing. One o'clock. Two o'clock.

Several of the men drifted away, defeated by hunger, only to return, refreshed, to the well.

At four o'clock, the pump and shaft were in place, the motor was connected, and Gibbs threw the switch. Gladden had moved away from the well. His legs were unreliable; he was afraid that he might topple over like a sawdust man. He lighted a cigarette, trying to steady his hands.

WHEN he heard Gibbs's shout, he turned back again, into the circle of his personal triumph. Strangely enough, he did not think of Olive Smith, whose guerdon he wore, but of his uncle Steven, offering him a guaranteed, predestined success, a success not earned but purchased.

Here in this dusty field, anonymous and unheralded, he had won his spurs. The pump was running. A full stream of water came out of the discharge line. The rhythm of that perfect achievement beat against his heart. He had never been as happy. It was the happiness of selfhood realized.

Somehow, at that moment, he canceled the debt of the long, expensive years of preparation, and sensed a very particular, personal fruition. He knew why he had worked; to what end he had dreamed.

"If she's still running at six o'clock," Gibbs shouted, "the hundred dollars is yours. I'll keep my word!"

Gladden smiled. "Will someone tell me where there's a telephone?"

"Sure! This way! Come right down to the house! How'd you boys like some wine? Some real port bottled on this place thirty years ago? Eh? This way, gentlemen. The drinks are on me."

The roadster galloped back to the ranch.

"Now," Gladden thought, "I can go to bed!"

But nothing was to be simple, not even a backache. For when Gladden opened the door upon a transformed kitchen, a kitchen scrubbed and polished and set in order, with pans in rows and stove top black, and windows clear as clear water, he found Olive Smith, in an apron, presiding for two strangers.

She made a little, interrupted gesture of sympathy and warning.

"These gentlemen have been waiting for you," she said, "all afternoon."

The men rose (they had been taking their ease), and met Gladden's inquiring stare with the bland look of the professionally righteous.

The tall one, clearing his throat, said, "I'm the truant officer. I'm here to find out why these children aren't in school!"

"I didn't know the term had begun," Gladden said.

The other man laughed. "There's quite a lot of things you don't know, it seems to me. I'm from the district attorney's office. The district attorney wants to see you. I was told to bring you back. Come along now. My car's out front. It's late. And I'm fed up waiting for you. Move right along!"

(*To be continued*)

The Thing to Do

(*Continued from page 41*)

"No luck, eh? Well, it's a tough old town till yer get the hang of it." Calder pulled out a pipe and a can of tobacco. As he commenced to fill the bowl he looked over at Chetwood, and asked:

"Say—do yer know anythin' 'bout electricity, or this here—watcha call it—wireless?"

"Wireless?" Niel glanced up curiously, and hesitated. "Why, yes—that is, another chap and I built a set up at school. We used to fool with it a lot. But what—"

"Well, seein' you again kinda reminded me of George," the expressman went on, striking a match. "George is a brother o' mine, an' head shippin' clerk down at the Sanderson Electric Company." He paused to draw several puffs on his pipe. Then: "Anyways, George was up here the other night, an' got talkin' 'bout his place and this wireless stuff. Now, from what he said, I just happened to think as how they might be some openin' down there fer a young feller like you."

As Calder finished talking, Niel regarded him with a curious expression.

"I wish you'd tell me one thing," he laughed. "Why the deuce do you take so much interest in me?"

Joe Calder puffed at his pipe for a moment in silence.

"I dunno, son," he finally admitted, "unless it's how I said before—just like yer looks, tha's all. Never havin' no kids o' my own, I'm always buttin' in on other youngsters' business. Come on in an' I'll write George's address fer yer. Just tell him I sent yer. Won't do no harm to try, anyways."

And when, two days afterward, Niel Chetwood strolled into the Sanderson Electric Company's offices on Fortieth Street with no idea of gaining anything thereby . . . he walked out again an hour later, with the surprising realization that he had a job, a job that was going to pay him eighteen dollars a week.

The following morning he went to work—at the order desk. And the last thing he did at the end of that somewhat bewildering day was to thrash a pimpled, loud-mouthed clerk who had called him a "stiff-shirted la-de-da." It was probably the best thing that could have happened to young Chetwood. For in that fight he unloosed all his remaining pent-up emotions—all the fierce resentment of a keenly sensitive boy who had been suddenly plunged into a strange, hard world which he did not fully comprehend, and whose universal purpose, he felt, was to show him how little he knew.

And for the first time in a long while Niel fell asleep that night almost as soon as his head touched the pillow.

Coming out of the Sanderson Company's offices one evening, late in March, Niel started up Fortieth Street to the Broadway subway, as was his usual custom. But as he was passing a haberdasher's shop on the next block a casual glance at a sign in the window brought him to a halt. Part of the sign read, in big green letters: "To-day—March 26th, 1920." It was the first time that day that he had attached any particular significance to the date.

"Gosh! I'd almost forgotten," he said under his breath. "Why, to-day—to-day's the beginning of spring vacation up at school. I wonder—"

He pulled out his watch and noted the time. Quarter past five. Then he wheeled around and broke into an easy run toward Madison Avenue. . . . There'd be a bunch of the fellows coming in on that two-twenty train from New Sussex. Due about five-thirty, wasn't it? Yes, he remembered now—always took that train.

He reached the track-announcer's desk two minutes before the train was due. "Yes, it's on time," the announcer informed him. "Over there—track forty."

But Niel did not move toward the group of people standing back of the ropes some thirty yards distant. Instead, he pulled his hat down low over his eyes and remained where he was—partly hidden behind the high desk beside him—his eyes

DYSKINESIA

IT is safe to say that Dyskinesia—pronounced Dis-kin-ees-ia—causes distress to more persons than any other physical ailment.

Dyskinesia makes people old before their time. It is a cause of dyspepsia, sick headaches, colds and inflammation of the intestines. When neglected it may induce or aggravate rheumatism, gall-bladder trouble, disease of the kidneys and other serious maladies.

For the millions of sufferers from this ailment here is good news—

Dyskinesia is both preventable and curable, but not by drugs, many of which at first relieve but later make the condition worse than it was.

The successful treatment for Dyskinesia is based on an understanding of health habits that can easily be acquired by almost anybody. In its splendid fight for better health and less sickness, medical science can be given credit for another great victory.

Every family should send for a copy of the helpful booklet, "Dyskinesia". It tells in plain English how a vast amount of needless distress and serious illness can be prevented.

The booklet, "Dyskinesia", one of the latest printed by the Metropolitan Life Insurance Company, will probably be of value to more people than any booklet this Company has ever offered for free distribution.

The Metropolitan, since the inception of its welfare work, has printed and distributed more than 400,000,000 booklets and pamphlets dealing with the cause and prevention of most of the common diseases which afflict the people of the United States and Canada. The free booklet service is an important part of Metropolitan work for the promotion of health and the reduction of mortality.

The Metropolitan strongly advises all readers of this announcement to send for a copy of "Dyskinesia". It will be mailed without charge.

fixed on the open gate, and his heart thumping strangely.

The first scattering passengers hurried past; then a steady stream of them. Niel Chetwood still watched the gate, his cheeks a little flushed, and his hands moving nervously in and out of his pockets. Nig Stuyvesant and Jack Biddle were the first St. Matthew's boys he saw. Then a whole crowd behind them—laughing, shouting to one another.

Niel closed his eyes and drew back. Way down inside him was a hollow, sinking sensation that suddenly made him feel a little dizzy. He'd have given anything to be able to rush out there—hear someone shout, "Well, hel-lo, old Chet!" —and friendly slaps on the back, warm handclasps, someone taking his arm, leading him off somewhere with a bunch for dinner. . . . But he hadn't the nerve. He could see the expressions on their faces change, hear a casual, "Why—er—hello, Chetwood. How are you?" No, it wouldn't be the same. They'd high-hat him, and go on their way.

He opened his eyes again and searched the faces of the thinning line of passengers. There didn't seem to be any more of the St. Matthew's crowd. Niel took a step forward, but immediately halted and caught his breath. Among the last group of people coming through the gate was a dark-haired, blue-eyed girl walking with an elderly woman, and followed by a porter with their bags. Although the woman was busily talking to her, the girl kept glancing around with half-expectant eyes—serious eyes.

"Connie!" Niel could have yelled it—but the name barely left his lips in a broken whisper. He stepped back quickly and faced the other way, his heart pounding so hard now that it seemed ready to burst. His knees trembled so that he had to lean against the desk to steady himself. The palms of his hands felt hot. He clenched them tighter—and waited—waited until he heard a voice call down to him:

"Say, mister, gate's closed on forty. Your friends didn't come, eh?"

"N-no," Niel mumbled huskily, turning to go. "No, they—they didn't come."

AS THE months passed, Niel clung to the hope that he would some day receive news of his father. Night after night he would hurry from the subway to the house on Eighty-third Street, and pause in the dimly-lighted hallway to sort over the letters on the table by the hat stand.

He knew, if he ever did receive a letter, that it could only come from Trelfall; for, except the Sanderson Company and the Calders, Trelfall was the only one who knew where he lived. Niel had never returned to the Park Avenue apartment from the day he walked out of it with his packed suit case. He had left no forwarding address, because he didn't care to have anybody know where he was going. Save for the natural desire to hear from his father, Niel had wanted only one letter—and it hadn't come. After that— Well, he made himself believe it didn't matter.

So two years went by. Two years, during which Niel Chetwood gradually learned to adjust himself to the new order of things: to his daily work, which he grew to like more and more, and to which he consequently applied himself with greater effort; to eating in cheap restaurants with junior clerks and others who were unlike anyone he had ever associated with in his life; to Joe Calder and his thin little wife, on whom he made a point of calling once in a while; and finally to take everything as he found it, and try to make the best of it. But if he was forced, or willing, to put aside other things—to give only an occasional thought to Princeton and all that went with it—he never once forgot Constance Dana.

On a Saturday afternoon in early April, when all New York seemed to be out for no other purpose than to feel the gentle warmth of the sunshine, Niel Chetwood left the Sanderson offices and strolled up Fortieth Street to join the throngs on Fifth Avenue.

As he paused at the corner of the Avenue to await the passing of traffic, he suddenly heard someone shout from the crowd back of him:

"Oh—Chet!" And then a shrill, familiar whistle, one that he hadn't heard for a long, long time.

A tingling thrill ran through Niel, and he spun around, his eyes searching eagerly through the crowd.

"TOMMY!" he exclaimed. "Tommy DeWitt! Great guns! But if I'm not glad to"—and that was all he could say before his voice choked back the rest of the words. The next minute Tommy had two broad hands on his shoulders—shaking him, laughing, and talking so fast that Niel hardly understood a word he was saying.

After a while DeWitt paused for breath and drew the other to one side.

"Now, where in thunder have you been, Chet?" he demanded.

"Right here, Tom," Chetwood smiled.

"What doing, boy?"

"Working. Thirty dollars a week."

DeWitt grunted. "Thirty more than I ever earned in all my life, Chet." He fixed a pair of brown eyes on Niel. "Did it ever occur to you, young fellow, that a few of us might have been interested in your general welfare? My good gosh! Why didn't you write?"

Chetwood hesitated, and lowered his glance.

"Oh, I don't know, Tommy," he answered quietly. "The bottom was rather knocked out of everything, and—and I had—"

"Pride!" broke in DeWitt. "Now, here"—he slipped a hand under Niel's arm and led him to the corner—"we'll go over to the Biltmore. I'm checking out for Boston in an hour. In the meantime, suppose you begin at the beginning and unload everything."

"But there's nothing much to—"

"Begin," Tommy repeated, as they crossed the street, "at the beginning!"

So, after a somewhat reluctant start, Niel finally recounted everything that had happened since the day he walked off the St. Matthew's campus for the last time. But, for all his new-found friendship for Tommy, he could not bring himself to say a word about Constance Dana. There his pride still held him back.

When he had finished talking, DeWitt hunched back in his chair and remained silent for some time. Occasionally he drew a puff of smoke from a pipe whose bowl bore the metal numerals '24.' Finally he straightened up and looked over at Chetwood.

"And you still haven't found out where your father is, Chet?"

"No. It kicked a lot of the stuffing out of me, Tom."

"Well, I may not be in a position to talk," DeWitt returned, "but my advice to you would be to forget it. After all, you have your own life to live. If he doesn't think enough of you to come back, or write you—you're an awful idiot to moon over it, Chet."

Niel was silent for a moment. Then he said:

"Oh, I suppose I will forget about it in time. Have to." His glance went to the window and out across the concourse above the Grand Central Terminal. He continued: "But the thing that rankles most is what I've lost as a result of the mess, Tom. I don't mean to say that I was afraid to dig down and go to work, or that there aren't a number of opportunities ahead of me, regardless. But"—he brought his eyes back to DeWitt—"it twisted my whole way of living in one swoop, and it took away the greatest opportunity I'll ever have—four years at college. Darn it, Tom!—every time I pass the University Club here, or the Princeton Club, I stop and say, 'There's one club I can never belong to, no matter who I am or how much I'm worth!'"

Tommy DeWitt slowly tapped the ashes from his pipe.

"Chet," he said presently, "tell me this: What did you really want to go to college for?"

Niel gazed at him in mild surprise.

"What for?" he repeated a little impatiently. "Why, I've just been telling you, Tom. Because all my friends were going; because of the associations; and—well, because it was the thing to do—"

"Exactly," DeWitt interrupted. "Exactly why Dave, Stony, and I, and half the others in our class went—because it was the thing to do."

"But—you aren't sorry, are you, Tom?"

DeWitt laughed. "Well, as far as enjoying myself goes, I can't say that I am. Fact is, my first two years have been one glorious party; and I'm looking forward to two gayer, wilder years ahead. I'll study just enough to get by. I'll take every cut they'll give me—sleep in every lecture possible—learn all I can about wine, women, and song—and call it an education!"

Chetwood got out of his chair and walked to the window.

"YOU can't tell me," he contended firmly, "that college doesn't mean more than that to a man. I know better."

"True enough—for those who *want* it to mean more, and who therefore take it seriously. But I don't, Chet; and I've got lots of company." Tom paused, stood up, and went over beside Niel. "Thunder, old boy, don't think I can't understand how you feel. On the other hand, I'll tell you one serious, honest fact: the last place in the world to send chaps with too much money, too little desire to learn anything, and no definite purpose in going there—is to college. Be a law against it some day, I'll bet."

Niel made a perfectly natural statement. He said: "But I'd have made it count for something!"

As long as you wish, You can keep the *sweet inviting* MOUTH of YOUTH

While we are still young, soft foods gradually rob the little mouth glands of their youthful vigor. The numbers show them, three on each side. Pebeco's important ingredient restores their healthy action.

EVEN more important than brushing the teeth is caring for six little glands in your mouth.

If you keep them active, they pour out the fluids that counteract dangerous acids of decay and keep the teeth and gums sound, gloriously young and healthy.

But few of us have kept the Mouth of Youth.

From childhood on, soft foods have slowed up the mouth glands, the real guardians that prevent decay. Too little chewing does not keep them exercised, vigorous. Then decay begins.

That is why Pebeco's formula was worked out, especially to correct faltering mouth glands. An important ingredient restores for you the gay and lovely Mouth of Youth. A tingling sensation after brushing tells you that your whole mouth is refreshed, kept vigorous, young.

Made by Pebeco, Inc., a division of Lehn & Fink Products Company. Sole distributors, Lehn & Fink, Inc., Bloomfield, N. J. Distributed in Canada by Lehn & Fink (Canada) Limited.

Merry laughter and brilliant smiles

These are yours when you have used Pebeco. For you know your teeth are charming, your breath pure and sweet.

"That's it," replied DeWitt. "You would *now*, and as a result of what you've had to buck up against since you left school. But otherwise you'd probably have wasted as much time as I shall have done." He glanced at his watch, and then put an arm across Niel's shoulders. "Guess I'll have to start if I'm going to catch my train. Come on!"

Ten minutes later, as they stood near the gate leading to the Boston train, DeWitt abruptly dropped the subject of their conversation, and said:

"By the way, Chet, do you ever see anything of Connie Dana?"

The question took Chetwood by surprise, and brought a dull red flush to his face.

"No—I—I don't, Tom," he faltered, turning his head away. "Have you?"

"Not since graduation." DeWitt was making a hopeless effort to jam two magazines into one pocket of his top coat.

Niel was silent.

"You know, I thought that some day you—" Tom began again, and then broke off as he observed the other's expression. He picked up his bag and held out his hand. "Well, I—well, so long, Chet—and keep in touch with me now. I'll let you know when I'm coming down again."

He stood there for some time; until long after Tom DeWitt's broad back had disappeared, and the train had gone. . . .

SITTING at his desk one morning, about two weeks later, Niel looked up to see a freckle-faced office boy motioning to him.

"Boss wants to see yer."

"Who?"

"Mr. Kerr, gen'ral manager," the boy elucidated, and sauntered off.

A summons from the general manager was unusual—and considered unhealthy.

His knees bending a trifle unsteadily, Niel mounted the stairs and walked through a wide corridor until he came to a door with the name "Melville J. Kerr" painted on the frosted glass. He knocked timorously.

"Come in!" boomed a voice.

Opening the door, Niel stepped in. A square-jawed man, with a bristling mustache, cocked up his head and glanced quickly at him.

"Hello, Chetwood. Sit down. Be with you in a second."

Niel perched himself on the edge of a chair, swallowed hard, and waited. At last Kerr leaned back from his desk and—as Niel imagined—glared at him.

"Chetwood, my connections with this company will end in about a week. I've resigned, because I'm going to form, with several other men, a radio manufacturing organization. To our way of thinking, there are signs of a sudden and phenomenal development in the radio industry. We may be wrong; but we're going to take that chance." He paused and smiled. Then, "What do *you* think about it?"

Niel blinked at the question. But he had to say something—so he stammered exactly what he thought:

"Why—I—I think you're right, sir, but"—he hesitated—"but isn't the company going to make a speciality of radio production? I thought—"

Kerr shook his head. "Mr. Sanderson has a much more conservative viewpoint of the situation. He doesn't see that it's a big enough factor—yet. But we're parting the best of friends, and he's even given me permission to take two or three young men here along with me." He tapped a pencil on his desk and abruptly added, "Want to come?"

Before Niel could make a reply, the older man went on:

"Been watching you, Chetwood. Deliberately shifted you around just to see how you'd take hold. Of course, you're only a youngster, but I like the way you go at things—and you've got brains. And they don't grow on trees or come with college diplomas. They're valuable. Now, I'll give you fifty dollars a week, and all the opportunity you want to climb. Up to you."

Niel Chetwood's heart gave one final leap to his throat, and then settled down to a normal, although rapid beating. It was a minute or two before he could recover his voice and say what he wanted.

Then, "I guess I'd like to accept it, Mr. Kerr."

"Good! Come in and see me again at two o'clock Saturday."

Niel walked back to his desk almost as unsteadily as he had left it. And the rest of that day was one long struggle to curb his exhilaration and keep his mind on his work.

But that was also the day that the letter came from Trelfall. It was there on the table by the hat stand when Niel got home. A short, brusque letter telling him that his father had died in a small Southern town some three weeks before.

JUNE.

And one morning, instead of going down to the new Kerr-Brixey offices on lower Broadway, Niel Chetwood boarded a train that left the Grand Central at nine o'clock—for New Sussex, Connecticut.

All during that three-hour ride he kept saying to himself that he was going back to visit St. Matthew's for several very natural reasons: Because it was commencement; because Tommy had wired him to meet him there; because Dave and Stony would also be up. Yet, long before he started, Niel knew that he was bound to see somebody else there whom Tommy hadn't mentioned. And he wondered what he'd do about that.

It seemed to Niel that everybody got off the train at the New Sussex station. The platform was crowded with St. Matthew's fellows—sifting through the passengers to greet parents and friends. The usual commencement crowd. George, it was good to get back again! He made his way past them—glancing around for a glimpse of a familiar face.

Then he stopped.

Stepping from the running-board of a car at the other end of the platform, a slender, dark-haired girl, wearing a white sports suit, walked slowly in Niel Chetwood's direction. And as he stood there watching her, she suddenly looked straight at him—half-raised her arm—paused. . . . Lord! that couldn't be Connie . . . waving to *him* . . . coming toward him?

A group of people passed in front of him going into the station; and when he looked again, there was Constance Dana smiling at him—holding out her hand—waiting.

"Niel," he heard her say a little hesitantly, "you—you've been an awfully long time coming back."

A long time coming back! He was conscious of a pair of blue eyes meeting his own, of the pressure of a firm little hand, of his apparent inability to speak a word. . . . A long time coming back!

"Why—Connie! I didn't know that you"—the words stumbled out—"I mean, I thought that Tommy and—"

She laughed softly, shook her head with quick little movements, and lowered her eyes. "I—I didn't wait for them, Niel."

NOT until they were in the Danas' car, and well out of the traffic jam at the rear of the station, did Niel find his voice again. Then he said:

"You—you knew I was coming, Connie?"

She flushed slightly and flashed a smile at him.

"Of course, I did—silly." Then, in a more serious tone, she added, "You see, Tommy came over to see me last evening. He told me—lots of things."

As they turned the corner of the next street, and started up the hill that led to St. Matthew's, Constance took one hand from the wheel of the car and reached back of her. When she drew it forth again there were two letters in it. She passed them to Niel.

"They're a—a little late, Niel." Her voice was very low. "But I thought perhaps you might want to read them—sometime."

Slowly he brought his eyes away from Constance Dana and looked down at the two letters. They were both addressed to him at his old address on Park Avenue—and dated February 8th and 14th, 1920. In the upper left-hand corner of each was written, "Constance Dana, New Sussex, Conn.," and below that a blurred post-office stamping, "Removed—left no address."

Niel's glance went back to the girl sitting beside him. She was looking straight in front of her now—cheeks a little pale, and lips pressed tightly together. He started to speak—but she quickly interrupted with:

"Tommy tells me you're doing quite splendidly, Niel."

Then: "It was the only thing to do, Connie. I had to dig in somewhere and—" but he stopped, because he couldn't keep his mind on what he was saying. Everything was jumbled. . . .

He was only dimly aware of the fact that they were driving through the main entrance of the school, that they were passing groups of boys and young men scattered along the edge of the campus, and that among them were fellows whom he knew and wanted to see. His fingers touched the edges of the two letters. . . . Connie's arm brushed against his sleeve as they made a wide turn, slowed down. Then he heard someone shouting to him:

"Oh-h—Chet! Can't you even say hello to a chap?"

And another, "Hi—there's old Chet!"

"Pull up over here, Connie—we'll take him off your hands."

The car stopped suddenly. Niel felt a small hand press against one of his own.

"You go with them now, Niel,"—Connie's voice—"and then come over to my house—later. I—I'll wait for you!"

P. A. says "Come again!" in every puff

THERE'S a warm invitation in every cool puff on a pipe packed with P. A., if you get what I mean. You sort of look forward to each intake, the way you watch the mails for a letter from your best girl. Good old Prince Albert! Never wears out its welcome.

Why, the instant you open the tidy red tin and get a whiff of that wonderful P. A. fragrance, your mouth waters for a *taste* of such tobacco. Did I say "fragrant"? I hope to tell you! The flowers that bloom in the spring have nothing on Prince Albert.

And when you load-up the old jimmy-pipe and open the drafts—say, Mister! Cool as the blast of a traffic-cop's whistle. Sweet as his words: "I didn't mean *you*." Mild as the Gulf Stream, yet with that full, rich tobacco body that satisfies to the very limit. No bite or parch—ever.

I'm getting mine with a pipe and P. A. every day. I want you to get yours. All you have to do is step around the corner and tell the man-behind-the-counter you want a tin of Prince Albert. He hears *that* hundreds of times a day from men like yourself. Try P. A.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

Women who ask questions

Learn that the most and least a dentifrice can do is

CLEAN

INQUIRING women—women with eager, hungry, questing minds—who ask the doctor and the dentist "Why?"—they make good mothers, good wives, good shoppers.

Very soon they have the same ideas on care of the teeth that all dentists have. They use a dentifrice and see that their family does, for the same reason the dentist gives—to keep teeth *clean!*

For *treatment* of the teeth they go to the dentist and see that their children go—twice a year. They avoid self-medication. They use a dentifrice to clean, and they employ a dentist to cure.

They know that modern dental authorities agree that the one and only function of a dentifrice should be to keep teeth clean. This is the reason Colgate & Co. made Ribbon Dental Cream with the sole object that it shall clean teeth and clean them better.

Colgate's cleans by the following method: As you brush, it breaks into a sparkling, bubbling foam; in this foam is calcium carbonate, a finely ground powder which loosens clinging food particles, and polishes all tooth surfaces.

Next, this foam in a detergent, washing wave, sweeps over teeth, tongue, gums — washing all surfaces, removing the very causes of tooth decay.

Colgate's attempts to do no more than clean, because dentists say that a dentifrice *should* do no more. Rely on your dentist to cure your teeth—rely on Colgate's to clean your teeth.

Colgate & Co.
Est. 1806

FREE to the readers of this publication—a sample of the dentifrice most Americans use.

Hard-Boiled

(*Continued from page 15*)

yours whether I choose to have twelve suits or one; or if I prefer to run around in a horse blanket. Now, measure me for what I have ordered and for nothing more. Get busy."

If you said that, the tailor could not have you put in jail or even expelled from any of your clubs. He couldn't do a thing; and he wouldn't do a thing. He would not even refuse to measure you. In his heart would dawn a certain respect for you. But you dare not do it. (Neither do I.)

Instead, you shuffle about and mutter something about having been hit pretty hard lately; and that by and by you intend to get a number of suits.

It is the same along all lines of fashion. Miss Sapphira Somebody looks like a Misfortune when she wears skirts to the knees and a shingle bob. She is one of the women to whom a long dress and coils of soft hair are tremendously becoming. They give her her only claims to beauty and to distinction. Does she dare wear them? If so, I have not chanced to meet her; nor one woman in a thousand who has the hard-boiledness to defy the various commands of fashion for the sake of individual attractiveness.

A straw hat is a cool and usually a becoming head-covering for men. During certain arbitrarily-decreed months in summer a man may wear one. The last half of September may be, and often is, piping hot. But what man is so hard-boiled as to go forth into the streets on September fifteenth—or any time after mid-September—wearing straw head-gear?

BUT we were speaking of hard-boiledness as an armor. It is; and a highly needful one. Many years ago, for instance, I worked in an office whose boss was known through all other offices of the same profession as the Simon Legree of Journalism. Let's call him Smithers.

One of his workers—Brown will do for a name—died. Brown had had hard luck for some years. He left a wife and two small children; and he left nothing else. They were destitute.

Some of us got up a subscription for the widow and children. One of us took it to Smithers; sullenly unwilling to brave a rebuff from the boss, but still more unwilling to rob Mrs. Brown and her children of any off chance of getting an extra dollar or so. Smithers glanced at the subscription list, then thrust it from him.

"I won't give a penny to save the whole lot of them from the poorhouse!" he snarled. "It isn't my fault the fool hadn't sense enough to save his money. I'm no easy mark."

We collected what we could, and one of the men took the small offering to the widow. She thanked him. Then, bursting into tears, she exclaimed:

"And oh, may God bless Mr. Smithers for all his wonderful goodness!"

Our emissary blinked foolishly. This sounded like wild irony. He inferred that she thought the collection was a personal gift from her husband's Simon Legree

Lost *thank goodness . . .* the old-fashioned appetite

NO doubt about it—America is losing its appetite. Formal dinners have shrunk from fifteen courses to five. Luncheon has dwindled from a heavy, substantial meal to a mere entree or salad. Breakfast—well, breakfast has almost disappeared!

This change in modern appetites is the result of changed living conditions. It is natural and healthful that we should eat a smaller quantity of food than our forefathers did. *But we still need, and will always need, every one of the essential food elements that Nature provided for the human race.* We must choose our smaller meals with particular care, to make sure that no vital elements are lacking.

Because of the varied nourishment it supplies, Grape-Nuts has found a daily place on millions of American breakfast tables. This delicious food gives to the body dextrins, maltose and other carbohydrates, for heat and energy; iron for the blood; phosphorus for teeth and bones; proteins for muscle and body-building; and the essential vitamin-B, a builder of appetite. Eaten with milk or cream, Grape-Nuts is an admirably balanced ration.

Grape-Nuts is made from wheat and malted barley, prepared by a special baking process. This brings out the tempting, nut-like flavor, makes the food easy to digest, and makes it *crisp*. You'll really chew Grape-Nuts and enjoy chewing it. You will benefit teeth and gums by this exercise. This is particularly important, because so many of our modern foods are soft.

Your grocer sells Grape-Nuts. Perhaps you will wish to accept the free offer below.

Two servings of Grape-Nuts, free—and "A Book of Better Breakfasts"

Mail the coupon and we will send you two individual packages of Grape-Nuts, free. With them we will include "A Book of Better Breakfasts", written by a famous physical director.

These outdoor days your face needs this

After-Shaving Care

TO *keep* the face comfortable all day long — to protect it against wind, sun and dust — means special care after shaving. To make this care quick, easy and comfortable, Williams scientists developed Aqua Velva, a crystal-clear liquid, made expressly for use after shaving.

1. It gives the face a stimulating "good morning" tingle.
2. It helps to heal little nicks and cuts.
3. It aids the skin in its daily fight against sun and wind, dust and germs.
4. It keeps the face feeling and looking "well groomed" all day long. (And remember, Aqua Velva leaves no trace.)

Any druggist will supply you with Aqua Velva. Big 5-ounce bottles—50c in the U. S. A. By mail postpaid if he's out of it.

A generous trial bottle FREE upon request. Address:—

The J. B. Williams Co., Dept. 18
Glastonbury, Conn., U. S. A.
(Canadian Address: 1114 St. Patrick St., Montreal)

Williams Aqua Velva

Made by the makers of Williams Shaving Cream

FOR USE AFTER SHAVING

boss; and he began to seek words to undeceive her. But she continued breathlessly:

"Mr. Smithers came right up here, himself, the minute he heard of my loss. No father could have been more tender or more consoling to me than he was. He said such beautiful things about my poor husband! Then he made me give him the funeral bill; and he wrote out a check for it; and he gave me five hundred dollars more, to go on with."

That is all there is to the story. It is true. And it illustrates, more clearly than could a bookful of my own clumsy writing, the difference between the hard-boiled brain and the hard-boiled heart.

Smithers, as I learned afterward, did things of that kind again and again. But if the office had known of it he would have been assailed by myriad hard-luck stories. He would have been pestered for undeserved raises of salary, and he would have been begged to subscribe to every senseless object in all the eternal succession of a newspaper office's quasi-charities. Thus, he wore the only armor that could possibly have protected him.

More than once I have known men of enormous wealth coupling their several-figure subscriptions to some worthy cause by making the gift contingent on strict secrecy. This, not only through modesty but to shield themselves against the army of begging letters and hard-luck-story sentimentalists who would have rushed to the feast at first hint that a new victim had been discovered.

YET I believe every hard-boiled armor contains a wide chink through which shafts of appeal can be shot deep into the soft-boiled heart. I have found innumerable instances of it.

The late J. P. Morgan was notoriously hard-boiled. He was adamant to a swarm of money suckers who tackled him from every angle. But—

A group of reporters sat around a table at Lipton's café on Nassau Street. One of them was broke and out of work. He had the promise of a job the following week; but he had no cash to tide him over nor to get out of pawn the only decent suit he owned.

Calling for pen and paper he scribbled a jolly little tale of his woes—an audacious and non-whining request for fifty dollars—and sent it to J. P. Morgan's office by a messenger boy. He did it as a joke. He did not know Morgan. Morgan had never heard of him. But Morgan chanced to be the first rich man whose name he thought of. Expecting nothing, he wrote gayly and rather brilliantly.

Twenty minutes later, the messenger boy came back to Lipton's and handed the reporter the envelope in which he had sent his letter to the financier. It contained a fifty-dollar bill. No word of writing, but just the money. By some rare good luck, the reporter had chanced to strike a weak spot in the Morgan armor.

By the way, that story went all over newspaperdom. No fewer than a hundred more or less needy reporters sprained their intellects to write similar jocose appeals to Morgan. To the best of my knowledge, not one of them received a reply.

Bob Fitzsimmons, once champion heavyweight prize fighter of the world, was

Through a great new companion invention to the famous Super-Six Principle

HUDSON excels HUDSON *itself*

A new high compression anti-knock motor that turns waste heat to power

With the Super-Six principle, the new invention combines the highest efficiency in power, smoothness and long motor life ever achieved within our knowledge.

The released Super-Six principle converts to useful power, energy that in other types is lost in vibration.

This new companion invention adds a further step in efficiency by actually converting hitherto wasted heat into useful power.

Saves Fuel—Increases Performance

In all previous types of automobile motors a high percentage of the power of the fuels is lost in heat thrown away in the exhaust and cooling waters.

The new Hudson motor gives the snap and performance of the high compression type without sacrifice of flexibility and smoothness.

Spark knock is positively prevented. Regular gasoline gives the performance sought, in other types, through the use of special and costly fuels. The cold motor starts with the same snap you get from other types in midsummer. You don't have to wait for your motor to sputter while it warms up.

Ends Spark Knock

Oil dilution is ended, greater power and speed and fuel economy are obtained.

Every phase of performance is brilliantly better. These two Hudson inventions give a performance and reliability supremacy that are immediately and continuously apparent whether you drive your Hudson a city block or a hundred thousand miles.

Application Has Been Made for Patents Covering the Principle by Which These Results are Accomplished

Small-bubble lather *attacks beard at base*

Softens every whisker close to skin, right where razor works

COLGATE "small-bubble" lather seeps between whiskers. Myriads of midget bubbles douse every hair at the base—soften it ready for shaving.

"Small bubbles" hold more water than large bubbles, and water is what softens whiskers, science says. Look at the lather pictures below.

How "small-bubble" lather works

The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up and floats away the oil film that covers each hair.

2. With the oil film gone, millions of tiny, water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. Every hair is cut close and clean. And your face remains cool and comfortable throughout the day.

A WEEK'S SHAVES—FREE Try this unique "small-bubble" lather at our expense. The coupon below will bring a generous trial-size tube—free.

EXTRA DIVIDEND! We will also include a sample box of Colgate's Talc for Men—the new after-shave powder that *keeps* your face looking freshly shaved all day long.

ORDINARY LATHER
This lather-picture (greatly magnified) of ordinary shaving cream shows how large, air-filled bubbles fail to get down to the base of the beard; and how they hold air, instead of water, against whiskers.

COLGATE LATHER
This picture of Colgate lather shows how myriads of tiny, moisture-laden bubbles hold water, not air, in direct contact with the base of the beard, thus softening every whisker right where razor works.

SOFTENS THE BEARD AT THE BASE

equally hard-boiled. Here is a tale of him, told me by Fred Leighton, the collie breeder. Both men are dead now. Said Leighton:

"I landed in America, down and out. I had met Bob Fitzsimmons in the old country. I called on him, and asked him to lend me ten dollars and to let me work it out in some way. He answered that he was no Soft Spot; and that he wouldn't lend a penny to anyone. He was insulting in his manner, and he bawled me out as a dead beat, and then he told me to leave his house.

"I went away, smarting from his rotten treatment of me. My eyes stung; and I took out my handkerchief to wipe them. With the handkerchief, out rolled ten ten-dollar bills that Fitzsimmons had stuck there as he went to the front door with me.

"I ran back to thank him. He told me I was crazy; and that he hadn't done anything of the kind. He said he'd knock my block off if I tried to spread such a fool story about him. Six months later I had saved enough from a job to pay back his hundred dollars. I took the money over to him; and he wouldn't touch it. He still kept insisting he hadn't given me a penny."

Yet Bob Fitzsimmons had a reputation for "nearness," even in the heyday of his fortune and fame! To have been known as lending money to the needy would have swamped him with fake suppliants. Hard-boiled head, soft-boiled heart.

SPEAKING of the chinks in our hard-boiled armor, I think we all have them. I have at least two. I am slightly ashamed of them both. Moreover, they are nobody's business but my own; and I have no intention of letting myself in for a flood of begging letters—I get quite enough already—by confessing what they are.

Personally, if I want any favor, I would rather ask it of a hot-tempered man who begins the interview by being cranky. Loss of temper always lays open a man's armor chinks. The man who is calmly and smilingly sure of himself is a terrible foe to the seeker of such chinks. Smiling calmness seems to be the trade-mark of the thoroughly hard-boiled. I envy it—when it is genuine. It implies self-sureness, a glorious quality. Of an American general it was said by a member of his staff:

"He is the most even-tempered man in the army. He is mad, all the time."

Obviously, the general was one man who was anything but sure of himself.

I have heard more than once the query: "But why do we need to be hard-boiled?"

The answer is very simple: Because the world is organized largely on the principle of getting something from the other fellow. People are forever trying to sell you something you don't want or need. People are forever wanting you to do or to give something that you don't want to do or give.

The man with the soft-boiled brain or with a brain not hard-boiled enough to counterbalance his soft-boiled heart, is certain to be stung, fore and aft, and to be victimized. In order to carry a brain and judgment competent to fend off these pests (and to guard against one's unwise impulses) it is necessary to be hard-boiled.

MR. G. HAYDEN DUNN, *whose hobby is raising flowers*

"I once thought I would always be ill"

"UP TO THE TIME *of the War my life had been uneventful, tranquil.*

"Then—the trenches. Cold. Forced marches. Hunger. Thirst. I was gassed—and wounded.

"When I returned I was a physical wreck. For four years I fought in vain to steady my frayed nerves and to rid myself of my chronic stomach trouble. I had almost abandoned hope of ever being well again.

"Repeatedly a fellow worker had urged me to try Yeast. At last I began eating it—and in less than three months I had regained my old health and happiness.

"My favorite pastime is working with the flowers and vegetables around our home. Now, no matter how strenuous my day has been, I still have energy left to indulge this hobby in the evening."

G. HAYDEN DUNN, Medford, Mass.

FLEISCHMANN'S YEAST is composed of millions of tiny living plants, grown in a nutritious extract of malt and grain. They keep the whole intestinal tract clean, checking the absorption of poisons into the blood. They strengthen the muscles of elimination, banishing constipation and its evil results, an unhealthy skin and stomach disorders.

You can get Fleischmann's Yeast from any grocer. Buy several days' supply at a time and keep in a cool dry place. Write for the latest booklet on Yeast for Health. Health Research Dept. J-43, The Fleischmann Company, 701 Washington St., New York City.

"TRY AS I WOULD, I could find nothing that would clear my skin. I was very badly run down—probably this was the cause of my skin trouble. I ran along this way until about a year ago, when one of my friends said, 'Why don't you try eating Yeast?' I was skeptical, I must admit—but I began. To my surprise my skin began to clear, and ever since I have felt fine."

CHRISTINE INGLIS, Vancouver, B. C.

LEFT

MR. DE PASZTHORY is an all-round athlete. At the University of Southern California he won the middleweight wrestling championship. He writes: "Ever since high school days I have periodically eaten Fleischmann's Yeast. It has enabled me to restore my system quickly to order whenever my digestion was upset, to keep my blood clear and my skin free of embarrassing eruptions."

MELBOURNE DE PASZTHORY, Pasadena, Calif.

For the health that can be yours—do this:

Eat three cakes of Fleischmann's Yeast regularly every day, one cake before each meal. Eat it plain in small pieces, or on crackers, in fruit juice, milk or water. For constipation physicians say it is best to dissolve one cake in hot water (not scalding) before meals and before going to bed. (Be sure that a regular time for evacuation is made habitual.) Dangerous cathartics will gradually become unnecessary.

"Two punctures and a blowout in less than a thousand miles, and all on that left front, too! Funny that that one tire seems to get all the trouble."

"No, because your other three tires are Kelly-Springfields."

There are many definitions of hard-boiled, most of them signifying heartlessness. I do not think any one of them is correct. Perhaps I am not correct, myself, in my own idea of what is meant by the word. Here is my definition:

"To be hard-boiled means to be so certain of yourself that it makes no difference to you what other people may do or say or think."

I was a bit proud of this, until I repeated it to a woman who is wise. She thought a minute, then replied:

"Why, isn't that the definition of pig-headedness?"

Perhaps it is. But who ever heard of a pig that was fooled or imposed on or victimized (during his lifetime), or was coaxed into doing something his own wishes did not approve?

If your hard-boiledness makes you unfair to humanity at large or unkind to those who have a just claim on your tenderness, then it is a vice; and it is not the thing I have here been praising.

It should be the mosquito netting which you wear for protection when you change the location of bee hives. It should not be a club to shatter the hives to pieces and harm their occupants.

In other words, it should be used as a defensive, not an offensive, weapon; to guard its owner from a million troubles that beset him on every hand, not to make the world less happy and less comfortable for others.

Perhaps I have not made so great a success of my own efforts to do this that I can afford to preach it to others. But it is a grand idea, none the less.

"All Crumbs Thankfully Received"

(*Continued from page 55*)

into the real-estate business with him in New York.

"Well," laughed Noyes, "you can guess that he succeeded—for here I am! That was almost thirty years ago, and I have been in the real-estate business ever since. We started with one desk, which Mr. Goodwin let us have in his office. Now I have a staff of several hundred people, with branches in other cities and connections in other countries.

"Lovejoy and I arranged that he was to have the first eight dollars we took in, plus all his salary from Mr. Goodwin. I was to have the next eight dollars, and so on. This arrangement favored him, of course; but that was all right, because he had a wife and child to support.

"Even the first eight dollars for the new firm was so slow in materializing that Lovejoy couldn't have got along if he hadn't kept his job with Mr. Goodwin. As for me, I still had the income from my Block Island business. But, even so, it was hard sledding.

"As Lovejoy's job with Mr. Goodwin kept him in the office, we arranged that he should be 'the inside man' of our firm. I was to go out and try to dig up business.

"Of course, without experience or standing, we couldn't get property to sell. We had to depend on renting stores and offices. I used to walk through the

Removing Dull Film from Teeth

Helps Smiles Grow Bright and Charming

Affords teeth and gums the most recent protection dental science knows

(*Above*) BUBBLE BOATING is the latest water sport at San Diego. Judging from smiles kept gleaming bright by Pepsodent, Dorothy Prather and Charles Lipton find it highly entertaining

(*Above*) KATHRYN KOHLER, whom you've seen as "Sondra" in "An American Tragedy," goes twice each year to the dentist in protection to her priceless smile. Daily she keeps it gleaming bright by use of Pepsodent.

(*Above*) VAL LESTER goes out walking with a winning entry. Her smile of victory is sparkling white by help of Pepsodent that brightens teeth by dingy film removal

THAT many of the commoner tooth and gum troubles, and most cases of so-called "off-color" teeth, are due to a film that forms on teeth which ordinary brushing does not successfully combat, is the consensus of today's dental opinion.

Run your tongue across your teeth and you will feel this film—a slippery sort of coating. Film absorbs discolorations and thus makes teeth look dull and dingy. It breeds germs and bacteria and invites tartar, decay and pyorrhea. It is a menace to tooth and gum health that must be combated.

Thus dental authorities now seriously urge that film be removed at least twice every day—in the morning and at bedtime. To do so, obtain Pepsodent—a special, film-removing dentifrice most dentists favor. It curdles the film, then removes it and polishes the teeth to high lustre in gentle safety to enamel. It combats the acids of decay. It acts, too, to firm and harden the gums; thus meeting, in many ways, the requirements of modern findings.

Old-time dentifrices did not adequately fight film. That is why this modern protective way, as a twice a day habit, and at least twice a year calls on your dentist, are being advised.

Accept this test

Send the coupon for a 10-day tube. Brush teeth this way for 10 days. Note how thoroughly film is removed. The teeth gradually lighten as film coats go. Then for 10 nights massage the gums with Pepsodent to firm and harden them.

"Daddy,

your face doesn't scratch any more!"

There's a secret in Mennen, a secret all its own which we call *dermutation*. Dermutation softens the beard and relaxes the tiny microscopic mounds surrounding each hair. Beneath this beard-softening action your razor glides easily and smoothly without resistance; without a drag; without a nick. Mennen makes shaving easy, quick and pleasant.

And you'll be amazed at the improvement in the tone and feel that Mennen brings to your face. Five pure emollients cleanse and tone up tired skins.

Invest 50c—four bits—in the big tube of Mennen. Your face will feel the difference and others will see it.

To know the real luxury of a *complete* Mennen shave, use Mennen Skin Balm after shaving. Gives a cool, fresh tingle to the face and is antiseptic. Large tube 50c. Use it every morning along with Mennen Talcum for Men.

streets of that section, and when I saw a 'For Rent' sign, I would go in myself, measure the space that was to let, and make a record of every fact concerning it.

"Then I would canvass the locality to find a possible occupant. I studied the needs of tenants; and sometimes I could show a man that it would be to his advantage to move. In that way I earned a few commissions—and I began to *learn real estate values*.

"But we didn't make much headway for the first two years. The turn came when we ourselves moved into a basement store at 62 Cedar Street. The rent was eighteen hundred dollars a year, which seemed bigger to me then than a small fortune would now.

"Our reason for making this change proved to be a shrewd one. Two important real estate firms had their offices on the floor above our basement; and we figured that if anybody came to these big dealers with business too small for them to bother with, they would say, 'We can't handle this; but why don't you go to the firm down-stairs?'

"This was exactly what did happen. We got the crumbs which fell from the rich man's table. But gradually these business crumbs grew larger. Our clients became our friends. They brought us other clients, and so we got on our feet.

"Finally, Lovejoy decided to follow a special line of his own, and we dissolved partnership. I opened larger offices, went on building up the business—and am still at that same job," he said, with a smile.

"About a year ago, a gentleman connected with the United Cigar Stores Company asked me if I would consider selling my business to that corporation.

"'There isn't anything to sell—except good will,' I told him. 'I guess that's worth more to me than to anyone else.'

"'Perhaps it isn't!' he declared. 'With thousands of stores, the United itself is a pretty big dealer in real estate. Anyway, think it over.'

"A few days later an official of the United corporation called me up on the 'phone. I had considered the subject of price and told him that I would sell for two million and four hundred thousand dollars; one half of that amount to be represented by the half-interest which I would retain in the business.

"'I guess that settles it!' I added.

"When he said that he would see what could be done, I explained that there were a few more strings attached to my offer. The chief one was that I should remain at the head of the business. Also, the bonus system which I had put into effect seventeen years ago for the benefit of my employees must remain in force."

THE would-be purchasers agreed to pay the price, and accepted all the conditions named by Noyes. This was a flattering tribute to the business he had built up. But the United corporation showed very plainly that Noyes *was* the business; for they immediately took steps to insure his life for two million and four hundred thousand dollars, the price they had paid to get him.

In connection with this insurance policy, which is one of the largest ever issued on an individual life, Noyes told me an interesting story.

"I had named the conditions on which

Get the benefits of *high compression*

AUTOMOTIVE engineers have long known that the efficiency of gasoline engines increases as their compression is raised.

The compression of the present day automobile is as high as the limitations of ordinary gasoline permit. Gasoline is not a perfect fuel. It explodes too soon (*i. e.*, "knocks" and loses power) when compressed beyond certain limits.

That is why automotive research devoted many years to the development of "ETHYL" fluid, which, when mixed in very small quantities with motor gasoline, eliminates its knocking tendencies and makes it a high compression fuel. The fuel so mixed is Ethyl Gasoline.

Ethyl Gasoline has brought the benefits of high compression — greater power and flexibility, faster pick-up, reduced gear-shifting — to hundreds of thousands of motorists. This is because carbon deposits raise the compression of your engine beyond the point at which it was designed to perform efficiently with ordinary gasoline.

Try Ethyl Gasoline to-day. Enjoy a driving satisfaction and engine performance that you have never before experienced with your car. The "ETHYL" trademark shown above identifies the Ethyl Gasoline pump.

ETHYL
GASOLINE CORPORATION
25 Broadway, New York City

What high compression means to you

THE principle of high compression is readily understood. The tighter you pack the powder charge in a muzzle loading gun, the greater the force given the bullet. Similarly, the tighter gasoline vapor and air are compressed in the combustion chamber (the space between the head of the cylinder and the top of the piston) before ignition, the greater the power derived from the explosion.

Increasing compression therefore simply means decreasing the size of the combustion space, which may be accomplished mechanically or through the formation of carbon.

Higher compression means a more powerful and flexible car, less gear-shifting, faster pick-up. In short, a performance impossible with lower compression and the use of ordinary gasoline.

Easy

with Filmo equipment, to have

MOTION PICTURES

of Your Children

THOUSANDS have learned—as you will learn—that taking *motion pictures* with the Bell & Howell Filmo is easier than taking snapshots with an ordinary camera. Simply look through the spy-glass viewfinder and press the button. That is all there is to it. No cranking, no focusing, no shutter adjustment, no tripod required. Without previous photographic experience *of any kind* you can take first-class movies with Filmo *on the first try.*

Think what this simplicity means to *you*—who would treasure movies of your children almost as you treasure the children themselves! Every move, gesture, fleeting expression and characteristic mannerism faithfully recorded for the future!

Filmo Camera—and automatic Projector for showing your movies—are made with all the beauty and precision that enter the larger Bell & Howell Cameras, *with which nearly all motion pictures shown at best theatres are made.*

Eastman Safety Film (16 mm)—in the yellow box—used in Filmo camera is obtained at practically all stores handling cameras and supplies. First cost covers developing and postage to your door. Then comes the thrill of seeing your own movies at home, using Filmo automatic Projector.

Write for descriptive Filmo booklet, "What You See You Get," telling all the interesting details.

BELL & HOWELL CO.

1814 Larchmont Avenue, Chicago, Ill.

New York, Hollywood, London (B. & H. Co., Ltd.)

Established 1907

I would sell," he said; "and, in reply, United named one condition on which it would buy. The deal would go through, provided the insurance companies would underwrite a policy, to the full amount of the purchase price, on my life.

"A few days later, one of the United officials called me up and suggested that I see their company doctor before going to the insurance examiner.

"'You are forty-seven years old,' he said. 'When a man is that age, he is likely to be more or less below par physically. You may have something the matter with you that can be corrected if you have medical advice. Better get yourself in good shape before seeing the insurance people.'

"'But I've already seen them!' I said. 'They gave me the examination yesterday; and I have been notified to-day that my application is accepted and that the company agrees to underwrite the policy.'

"The whole matter had been settled inside of twenty-four hours," Mr. Noyes went on; "and I understand that this is the shortest time in which so large a policy as that has ever been arranged."

"How have you managed to keep in such good physical condition?" I asked.

"I don't know," he said, "unless it has been by the right mixture of work and rest. I guess everybody needs both. I know I do. For instance, I always have needed a lot of sleep. That was the reason I gave up playing football when I first came to New York.

"I often run short of sleep now; but I have my own way of catching up. In the summer I usually go abroad, taking a slow steamer over and a fast one back. On the trip over, I sleep from twelve to fourteen hours a day, until I am absolutely 'slept out.' I stay abroad about six weeks. I meet friends over there, play a little golf, and sleep all I want to. At the end of that time I am so keen to get back to work that I take the fastest steamer I can find.

"Work never seems to hurt me. Perhaps that's because I like it. There's a lot of satisfaction in *building* something; especially if you can be helping other people to do some building too.

"When I stipulated that I should receive a half-interest in the business, at the time it was sold to the United corporation, I had a definite plan in mind. Not a share of stock was to be offered to the public. If there is money to be made in this company, I want my own employees to make it, and I also wish to retain a one-half interest in the business. I immediately gave my employees a substantial block of my stock under condition that it shall always remain with the employees of the organization. I don't consider this in the light of a gift to these faithful employees. It is their right to share prosperity with me, as they have all contributed to it."

LATER, when I was sitting at Crawford's desk, I was reminded of this article in the Noyes business creed. A boy, coming down the aisle from the private office at the rear, laid a pink slip on the desk. Crawford read it, laid it aside, then picked it up again and looked at it thoughtfully.

"A whole story could be written about Mr. Noyes," he said, "just out of these pink slips. Sometimes they are requests

Digitized by Google

for information; but more often they *give* information. He seems to know everything that is happening, or is going to happen, or *ought* to happen, in the real-estate field. If a piece of property is to come into the market, there will be a pink slip on one of these desks, stating the essential facts about the property and giving directions what to do about it.

"But that isn't the whole story. One of these pink slips may be about something that is a personal matter with the man who receives it. Perhaps it is a few words of appreciation of some work he has done. Or it may be an offer to advance him the money with which to build a home. In this office there is at least one thing that is never put off. We read our pink slips the minute we get them! They are only scraps of paper. But they are a constant reminder that the chief is keeping track of his men and looking out for them.

"The result is that he has the most loyal and enthusiastic staff you could find anywhere. Everybody is willing to put in hours of extra work if necessary. I believe they would do it, for him, even if it meant no gain to themselves. But they know that it does mean a personal gain, for he sees to it that they share in the prosperity of the business."

WHEN he was a boy, Noyes put in an average of thirteen hours of work daily for his uncle Floyd. Now, at an age when most men are beginning to slow up, he usually works from fourteen to sixteen hours a day! Often he reaches his office at eight o'clock in the morning. If he has arranged to have his secretary there, in spite of the early hour he immediately begins to dictate letters and other work.

Although he uses few notes, he dictates very rapidly. At the end of an hour, another secretary takes the place of the first one. Apparently, Noyes himself does not know the meaning of fatigue, for he often uses four secretaries in succession, dictating steadily to each one for an hour.

When the deal with the United Cigar Stores Company became public last spring, it created a sensation in the real estate world. In the autumn, Mr. Noyes aroused still greater interest when he announced the formation of the Charles F. Noyes National Realty Corporation.

The "Noyes National" will have offices and agencies in every city, of fifty thousand or more population, in this country. According to his announcement, it will do a national business of buying, selling, and leasing real estate; will manage business property; will finance new buildings and refinance older properties; and will take charge of locating chain stores "everywhere."

He is proud of these great companies which bear his name; proud that he has won out in his effort to *build* something worth struggling for. Proud, too, of the men who have helped in the achievement. Someone else showed me a lot of figures about the company. But *he* showed me a list of the *men* who work with him. He told me how they had come up through the ranks; and he was far more interested in relating *that* story than in telling his own.

Why checking dandruff *prevents* baldness

Not a before-and-after picture—simply an artist's impression of a young man as he looks today, and as he would look without his hair.

A simple pine tar remedy

THERE is an age-worn superstition that baldness is a sign of wisdom.

But, instead, may not lack of hair indicate lack of foresight? Especially when scalp specialists tell us that baldness, in 9 cases out of 10, traces back to *dandruff!*

If you have dandruff, your scalp needs special care. Now—*before* baldness begins. A special soap is recommended—a soap such as Packer's Tar Soap made especially for the hair and scalp.

The value of pine tar

Practically every well-known authority recommends *pine tar* soap for shampooing, in the treatment of common hair and scalp ills—especially dandruff.

For over 50 years, leading physicians have been prescribing Packer's Tar Soap in the care of the hair, scalp and skin.

The dandruff treatment below lets your scalp enjoy all the benefits of Packer's tonic *pine tar* lather. It clears the gland openings; helps them perform their normal duties. It helps start the scalp toward renewed health.

The Packer Method

When you wash your hair, do this: Wet the hair with warm water, apply Packer's Tar Soap and pile up the rich, piney lather. With the finger-tips massage three minutes. Rinse. Lather again, repeat the massage, then rinse thoroughly.

In severe cases of dandruff, repeat this every other day for one or two weeks. (In milder cases, every third or fourth day may be sufficient.) Gradually decrease the frequency of the shampoos as your scalp clears. Then *keep up* the treatments regularly once a week to prevent the dandruff from coming back.

In most cases, this simple method will soon rid your scalp of dandruff and restore your hair's normal, healthy vitality.

Send 10c for Sample and Manual

For 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book has recently been re-edited to present the most scientific thought on the care of the hair. It contains dozens of authoritative suggestions for keeping your hair healthy and young-looking. Fill in the coupon, clip and mail today.

THE PACKER MFG. CO., INC., Dept. 6-H
Box 85, G. P. O., New York, N. Y.
I enclose 10c. Please send me sample half-cake of Packer's Tar Soap and your Manual, "The Care of the Hair."

All the world respects these

SPANNING the headwaters of the most important river in the world, the cities of Minneapolis and St. Paul form a unique economic unit. Backed by the industrial communities of the North Central States, and facing the tremendous sweep of the great Northwest with all its potentialities and raw wealth, these Twin Cities have attained a dominance in their quarter of the Nation that has no parallel.

For almost a century they have grown side by side, guiding the destiny of the Northwest. When timber was the greatest industry of Minnesota and Wisconsin, these were famous lumber towns. When wheat became king, these two were the greatest milling cities in the world. And now that diversification is making history in the Northwest, they have risen together to new heights as the industrial and commercial metropolis of one of the most remarkable agricultural regions in the world.

LOCATION: By St. Anthony's Falls, at the head of navigation. On the fringe of the great forest region of Minnesota and Wisconsin, where the open plains begin to sweep westward. Metropolis of a region embracing northwest Wisconsin, Minnesota, North and South Dakota, Montana.

INDUSTRY: Not only do the Twin Cities absorb the varied products of all the Northwest as a primary market, but they in turn supply the tools of production and all the needs of higher standards of living. Here is the largest manufacturing and distributing center in America for tractors and agricultural implements. The leading industries include grain, flour and mill products; metal working; clothing and textiles; printing and publishing; wood working; railroad shop construction; bread and bakery products.

AGRICULTURE: Statistics on production run into tremendous figures. Grain yields a billion dollars, yet the total value of dairy, livestock, and other diversified farm products *has already swept beyond that figure.* Egg and poultry production has doubled in the last five years; alfalfa acreage has tripled. The farmers of Minnesota alone earn $200,000,000 on butter annually.

TRANSPORTATION: Twelve trunk lines radiate from the Twin Cities, making them both heart and head of the Ninth Federal Reserve District with a population of 5,341,897! The Chicago, Milwaukee & St. Paul binds the Twin Cities to Milwaukee and Chicago with a double-track system over which run some of the most famous limited trains in America.

They grow in beauty

Beauty has governed the civic ideal of both cities, so that today there is no more delightful place of residence than here. Within corporate limits are the Falls of Minnehaha. The sandy shores of blue Minnetonka and Nokomis are circled by splendid boulevards and dotted with boat clubs.

Magnificent boulevards and parks, distinguished hotels and famous old clubs, excellent theatres and restaurants, libraries, art galleries and educational institutions, give these cities a charm and mellowed culture doubly emphasized by the vigorous youth of the region they serve.

SHORTEST AND MOST MODERN ROUTE TO THE PACIFIC AND FAR EAST

Twin Guardians of the Northwest

Where trails begin and end

THE importance of the Twin Cities both as a clearing-house for the products of the Northwest and as a distributing point cannot be overestimated. Only railroad service of the highest order can meet their requirements.

The Chicago, Milwaukee & St. Paul Railway operates 14 trains daily between Chicago and Minneapolis-St. Paul. This service includes some of the most famous trains in the world.

In 1851 the Milwaukee Road extended from Milwaukee to Waukesha. It grew steadily into a vast system 11,000 miles long employing 60,000 men. Its lines extend in all directions over the entire northwestern block of the United States: From Chicago to Kansas City, Omaha, Des Moines, Sioux City; to Milwaukee and the upper Michigan Peninsula; to the Twin Cities and Duluth; westward to Rapid City in the Black Hills; to Butte, Spokane, Seattle, Tacoma, the Olympic Peninsula and the Pacific.

Six hundred and sixty miles from Montana to the sea *are electrified.* Hydroelectric power, generated in remote valleys, sends the great trains humming across the Belt, Bitter Root, Rocky and Cascade Mountains to Puget Sound. Milwaukee passenger cars are now being *equipped with roller bearings*—another revolutionary improvement first adopted by this road.

Through glorious country

The famous *Pioneer* is the favorite between Chicago and the Twin Cities; but if you are bound for the Coast, by all means go by the *Olympian,* the de luxe limited that ranks with the finest trains in the world. The *Olympian* and the *Columbian* travel to shipside at Seattle or Tacoma, after passing the most beautiful and diversified scenery in America, through a great industrial and agricultural empire in the making.

Every tooth *reached* Every crevice *cleaned*

THE most important step in tooth protection is to secure a tooth brush that reaches *all* thirty-two teeth. Not all brushes do this. But the Pro-phy-lac-tic does, with its curved bristles, its big end tuft and curved handle.

Sold in three sizes by all dealers in the U.S., Can., and all over the world. Prices in the U. S. and Can.: Pro-phy-lac-tic Adult, 50c; Pro-phy-lac-tic Small, 40c; Pro-phy-lac-tic Baby, 25c. Made in three different bristle textures—hard, medium, soft—with white or colored transparent handles—red, green, orange. (For more bristle surface, the Pro-phy-lac-tic with 4 rows of bristles may be had for 60c.) Pro-phy-lac-tic Brush Co., Florence, Mass.

Life's Extras

(*Continued from page 26*)

and culture, it is the evidence rather of ignorance, and perhaps of folly. It is the triumph of shallowness and sterility. The real trouble with a sophisticated person is not that he knows too much, but that he knows too little.

Probably everyone has had some kind of experience with a star, or with the stars. I mean that, at some moment, a star has risen, or has been seen, or has set amid circumstances that made the memory of it a part of one's life. I remember that the morning star I used to see blazing above the plantation pines, when I was up early to feed the stock, or to be about some other work, used to thrill me with the beauty of its startling radiance. It seemed all dewy and throbbing—a thing alive, glorious and immortal. God set it there, I felt, as a reminder of His presence, so that we might begin our day with the thought of Him. So when the evening came, a great beacon of the twilight reminds us of Him again. Our days and nights are sentineled by the splendid warders of God.

I ONCE had a curious experience with a star. I was driving home to the plantation, in the old motorless days, when I was overtaken at dusk by a storm of hurricane violence. Inky darkness shrouded the world. I could not even see the road ahead or behind. The thunder and lightning were appalling. Finally, a bolt struck a pine not twenty feet from my buggy. My horse had stood a good deal from this storm; but now he made a sudden dash. He broke away through the forest, and I could not hold him. In a moment he had run between two pines standing close together, had smashed both shafts, and had torn loose from the buggy and from me. Into the howling darkness he vanished.

The rain came down as if it meant to make a joke of the Flood. The thunder blared. The lightning became most uncomfortably intimate and intrusive. I heard near me great trees go crashing down in the fury of the tempest. Alone I was, defenseless, in profound darkness. I knew in a way where I was, and to locate myself the better I looked toward what I believed to be the west.

Through the heavy arras of the rain, to my amazement, I saw a little rift in the storm-rack, hardly bigger than my hand, in the very heart of which the evening star gleamed in dewy-silver solitude. In all the stillness of felicity it shone serenely, saying to my heart, "This storm is an impostor. It is momentary. The sky is here, and the stars; all shall be well."

Amid all the desolation about me, and the seemingly hopeless chaos, here came a celestial message. Shining through the storm-rack, its light reminded me of something past our world. Taking heart, I waded out to the road, found my horse waiting for me half a mile down its gleaming length, rode homeward through the breaking storm, and reached the house in full, calm starlight. Stars fill me with a sense of God; and the heart cannot help being grateful when it remembers that the beauty and the wonder of them may be accounted things not to enable us to exist, but gifts of love to make us joyous.

If there is anything in life in which I take a pardonable pride, it is in my friendship for certain old woodsmen and hunters; obscure men, as far as the world is concerned, but faithful friends, loyal comrades. Occasionally one will tell me something intimate about himself; and when he does it is usually remarkable, as I believe the following story is. I shall give it without embellishment.

"It happened last June," my friend told me, as we were sitting together on a pine log in the depths of a virgin forest. "I tell it to you because I know if you tell it, you will never use my name. Bill Moore and I, you see, had had trouble between us for years. The last time we met in town, if friends hadn't separated us we would have finished the thing right there. A lot of things had made us feel as we did; and everything that happened appeared to make it worse.

"After that night in town, I figured that one of us would get the other. I knew he always carried a gun, and I began to do the same. Well, that day in June one of the field hands told me that Bill said he would get me. I made up my mind to meet him a little more than halfway, and late that afternoon I rode up toward Bill's house, about three miles from mine, intending to have the thing over. A man can't live in that kind of suspense.

"A mile from his house, I saw somebody coming down the road. The man was riding too, and he looked like Bill. I just turned off the road into one of these here bay-branches, where I would be hid well. There I sat still on my horse, with the bushes all around me, and with my hand on my gun and the devil in my heart. I put up my left hand to pull aside a little limb, when on it I saw a white flower, a sweet bay flower. And I smelt it, too. My mother used to love that flower; and when I was a boy she made me bring a bush from the swamp and plant it in the yard for her. She was buried with one of them same white flowers in her hand. And, you know, I forgot all about why I had come down that road.

"YOU'LL think I was a fool, but that flower set me to thinking about my mother, and about them old days, and about the kind of man she hoped I might be when she was gone. The first thing I knew the man on horseback was right opposite me in the road. And it was Bill, all right.

"But in the few minutes he had taken to come up, something had happened to me. I didn't want to harm him now. I didn't feel that I had to look out for myself. Perhaps I did a risky thing, but I rode out of the bushes, calling to him. Something in the way I came up made him know it was all right. And it was all right, 'cause we made it right there and then; and we are better friends than ever we were before anything happened. Now what do you think of that—and all because of a derned little flower? But it's all the truth, just as I'm telling you."

He "redeemeth thy life from destruc-

Good News
for the man supporting a family

If you are supporting a large family, here's good news for you. Listerine Tooth Paste, the finest achievement of dental science, costs but 25c for a large tube.

Those who have paid up to 50c for other dentifrices can now have whiter teeth and save $3 per year per person by using Listerine Tooth Paste. Think how that mounts up in a large family with everybody using tooth paste every day. Worth considering, isn't it?

In Listerine Tooth Paste is a marvelous new polishing agent that gets teeth gleaming white in quicker time than ever before.

Also included are fifteen other ingredients to keep gums firm and healthy and the mouth sweet and refreshed. You will be delighted the minute you try it. Your druggist has it. Lambert Pharmacal Co., St. Louis, U. S. A.

Pipe Smoker Finds Price Does Not Determine Tobacco Satisfaction

Apparently, in selecting a certain tobacco, smokers suspend the rule: "The more you pay, the better you'll like it."

Read of this young man's experience:

Chicago, Ill.
February 17, 1927

Larus & Bro. Co.
Richmond, Va.

Gentlemen:

I'm just a young man—less than thirty. About five years ago I switched from cigarettes to a pipe. Why? Because I found that a pipe required the least attention and also interrupted me in my work the least.

At first I only smoked the more expensive brands of tobacco. Then I tried the less expensive blends. I guess I tried them all. Finally I tried Edgeworth. I liked it at the start—and repeated, and repeated.

For the last four years I have smoked nothing but Edgeworth—except when I was unable to obtain it. And, whenever I couldn't get it and had to substitute, I was glad to return to Edgeworth as soon as possible. Now I smoke about two cans of Edgeworth every four days.

No other tobacco can take the place of Edgeworth in my pipe.

Sincerely,
Paul A. Johnston

To those who have never tried Edgeworth we make this offer:

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 256 meters.

tion," says the Psalmist; but we do not often think of the deft and beautiful ways in which God works. Beauty is made to touch the heart, a right spirit is renewed, and the life is redeemed. I don't think this is preaching; I hope not, for of all men I am the least capable or worthy to undertake that. It just seems to me like a rehearsal of truth. Surely life's extras not only give us happiness in a positive way but also indirectly: by saving us from the tragic loss of our nobler instincts, they rescue us in times of peril.

There are very few sounds in the natural world that are harsh. Even the massive rolling of thunder has about it something of solemn beauty. In anthems the sea rolls on the beach; and in the sunny shallows there are water-harps forever making melodies. The wind is a chorister. Many a wild bird can warble like an aërial rivulet. The world is really a melodious place, full of soft sounds and harmony. Man makes it riotous and blatant.

I remember being especially impressed with this truth when I went one day into the forest to try to escape from a grief that had come to me—the loss of one dearly beloved.

A LITTLE way within the borders of that fragrant, dewy forest, where giant yellow pines, tall as the masts of brigantines and full of dim contralto music in their crowns, rejoiced in the sunshine—just here I heard a parula-warbler singing. He was in the crest of a bald cypress, high over the dreamy waters of a little woodland lake. The bird's song sounded like a delicate astral flute, sounded softly and sweetly, to lure me out of my trouble. High in the heavenly blue this chorister was, joyous in that halcyon repose that the heart enjoys when it is at peace. Like a voice of a spirit was this music; it came to me calmly yet thrillingly. Like a quiet hand was that beautiful song, to cool the fever of care, to still the pulse's leap.

All about me were the rejoicing looks of the flowers, and the shining hush and loveliness of dew-hung ferns and bushes, and the gentle, pure passion of the sunlight. And music there was from myriads of sources: gossamer lyrics from bees; the laughter of a little stream jesting with the roots of a mighty pine. The wind's soft wand touched the tall grasses and the sweet myrtles into a sibilant elfin choir. Everywhere I looked I saw wild, sequestered grace. The great pines chanted like the sea, their harps of the sky touched like things celestial. And what did the music and the beauty, those extras, bring me? Passing from a state of keenest grief I came to one of quiet reconcilement—to the profound conviction that, living or dying, God will take care of us.

God seemed very near to me in that wood; the beauty of it all trembled with His grace; the music held His voice. I saw there both life and death—in the green leaves and the brown, in the standing trees and the fallen. If one is honest with himself when he asks the question, What is it that perishes? he will be obliged to answer, Everything that the eye sees. In the forest, amid those things that God provided, I came to understand that if we are to hold anything—and in times of sorrow we *must* have something to which we can cling—it must be to the unseen.

For the strength that is permanent, we have to lean on visions; for immortal hope, we have to trust, not the things that we perceive but those invisible things that our spirits affirm.

I REMEMBER walking early one July morning down a thickety path. Trees completely overarched it; but far ahead light gleamed. The path was long and straight, and terminated in a wide meadow. As I glanced upward, my eye caught sight of what I supposed to be a knot on the end of a dead limb that hung directly over the pathway; it was clearly silhouetted against the sky line ahead. In a moment something had darted over my head and had alighted on the knot. It was a hummingbird on its nest, which hung like a fairy bassinet in the lonely woodland. I looked at the nest and at the bird, with its elfin grace, its delicate sheen of brilliance, its jeweled throat. And I thought: This whole matter of *grace*, of elegance, of delicacy and felicity of beauty is an extra. It is not necessary to have it so. But God has willed it so, because He loves us and knows our hungry hearts need this kind of beauty.

For many years, I had an idea that nature had for man an active sympathy; but now I have changed my opinion. There seems really a superb indifference about nature. It is what lies behind nature that really has sympathy. The rose does not of itself bloom for us; but God has made it to bloom for us. Surely this beauty is not a random affair; it is too authentically a sign and symbol of love. All we know about the highest form of affection we have learned directly from God's affection for us. We not only "love Him because He first loved us," but we love one another because He teaches us how. We originate with Him; and our sublimest art is nothing but attempts to imitate the things in nature that He has created.

Whatever my religion may be worth, I feel deeply that life's extras have given it to me; and time shall not take it from me. Meditating on what we have, not merely to sustain us but to make us joyous and serene in life, I have come to so clear a consciousness of God that of all men the atheist appears to me the most pitiable and foolish. Nor have I come to this faith by roseate paths alone. I know well the Valley of the Shadow; I know the aspect of that Veil which mortal sight cannot pierce. But I know, also, that the spiritual luxuries that we so freely enjoy vindicate the faith that behind the Veil is the God of mercy and of tenderest love.

DR. WILL DURANT, whose book, "The Story of Philosophy," made him famous almost overnight, writes next month on "Men and Women—How They Differ in Mind, Motives, and Character." No subject on earth is more provocative of discussion than this. You may agree with all Doctor Durant's points of difference, or only with some of them. Or you may find yourself in violent disagreement with everything he says, and ready to commit mayhem on him for his opinions. But, whatever your attitude of mind, you are going to be tremendously interested and stirred by what he has to say.

Wanted—Your Services

As a Real Estate Specialist

Make big Money—I made $100,000 in less than 5 years. Learn how I did it. Use my successful system. Begin at home—in your spare time. Make money my way. Start now. Free book tells how.

Are you in the same hole I was in?

Are you stuck in the rut of *hard work* and *poor pay?*

Are you dissatisfied with you job, your *income* or your *prospects?*

Are you having a struggle to make both ends meet?

Are you putting up with the *crumbs* of life while others are getting all the *cake?*

Then you are the man I want to talk to.

Listen!

When I made up my mind to get started in the real estate business, in my spare time, I was receiving a salary of $100 a month.

I was doing work I was not fitted for and which I thoroughly disliked.

I was living in a gloomy boarding house, wearing cheap clothes, striving to keep out of debt, and getting mighty few of the good things of life.

In less than two years after I started to specialize in real estate, I was making nearly *one thousand dollars a month.* And in less than five years, I cleaned up a net profit of *over one hundred thousand dollars.*

To get the whole story of my success in real estate, and how you, too, can succeed, write at once for my free book "How To Become a Real Estate Specialist." It contains *my history* and *your opportunity.*

Follow in My Footsteps

If you want to learn the secret of my success—if you want to use my money-making methods—if you want to follow in my footsteps—this is your chance. And *now* is the time to get started.

I have studied real estate conditions in this country very carefully, and my investigations convince me that the next ten years are going to be banner years for real estate.

Furthermore, my experience satisfies me that there is no better business to get into. It is more healthful than most indoor jobs—you can start in spare time—you can begin with little or no capital—it does not require years of study like medicine, pharmacy, dentistry, law, engineering, electricity, architecture, etc.—the beginner is paid the same rate of commission as old-timers—the business is practically unlimited—it is estimated that there are thirty million properties in the country and that ten million of them are always on the market—it is a permanent business, not affected by fads or fashion—it is constantly growing as population increases—it puts you in touch with the best people—it is a dignified, pleasant and worthy occupation with great possibilities for big profits.

If you want to make big money as a Real Estate Specialist—if you want to use my amazingly efficient system—let me hear from you at once. I will send you—*without cost or obligation*—my free book, which fully explains how you can get started—in your spare time—just as I did—in a new kind of real estate business that is as far ahead of the old, moss-covered methods of the average real estate agent as the automobile is ahead of the ox cart of our forefathers.

Put Your Name Before the World

What Others Are Doing

As positive proof of the success of my modern methods, read the following brief extracts from some of the letters that come to me from those who are using my scientific system—following in my footsteps—making money my way:

"It may astound some to know that I have made between $8,000 and $10,000 over a three-month period, which may be directly attributed to your splendid Real Estate System."—A. W. Fosgreen, New York.

"I have been helped a great deal by your system. I have now a new car, two new typewriters, a stenographer and a dandy office, and money in the bank, all through my own efforts and without any capital to start with."—Alice Moore, Conn.

"I was a Ford salesman earning $300 a month. Your Real Estate System increased my earning power 200%. I now own a Chrysler Sedan, up-to-date office equipment and have increased my bank account."—Alfred J. Bennett, Mich.

"Your system is wonderful. Without giving up my job as stationary engineer I made $900 in three months in my spare time."—Matthew J. Stokes, Penna.

"Without your Real Estate System I would still be making $35 a week instead of around $200 as a starter."—E. K. McLendon, Ore.

"I have sold many thousand dollars' worth of Real Estate and have deals pending that will go beyond $300,000 mark. Owe all my success to your comprehensive System."—Carrie Marshall, Miss.

There isn't room here for any more such letters, but send for my free book, "How to Become a Real Estate Specialist." It is filled with stories of success. And it makes plain how you—too—can use my money-making methods to build a profitable independent business of your own—just as others are doing.

Act Promptly

Investigate this splendid business opportunity at once. Learn how easy it is to follow my methods and get big money for your services as a Real Estate Specialist.

The business needs you. It offers rich rewards for trained men.

So, mail the coupon *now*—before you lay this magazine aside—and receive, without cost or obligation, a copy of my new book, "How to Become a Real Estate Specialist." From it you will learn how you can use my successful system to make money my way—how you can get started right at home—in your spare time—without capital or experience—and establish yourself as a Real Estate Specialist, in a high grade, money-making business of your own.

Be prompt! Your opportunity is here and now. "Wise men act while sluggards sleep." Write your name and address on the coupon and mail it at once to American Business Builders, Inc., Dept. 4 HH, 18 East 18 Street, New York. You will then have the satisfaction of knowing that you have opened the way to a profitable business career for yourself as a Real Estate Specialist.

American Business Builders, Inc.,
Authorized Capital $500,000.00

"Off-Days"

too much food • •
too little exercise •
is often the cause

We all have our "off-days"—days when we pay the price of our sedentary lives, of our irregular habits of eating and exercising. Self-poisoning (Auto-Intoxication) is often to blame.

NEARLY every one of us has some pet physical trouble—indigestion, fatigue, "nerves", headaches—to mention just a few of the common ailments traceable to neglect of nature's health rules.

Our quick-step lives throw our digestions out of kilter—food remains too long within us—fermentation sets up and a condition of self-poisoning results. This is the real cause of many, many ills of modern life.

To neglect the effects of self-poisoning is dangerous, for all too often they are the warning signs of more serious ills to follow.

The first step in safeguarding your health and in keeping free of self-poisoning is to keep the intestines clean. And the best way to do this is by the saline method with Sal Hepatica.

The benefits which follow the use of Sal Hepatica, the standard effervescent saline, are the same benefits of the "cure" at the famous watering places throughout the world—Vichy, Carlsbad, Wiesbaden or Aix. To these Spas physicians from all over the world send their wealthy patients to regain health through drinking the natural waters. Sal Hepatica contains the same salines as these health-giving waters. It sweeps away wastes and intestinal poisons, promptly, safely and thoroughly and helps keep you physically fit.

There is in all probability, a bottle of Sal Hepatica on your bathroom shelf right now; it is the standby in millions of homes. Sal Hepatica may be taken on arising, or if you prefer, half an hour before any meal.

* * *

Send for our new booklet which tells how to safeguard your health and correct the ills which spring from self-poisoning.

Please address BRISTOL-MYERS CO.
Dept. L-87, 71 West St., N. Y. C.

A Home Without Children May Still Be a Home

(*Continued from page 45*)

mother has a strong face, a determined look in her eye, and it is easy to see that she will want her own way even when her own way may not always be the best. The patience with which the younger woman humors her whims, yields to her desires, appears to let her direct her own affairs and yet really directs them herself, is beautiful to see.

Devotion always means sacrifice. Sometime, no doubt, romance knocked at the younger woman's door; love beckoned her, and dreams of a home and children of her own came into her mind. It must have been so, for she has a strong, graceful body, and a pleasant face and a charm of manner which men do not ignore. One day, I am sure, she was forced to make a choice between an unselfish devotion to her mother and the making of a home for herself, and she chose the unselfish part. Should she have done so?

Last week a friend of mine died. He was past middle age, yet through all his years since boyhood he had devoted himself to his mother and an aunt. His father had died when Miles was a boy, and for forty years these two women—grown old and gray by this time—had been his sole thought and care. He could not afford to have a home of his own and run a separate home for them, so he had died unmarried in order that they might be comfortable. If old age is to be cared for tenderly someone must make a sacrifice. There is a satisfaction and comfort in feeling that, childless as we are, no one will be called upon to make that sacrifice for us.

IT MUST not be thought for a moment that one who is childless will for that reason be deprived of the knowledge of children or of association with them. Nancy and I, as I have said, are both members of large families. We have been surrounded by children ever since we were ourselves babies. I have lugged a baby about ever since I was big enough to carry one. I can put a restless child to sleep as successfully as if he were my own. Getting a child into its clothes and out of them involves no mysteries to me and no embarrassments, no matter what the age of the child may be. It is very interesting to see how skillfully those who have children can unload them at times upon those who have none. We have perhaps had no more than our share of orphans and nephews and second cousins and neighbors' children left until called for, but very few months have passed during our married life without a child in our house.

A friend of Nancy's living in the Orient, knowing that we were alone, sent her two little boys over to us a few years ago to look after and to see that they were educated. It was a great experience for us and taught us poise and unselfishness, though it nearly wrecked our nervous systems and necessitated almost an entire refurnishing of the house when they were gone.

We have wrestled with measles and mumps and chicken pox and tonsillitis. We have got out of bed in the night to slake the thirst of parched little throats, and stumbled over rocking chairs and express wagons that had not been properly parked. We have tied up mashed fingers, and rubbed bruised heads, and stopped the aching of little teeth. One does not have to have children of his own to get a sympathetic insight into childish troubles.

Nor are the childless necessarily devoid of the love of children, which is one of the pleasures and the rewards of parenthood. Everywhere I go, even to the remotest corners of the earth, I come upon these boys and girls who were at one time or another a part of our household.

Children do not always strengthen the love between husband and wife. When the child comes, too often all the sentiment, all the tender love, all the little attentions which each formerly showered upon the other, goes to the child. Everything must give way, everything must be sacrificed for the sake of the child. If it begins crying or requires reproof or correction, even though in the midst of a confidence or a few minutes of pleasant communion between husband and wife, the confidence and the communion must be interrupted, and the child attended to.

"I had the most amusing experience this morning," Jones begins with his wife at dinner, eager to arouse in her the same emotions which he had himself experienced.

"Haven't I told you, darling, to use your fork?" Mrs. Jones says to her five-year-old, who is feeding himself potatoes with a spoon. And Jones must begin again. In fact, before he gets to the end of his funny experience all the humor is squeezed out of it by the numerous interruptions caused by Mrs. Jones's efforts to teach the little Joneses table manners.

IT MUST always be a regret to a man to think that when he goes his name and his family will disappear. Each man, consciously or otherwise, feels that he would like to perpetuate the best that is in him, and he likes to imagine that if he had a son the boy would embody in his character the strongest qualities of his parents. It is too often not so; but we like to feel that in our individual case it would be.

Childlessness seems to me to be dreaded only when it must be spent alone. The childless pair growing old together have many compensations for their failure to have children. Having only each other, if true love has brought them together, the lack of children draws them still closer. Since the responsibilities of home are not so exacting as if there were children in it, they have had more freedom; they have been able to give more to society, to the church, to the service of others. Having fewer responsibilities in the home, they have been able to assume more in the community. And out of these responsibilities and this service they have found happiness.

The Boy and the Wind

(*Continued from page 53*)

He had grubbed for potatoes with a tined hook, and sometimes he had fed hogs. He had been cheated! But he could fool them yet! He could go home! He *would* go home!!

Unconsciously, he shrank away from Bill. He began to think hatingly, and his mind began to fasten upon countless reasons for going home. He had done a great wrong to run away. He could repair that wrong only by returning and showing them that he was sorry about everything. He wanted to be an educated man. He couldn't be one digging potatoes, could he? He didn't like Bill very much. He had a right to go away from people he didn't like, hadn't he? Besides, Bill never talked. A man ought to talk *once* in a while.

And the wind. The wind. Always the wind. A boy didn't have to be driven crazy by the wind, did he?—a wind that sounded like . . . like a . . . a dead regiment holloing in a cave. All right! He *would* go home. Away from Bill, from potatoes, from rows and rows and rows of corn, from hogs, and from the lonely, awful wind. . . .

BUT there were other thoughts, sterner thoughts. It would be like quitting to go home now. Perhaps no one would actually say he was a quitter, or maybe even think he was a quitter. But *he* would know it, wouldn't he? Besides, other men worked and worked. All their lives, some of them.

Writing home for money wouldn't be a very fair thing to do, after he had run away and everything. He was old enough —nearly fifteen—to earn his own money. He ought not to pity himself too much anyway, ought he? It was all his own fault. Nobody had told him to run away except himself.

He ought to stay where he was a while, and work and get strong, and earn some money of his own, the way men did. He shouldn't be a cry-baby over a little loneliness and homesickness, and wind blowing all the time. Sir Galahad or Whisperin' Smith wouldn't worry much about that. They'd stick! They'd stick to a finish, and ride back home and look steadily into people's eyes.

Toil. Toil. Toil. Bent back, hard hands and soil. Tired footsteps down from the table-land at night. Rustling of the corn-husk mattress. Sleep. The screeching of the windmill at daybreak, and the scuffling steps of Bill's old mother in the kitchen down-stairs. Bill's voice through the door. "Time to get up!" Sleep-lagged footsteps up the road onto the table-land. Frosty air, and sun that seemed to shine through ice. The huskers! The huskers, with bent backs and working hands, tearing down the shocks they had built, snatching off the dry husks, piling the yellow ears. Boots scraping along the hard ground. Days and days and days. . . . Wind advancing from nowhere, attacking all around him.

Sometimes the Boy longed to stretch out his arms toward the East, just to feel more keenly that he was reaching actually, physically, toward home. But he didn't, because he thought that a man wouldn't have done a thing like that.

Nine days more—eight—seven—the money was nearly earned.

One twilight late in November Bill said something which made the Boy's heart leap.

"There's them five cows and a heifer up in the north pasture. They all got to be brung down here to the home pen 'fore snow. How'd you like to go up an' fetch 'em down this evenin'? You can ride that Steve hoss, if you please to."

Dusk. The Boy rode out through the big gate mounted on Steve. He sat straight in the saddle and his chin was high because the steel springs that jumped in Steve's live body were under his power of hand. A faint odor of leather came from the saddle. Bill's big hat slanted down over his eyes, and the bit chains jingled gayly. The sky was fiercely beautiful and the wind sang a new, tremendous tune of power and fulfillment.

When he dismounted and opened the barbed-wire gate into the north pasture it was nearly dark. A few vague clouds gathered, moving proudly across the night, and one or two arctic stars blinked down at him.

He rode into the pasture, leaving the gate open behind him so that he could drive the cattle through. He didn't know just where they would be. Bill had said "in the north pasture." But the north pasture was six hundred and forty acres of small gray-guttered hills.

The Boy rode, hunting, for nearly an hour, and night swooped down like a black owl. Steve was beginning to shy and jump. Once he turned completely around and tried to break for home. The Boy held the reins firmly, too firmly for the curb-bitted bridle. It was hard, he thought, to be like a knight when your horse joggled up and down so much. A little panic flashed into his mind, panic at the night, the nervous horse, and at the voice of the wind. Where were those old cows, anyway?

He drew rein. P'raps he could hear them . . . but he heard nothing except the wind. Its old tune of cold and solitude had returned. He struck his heels against Steve's sides. Better the sound of those nervous hoofs than the voices of the night.

He rode down a steep bank, leaning forward in the saddle, peering wide-eyed into the dark. Abruptly, Steve broke into a run, and at the bottom of the bank swerved sharply. The Boy's right foot slipped out of the stirrup; he felt ridiculous and insecure. He bobbed crazily in the saddle, his hands clutching at the saddlehorn. Steve was running wild—up, down, twisting.

THE Boy yanked savagely at the reins, angered at himself and at the horse which defied his bridle hand. The wind of speed roared terribly in his ears, and tears streaked backward on his cheeks. Bill's big hat was snatched from his head by fingers from the air, and he felt the frosty wind tugging in his hair. His leg brushed

"Pink" Tooth Brush

A modern evil with a very simple treatment

A SLIGHT pink tint on your tooth brush, after you have brushed your teeth, may not be very important. Certainly it doesn't necessarily mean that you have pyorrhea, but it does indicate that you ought to pay a little serious attention to the condition of your gums.

For under our modern regime of soft food and hasty eating, gums have a decided tendency to grow soft, to become tender and weak, and to bleed easily at the touch of the brush.

This should be quickly corrected, for serious dangers to the teeth and the gum structure lie in the train of this condition if neglected.

THE counter measure is simple and effective —massage with Ipana Tooth Paste after the usual cleaning with Ipana and the brush. The massage itself is good, and the ziratol content of Ipana makes it doubly good.

The coupon will bring you a ten-day tube of Ipana, but a larger tube from your druggist will last you more than a month. Try it, use it faithfully! Your teeth will be whiter, your gums will be healthier, and every time you use it you will enjoy its delicious taste—its refreshing effects!

IPANA TOOTH PASTE

BRISTOL-MYERS CO.

ON THE PENNSYLVANIA NO VILLAGE IS REMOTE, NO CITY FAR AWAY

Starting with a case here, a crate there, the products of thousands of villages are gathered into freight and express shipments which stagger the imagination by their size and value.

LAMBERT HOLLOW

and way stations

THE *great limited trains swing across the country with a flash. They are the famous leaders of the Pennsylvania forces.*

But what of the locals, the rank and file of the road?

Every day on the Pennsylvania 2500 of these little trains do their part in weaving the colorful pattern of the nation's life.

They puff along out of hot cities to the cool, green suburbs, up some mountain valley, or through pleasant farm land.

Informal trains they are. The crews are known by their first names. In the smokers men loll in shirt sleeves. In the coaches women chat of the doings at the grange, or compare purchases made at the county seat.

The locals do not make records for speed, but they make friendships. They are close to the people who are America. They link town and village with the city. They are as vital as the Broadway Limited itself.

And besides the passenger service to the local stations there is the equally important handling of freight from the villages. The roots of the nation are in the small towns. Virtually all food, clothing, fuel, lumber, iron and other ores, either in raw or finished state, are produced by village people. Raw materials of almost every sort start their journey to the consumer from a local railroad station.

Carries more passengers, hauls more freight than any other railroad in America

against something and he closed his eyes in fear. Steve snorted and turned suddenly. The sound of his hoofs rang on the hard dirt of the road, and the Boy realized that he had come back through the gate and Steve was racing for home.

He had failed. He had not found the cattle. A horse and the night had beaten him! A horse and the night. . . .

A stubborn flood of resistance rose within him. He gripped fiercely with his knees, pulling back on the bridle reins with all his strength. Steve came to a plunging stop. "There!" said the Boy, trembling. "You're going back there now. Do you hear what I'm telling you? Do you hear?"

Back he rode the way he had come. Back he rode, handling Steve with the firmness of a victor. Near him by the roadside he saw some dark blots moving. He peered at them, drawing the bridle reins tight. Cattle! He could hear the low sounds that they made. They must have strayed out through the opened gate. They must be on their way down to the ranch.

The Boy swung in behind them, driving them toward the ranch. He counted—three, four, five, six! They were all together. Now! Now! He was a night-herder on the great ranges—he rode easily behind them, slouching sideways in the saddle. He sang the way he had heard that men sang to cattle at night on the open range. And as he rode, singing, down from the table-land behind his little herd, he felt full of great gladness. He had won! He was a conqueror! There were only six days more and ahead was the greatest adventure of home-coming!

HE HAD said "Good-by" to Bill, and to Bill's wife, and to Bill's old mother, whose face never changed. They seemed all to have vanished; swept up and whirled away, forgotten in the excitement of returning.

"Home-chuck-a-chuck. Home-chuck-a-chuck. Home-chuck-a-chuck," said the iron wheels of the train clicking over the rail joints. The wheels were rolling him home across flat land, across bridges, along the edges of mile-long corn fields. Towns. Towns by the hundred. Disinterested people walking about in them. Broken Bow, Lincoln, Omaha, Chicago. A shuffle and scuffle in a great crowd. Eastward bound! "Home-chuck-a-chuck," said the iron wheels. . . .

The train was slowing down. It was late, nearly midnight. The Boy saw only a few lights at the upper end of town. Some of the people in his car were asleep, sprawled on the cushions. Others sat like upright sphinxes, trying to keep their clothes from wrinkling. A few reached for bundles or bags on the racks above their seats. These stepped into the aisle and formed a line which moved out of step toward the forward door of the car. The Boy took down his suit case and stepped into line close against the man ahead.

There was a jolt. The train stopped and a trainman holloed something, his voice sounding clearly through the night. The Boy stepped down onto the platform.

He crossed the tracks and walked up Union Avenue past Rice's drug store and the bank. The street was deserted, silent save for the far-off rattling of pins in the bowling alley in the yellow-brick block.

He walked on past the church and

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

under some leafless trees which were not strange to him.

He turned off Union Avenue into his own familiar street. He was trying to choke back his excitement. He didn't want them to see that he was excited—excited at all.

He wondered what he would say to them and how he would say it. He would just open the door—just sort of happen in unexpectedly—and say, "Hullo, everybody." That would surprise them. Then he would sit down calmly and tell them about how he had ridden after the cattle. He would tell them all about shocking corn, about what Bill said and did, about driving to town, about the funny scar-faced hills, about—about the—the wind! *The wind!*

He stopped, tilting back his head, and stared up, up, up through the still, naked branches of a great maple. He stood there looking, listening, feeling. *There was no wind!*

HE WALKED swiftly on, panting and eager. Beyond some big elms he saw his own, own house. It was dark and quiet. Everybody must be asleep, he thought. . . .

Suddenly, he was running. Closer, closer, closer— He bounded up the porch steps. They creaked under his weight. He rattled the door knob. The door was locked. Dropping the suit case to the porch he rang the doorbell. He wanted to cry out, but more than that he wanted them to see him calm and strong and controlled, incapable of the emotions which seemed to be suffocating him.

Up-stairs a light came on, and footsteps sounded faintly. There was an eternity of fumbling at the lock from inside and then the door opened. It was his mother.

The Boy stood rigid, holding his breath, his lips parted and his eyes staring straight into hers. He tried to say some of the things he had wanted to say, but they had gone. "Mother!" he said.

She stepped back half a step, turning suddenly pale. Her hands moved in a queer, passionate, hungering gesture.

"Mother!" he said again, and rushed toward her, reaching out his arms. He pressed his head tightly against her, so that she could not look at him. A long, choking sob seemed to tear him apart. "Mother, Mother, *Mother*," he cried. She just held him.

NEXT MONTH, Helga Lind, the rural mail carrier of Sweden Hollow, features in another story, entitled "Love's a Lie," and incidentally she proves that it is not. And two old favorites in the shape of Dot and Will reappear in one of Fannie Kilbourne's characteristic domestic stories, "Rosie Merton Takes a Brace." Other short fiction includes "Old Jupe," the story of a wonderful old darky who tried to awaken the dead, and in a measure succeeded; "Heat," the tale of a small boy who tried to run away from his ancestors and found out that he had his share of pirates, prize fighters and 'undesirables' just the same as the rest of us; and a story of romance among the summer folks entitled "The Vagabond Comes Home," by Philip Curtiss.

Pore-Dirt
hides from surface washing

but this cream fetches it from a twice-washed face

IT seems queer to say that a twice-washed face is still dirty. But you can easily prove that this is true.

The skin of your face, for instance, seems a solid layer. It is really porous — like a sponge — filled with thousands of open pores. In them dirt lodges, gets ground in tight.

When you wash, the surface dirt is removed. The pore-dirt, however, is left in the pores, causing what cosmeticians term "grey skin." If pore-dirt is allowed to remain too long, blackheads result.

Washing *can't* dislodge pore-dirt. Pompeian Massage Cream *can.* This remarkable cream goes into pores and brings out hiding dirt. It lets your pores breathe freely; it helps them function normally.

Highly magnified cross-section of the skin showing how pore-dirt becomes imbedded in the pores. Surface washing cannot remove it.

The pores after Pompeian Massage Cream has cleansed them. The cream first loosens pore-dirt and then rolls the dirt out on the face.

Goes in PINK . . rolls out a DINGY GREY! Try it!!

Prove to yourself that Pompeian Massage Cream begins to clean where ordinary cleansing stops. First wash your face and hands as clean as you can.

Then scoop a little cream from the jar and massage it into your face. Keep on rubbing until the cream rolls out of your skin in tiny pellets.

Note this amazing thing—the cream that went into the skin a clean pink rolls out a dingy grey. The grimed-in dirt is now removed. Your pores can once more fully breathe. Your skin quickly responds to the invigorating massage.

Your face looks, feels, and *is* really clean!

FREE test convinces thousands. Test the benefits of Pompeian Massage Cream on your face—FREE. Fill in the coupon and mail it to us—right now while you are reading this magazine.

POMPEIAN MASSAGE CREAM

Pompeian Laboratories, Dept. 300 H
595 Fifth Avenue, New York City

Gentlemen:
Please send me a generous trial tube of Pompeian Massage Cream—enough for three facial massages.

Oh, for a bathroom

Even though reared in luxury, she was hardly prepared for this.

For in the remodeling of the lovely old manse where she had bloomed into womanhood, one thing had been overlooked.

And because she had always lived without it, she had never come to miss it... until now... and now she blushed at the very thought of how her own guests must have felt.

like this in our home!

WHETHER your home is ever so modest or ever so pretentious, nothing writes into it such a note of discrimination as a well behaved bathroom.

And good behavior is very largely a matter of faucets, fittings and fixtures.

How about your house guest . . . would she exclaim, "Oh, for a bathroom like this in our home!" Or would she be annoyed . . . by faucets that refuse to be turned fully off or on, that habitually and audibly drip, that stick, that squeal, that groan? . . . by a lavatory slow to fill, slower still to empty? . . . by other inadequacies even more embarrassing?

With Mueller hardware installed in your new or remodeled bathroom, such abominations are things of the past. Your bathroom would maintain a discreet silence, would behave itself—would become one of the greatest sources of comfort and pride in your home.

And with a like installation of the new Mueller vitreous ware, your picture of bathroom beauty, utility and economy would be complete.

Don't be indifferent—look into this matter. If not entirely satisfied with the detail of your bathroom, call in your merchant plumber. Get Mueller figures. And by no means build without Mueller specifications.

Faucets, fittings, fixtures and vitreous ware of quality for all buildings, residential or otherwise.

To the plumbing merchant of every community Any plumber thinking in terms of a larger, better satisfied clientele welcomes Mueller equipment. Every faucet, fitting and fixture is tested through every stage of production as well as upon completion. Nothing can leave the Mueller factory until, down to the smallest detail, it is worthy of the Mueller quality reputation! The 200-lb. pressure test given each Mueller faucet is typical of the Mueller method of precaution. Every part of every fitting where extraordinary strain or wear may occur is reinforced.

Through 300 plumbing jobbers located in the main distributing centers of the United States and Canada, and with complete stocks on hand, plumbing merchants can get quick service in Mueller.

MUELLER CO. {*Established 1857*} Decatur, Ill. *Branches:* New York, San Francisco, Los Angeles
Canadian Factory: MUELLER, Limited, Sarnia

Seventy years ago when Hieronymus Mueller founded this institution, it was for the specializing in brass goods. Today Mueller faucets and fittings are accepted by the trade as the last word in quality. Mueller vitreous ware is a logical development. It measures right up to Mueller standards and because of modern production methods and established trade outlets, is priced most reasonably. Before committing yourself to any plumbing appurtenances, look into Mueller. It would be well worth your while to ask your architect, plumber, or water work executive about its underlying merits.

The Poor He Has With Him Always

(*Continued from page 33*)

Aunt Ann had passed on. To-day as well as usual; and in the night came the Reaper. She never had her 'lingerin' sickness.' She never had *anything* that most of us consider desirable. Perhaps Saint Peter has special haloes to match alpaca dresses of the style of the seventies. Who knows?"

THAT is Mr. Bardwell's story of Aunt Ann. Can't you imagine how different a tale most people would have told? A half-irritated, half-ridiculous tale of an old woman who suddenly developed an "unreasonable whim" of refusing to work, and of staying in her room at the poorhouse, all dressed up in her Sunday best? A tale to excite sympathy—but only for the people who had to deal with this cantankerousness.

What was it Aunt Ann said to her caller, who, of course, was Mr. Bardwell himself?

"I *felt* you'd understand!"

It was this assurance of *being understood* that opened the hidden chamber in her heart. Only to eyes that could truly see was she able to show her pitiful, but precious, secret desire—and the reason for that desire! With this reason brought out into the light, only those who are willfully blind can still find her sudden revolt "unreasonable."

"Why do you devote your life to this work?" I said to Mr. Bardwell.

He laughed, with frank appreciation of the question. "Well," he said, "looking at it from a financial viewpoint, the money reward isn't much more substantial than the pot of gold at the foot of the rainbow. But it has brought me another kind of riches; and they happen to mean more to me than money does.

"There is nothing in the world so interesting as people! There is no satisfaction so great as that of helping to make life easier and happier for some human being! To me, personally, this satisfaction is keenest when the person helped is poor and old and dependent. There are plenty of people, outside the almshouse, who are like that. But I am not a rich man myself. Very far from it! So this is a way in which I can combine necessity and choice.

"The necessity is to earn my own living. The choice, as I said before, is to make life easier and happier for those who need sympathetic understanding. That's why I am a poorhouse visitor.

"Much of the unhappiness in the world," he went on, "would lose the worst of its sting if we would only try to give people this simple *human understanding*. In my experience it has almost never failed. But even in the rare cases when it did fail, I still could understand.

"I remember a woman in one of our almshouses. She was often referred to as 'bitter Betsy Baker.' She had seen better days; and when finally she had to go to the poorhouse it was with humiliation and rebellion in her heart.

"She could not walk; and she would lie in bed, never smiling, never speaking an unnecessary word. I wanted to provide her with a rolling chair, but she refused to have one.

"'It will be so nice for you to get out in the air and sunshine,' I urged.

"'I don't *want* to get out!' she would snap back.

"'But you could sit at your window and see the trees and the flowers,' I persisted.

"'Don't *want* to see them!'

"When she was dying—actually dying—someone tried to ease her by lifting her up a little.

"'*No!*' she muttered resentfully.

"It was her final protest against sympathy. She was 'bitter Betsy Baker' to her very last breath.

"Across the hall from her was another woman. Life had treated her harshly. She had been poor; she had never married; her family had 'died off'; she had been a mill worker until she became too old and sick to work any longer. Then she had been taken to the poorhouse.

"The doors of these two rooms faced each other across the hall. But those who lived in the home avoided Betsy Baker's room. She wanted nothing *from* them and would give nothing *to* them.

"But someone was always going in through the opposite door, which stood open all day long. The sun did not shine through these windows. It was on Betsy Baker's side of the house. But no one missed the sunshine in that other room, so long as Miss F lived there. It never seemed anything but warm and bright—a place of cheer and comfort.

"THOSE two rooms," Mr. Bardwell went on, "are exact symbols of human lives. People differ in all kinds of ways. But I believe that the most important difference, the one that controls our own happiness and the happiness of others, is our willingness to *adjust ourselves* to life as we have to live it.

Betsy Baker did not adjust herself. She despised those final years in the poorhouse. Instead of feeling that they were infinitely precious because they were her chance to finish bravely and beautifully the job of living, she filled her heart with bitterness—and closed the door.

"One day, during my periodical visit to a certain almshouse, I went out for a stroll with an old man who lived in the home. Like many of these old people, he had a good deal of shrewd native wisdom and I liked to get his ideas about things.

"While we were sitting on a stone wall to rest, we got to talking about life; and I said to him, 'What *is* life, anyway?'

"'Well,' he replied, 'life is just buffets—and the gasps between. But thank God for the gasps!'

"I think that's pretty good philosophy," laughed Mr. Bardwell. "It is the reverse of the pessimism which makes a good many people see only the hole in the doughnut.

"One thing which I have learned from my poorhouse friends is that it pays to have a sense of humor. A great many of them do have it; and it often turns the scale between content and discontent.

"In one house there was a man who was mentally defective. As the country folks say, 'He wasn't all there.' Because of this, he was sometimes a good deal of a nui-

Now a far simpler type of Electric Refrigeration for your home

The Creation of the GENERAL ELECTRIC *Laboratories*

SIMPLICITY, as applied to the General Electric Refrigerator, means that it can be installed in a few minutes by merely lowering the all-in-one icing unit into the top of the refrigerator. That it requires no plumbing or assembling. That it never needs oiling or attention. That it uses less current to keep a more constant temperature. That it has no belts, fans, pipes or stuffing box to get out of order.

For fifteen years the laboratories of General Electric have been busy with the task of developing a simplified electric refrigerator that would be about as easy to operate as an electric fan, almost as portable.... and unusually quiet.

They found the solution at last in the remarkably simplified General Electric Icing Unit. It has all its moving parts enclosed in one hermetically sealed housing. This keeps efficiency permanently in—and trouble permanently out.

The General Electric Refrigerator cabinets were designed especially for this icing unit. You will notice that the space occupied by the freezing chamber is so small that it leaves an unusually large food storage area. Even the smallest model (the one illustrated) has 8 square feet of shelf space. You will want to see the various models. Let us send you the address of the local dealer who has them on display. Also booklet No. 8-A which tells more about these new-day refrigerators.

Do 2 Things

and seal the air at mouth of tire valve

FIRST: See that a genuine Schrader Valve Inside, in good condition, is in every tire valve.

Second: Make sure you have an improved Schrader No. 880 Valve Cap screwed down tight on every valve.

Should the valve inside become worn or damaged, this cap prevents escape of air at mouth of valve until you have an opportunity to replace the inside.

Always carry extra Schrader Valve Caps and Valve Insides in your car. Both are sold in red metal boxes of five at 30c a box.

Schrader products are sold by over 100,000 dealers throughout the world.

A. SCHRADER'S SON, Inc.

sance. In more ways than one, he 'wasn't all there,' for his feet had been amputated because of an accident.

"In one of my visits to this particular home, I was talking with another man who lived there. You see," he said, smiling, "I try to practice what I just now preached. I want to get from these people *their* point of view. And it is in the companionship of sitting around and just visiting together that they tell me what they are really thinking and feeling.

"Well, while I was talking with this man, I happened to see the other one; the one that was crippled in both body and mind.

"'That was a pretty big operation—taking off Jim's feet,' I said to my companion. 'What do you think of it?'

"He looked at me with a twinkle in his eyes.

"'I think the job wasn't done right!' he said. 'They took off the wrong end of him!'

"My point is this," laughed Mr. Bardwell. "Some of the people in the home were irritated by the man who was as 'footless' mentally as he was physically. But this other man, with his twinkling sense of humor, accepted him philosophically, and was gently tolerant of his limitations.

"A GOOD many people in the almshouses are 'not all there' mentally," he went on; "but it is from these clouded minds that I have had some of the most revealing lights on the average normal instincts of human nature.

"In one home, for instance, there was a man named Hiram. At first he was a problem: a silent, sullen man, avoided by everyone. The matron was an intelligent and kindly woman; and it was she that wrought the much desired transformation in Hiram.

"One of the appurtenances of the home was a large chicken yard. As an experiment—a rather doubtful one—the matron put Hiram in charge of the poultry. At first he was reluctant and as sullen as ever. But almost immediately he began to change. He was like a mother with a brood of children.

"I don't suppose he ever before had been given anything to take care of; and so, in him, the profound human desire 'to have and to hold,' to fill some place in the scheme of life, had been unsatisfied. When it *was* satisfied, he became an entirely different sort of person.

"During the hatching season, he would rush to the kitchen a dozen times a day, and announce triumphantly: 'Got another chicken!'

"Then there is the story of Tommy. He was born deaf and dumb; and, as if that wasn't enough of an affliction, he had a club foot, and his mind never 'grew up.' So Tommy was about as badly handicapped as anyone could be. Until he was forty years old, however, life seemed sweet to him, in spite of all this—for he had his mother!

"His father had been dead many years; but Tommy and his mother loved each other with a deep and understanding affection. Each was all in all to the other.

"Then came the day when his mother folded her worn hands, closed her tired, loving eyes—and left him, a grown man, but with the mind and the heart of a child, to hobble alone through his silent world.

"It hurts me to think of the months that followed, when he crept aimlessly and desolately about the house, and over the little farm which his mother had worked, with his help. He became a mere shadow; half starved; the child-mind and the child-heart breaking under the loneliness of it all.

"Finally, the townspeople 'discovered' Tommy and he was sent to the poor farm. The matron, Eliza, was a fine woman. Many of these poorhouse matrons are marvels of kindliness and of sympathetic understanding.

"Eliza watched and studied this new member of her strangely assorted family. It seemed as if he would have to be sent to an asylum. But instead of welcoming this as a means of ridding herself of a burden, she tried to think of some way of avoiding it.

"She used to put her baby, in its perambulator, out on the piazza to sleep. Occasionally she would look out of the window to see that the child was all right; and as she did this one morning she saw Tommy bending over the little sleeper.

"Repressing her first terrified impulse to rush out and protect her child, she stood there and watched. Gently Tommy touched, with one careful finger, the baby's tiny hand. Then he sat down on the porch railing, where he could see the child's face.

"He stayed there, absolutely motionless, until Eliza went out, lifted the baby from its carriage, and with a smile held it in her arms for Tommy to look at. She almost thought *he* smiled. Perhaps he wanted to, but had forgotten how.

"The next morning, when the baby was left on the porch to sleep, Tommy came again and sat beside it. Day after day, he did this; while Eliza—wise and kind Eliza—watched from behind the window curtain. Once she saw Tommy take the baby's hand, hold it for a minute, then gently put it under the coverlet.

"Finally a day came when the baby opened her eyes, looked up at Tommy, and smiled at him. Then Tommy remembered how to smile! A sort of radiance came into his face; and Eliza knew that the problem of Tommy was solved.

"The child grew to adore him. She would hold out her arms, wanting to go to him. She would cry—and so would he—when they were separated. Before this, he had taken no share in the work at the poor farm. He had seemed incapable of it. But now, in order to be near the baby, who was often with her mother in the kitchen, he began to help with the routine duties. And so he became a useful member of the household, and a happy one.

"MY EXPERIENCE has taught me that the two great factors in human happiness and contentment are work and companionship. Tommy had found both. Something to do. And something to love. The first satisfies the need of the mind and the body. The other satisfies the need of the heart. Each helps; but neither, alone, can work the miracle of happiness.

"I have seen many people try one, but without the other. I remember a very unusual case. A woman who had lived not only in comfort but in actual luxury was suddenly transplanted to the poorhouse. Her father had been, apparently,

United States Tires are Good Tires

Trade Mark

PLENTY OF RUBBER in United States Tires starts out in the Far East—on the United States Rubber Company's Plantation. This Company owns 10,000,000 rubber trees—enough to make an unbroken line nearly *twice around the earth.* Seven million of these trees are *producing rubber.*

Get more for your money

YOU'VE a question to ask—"How do I *know* that there's plenty of Rubber in Royal Cord Balloons?"

A natural question. You can't *see* all this "plenty of rubber"—and you can't tell it by *weighing* the tires. A tire manufacturer can make a tire weigh almost anything he pleases by "loading" it with heavy substances which add nothing to the *wear.*

The "Plenty of Rubber" in Royal Cord Balloons is distributed where it will do the *most good.* Take our word for it—until you *prove it for yourself* on the wheels of your car.

At noon—each day

JAPAN TEA

... and start the day again

At noon, make yourself a present of just ten minutes.

Sit back. Relax.

Top off your luncheon with a cup or two of steaming, fragrant Japan Green Tea.

***Linger* over it. Enjoy it. Forget business for the moment and study flavor.**

Note how fresh and fit this makes you feel. Why, you've all your early morning energy!

Then—start the busy day again. And nevermore fear afternoon fatigue.

Japan Tea is tea at its best, tea in its *natural* state, uncolored and unfermented, with all the flavor-laden juices preserved by immediate sterilization.

Specify Japan Green Tea when you buy. Put up for the home in packages under various brands. Several grades and prices. The best you can buy will cost you only a fraction of a cent a cup.

a rich man. He had a beautiful home; and after her mother's death this grown daughter, the only child, presided graciously over the household; which, by the way, included six servants!

"The father died suddenly, leaving nothing but debts. The house and its contents were sold to help pay these debts. There wasn't a penny left. The daughter, at this time, was past middle age. She was not well; and even if she had known how to earn her living—which was not the case—she wouldn't have been able to do it. I don't know whether anyone was willing to help her; but if so, she was too proud to accept it. So she went to the poor farm.

"She never complained. She made no demands. She was always quietly courteous. But there was an insurmountable barrier which was never lowered. She kept to herself; staying in her room except when she was forced to leave it. But she was not idle. She worked constantly—too constantly—mending the linen and helping with the necessary sewing. Fortunately—I can't help saying that, for she must have been tragically unhappy—she did not live a great while.

"I admit that her problem of readjustment was a very difficult one; but she found only half the possible answer. She kept her hands busy; but she did not try to find something to warm and fill her empty heart.

"Hiram, with his jubilant 'Got another chicken!' and Tommy with his radiant love of a little child, were wiser than she, even though they weren't 'all there' mentally. That is why I say that from these clouded minds there sometimes comes a great light to show us the deep needs of human nature."

BEFORE I took my leave of Mr. Bardwell, I asked him what was the most extraordinary case in his poorhouse experience.

"I believe," he said after a moment's thought, "it was that of—well, I'll ask you to call him Mr. Blank. He is dead now, but I wouldn't want you to use his real name.

"He was the cousin of a very rich and well-known person. He had been rich himself; had traveled all over the world and had lived for years in Europe, where he knew people of the highest social standing.

"Suddenly his fortune was swept away, and he found himself a poor man. He came back to this country to try to earn a living. He had been abroad so many years that his relatives had lost touch with him, and he had no friends over here. At least, he made no attempt to communicate with his relatives, or with his friends, if he had any.

"Somehow, he got a position; a small clerkship in a Massachusetts town. But he had no business training or experience. His fortune had been an inherited one. He never had earned a dollar, until he tried it after the crash came. He couldn't do it then! He lost his position and couldn't get another. He was growing old and was incapable of supporting himself. The only way out of his trouble was into the almshouse.

"I often saw him there and enjoyed talking with him. And I wasn't the only one that enjoyed him! Everybody in the house liked him. He never assumed an air of superiority; never tried to be 'high-hat,' as we say nowadays. He was a courteous, friendly, interesting companion.

"The matron had a rather fussy baby, I remember. And Mr. Blank would go into the kitchen and, with as polished a manner as if he had been speaking to a grand duchess, would gravely request the pleasure of taking charge of the fretful infant. He did it too! And he *liked* doing it.

"NOW comes the strangest part of the story. A few years after he went to the almshouse, a distant relative died and left him about eight thousand dollars. I helped him to get possession of this legacy and also found him a boarding-place where he could live in a fair degree of comfort on his new income.

"A few months later, however, he sent for me. I went to see him; and, to my amazement, he asked me to arrange matters so that he could go *back to the poorhouse* and board *there* for the rest of his life!

"'I hope you will not think me ungrateful,' he said. 'I appreciate what you have done in finding this place for me to live. But I made *friends* at the poor farm. I meant more to them than I can mean to this busy outside world, and they mean more to me than these strangers do. If you don't mind, I'd like to go back!'

"He did go back, and lived happily and contentedly there until the end came. That, I believe, was the most extraordinary example, in all my experience, of willingness to *adjust one's self* to a harsh necessity—and of the compensation that comes when the adjustment is made."

You Can Keep a Youthful Figure if You Treat Your Muscles Right

(*Continued from page 43*)

of exercise! And just a *little* exercise is all that is necessary.

The peak of physical condition is supposed to be around twenty-nine years of age. Around that time in life the last of the youthful reserve is being used up, and it's time to begin developing energy to take its place.

A really surprising and pleasant thing is how little exercise is required to keep your body fit, once you get it in good condition. There is no need to build up an unnecessary surplus of strength. There's no sense in drawing on your system for a prize-fighter's physique, if your sole occupational duty consists of sitting at a desk or standing behind a counter or bench during your working day.

But, without building up a great mass of muscles on your body that would be more ornamental than useful, you should keep yourself as lean and fit as possible. It's more efficient to be that way.

Every important muscle should be active and available; but all the voluntary muscles should be used a little bit every

FRIGIDAIRE

PRODUCT OF GENERAL MOTORS

Even when you're away for days

Frigidaire keeps foods perfectly—without ice and without attention

FRIGIDAIRE preserves food at least four to five times longer than the old-fashioned type of refrigerator. So if you own a Frigidaire you can leave home for days at a time without misgivings as to the condition of your food supply. When you return you'll find the foods in Frigidaire as fresh and sweet and wholesome as they were the day you left.

See the new Frigidaire models at the nearest Frigidaire Salesroom. Steel cabinets, made in the Frigidaire factory, with hydro ene-treated insulation that keeps heat out and cold in. Direct frost-coil cooling that maintains a constant cold-storage temperature in the food compartment — self-sealing freezing trays in which to make ice cubes and an endless variety of frozen salads and desserts.

Therein lies the importance of looking for the nameplate "Frigidaire—Product of General Motors" on the cabinet of the electric refrigerator you buy. It is your guarantee of General Motors quality in every detail of construction; your assurance of unfailing service in every phase of operation. Already hundreds of thousands of users have been won to Frigidaire—*more than have bought all other electric refrigerators combined.*

Yet the cost of Frigidaire is surprisingly low. A small deposit puts it in your home. Then pay a little each month under the liberal G.M.A.C. terms.

Visit the Frigidaire Salesroom nearest you. Or write for an interesting illustrated booklet—sent free.

FRIGIDAIRE CORPORATION
Subsidiary of General Motors Corporation

"The Most Convincing Story I Ever Heard"

"The Fyr-Fyter Representative who called on me had me sold in three minutes but I let him go on for ten. That man had the most interesting story, the most powerful argument for fire protection I ever heard and the evidence he laid before me in favor of his Fyr-Fyter was a knockout. I offered him a job right then and there but couldn't name a figure big enough to interest him.

"He gave all credit to his proposition, the training and talk furnished by his company and all I can say is that I hope my own men don't get wind of that Fyr-Fyter proposition or I have the job of getting a new sales force."

It's YOUR Story— That's the kind of talk you hear about the visits of Fyr-Fyter Representatives, and the convincing story they have to tell. And it's *your* story, your opportunity if you have in you a grain of ability to succeed in what others are doing so profitably.

The Reason WHY Fyr-Fyter Representatives Make $20 to $60 a Day Look around you, see inflammable material everywhere, listen to the fire alarms and the fire engines dashing madly down the street, read the papers, get Uncle Sam's statistics of appalling fire losses of five hundred million dollars a year, and then realize what inadequate fire protection you find on every hand. *That's* why Fyr-Fyter men make so much money, $20 to $60 a day and often more.

There's not a logical reason under the sun why any home, factory, garage, institution or any of a hundred other places can get out of being your customer for Fyr-Fyter after you've told the story we tell you to tell.

Let 100 Men who are doing it Tell You Payne averaged $20.77 per day for 217 days and that shows you we're not talking about any one day luck. Mendenhall works half time and knocks out $100 a week. Frank Depries made over $500 in one week, following an 11-year city job at $85 a month, and averaged $150 a week. There are scores more, hundreds of sales records show how Fry-Fyter men make good. Any 100 of them will tell you "If you're a man of average ability, just one of the regular fellows and want to make good, hop on to the Fyr-Fyter proposition."

Write Today And we say, write today if you've got a spark of ambition. 100 good men are needed to round out our big national sales force.

This is the Fyr-Fyter, marvel of ingenuity and efficiency, low priced, approved by (Fire) Underwriters Laboratories, and used by U. S. Government, Standard Oil and other big businesses.

day. Nature will never withdraw a muscle from activity if it is given a few minutes' exercise daily.

What kinds of exercise? Well, that's pretty hard to answer. There are dozens of available exercises. Naturally, a great deal depends on what the individual wishes to accomplish. What I want to suggest to you in this article is that you take as your purpose the general toning up of your whole muscular system. Keep your body supple, elastic, and *responsive*.

Here is an exercise which will help you do this—and this exercise is the very minimum of the exercising you should do. With this exercise as a beginning you can take up further exercises to develop your legs, reduce your waist line, perfect your carriage—or whatever objective you may select. Anyone interested enough can find plenty of data and information on the subject.

Stand perfectly erect, feet close together. Beginning with the legs and working upward, *gradually* tense the whole body. Let your mind run over your muscular system, making sure you have flexed all the muscles you can consciously control—legs, thighs, abdomen, across the ribs, forearms and biceps, neck and jaw. When the tenseness is as complete as you can make it, hold it for six or seven seconds (later on you can hold it for ten seconds). Relax gradually, releasing control *consciously* of one muscle after the other. Repeat this exercise twice, resting a full minute after each effort.

WHILE this exercise will not add a great deal of strength to your muscles, it will, if done immediately on rising and just before retiring, distribute blood to them, and keep them in a healthy state.

However, if I were to limit myself to one set of muscles as being the most desirable to exercise, I'd tell you to take care of your abdominal muscles, even if you neglect all others. The abdominal muscles help to hold you erect. They also keep your vital organs in place. When they sag, serious trouble is on the way for you. I am going to suggest three exercises especially for them.

The first is the tensing exercise, already mentioned, but adapted especially to the abdominal muscles. Just as you tensed your whole body, try now to tense only the abdominal muscles. Start by drawing them inward, then holding them that way, try to move them further by drawing them upward. At first you will have some difficulty in drawing them upward, but with a little persistence you can do it.

By tensing them ten or fifteen times daily for a few seconds, you force blood into them, and keep them supple. But suppleness isn't enough. They must be strong. The stronger they are, the tighter they hold you together, and the better form they give you. This second exercise is to strengthen them:

Stand erect, feet together, arms extended level with the shoulders. Draw the abdomen in, and while holding tightly turn the body to the right, keeping the hips squarely to the front; in other words, rotate the upper half of your body on the pelvis. Turn as far to the right as you can, keeping the arms outstretched at shoulder level. And hold that abdomen in. Learn to do it without holding your breath.

Now turn back slowly to the front, relax a fraction of a second, then tense yourself again and turn to the left. Do it a dozen times, increasing to twenty as your muscles permit. Take it slowly at first. This is really a strenuous exercise. It will get unmistakable results; but don't let your enthusiasm cause you to overdo it at the start.

Besides strengthening your abdominal muscles, this exercise will have a beneficial result on your circulation, particularly around the vital organs.

For the third exercise, lie on the floor, face up, and lift your legs straight up, one at a time, then together. Then practice raising yourself from this position to a sitting position. Do each of these movements only a few times a day to start, gradually increasing the number of times as your muscles get used to the strain. Flex the abdominal muscles repeatedly.

If you are in good health, and are suffering only from lack of exercise, you can accomplish astonishing things through it. But you can't kid Nature with a few exercises to-day, none to-morrow, less than a few the next day—and a desperate spurt to catch up the fourth. Nature will just naturally hang back and wait to see whether your intentions are serious or not.

If it looks as if you are serious, she will help you, for she is a marvelous little coöperator. Not only will she see that your muscles get the materials they need, but she will brighten your eyes, put color into your flesh, and clear your mind.

Even if you should happen to be one of those people who just will *not* take exercises, and "just know it isn't any use to start," you can do one thing, and it will help: You can stretch yourself, from head to foot, several times a day. Concentrate, *think* what you are trying to do when you do it. Put your mind on a muscle, and flex that muscle. You don't need even to get up from your chair to flex the muscles that probably need it the most—the abdominal muscles.

By thoughtfully stretching several times a day, you will get circulation into your muscles and at least keep them elastic. A muscle that isn't used is something like a sponge from which the water has been squeezed. It becomes dry and hard. The cement-like substance that holds the fibers together in good health begins to "set," hardening like glue.

If you are a bit fat, and find it difficult to keep up your interest in exercising, bear in mind this thought:

"*Where there is a good, healthy muscle there can be no fat.*"

The best way to get slim is to exercise the fat off. You can reduce your weight very rapidly by dieting; but the safest way of all to reduce—unless your plumpness is due to some disease—is to eat carefully, and exercise.

A QUESTION that is often asked me is, At what age do a person's muscles begin to "set;" that is, to harden so it takes a long time to get them back into a supple condition?

This condition, long recognized as a characteristic of adult life, may take place at any age from thirty-five to seventy-five. As I have already indicated, it's all a matter of keeping the muscles in use.

It is true that in some families muscles harden and set quicker than in other

Old Briar

TOBACCO

"THE BEST PIPE SMOKE EVER MADE!"

CAN YOU IMAGINE this surging theatre throng along Broadway all agreeing on *one* star as the greatest? Of course not! Yet this throng is but a fraction of vast multitudes of smokers who are welcoming and praising *one* pipe tobacco—Old Briar—as "the best pipe smoke ever made."

THE most convincing thing in the world about Old Briar Tobacco is the whole-hearted praise of the smoker himself. It's just plain common sense that pipe smokers are turning to the best tobacco they can get. A pipeful of Old Briar costs so little, they are entitled to it!

Light up *your* pipe full of Old Briar. Draw in the ripe fragrance of this wonderful tobacco. Enjoy its full, pleasant aroma—its extra smoothness—its comfort. Smoke it awhile. Notice how mild and cool it is—how completely satisfying! Now, you know why a world of pipe smokers are welcoming Old Briar—the ladies, too, enjoy its fragrance.

It has taken years of scientific knowledge in the art of mellowing and blending, and generations of tobacco culture, to produce Old Briar. Step by step Old Briar has been developed—step by step *perfected.*

And, every day, thousands of pipe smokers are proving for themselves that Old Briar is the best pipe smoke they ever had.

A-8-27

IF YOUR DEALER DOES NOT HAVE OLD BRIAR

Tear out this coupon and mail to:
United States Tobacco Co., Richmond, Va., U.S.A.

SPECIAL OFFER: It costs so little to smoke a pipeful of the best Tobacco ever made, you are entitled to enjoy it. We will mail you the regular OLD BRIAR 50c Humidor Box on receipt of this coupon with your name and address. In addition, we will send you a 25c pocket package of OLD BRIAR—extra—if you send us your dealer's name. Send no money, but pay the Postman only 50c when he delivers the tobacco.

families. But this is because individuals of a family are likely to exhibit the same physical habits and traits even though they differ in mental characteristics, and, as a result, develop the family muscular peculiarities. If the family tendency is to be ease-loving and indolent, the individuals naturally will not develop muscles that will continue supple and elastic through old age.

You can tell when your muscles are beginning to set by the following signs:

First, a noticeable slowing down of your general tempo. You no longer feel the impulse to get outdoors and run. You find yourself avoiding exertion wherever possible. Rather than speed yourself up for a three- or four-minutes walk, you'll wait ten minutes for a street car to come along. You feel heavy and tired, and you don't want to exert yourself. The spark of muscular ambition is gone.

The second sign which indicates that your muscles are hardening is the appearance of aches and pains—minor cramps—in your limbs and body when you get up after sitting a while. Beware of this sign! If you get up aching after having sat down for ten or fifteen minutes something is wrong with your muscles. They are trying to go to sleep on you.

Of course there may be organic troubles at work, such as rheumatism or lumbago; but, remember, those ailments don't show up in healthy, active muscles.

The cure for muscles that are trying to "set" is—well, just what I've been talking about—exercise, beginning on a mild scale and increasing as the muscles become used to the exertion.

An important consideration in the care of your muscles is your posture. We all know it is wrong to stand or sit "lopsided." The effect is so obvious that most of us hardly need to have the danger pointed out. But many little things enter into the subject of posture.

Take the heels on your shoes. If they are run down, you'd better have them fixed. They are weakening the muscles on one side of each foot. Every time your shoes become "run-over," you injure the weakened muscles again. When you get older your feet become gnarled and twisted; the muscles on the strong, uninjured sides pull them out of shape.

THE eternal pull between strong muscles and weak ones is seen in the types of persons developed in various occupations. I recall seeing one morning a long procession of well-dressed men walking down the streets of Des Moines. There was nothing to indicate what order or what organization they represented; at least, from where I stood I couldn't read the badges on their coats; but their occupation was so plainly stamped in their walk and carriage I had to smile at the obviousness of it. They were traveling salesmen.

Their tread was steady and brisk enough; but every man jack came down on his right foot with a decisive thump and an emphatic list to starboard—the subconscious pull of the weight of all the grips he had ever carried in his life as reflected in the effect on his muscles.

It is important to keep the muscles on both sides of the body practically balanced in strength. Nature starts us out almost perfectly balanced. Observe your occupational posture; if you lean too much one way or another, exercise to correct it. Equalize the strain. Do you use your right arm a great deal? Give the left one five or ten minutes' attention a day. Are you getting round-shouldered? Stretch backward and take the strain off your back muscles. They are tired from being pulled forward all day long. By throwing your shoulders back, you give them a rest.

Make it a point to stop a minute or two every now and then during the day and give the strained muscles a rest. A little rest goes a long way with a fatigued muscle.

But—speaking again of how apparently minor habits affect the growth, development, and pull of your muscles on your frame—such a simple matter as the way you cross your legs has a bearing on the alignment of your body. The probability is that you invariably cross the same leg over the other. The result is that when you sit with your legs crossed your spine is always slightly twisted in the same direction, and consequently the muscles in the lower region of your back are subjected to the same wearing strain time and again. The muscles that are strained become weak. The ones that are rested in this position remain strong. They pull against each other, and your body develops an internal strain. Perhaps in old age you will hobble, dragging one foot behind the other.

Try crossing the other leg once in a while. It will not be comfortable at first; the muscles that have been weakened will rebel. But persist, and after a time you'll find it just as easy and comfortable to cross one leg as the other.

CHILDREN at play often injure their muscles, or get them out of line. One of the queerest accidents to muscles I ever ran across happened to a little girl brought to me for training. The toes of her right foot were pointing straight up, the ball of her foot was rounded and the ankle motion was interfered with. She had been that way about four months.

No one seemed to know what was the cause of the trouble. I questioned her at length, and found out that about a month before her toes began to turn up she had taken part in a "hop scotch" tournament at school. That's a game in which they hop around on the toes of one foot. Not only had she participated in the tournament, but she had practiced strenuously three weeks in advance.

This had weakened the muscles on the under side of her foot. The stronger muscles on top had just naturally pulled the toes out of shape. I got her foot straight again by special exercises to strengthen the under muscles. As they grew stronger, the foot was pulled back into shape.

Such games may be all right, but if a child must play them he or she should be taught to change feet once in a while—to hop on one foot as much as on the other.

Muscles, not otherwise injured, which have suffered from disuse for years *can* be brought back to normal efficiency. Even a person of fifty or sixty can regain the use of hundreds of muscles which have become "warped" or "dried up" only because they have not been used. Blood nourishment—that's the secret of muscular strength; and any muscle which the blood can reach can be restored to use.

My Queerest Acquaintance

FIRST PRIZE

"There's an Old Saying, and a True One . . ."

THE queerest fellow I have ever known is my grandfather. He lived his life, and advised others to live theirs, in accordance with a tremendous supply of old sayings. He spent forty years at hard labor in one rolling mill, because, "*A Rolling Stone Gathers no Moss.*" Whenever his opinion was asked, he would always start out with, "Well, there's an old saying and a true one," and followed with some ancient and time-worn maxim in which he firmly believed. When my sister's beau eloped with a young widow, Grandfather couldn't understand why she wasn't wholly comforted by the wisdom of "*There's as Good Fish in the Sea as Ever Came Out of It.*"

When but a young child, I can remember saying to Grandfather, "But so many of those old sayings are contradictory. There is one which says, '*Leave Well Enough Alone,*' and yet another which warns, '*Nothing Venture, Nothing Gain.*' How do you know which one to believe?" And do you know what his answer was? "My dear child, there's an old saying and a true one, '*You Can't Put a Man's Head on a Child's Shoulders.*'

To-day Grandfather is confined to his bed. Hosts of lifelong friends who heeded his advice, and some who didn't, visit him regularly. Not long ago, on the ninetieth anniversary of his birth, upon entering his room, I asked, "Well, Grandfather, I suppose you feel like a boy to-day?" He replied, "My good child, there's an old saying and a true one, '*A Man is as Old as He Feels, but a Woman is as Old as She Looks.*' I feel like a boy!" C. E. W.

SECOND PRIZE

Aunt Mittie Came to a Fitting End

AUNT MITTIE, our loved family oddity, had ailments enough to supply a clinic. And how she enjoyed them!

"The doctor says I'm anemic," she'd announce proudly. And next day she'd be suffering from high blood pressure, blissfully unaware that the two conditions aren't on speaking terms.

Whatever money she had, she spent on her health, her only hobby and recreation. Once she inherited a tidy sum. "Lay it away for old age," we counseled. But she hastened across the continent to consult a group of famous specialists.

Three months later she returned, indignant and penniless.

"Good doctors!" she snorted. "I wouldn't send them a sick cat! They said there was nothing the matter with me, though I'll probably not live a month!"

Once she started saving for a postmortem examination. "Just to prove I've been a sick woman for years." Then a new kind of "doctor" came to town, and her savings went for a series of painful pummelings.

On a visit to a farmer brother she secretly took some tablets she found in the cupboard. Later she confessed, and declared they'd helped her rheumatism. No one had the heart to tell her their original purpose was to further productiveness in the poultry yard.

But, although her health proved so interesting, there was always time for the ills of others. One stormy day she got out of bed, where she'd been "enjoying" lumbago for three days, to ride ten miles in an open wagon and nurse a pneumonia patient whom she scarcely knew. She always arranged her health-seeking journeys so they'd come when no stork visits were expected in the neighborhood.

And so she lived. She died, I believe, contentedly. For her last illness really was stranger and rarer than any she had ever imagined. Interested physicians came from afar to study and try to cure it.

How we miss her now! We laughed at her, but we loved her. No one has ever taken her place in our hearts. A. F.

THIRD PRIZE

Uncle Joe Can Tell Others Exactly What to Do

MY QUEEREST acquaintance is old Uncle Joe. He is no relation to me, but everyone who knows him calls him by that name. He must be about sixty. Though he has never been any further in school than high school, he is better informed than most college graduates. This is the way he managed it: When his sister went to college, he was too poor to go. So he studied her books, and he has been studying ever since!

Uncle Joe could have held a responsible position in his day. But he wanted plenty of leisure to read and study, so he took a position reading gas meters. He figured out the shortest distance between houses on his route. Now he can do his day's work in half a day, and have the remainder of the time for study.

The lighting company has discovered his remarkable skill with figures. Accountants always call him in when they have a difficult problem, and he can always solve it. Once my uncle's firm came across a complicated accounting problem. As a last resort, my uncle called up Uncle Joe and explained the problem. In eleven minutes he 'phoned back the answer!

Though Uncle Joe has never touched a drop of liquor, he is very much against prohibition. Though he is a confirmed bachelor, he believes in marriage. He wrote a series of articles on marriage and divorce for his local paper.

Just to show his versatility, he wrote another series of articles on broad financial problems and forecasts. This series won the praise of the best business men in the city. Yet Uncle Joe has never invested a cent of his own money. J. S. D.

"Me and My Flapper Daughters"

(*Continued from page 27*)

long and tense pause until my wife broke the silence.

"Elizabeth!" she exclaimed. And that was all. For once my wife was inarticulate. She looked long and hard at me, as if she expected me to do the talking. I think she wanted me to bawl out our daughter good and proper right there. But I didn't do it. I looked sheepishly, instead, at the burning end of my own fag and remembered that I had been smoking the things for a matter of more than thirty years myself. I didn't scold our daughter or betray the emotional turmoil that I was undergoing.

For once in my life, I exercised good judgment, swallowed my hypocritical indignation, and simply said, "I am shocked and surprised; but I should be the last person in the world to lecture you on the evils of nicotine or the incongruity of a sweet and dainty little girl befouling her breath, staining her fingers, and distorting her features with a cigarette stuck in her face. I've been smoking cigarettes myself ever since I was six years old when I picked up the habit in the hinterland of a one-teacher rural school on the opening day."

Elizabeth arched her eyebrows, lifted her chin, and beamed a smile of approval upon me. I think it was the first spontaneous smile of approval I ever had from her. That was the beginning of an understanding between us, and an exchange of confidences that has emboldened me to assert that I expect some day to know my daughters.

WE LEFT the dinner table and I followed Elizabeth out on the front porch. I proposed taking a ride, and we climbed into my roadster and took a spin in the country. Out on a country road I offered her another cigarette, to see what she would do.

"Really, I don't care for it, Dad," she said. "I didn't smoke that one at dinner because I especially cared for it; but no self-respecting girl wants to be a hypocrite all of her life, even to spare the feelings of the best mother in the world, who clings to the old-fashioned ideas of things.

"I knew that you and Mother didn't believe that I had ever smoked, and it struck me all of a sudden that there was an opportunity to confess, even though it might shock you."

"I guess you smoke merely because you think it is smart, and you young folks get something of a kick out of defying the old conventions?" I asked.

"Maybe some of us *do* think it is smart," replied Elizabeth; "and I think most of us *do* get a kick in defying your conventions. I saw a book in your library the other day called 'The Warfare between Science and Christianity.' That gave me an idea; I think there is a greater warfare to-day between young folks and old folks. Old folks say they just can't understand us young folks; their trouble is, *we* young folks *do* understand old folks, and the old folks don't give us credit for the discernment we have."

That was the beginning of a series of friendly interviews with my daughter, in which I have learned much in the past few months. Out of the peculiar combination of sophistication and innocence of this typical young female I have acquired something of an understanding of what young folks think of old folks; I have discovered that modern youth is thinking for itself.

If I understand that daughter of mine, the young folks of this generation have very little faith in, or respect for their elders, because they think we elders are unsophisticated, unfair, and insincere. They charge us with unfairness and insincerity because we condemn in them frivolous practices and habits that were common to us when we were young.

"I can imagine Mother having been a very shy and perfectly proper little girl when she was a child," confides my daughter, "because Mother was brought up in those stay-at-home days of a quarter-century ago, when they didn't have telephones, radio, movies, automobiles or any place to go except Wednesday-night prayer meetings, Friday-night spelling bees, and Sunday church services. A fifteen-year-old girl of to-day has seen more of life and has a better understanding of life than her mother had at twenty-five years of age.

"BUT I think if I had lived in Mother's day I could have found as much about young folks to criticize as the old folks find to criticize about us. You and Mother didn't have an automobile to ride around in, and you couldn't get as far away from home in a ride as we can get to-day; but you did ride in a buggy with a narrow seat in which both of you could barely squeeze and in which your legs were all mixed up in a narrow boxlike space.

"A young man driving an automobile to-day has to keep at least one hand on the steering wheel; in those days, he threw the reins of the horse loosely over the dash board of the old buggy and had both arms free. And I have an idea he made the most of his freedom.

"We young folk are condemned for our night rides, when you older folks forget that there is no other way for most girls to do their courting. Houses used to be built with separate rooms down-stairs; there was a parlor where a girl could entertain her beau. But now we build houses with every room on the first floor looking into every other room through French doors, affording no more privacy than if the whole floor were one big room."

Thus speaks the daughter. I have not attempted to quote her verbatim; her language is not exactly my language. But I have persuaded her to be shamelessly frank with her dad in a number of interviews. I have led her on to discuss dancing, drinking, "necking," clothes, courtship, marriage, and almost everything else under the sun. In order to draw her out, I must confess that I have often feigned a sympathy which wasn't genuine. Old-fashioned inhibitions are deep-rooted. But I am learning a few things about

This Business Sign gives *Twofold* return

THIS electric advertising display does *double duty* for its owner—

First—by *directing* to his place of business prospects and customers interested by his advertising in newspapers or direct mail.

Second—by *attracting* many out of the traffic up and down the street who never see his other advertising.

Working night and day, Flexlume Electric Displays reach more people, more continuously, and at a lower cost than any other form of advertising.

Let us tell you how others in your own line of business are using Flexlumes, and furnish without obligation color sketch of a display for you. Write the Flexlume Corporation, 1582 Military Road, Buffalo, N. Y.

Distributor openings for capable and responsible business men.

Factories also at Detroit, Los Angeles, Oakland, Calif., and Toronto, Can.

Do you know dog's greatest enemy?

DO you know the greatest primary cause of death among dogs? Do you know what it is that so frequently weakens their health from the time of birth, spoils their dispositions, paves the way for other serious diseases of many kinds? It is a parasitic disease afflicting the majority of dogs today. *It is worms.*

TRAGEDY

That Was Preventable!

A Free Book Tells How

SPOT showed every symptom of worms—irregular appetite and bowels, dragging and biting at hindquarters, restless sleep, etc.—but none of the family knew what these signs so clearly indicated. His system became weakened... distemper... and...

Dog fanciers and kennel owners know a simple and sure way to combat this disease. They give Glover's Vermifuge or Glover's Worm Capsules. Puppies require this safe and simple treatment monthly—grown dogs four times a year. And it is as easy to get as it is to give—

Sold By All Drug Stores By Pet Shops and Kennels

Food and affection are not enough. Your dog needs care. An easy matter when you use these famous medicines, endorsed by breeders of finest dogs. Ask your dealer for them today. Don't delay this first essential step for having a healthy, happy dog as playmate for the children and fit companion in the home.

GLOVER'S
IMPERIAL
DOG MEDICINES

Here are some of Glover's medicines which should be in every home that has a dog.

Glover's Vermifuge	65c
Glover's Worm Capsules	65c
Glover's Condition Pills	65c
Glover's Distemper Medicine	$1.25
Glover's Mange Medicine	65c
Glover's Digestive Pills	65c
Glover's Kennel & Flea Soap	25c

Send For Dr. Glover's Free Book

To deserve a dog's friendship you should know a dog's needs. This free book tells how best to feed and care for your dog—how to protect his health and improve his disposition and appearance. It is the work of H. Clay Glover, V. S., known to dog authorities the world over.

youth, and I set down here some of the things I have learned.

I have learned from both daughters. I have learned much from Billie, the younger. Bill is eighteen years old and not so articulate as Elizabeth is, nor so bold. Bill is slow to say outright just what she thinks; but she contrives at times to get her viewpoint over to me.

Bill's peculiar weakness is dress. If any new fad or trick of adornment comes along, she is first to seize upon it. She draws upon the wardrobe of her sister, her mother, and of other girls in the neighborhood, and I have even had my quarrels with her for borrowing my knickers, my neckties, and my one pair of suspenders. The mystery about this girl to me is how she can adapt to herself any size clothing, including my knickers, which should be big enough for two of her.

I discovered Billie the other day scantily dressed up in an afternoon frock and ready to leave.

"Do you think it looks nice to go out like that?" I asked her. "Do you think your mother would be seen on the street like that?"

"I GUESS you don't remember how Mother looked on the street before she married you!" said Bill, with a sly look. Of course I remembered, but I would make no admissions. "I'll show you," said Billie. She darted up-stairs and left me waiting for what seemed an interminable length of time. And then she reappeared. I burst into laughter, and I laughed until my sides ached.

That kid had dug up some of her mother's girlhood clothes from the attic and had arrayed herself in the style of the early eighteen-nineties. The figure she affected was, if I remember correctly, what the girls of that period called the Grecian bend. They wore wasp-waisted corsets, padded their busts, and wore bustles.

Bill had it all, including the bustle and the padded bust. The skirt trailed the floor, or would have trailed but for the fact that she held it up with one hand in a way that showed a tantalizing glimpse of a trim ankle—or it would have been tantalizing but for the high-top shoes she wore. The sleeves of her bodice were of the balloon kind that I had almost forgotten. The bodice buttoned up tight around her neck. A funny little hat with a lot of ludicrous feathers on it was perched on the top of her head. She lifted her skirt and revealed an old-fashioned white petticoat with about eighteen rows of lace on it. I had almost forgotten that a quarter-century ago no woman was well dressed who didn't wear forty yards of Hamburg edging on a petticoat.

"Don't you think now that a girl to-day looks a whole lot better and feels a whole lot better than Mother felt in the clothes she used to wear?" said Bill.

And Bill was right. Slowly it all came back to me, how I used to have to wait an hour for my wife to put on a trunkful of clothes and do up a peck of hair. Bill makes her coiffure with a few dabs of a pocket comb and a flirt of her pretty head, slips into her one-piece frock in a jiffy, and is dressed for any occasion in the time it would have taken her mother to have puzzled out which was the front and which was the back of her gown.

Bill doesn't smoke. "I would smoke if I liked it," she says frankly. "But I can't see any good it does. It makes your teeth bad, hurts your eyes, gives you a cough, and I don't think it makes anybody think any more of you. Sister sometimes smokes, because Sister thinks it's smart."

"I don't think any such thing," Elizabeth replied with indignation. "If smoking is bad for girls, it's bad for men, and when any man wants me to quit smoking I shall expect him to set the example."

ALL of which, I think, is our key to the rebellious spirit of modern youth. They are up in arms against the inconsistency of parents and seniors generally.

They have set us down as a lot of moral frauds and hypocrites who do not present the facts of life fairly and squarely to them, and they are determined to explore life for themselves. In their automobiles and in the open-air life that they lead, they see everything in the world and in nature that we have so foolishly tried to keep them from seeing.

Moving pictures bring to them every aspect of human society, at its worst as well as its best. The news-stands are loaded with cheap and trashy magazines in which these young people find frank discussions of phases of life in which they are by nature intensely interested, and about which we older folks maintain a prudish silence in their presence.

I recall now with pain and with a sense of deepest shame my sorry conduct on an occasion when Elizabeth was hardly six years old. She rushed into the house one day all breathless with eager curiosity.

"Where did you get me from, Mother?" she asked with sparkling eyes.

"God made you," replied her mother.

The answer did not satisfy Elizabeth. She looked long and hard at her mother as if she expected more enlightenment. Presently she turned her curious gaze upon me, as much as to say that surely there was something more to be said, and I would say it.

But I had no word for her. I appeared to be interested in something to read, and tried not to look at her. The little child tiptoed over to me and stood by my chair until I was compelled to notice her. My eyes met hers, her eyes so bright, so clean, so honest, so unafraid.

"Daddy," she said, "Daddy, who made God?"

I told her I did not know. A perturbed look came over her innocent face, and she went thoughtfully back to her play.

In the very beginning of the awakening of the wonderful mind of the child, she had come to her parents for enlightenment upon two of the greatest mysteries of life, and we had failed her.

Never again did she ask either of us any question touching upon the mystery of life. She knew or surmised that we either did not know or would not tell. In either case, we had put ourselves in a despicable light, and lost that first and surest opportunity to establish an intimacy that would have impressed her profoundly and made us her confidants for life.

These young people are thinking a lot about sex. I am astounded to find that my girls are familiar with the adventures of the leading female lights of history from Cleopatra, Hypatia, and Theodora down to Marie Antoinette, Mary Stuart,

haven't given thought yet to the fact that some day they, too, will be old fogies in the eyes of a newer and even wiser generation.

But Elizabeth, like all of her type, misses one of the biggest facts of all: the fact that, after all, children owe something to their parents. A parent may be an ignorant and deceitful old fogy, but, after all, he is a parent struggling under the great economic and social burden of rearing dependent offspring. He must provide clothes, food, shelter, education, and certain social, spiritual, and recreational opportunities for his young.

In the great economic struggle to provide these things, he may not have the time to mix with the world and to keep pace with everything new under the sun, as his children do. But in every normal parent's heart is a great love for and appreciation of his children. His dream is to see them grow up into clean, straight, healthy, happy, dependable men and women.

And if that parent doesn't know everything that his sophisticated young ones know, he does know one thing very well: he knows that the resources of this frail temple known as the human body must be conserved in youth if one is to be even moderately healthy, happy, and able to enjoy himself in middle life and old age. He grieves to see his children burning up their young lives in tumultuous recreations before they are old enough to recognize, appreciate, and enjoy life's greatest values.

I HOLD no brief for us parents. Everything the young folks say about us older folks is just about one hundred per cent true. But the big economic fact is that we pay the bills; we pay for the food, the clothing, the shelter, the finery of these young folks; the gas they burn and the good times they have. We pay for these things in cash earned by the sweat of our old-fogy brows, and we pay in tearful prayers and sleepless nights for their dissipations and their late hours, regardless of their harmlessness. And because we pay, we think we are entitled to a little more consideration than our children accord us. The only price they are demanded to pay for what they get out of life is parental obedience. I ask these youngsters to answer, in all fairness, if this is not, after all, a moderate price to pay?

The Ten Commandments recorded by Moses are very old and were made for a primitive people, but they represented at the time the sum total of the social wisdom of human kind after thousands of years of social experience. Human nature has not changed in ten thousand years; human nature is the same to-day as in Moses's time and the primary social needs and obligations are essentially not different.

In the Ten Commandments it was written: "Honor thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee." It is a commandment that we have come to ignore; maybe we have lost the best in the Bible by our eternal quibbling and quarreling over non-essential points of dogma and creed.

"Honor thy father and thy mother: that thy days may be long upon the land which the Lord thy God giveth thee." I

A HOME *in the Sunny South embellished with* 40-40-20

COMPOUNDED to withstand the varying atmospheric conditions to which exterior paints are subjected, it is successfully used in southern climates as illustrated in this, an actual picture of a *beautifully white house* painted with 40-40-20.

40-40-20 is made in ready mixed form, in beautiful tints as well as in white, and in paste form for the professional painter's use.

40-40-20 may be obtained from the representatives or dealers of more than 120 paint manufacturers, a list of whom may be obtained from us on application.

KEYSTONE
Copper Steel Sheets
For Farm Machinery and Equipment

LIGHTNESS of weight, strength, economy and service are combined in the use of sheet steel for the manufacture of machinery and implements. Pressed steel has displaced both wood and cast metal for many machine parts.

The American Sheet and Tin Plate Company, the largest manufacturer of Steel Sheets, through its cooperation with manufacturers of farm machinery is doing its part in the improvement of agricultural equipment and development of machinery.

The quality of Steel Sheets required to withstand the ravages of weather and wear, the gauge and ductility necessary to do the job of stamping or pressing, these are questions which this Company would help you solve. Write our nearest District Sales Office for interesting FACTS booklet. Let us know your sheet metal problems if you use sheet metal of any type—black sheets, galvanized sheets, automobile sheets, stamping stock, roofing and siding products, tin and terne plate, etc. Sold by leading metal merchants.

ask the younger people, with all their vaunted worldly-wiseness, to study and analyze that precept by every rule of philosophy, scientific fact, and human experience at their command. Their days will be longer upon the earth if they will but honor their fathers and mothers more and pay more heed to parental admonition. We may not know so much as our children know, but we know a few things very well; we know because we, too, have lived.

But the child has rights which we parents must not ignore. First among these is the right to be heard and understood. When I was a kid, "talking back" to one's parents was an unpardonable offense. There was no argument; there was but one side to any question involving the child—the parent's side. The result was an inseparable barrier between parents and children which neither could overcome.

Our irrepressible younger generation is making this less possible to-day. We can't help guide our children's lives unless we really understand them—and real understanding comes only when barriers are gone.

NEXT month you will have the privilege of meeting the most interesting man in New Orleans—William Jennings Warrington. Living in the house dubbed "haunted" by old wives' tales, Warrington devotes all his time and money to one single purpose: He reaches out to salvage his fellow men—men who have stumbled by the wayside, young fellows temporarily down and out—and puts them on their feet. In fifty-three years over one hundred thousand men have passed through his home, and only two does he regret helping.

I Have the Most Useless Memory in the World

(*Continued from page 57*)

examination in Plane Geometry; and all I could think of was that those merry, carefree singers were having all that fun on the stage, oblivious of the angle A in the scalene triangle ABC. It didn't occur to me that night that perhaps Mr. Henry Clay Barnabee and Mr. Eugene Cowles and Mrs. Jessie Bartlett Davis probably didn't ever care much about triangles and rhomboids.

The simple melodies of to-day, as I have said, I cannot remember. But I can whistle every note of "The Washington Post," "The High School Cadets," "Liberty Bell," "King Cotton," and "The Directorate." And I can sing you the trombone part in "Manhattan Beach"—my favorite of the Sousa marches—that Arthur Pryor and two others used to step out in front of the band and play. I know "The Honeymoon March," and "Georgia Camp Meeting."

I know that coal and peat are of vegetable origin. Because when vertical writing came in—yes, I'm as young as that—a

each week in 1927?

E. J. Dryden

FRANKLY—are you in earnest in wishing to increase your income, but doubtful as to the aid you could get from home-study business training?

E. J Dryden, of Laredo, Texas, was doubtful, too. But he determined to try, and to measure his results by the good old sign of the dollar!

He was earning $150 a month when he started with LaSalle. His course in Higher Accountancy was completed in eighteen months. His salary increase paid for the training plus $1.00 an hour for every hour spent in study.

After his first lesson in Business Management, dealing with Selling, he tried out his newly acquired knowledge. In six weeks he made $750 in commissions working after hours.

He has since followed thru with Commercial Spanish, and is now completing his fourth course—in American Law and Procedure. For two years past his earnings have been better than $11,000 a year.

Again we ask—are you in earnest in your desire to increase your salary?

MACHINERY & SUPPLIES
LAREDO TEXAS

LaSalle Extension University,
Chicago, Illinois.
Gentlemen:

My schooling stopped when I was fourteen; and when I first enrolled with LaSalle for training in Higher Accountancy I was earning only $150 a month.

Yet that training enabled me to make certain suggestions to the firm I worked for which resulted in a trip to Washington with all expenses paid and a commission of $2,126. That alone paid for the training seventeen times over!

Since then I have followed thru with two other LaSalle courses; I am now on my fourth. And for two years past my earnings have been in excess of $11,000 a year.

I used to think you were too extravagant in your claims for LaSalle training. Now I honestly believe you are too conservative. Why don't you tell the full truth about what LaSalle can do and is doing to lift men out of the low-pay class and put them in command of the really important places in the business world?

Sincerely yours,

E. J. Dryden

statement to that effect was the first sentence in the copy book. I was a good penman, but so—in Room 15—were Bessie Knight and Hosmer Dorland and Paul Rutt and Eleanor Parker and George B. Carpenter—he wore a scarf pin in the form of an interrogation point—and Hester Ridlon and Elsie Neel, whose brothers were tennis champions, and Clarence Schofield, who didn't have to leave home until 8:58, because he lived right across the street from school. And I remember that Mr. Murray, the janitor, who chased us out of the basement when, every noon, we played Pom-Pom-Pete-away (we never called it Pullaway), had purple whiskers and I didn't know they were dyed. I remember how I used to time my departure from home so that I might walk behind Corinne Zimmerman, who at the age of eleven (hers and mine) seemed highly alluring, what with her red dress and her yellow hair; and how I walked behind her every day for three years, and never spoke to her.

I remember that I excelled at reading—that meant reading aloud. We read "The stag at eve had drunk his fill," and something about Lucy and little Ned, and something about Beth-Gelert or the Faithful Greyhound, and something about the overheated boy who drank ice-cold water and died therefrom; also a piece called "How to Render Impassioned Ideas." I read, as I say, excellently; and what is the result? I still read well, and so, no matter how tired I am, I have to read aloud to my wife until she is asleep. The only way I can tell whether she is asleep is to make up things not in the book. If she says, "That isn't there," I know she is still awake.

LAST year I took my first French lesson. Of what I learned last year I remember little. In 1895 I took my first German lesson, and I remember most of the German I learned thirty years ago, including that "remember" is a reflexive verb—*sich errineren*. If at that time I had learned French I might be adept now. But instead of French I took Vaudeville.

It was like this: German, in my first year at Armour Institute, came at 10 A. M., French at 2 P. M. You had to choose one of them, so I picked German. I wonder whether Miss Rosa C. Lang, my excellent German teacher, ever knew that I chose her course so that I might have the afternoon free to attend the Olympic Theatre's show of Continuous Variety, which began at 12:30 P. M., and that if we—Lee Frank, Horace Witt Stevenson and I—hurried down-town right after the Algebra class, we could arrive at the theatre in time for the opening. By staying until six we could see the whole show; and parts of it three times, for the so-called supper show acts would go on from 12:30 to 1:45, repeat, and then go on again, after the star show ended, at about 4:45. It was in the supper show that I used to see a brother team tear paper into fancy shapes, to the tune of "Alice, Where art Thou?" It was there I heard a brother Song and Dance Duo sing:

"You lie! I saw you turn that ace!
A smashing blow right in the face,
A pistol shot (*Bang!*) and death's disgrace—
Was in that pack of cards."

And it was there I heard a tenor sing "She's More to Be Pitied Than Censured," like this:

"Atta the yole consoit hall on the Bowery,
Round a tabil were-a seatid one-a night-a,
A crowd of young-a fellows ca-rousing,
With them life seemed cheerfill and-a bright-a."

Hundreds of other songs I heard, too. I can sing them when requested; and not infrequently I oblige when requested not to. The only persons I know who can beat me at this feat of useless memory—who can remember more songs of those days than I—are Irene Franklin and Mrs. Rex Beach, who is Fred Stone's sister-in-law.

I cannot truthfully say that what I remember of Mathematics has been of no use. I studied a lot of mathematics, and I was the best student in the class. Look, if you doubt it, at the records of Armour Institute, 1895-99. I went all through Algebra, all the Geometries, including Analytic, and the Trigonometries. And I never used any of it—that is, in a demonstrable way—until I found myself in a game of rotation pool twenty-five years after I learned Arithmetical Progression. In rotation pool, the balls are numbered "1" to "15" and the player amassing balls with the largest total wins. The other players would add laboriously on the backs of envelopes. But it took me only a second, remembering the formula

$$s=\frac{n}{2}(a+l)$$

s meaning the sum, *n* the number of balls, *a* the first number in the series, and *l* the last. Therefore:

$$S=\frac{15}{2}(1+15)=\frac{15}{2}\times 16=120$$

So, if there were only two players, one of them needed 61 points to win.

After I left college I embarked in the fire insurance business. What I remember of that—I was a supply clerk—is the name of the expressman who called for the packages I wrapped. It was Rueckheiser. He looked at the first package I wrapped, looked at me, unwrapped the package, and retied it. "Do it like this hereafter," he said. It was a kindly way of treating a cocky college boy. I hope he is now president of an express company.

I HAVE seen many confessions of writers, telling how it happened they were driven to their high calling, how they Saw Visions, or Dreamed Dreams, or Felt the Urge. I remember exactly what got me into writing—a job, by the way, I dislike less than any other way of making a living.

No longer a supply clerk, I had advanced to bill collector and insurance solicitor. My hero at that time (1901) was George Ade, and I may add that in that respect I haven't changed a bit. Why should I not ask him, I thought, whether he wanted a policy—a policy covering his personal belongings—apparel, books, and so forth?

So one morning—February 22d, 1901, in round numbers—I called at the Chicago Athletic Club and asked for Mr. Ade. Mr. Ade was in the dining-room having breakfast, and wouldn't I come right in? *Breakfast* at 11:30 A. M.! I had been accustomed to the immutable rule that if anybody wasn't at the table at eight o'clock, there wouldn't be any breakfast. But I went into the dining-room, and, sure enough, there was Mr.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

George Ade, well dressed and handsome, having what was undeniably breakfast. This was Washington's Birthday, 1901, remember, when Fruits Out of Season was just a phrase from a fairy tale; and there was Mr. George Ade, a *writer*, having strawberries for 11:30 breakfast in February!

"Would you like a policy on your belongings?" I asked. I thought to myself that the worst that could happen would be for him to say, "No, confound your impudence, you young whippersnapper!"

"Sure," he said. And he asked me how much it would cost for $500 insurance and I told him $3.75 a year, so he told me to send the policy to him in North Carolina, where he was taking John McCutcheon that very day, as John was ill. I walked out, and traveled on air to the office and had Policy No. 620720 of the Transatlantic Fire Insurance Company of Hamburg issued to him. That is the kind of thing I remember, and if you doubt it, look up the insurance records.

AS THE result of this experience, I resolved that I was wasting my time writing fire insurance policies. No February strawberries for me at that job. So I decided to become a writer, and if I haven't yet come to the affluence where I have strawberries for breakfast, even in June, it isn't Mr. Ade's fault. He didn't advise me to quit the insurance business to write pieces for a living.

I could add forever to the list of useless things I remember. I don't know, for example, how many people attended the Sesquicentennial altogether, or on its biggest day. But on October 9th, 1893, Chicago Day, the paid attendance at the World's Columbian Exposition was 716,881. I don't remember who was the Sesqui's president; but the president of the Chicago World's Fair was Harlow N. Higinbotham.

The number of my automobile or the license number to-day I don't know; but I remember every detail of the Barnes White Flyer I—and Eddie Bald, the racer—used to ride. I remember that its crank hanger and sprocket were made of one piece of steel, that it had a Garford saddle, that it was geared to 72 and had Morgan and Wright Tires (double tube, as opposed to Dunlop single). The Sterling Bicycle was Built Like a Watch, and you were asked to Ride a Monarch and Keep in Front.

I can remember thousands of unimportant things. The only important thing I can remember is that the Editor of THE AMERICAN MAGAZINE asked me to write this piece. I'm going to send it to him, too.

That is, if I can remember his address!

A WHOLE industry was in danger of collapse when Edward E. Shumaker made a suggestion that put it on its feet. Next month, in "His Questions Were Hindside-'fore, But He Got His Answers Straight," you will read the story of this Pennsylvania-Dutch lad whose habit of asking twisted questions wrought a business miracle, and brought him to the head of the big organization in which he started as a combination stenographer-errand boy.

The sportswoman finds in Resinol Soap an invaluable toilet accessory

Its special Resinol properties make it singularly refreshing and protective to the skin.

THE keen exhilaration of the great outdoors has its physical opposites—it promotes the fine free flowing of the blood, even while it endangers the smoothness and softness of the skin through sun, wind and dust.

A fitting supplement to the exercise of the sportswoman is the regular use of Resinol Soap. Enjoy the outdoors—swim, motor, play golf or tennis—but safeguard your complexion with this delightful soap whose particular Resinol ingredients protect the delicate natural oil in your skin, thus helping to offset the parching effect of salt water, sun or wind.

Get a cake or a box of Resinol Soap from your druggist and begin its beneficial use today. You will like its distinctive Resinol fragrance, its thorough yet gentle cleansing and the velvety softness it gives your skin. In hot weather a Resinol bath is especially refreshing and helps one to avoid chafing, prickly heat and unpleasant perspiration odors.

Resinol Ointment, prescribed by doctors for more than 30 years in treating serious skin troubles, is now widely used for clearing away pimples, and other minor blemishes. Excellent for the relief of sunburn, chafing, etc.

Now the new and larger box of samples is ready for you. Send 10c with the coupon below and we will mail your box at once.

Send 10c for the new Resinol combination

Resinol, Dept. 8-G, Balto., Md.

For the enclosed 10c please send me the larger size samples of Resinol Soap, Ointment and Shaving Stick and the Resinol Soap booklet.

Box 487, 5026 Greenwood Avenue, Chicago, Ill.
FRANCES MUSSELMAN, Principal

Helga

(*Continued from page 23*)

her so. He began awkwardly to help her shell the peas, making small, commonplace remarks as he did so.

And, one other day, Anna and Hilda had boys there on a Sunday afternoon and there was a good deal of pleasant nonsense. Nonsense that ate into loneliness.

"Helga, I wish I had a drink from the spring," her father put in once, and she went, in grateful relief, on the quarter-mile walk to the spring. Grateful to be gone—but not admitting that her father had understood the necessity of her getting away.

Toward midsummer, when a sort of drawn, proud look had come about Helga's mouth, Emanuel Lind said to his wife, "Anna, we'll have to do something about Helga."

"She does look peaked," she admitted, troubled.

"It's more'n her body," Emanuel Lind said. "She's got to be made to think about something besides *him!*"

Helga *had* lost something that summer, some deep welling joy in life that had always been hers. Her eyes too nearly matched Emil's somber eyes, and Carl ran wild with no remonstrance from her. She went off sometimes to the woods, unable to meet folks' eyes. But she could never get away from herself. Not even the call of an ovenbird in flight could pierce her numbness. And the woods mocked her, talked to her constantly of him. "I can't go back there, to the house," she would say over and over. But of course she had to go back.

THERE came a day when her father found her alone in the woodshed. He was a man of few words, but something now forced difficult words out of him.

"Helga, I wish you wouldn't feel so bad. He wasn't worth it!"

Helga turned on him, her wet hands behind her on the edge of the tub, her calmness gone, her gray eyes blazing.

"He *was* worth it! He was! If it hadn't been for you—you always hated him! You've killed Mother, and now you want to kill me, too! You aren't satisfied to wear us out on these old stony fields; you took Mother away from the land and the folks she loved, and now you've hated *him* till he's gone! And *I* hate *you! I hate you!*"

Emanuel Lind seemed to grow old and shrunken as she spoke. It was the more terrible because she was always so even of speech and manner.

"Helga," he faltered, "you don't know what you're saying!"

"I know, I know well enough! You've begrudged us everything—always! School and good times and money! You've been bound to stay here on the farm, and you know Emil can't stand it—nor Mother, either! But you had to buy more cows—and the pine lot! You've had to stay here—no matter what happened or who suffered!"

"Helga!" he said. He was very old now. Very old. His hopeful Norwegian eyes were dreary. His hands on the barrel of chicken feed shook. But in his voice was a queer, commanding power. "Helga! Stop!" he said. Then he went into the house.

Helga had a strange feeling of having broken all the laws of her race, and as she bent again to the tub she felt shaken as she had not in months. But she was glad she had spoken—glad!

TWO days later—it was November now and the Hollow road was muddy and frozen—her father came in from shipping apples and said, as he hung his shabby mackinaw behind the door, "Old Mr. Niles is giving up the route. I saw a notice posted in the office that there was going to be an examination for a new carrier." His voice had significance, but he said no more till at the supper table. Even then it was not direct.

"Well, Carl, how'd you like to be the R. F. D. man on this route?" he asked, with, for him, unusual lightness.

"What'd you mean?"

"Well, old Niles is quitting, and there's an examination next month," he said.

Though he seemed not to see her, he did see the longing leap into Helga's eyes, a longing to get away from her folks' pity and understanding, from Anna's teasing, from the sight of those fine unfinished clothes. Carl grinned at her.

"You take it," he said, as if he had the giving. "You were wanting a job!"

"I guess it's just for men."

But, three days later, her father said, "I asked 'Dolph Bennett, and he says women can be mail carriers."

Helga looked 'round at him, startled. But she said nothing.

That night Mrs. Lind said to her husband: "Are you crazy, Emanuel? Helga couldn't stand that work!"

"Work won't hurt her," he answered slowly. "She looks awful peaked, Anna!"

"Yes; but that'd be too hard. I won't listen to it!"

"It would get her out," he said, a little stubbornly. "She's got to get out and see folks." It was as if he had been thinking about it in his slow way for a long time, and had made up his mind. "I know you need her here, Anna; but she's got to get away!"

Mrs. Lind made Helga think they needed the money. "The trees won't bring so much for a year or two," she said. Helga tried the examination late in December. 'Dolph Bennett, the postmaster, discouraged her.

"It's no job for a woman," he objected.

But she went ahead, and came out first on the list.

"'Dolph Bennett can appoint any out of the first three," she said at home. "I don't believe he wants me to have it."

It seemed he didn't. He appointed Ed Matthews. Emanuel Lind went to him about it, spoke of it in his slow, good-natured way, though he disliked 'Dolph Bennett and hated to seem to ask favors.

"Seems like you just pick favorites, eh?" he said.

'Dolph Bennett laughed. "Oh, it's no kind of a job for a woman," he said. "Helga's smart enough all right; but you

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

need to be tough more'n you need to be educated in this job. She's not used to getting out every day—twenty-eight below or ninety-eight above—like the Route Three man has to! That's a hard route, with no paving in there yet."

Emanuel Lind said no more. But he remembered one time when he had been sick during a terrible blizzard that snowed them in, and Helga and Carl had dug a tunnel to the barn so that they could tend to the stock. And walking into town to school, year in, year out, four miles each way—oh, Helga was tough enough! He couldn't, of course, tell 'Dolph Bennett why it was so important for Helga to have the route. But sometimes, long after Sweden Hollow slept, he lay awake, his hands clenched till the nails cut, and thought of Rell Stannard and the broken look in Helga's eyes.

Along in March, Ed Matthews had a sudden notion to go to Florida to sell real estate. Emanuel Lind took occasion to go to the office one day.

"Well, going to give my girl Helga a chance now?" he asked.

'Dolph Bennett looked embarrassed; but his voice was a little sharp.

"Oh, she doesn't want that job!" he said. "She'd just get so she knew the business and then she'd up and get married. Going to recommend Judd Bates."

Lind began to know it was personal then. And he knew why. It was his field of pine trees. 'Dolph Bennett wanted that field. He wouldn't be in office much longer, like as not, and he'd want that little stretch of land for Christmas trees himself. It was near a little house he owned.

So bluff Judd Bates got Route Three. Folks didn't like him much, either. He never had a stamp handy, and he was never ready to do a favor. Old Mr. Niles had always been good that way.

When rumors went 'round that Judd's wife was sick and wanted to get back East to her folks, Lind went the third time to the postmaster.

"Wish you'd see clear to give Helga a try," he said. "We find it pretty tough pulling, Mr. Bennett!"

'Dolph Bennett looked at him a little unfriendlily.

"Well—you didn't see fit to let me have that land!" he said.

EMANUEL LIND went home, sick at heart. He had been counting so long now on those pines. They meant a future comfort that he longed to give his family. Anna needed clothes so badly, and they all needed a let-up from the terrible grind of forcing their living from the rocks. But, whenever he stopped thinking of that side of it, he would remember anew Helga's eyes, accusing, sick with misery, and hurt, would run through him like fire. Helga couldn't wait for trees to grow up!

Still, on his way home, he drew up by the side of the road near his place, took a short-cut across a lot still white with March-swept snows, and came to his field of little pine trees. Their green-black boughs, edged with white against the slant of the snowy hill, seemed to reproach him, seemed to say something to him that brought a hard lump to his throat, a cutting feeling at his heart. He held his hat in his hands and his lined face twisted. Words of affection welled up in

You can keep strong, thick hair

Worrying about your hair?

PERHAPS your hair seems thinner, less healthily vigorous—you have wondered whether "anything could be done to help it . . ."

Two common scalp troubles cause thinning hair—dandruff and sluggish circulation. This simple treatment corrects quickly *both* these hair ills:

EVERY MORNING wet your hair and scalp thoroughly with Pinaud's Eau de Quinine. Then, with your fingers pressed down firmly, move the scalp vigorously in every direction, working the tonic into every inch of the scalp. Move the scalp, not the fingers! Brush the hair while still moist. It will lie smoothly just the way you want it.

Give yourself this Pinaud treatment *every* morning—feel the new glow of swift scalp circulation—notice the absence of dandruff—the fact that your hair is thicker, more vigorous!

You can buy Pinaud's Eau de Quinine at any drug or department store. Look for the signature of Ed. Pinaud in red on the bottle. Pinaud Incorporated, 220 East 21st Street, New York—sole distributors for Parfumerie Ed. Pinaud, Paris. Canadian distributor, Parfumerie Ed. Pinaud, 204-206 King Street, East, Toronto.

PINAUD'S
Eau de Quinine

him but did not pass his lips, unused to easy expression. After a long time he turned, rubbed the sleeve of his jacket across his eyes, went down the hill.

"Anna," he said to his wife that night, "I know how I can get Helga the job."

"You do?"

"Yes. Sell the pine lot. Bennett still wants it."

"Emanuel!"

"I know—I know, Anna! Seem's like I can't; but Helga's got to get better—somehow!"

"But maybe that wouldn't do it."

"I know; I've thought of that. But I think it would. Feel as if I have to try, Anna! She's tried to be just like always. She's been a good girl, a real comfort to us. I can't stand this much more, Anna!"

He rode back to town after supper and said to 'Dolph Bennett, "Do you still want that pine lot?"

TWO weeks later Helga drove home from her first day on Route Three, under a soft April sky. There was a curious look in her eyes—something different. Her eyes would never be young, really young, again; but she was, nevertheless, more like a girl than she had been in months.

"Where's Father?" Helga asked at once. Mrs. Lind looked 'round, startled, at some new quality in Helga's voice.

"His cold got worse. He's on the couch, said he didn't want any supper. Carl! John! Supper!"

They came trooping. But when she saw her father under the old red comforter, Helga said nothing to him.

"Len get a letter from Sally Davis today?" Anna demanded. "She writes him every afternoon in school!"

"How's the mud up by the Wheelers'? Jib said old Deacon Pritchard got stuck there yesterday, up over the hubs," put in John. "He cussed like everything!"

"Did Ed Vickery give you that fish line he promised to send up to me?" That was Carl.

Helga laughed. It was so long since they had heard that mellow, pleasant sound, that for an instant everyone looked startled. Emanuel Lind's worn face took on a strange contentment in the shadows.

"Yes, Ed sent the fish line!" she answered Carl. "It's in my coat pocket. And I 'most got stuck up by Wheelers'." She gave an appreciative chuckle of remembrance. "Guess Grandma Wheeler'd be glad to have that mud stay there! She gets lots of chances for gossip now; she came down to tell me a lot about her daughter-in-law. Elsie washes sometimes on *Tuesdays*—imagine that! And she was going to let housecleaning go right by without washing her feather beds! Think of it! And she goes to town to parties, and doesn't get in till all hours—and she a married woman with a baby!"

From the couch Emanuel Lind's slow, hoarse laugh came.

"And Sary Overhiser's going to have a new printed crêpe! I made out the money order. Judd wouldn't—called it folderol."

THE content in the tired blue eyes of Emanuel Lind deepened.

Helga turned suddenly to Carl.

"Carl—I heard up at Pomeroy's you'd been fighting again!"

"Aw!" he began, and reddened. But she was smiling, her old, half-tender, half-reproachful smile.

"Don't know as I blame you this time," she said. "But what do you care if he did steal your arbutus patch? I know another; and it's where he'll never find it, either!"

When she got up from the table she lifted thin Emil quickly in her arms.

"Got a brand-new story for you!" she said, and bore him off to the kitchen.

Yes, she was different, like the old Helga of a year ago; but even more than that Helga—more understanding even, dearer.

It was later, at bedtime, that Emanuel Lind said he guessed he'd "stay down there by the fire for a while," and the rest all trooped up to bed. All but Helga.

"I'm going to make Father some hot ginger tea," she told her mother.

When she brought it, she was strangely embarrassed. But it was not her way, nor his, to beat about the bush.

"You were right about the Route," she said—her voice low. His tired eyes came to hers with a surprised, quiet glow. But he did not answer.

"Not—not about *him;* but this will make it all right—after a while. I needed it; I guess I needed it terribly!"

Still he did not answer.

"Drink this. I guess you can stand it. It'll warm you up." Then, abruptly, with red coming out in hot splashes on her cheek bones, "'Dolph Bennett told me about the pine lot!"

For an instant they were still—she standing there, with the empty cup, he, on the couch. And the stillness seemed to enter into them, seemed to melt away that wall of antagonism that had grown through the years. Then, with a strange, blind movement, Helga put the cup down clatteringly on a chair, and fell on her knees by the old couch.

"Father!" she sobbed. "Oh—*Father!*" Hard tears, held back for months, came scaldingly. Her strong youth seemed suddenly weak childhood clinging to its father's might. His gnarled hand touched her bright braids gently.

"There, Helga!" was all he said. "There, Helga!"

Presently she rose, pulled her arm across her eyes.

"You'd better stay down here. I'll get another quilt!" was all she said. But as she spread out the quilt, she bent with a swift passion of remorse and love and kissed his lined cheek.

AFTER studying more than one hundred geniuses from the cradle to the grave, Dr. Catherine M. Cox is well qualified to speak on the subject of genius—what it is, what it is not, and how to recognize it when you meet it. Next month, in "Have You a Budding Genius in Your Home?" Doctor Cox speaks of the basic traits and characteristics of the geniuses she has studied, shows you their mental workings, and explains the reasons for their greatness. This article will be of tremendous value to people who have dealings with children; it will also give all who read it a line on themselves.

It Took Gary 43 Years to Beat the Family Luck

(*Continued from page 37*)

Companies, of Kansas City, Missouri, regarded as the largest physical consolidation of telephone properties up to 1922.

And the rise of Gary, I was to discover, a rise that had its beginning in a vision which did not take form until the man was past forty years old, is inseparably linked with his character, as revealed, in part, by those three anecdotes I have retold. A former farmhand and mover of buildings, Gary built on old-fashioned foundation rocks: Honor, confidence in his fellow men, and action of the kind that gets "things done yesterday!"

Furthermore, he built when many another would have folded his hands in passive, bitter resignation to a seemingly inevitable destiny to fail! It took Gary forty-three years to beat failure!

GARY'S forbears were Irish. Ireland's troubles and family misfortunes drove them in exile to Metz, and finally to America. George Gary, his father, grew to manhood in Ohio, a farmer and a house mover. Folks called him the "unluckiest man in thirteen counties."

Every epidemic that threatened live stock invariably visited the Gary farm first. George Gary's chickens and hogs died of the cholera, while glanders killed his horses. If he bought a cow, it went dry. Weather and pests ruined his crops. And when, after years of patient, uncomplaining struggle, George Gary had laid aside sufficient to build himself a home for his declining years, a flaw in the title caused him to lose everything.

It was regarded as "Gary luck" that Theodore, eldest child in a family that was to grow to ten, was born on a Friday, and that Friday the 13th of May.

He was an enormous boy. When five, he could carry a full pail of milk. When ten, he was doing a man's work. He learned to cradle and bind wheat by hand; to reset iron tires on wagon wheels; to hew a water trough from a raw log. And, from gentle, patient, unlucky George Gary, he learned to face life.

The family moved, in Theodore's thirteenth year, from Ohio to Cole County, Missouri. Later they moved into Morgan County, and then to Pettis County, in the same state, settling on the outskirts of Sedalia. These moves were forced—an effort to leave behind the specter of ill luck that haunted the Gary household. But the ghost went along.

In this atmosphere, then, of things constantly going wrong, of actual need always, of grubbing for a bare living, Theodore Gary was reared, tasting life in the raw and relishing it. Sons of better-off parents had time for school, some few for college. But not young Gary. He was needed in the fields and as the partner of his father in the building and moving business. Eighteen weeks in a country school were to make the sum-total of his educational equipment for life. Yet, to-day, Theodore Gary is an educated man, the president of a public library which he helped to found, and a student engaged in extensive prehistoric research.

But don't, by any means, picture Gary as a young man with a grouch, in those days. He was popular. He shone at the country dances. He was known as the "politest young fellow in town," and as a smart farmhand. Indeed, Gary's recollections of his youth are tinged with humor.

Listen to this story of what was probably his first big ambition: He loved music, and he secretly resolved to become a musician. To this end, he hunted up the master of the Sedalia brass band—a plump, serious little German—and confided in him.

"Ach, I've no blace for you," said the bandmaster, "except der pass drum. Any poy could peat dot."

Gary insisted he was willing to begin with the bass drum. To add weight to his appeal, he offered to pay five dollars in gold, in advance, for lessons on the drum. The gold piece won the decision.

Nightly for a week, far into the night, Gary practiced faithfully. Saturday night, when he took his place with the band for its weekly practice, he flattered himself that he was an expert drummer. As luck would have it too, the bandmaster opened with Gary's favorite piece.

"Boom-boomty-boom," thumped Gary.

A look of agony came into the bandmaster's face.

"Boom-boom-*boom!*" banged the recruit, louder than before, but three beats out of time.

The bandmaster threw up his hands. The band stopped, all but the big drum. Intent upon his music, Gary was still banging zestfully away.

"Stop!" shouted the bandmaster, above the resounding "booms." "I say, it's enough!"

The thundering of the drum abruptly ceased. The bandmaster, looking desperate, fished hurriedly into his pocket and produced Gary's gold piece.

"Take it pack," he said miserably. "Much as I need it, take pack your money! You'll never learn to peat dot drum in fifty years."

Thereafter, relates Mr. Gary, he confined himself to farming and to the side-line business of house moving.

AT NINETEEN, he was in that position to which thousands at some time come—discontented with what he was doing, but seeing nothing better to do. He had no definite plan, no visible goal. Big, husky, able, and willing, he fretted to "get on," but didn't know how.

One night, on his way to collect a moving bill, he made a mental inventory as he walked along. He had saved one thousand dollars, but it was all tied up in house-moving equipment. He fretted because moving work was seasonal and occupied him only one hundred days of the year. The remainder of the year had to be put in doing odd jobs, to make ends meet. And, he reasoned, no odd-job man ever got beyond odd jobs.

$12.50 for this Suit or Topcoat!

These are the famous NOGAR Economy Clothes—built for hard wear. A million enthusiastic wearers have saved money on them. Sold direct through local representatives.

Designed for work clothing but so good that thousands are worn by business men. Ideal for sports. Topcoats make perfect motor coats.

Made of NOGAR Cloth, the strongest fabric used in clothing. Almost tear-proof, won't burn easily, resists wind and water.

There is only one NOGAR Cloth and we make it. Beware of imitations.

Two prices only—$12.50 and $13.50—according to pattern of cloth. Boys' suits and topcoats, $9.85 and $10.85. Mail coupon below for Style Sheet showing full range of snappy new styles and other information.

SALESMEN—
here's your chance!

Something you can't help selling. Thousands writing for these goods and waiting to see you. Every man and boy a prospect. Your earnings limited only by number of calls you make. Mail coupon at once to secure territory.

"If only I could talk to somebody!" thought Gary.

And then he arrived at his destination, a brightly lighted hall where it happened that General Benjamin M. Prentiss was addressing Sedalia's young men on the time-worn but ever-new subject of how to get along in the world.

Gary drew the doorkeeper aside. The man whose bill he had to collect was in the hall.

"I don't want to hear the speech," Gary assured the doorman. "All I want is to get my money from this man. It won't take me more than two minutes."

"Sure," agreed the doorman. "I'll trust you. Go ahead."

Tiptoeing down the aisle toward his debtor, Gary heard General Prentiss thunder:

"The only way for a young man to get ahead in this world is to rub up against big men. He should meet them, talk to them, not be afraid to get right up against them. Big men are—"

Gary lost the next. He was leaning over and whispering about the bill. That settled, he started to tiptoe out.

"The average man," went on the general, "doesn't think thirty minutes in his whole lifetime. Take yourself. Every man here knows how to harness a horse, and I'll wager that each of you knows only one way, the way you first learned. For years you've been putting the harness onto the horse in the same old way. You've never bothered to think of a better, quicker way."

"That's right!" Gary muttered, and paused in the doorway. The talk struck home to him. He wanted to hear more of it. That stuff about big men, now; he had never thought of that. He had always been afraid of "big" men.

Again the general: "Most men don't use fifteen per cent of their brain capacity. Instead, they use other men's brains. They let the other chap do their thinking for them. Once more, take yourself—"

Young Gary hadn't fifty cents in his pocket and, mindful of his promise to the doorman, he slipped out into the night air—regretfully. A spark, ignited by chance, was smoldering in that unused eighty-five per cent of his brain!

Walking homeward he pondered, "I've been honest. I've worked hard. Yet I've got nowhere. Prentiss must be right. I need to rub up against big men."

THE question was, where and how was he to meet these big men? One didn't bump into them on every corner in Sedalia. However, to that problem he resolved to apply Prentiss's second admonition—to think. For the first time in his life he began seriously, intelligently, deliberately to exercise his brain beyond the needs of his immediate business.

A few weeks later, in the process of "looking around," Gary made the acquaintance of a newcomer in town. The stranger was prosperous looking and he was an excellent talker. His specialty was lightning rods. Every owner of a house and a barn in Missouri, the stranger pointed out, was a prospective lightning-rod buyer. Why not go into partnership with him, and clean up?

Ready to jump at anything that would bring him into contact with men bigger than himself, Gary took the partnership solely on the other's word. The two began to sell lightning rods, and without difficulty. Whatever a customer demanded, Gary's partner immediately promised would be done, until he had plastered Sedalia and all the country about with promises. Then on a convenient night, with the advance proceeds of their sales in his pocket, the glib lightning-rod agent vanished from Sedalia. Gary was left "holding the bag."

"The Gary luck," said friends, and shook their heads. Gary wondered, as he faced the storm. The lightning-rod customers descended on him, demanding their money, or their rods. He had but recently married, and a child was expected. All that he had been able to save was laid aside to provide for that event. Additional to that small sum, all that he possessed was his moving outfit.

In this crisis I don't think that the man hesitated so much as a moment. Promises had been made; contracts entered. There was only one road ahead, in Gary's eyes—to satisfy those injured customers. That character George Gary had passed along to his son. Young Gary *knew* no other road.

He drew the savings from the bank. He sold the moving outfit. Every cent that he had went to cancel the claims. Deprived of the means of pursuing his trade, he went back to odd jobs, to work by the day on farms, to earn something upon which he and his wife could live. But he had learned a second lesson that henceforth was to guide his every move—to investigate prior to action.

"FULLY half of the business failures," says Mr. Gary to-day, "are due to men not having confidence in other men. Lack of confidence far outweighs misplaced confidence.

"But the main fault goes beyond that: The time to doubt a man, whether he be an employee or a partner, is *before* you tie up with him. If you doubt at all, don't tie up. Settle the matter of confidence first. Be *sure* it is settled. Then, satisfied about the man, go ahead with him.

"In my business, my associates are as much a part of it as I am. They have the same interest in it. How can I expect them to rely on me in my work if I don't rely on them in their work? And I do rely on them. When I know a thing is to be done by them, I immediately dismiss it from my mind. But each of my men had won my confidence *before* he became associated with me."

From his experience with the lightning-rod agent, Gary evolved a working principle from which he has never deviated: Investigation, complete assurance in advance; and thereafter—but only thereafter—the giving of that complete trust which was his nature; this rule became his shibboleth. Mark it as we go on. The rule, a product of misfortune, was to help make the man.

He was twenty-four now. Still "looking around," he had made some study of the state of Missouri. The town of Macon and the country about attracted him. There were coal fields and railroads, as well as good farms. Big industry in this section would mean the presence of big men. His child had died. His wife was ailing. With her and a stick or two of household goods, he moved to Macon.

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

First he did odd jobs, whatever he could get, saving every spare penny; and studying every spare minute. He studied the men of Macon. He studied the mines, the railroads, the outlying farms; the history of the town itself, its values and its growth. He wanted to know Macon as no other of his years knew it. He taught himself to like what he had no apparent taste for—books. He saw the need of education, which he lacked.

His wife died. His mother died. The "Gary luck" perhaps. Unbeaten, he bought his father's moving outfit, transplanted it to Macon, and once more had a trade. This trade took him afield, and he found farms awaiting buyers, and buyers awaiting farms. He rented a little office and hung out a sign, "Theodore Gary, Real Estate."

Then, to aid his real estate business, he took the information he had gathered about Macon County—from farmers, from tradesmen, from men in the mines and on the railroads—and put it in "The Handbook of Macon County." Substantial citizens read the book and learned facts of their community they had not known. They began to rub elbows with Gary.

"YES, we have all the book says; but there's one thing we haven't," said Gary. "We need a building and loan association that will help folks to own their homes. It's too hard for a poor man to borrow money."

The citizens expressed interest. "That isn't enough," said Gary. "Such an association needs financial backers."

Shortly the backers were assembled. To Gary's surprise, and despite his protest that he was uneducated and without means, they made him secretary of the new association. Unable to make his own bond, business men of Macon signed it for him. They had heard the story of the lightning rods. They were ready to trust such a man with their money. They had him draw up rules for the association.

The rules completed, the directors met to adopt them. One scratched his head over a clause. "Don't you think," he asked, "that you are making it too easy here for folks to get out of this venture? Are you tying them up tight enough?"

"I purposely made it easy to get out," said Gary. "That's so nobody will *want* to get out."

They adopted his rules. That was in 1885. Twenty years later, when the State of Missouri enacted its building and loan association law, its plan varied only slightly from Gary's.

Three years went by. To real estate, Gary had added investments. He was beginning to meet the heads of industries and of banks. His office was handling some fairly important transactions in the industrial field, and he was beginning to be known for his intimate knowledge of the state. The larger town of Chillicothe had summoned him to organize a building and loan association there.

That year, 1888, while talking to a meeting of strikers, Thomas Wardell, one of the largest coal mine operators in Missouri, was shot and killed. Wardell's death necessitated the liquidation and sale of his extensive holdings, including mining properties in Macon County. It was no surprise to Macon when Theodore

The Traveler's Telephone

An Advertisement of the American Telephone and Telegraph Company

AMERICANS are the greatest travelers in the world. They have knit the country together by steel rails and made it the largest and most prosperous business community the world has ever seen. Business, friendship and political solidarity are maintained by personal touch, by travel and the telephone.

Wherever the business man goes in this country, be it thirty miles or three thousand, he is still within earshot of his office, his family and his friends. He can get them and they can get him, and for the longest call in the United States the day rate is only $12 and the night rate is only $8.

For the Bell Telephone System is an idea in force nationally. All the instruments are designed in the largest industrial laboratory in the world and made in the same factories to the one standard of fitness. All of the telephone builders, repairers and operators are trained to the same ideal and aim; stated by President Walter S. Gifford as:

"A telephone service for the nation, so far as humanly possible free from imperfections, errors or delays, and enabling at all times anyone anywhere to pick up a telephone and talk to anyone else anywhere else, clearly, quickly and at a reasonable cost."

Step into a Big-Pay Hotel Job!

Earn a Substantial Salary

In America's 4th largest Industry, Hotels, Clubs, Restaurants, Institutions, Schools, Colleges, Hospitals, etc., are daily calling for Lewis Trained men and women. Over 70,000 high class positions paying $2,500 to $10,000 a year open annually in hotels alone. Salaries up to $3,500 a year to start. We put you in touch with positions.

Previous Experience Unnecessary

Without cost let us show you how big pay, fascinating work, quick advancement can be yours in the great hotel industry. Age is no obstacle—young and old alike have equal chance for success. A common school education is all you need with the amazing Lewis system of spare time home training in hotel operation. Our students employed by leading hotels everywhere. Low cost—easy terms—money back agreement.

Part time men $5 an hour selling famous Pioneer tailored-to-measure all-wool suits at $23.50. **Commissions paid in advance.** Striking leather brief case containing 100 large swatch samples furnished—other equally remarkable values at $29.50 and $34.50. We train the inexperienced. *Men with determination and willingness to work for success write for this big money making opportunity, today.*
Pioneer Tailoring Co., 159 W. Harrison St., Dept. H1006, Chicago

Gary was named for the Macon end of the task. To Gary, this job came as his first big chance.

Gary took those properties, for which Wardell had paid sixty thousand dollars and sold them for a cool four hundred thousand dollars. How he did it is typical of the methods that years later were to bring fame to Theodore Gary and Company. First, let me picture for you the man as he was in those days—six feet or more in height and weighing over two hundred. He was frankly spoken, noted for his courtesy, dignified. With his size, his fiery red mustache, and his natural dignity, he had a native air of importance.

IN ACCORDANCE with what was now his fixed policy, he made a painstaking investigation of the Wardell properties. He was not content to do this from reports. He went to the mines, asked questions, used his eyes. Then, with the facts before him, he formed conclusions that embraced not only the present but the future.

Next, satisfied with his preparations, he sat down and made out a list of names. "What men in Missouri," he asked himself, "have sufficient means to buy these mines?" And down on his list went the names of the state's wealthiest men. The list was sifted and analyzed, not in a hurry but methodically. Any one of these men had means to buy; but which of them was most likely to be interested in mining?

Nor did he stop with that. From various sources he gathered data concerning each of these men as an individual. He wanted to know their habits, views, idiosyncrasies, hobbies, and even the names of some of the books they read. He bought those books and digested them. He took the expressed opinions of the men on important matters of the day, and against them formed his own opinions, which were not always in agreement. In short, when he met these men who were able to buy the mines, he wanted to meet them on their own ground, prepared to talk their language and to deal in their terms. In this, he had more in view than the mere sale of the properties: he wanted, also, *to learn* from these men, who were big men.

The work that this investigation and preparation involved was prodigious, but Gary possessed a physique and mental equipment that never tired.

However, with all this knowledge of his prospects at his finger ends, he was not yet satisfied to go ahead. Gary asked himself still another question: "What men and what interests outside of those immediately concerned are most eager to see these mines sold to advantage? Who can and who will be eager to help me reach my prospective buyers?"

The answer was obvious. The lines of the Wabash Railroad traversed Macon County. Much of their freight was Macon County coal. Also, there were the Burlington lines, and the Santa Fé. These roads had a direct business interest involved in the welfare of the mines. And, what was straight to the point, the high officials of these railroads *knew* the men who could buy. They could pave the way.

After a study of these men who were to open the door for him, Gary was ready. He set out, every step foreseen. He met Harriman, Hill, and Huntington, railroad and financial giants who were nation builders; David R. Francis, the governor of the state, and O. D. Ashley, president of the Wabash. He met the younger men of genius who were just coming up to fame; the heads of banks and the captains of business. One notable passed him along to another.

This was not accomplished in a few months. It took two entire years. And during that time, Gary talked more than mines for sale. He listened to these men recount their triumphs, discuss matters as far removed from coal mines as Bagdad is from Peoria. He voiced his opinions, and got theirs. He "rubbed up against them."

I've said that he sold the mines, and for what figure. But beyond this achievement the friendships and the connections he made were to continue through life. Some of the men whom he met were later to become his associates in business. Not so many years later, at a time when he had to place bonds and stocks and borrow much money, he was to do business with thirty banks. He had established himself in the confidence of many of these banks while he was selling the Wardell mines.

THE mines sold, President Ashley of the Wabash made Gary the road's industrial agent. Meeting big men was now his work. He was on the up-grade, and going fast.

The panic of 1893 was still further to demonstrate Gary's integrity and loyalty. The Wabash sent Gary into Indiana to establish the new town of Ashley. The town site was to be sold in lots, residences built, banks and business established. Gary himself established a bank, and raised considerable sums among Macon friends for investment in the new town. The community had seventeen hundred inhabitants when the panic broke.

Gary had moved to Ashley, and all of his own money was invested there. The panic soon threatened everything: new investors were frightened off, and with the exception of the bank the venture collapsed. Gary managed to sell the bank's collateral at its face value, and he could have retired from the enterprise with a small fortune. He was under no legal obligation to do otherwise.

In his eyes, however, there was a moral obligation that he refused to overlook. Friends in Macon had invested in the Ashley Company, because they believed in him. That belief was worth more than his money. He was forty, tasting his first few years of success. He had married again and had a son thirteen years old. Once more, he did not hesitate. Out of his own pocket he made good every cent his friends had lost, though it stripped him clean to do so. The "Gary luck" still clung to his heels. The Wabash management changed about that time, and he was out of a job.

James J. Hill, then president of the Great Northern, offered him the road's industrial agency in Montana. Gary declined it for two reasons: he didn't want to lose, as an asset, the information which he had accumulated on the state of Missouri, and he wasn't willing to risk a second upset, such as had come to him with the change in the Wabash management. Thenceforth, he determined, he would work for himself.

Back to Macon he went, and once more

set up in the real estate and investment business, this time in partnership with an old friend, James A. Hudson.

TWO years passed. One day the owner of the local independent telephone company walked into the office and listed his company for sale.

"What's the matter with it?" asked Gary.

"Nothing at all. It's a good business," replied the other. "But there are some cranks in this town with whom I can't get along. I'm going to move out."

As he did with everything before he attempted to sell it, Gary investigated the company. It was sound. Also, to Gary's notion, it was capitalizing only about one tenth of its possibilities. Up he went to Chicago to get a wider view of this new telephone industry. He discovered that the patents of Alexander Graham Bell, inventor of the telephone, had expired. All over the country independent companies were springing up. Factories selling independent 'phone equipment were doing peak business. And thus far scarcely the surface of telephone development had been scratched.

"Some day," thought Gary, "every home and business in this land will have a telephone. Every town will be linked by wires with every other."

Hurrying home, he found that there were telephone plants for sale in Missouri—one in Macon and another in Columbia. Both were small plants, to be had for about seven thousand dollars apiece.

Gary bought the former and persuaded his partner to buy the latter. The men dissolved their real estate partnership to enter the new field. Each put every cent he had into the telephone business. Each realized that there would be red-hot competition from the Bell interests.

Gary began by examining complaints. "What's wrong with this service?" he asked the town. Everything was wrong, according to what subscribers told him. He took the commonest complaint, and righted it; then the second commonest, and righted that. And so on down the list. "After all," he thought, "the way to learn how this business should be run is to learn how the people *want* it to be run."

I AM not going to weary you with details of what Gary did to make the Macon company pay. In general, he installed accurate account books, established standard charges, insisted that his employees be as rigidly honorable and polite as he was himself; and, instead of selling stock as a means of growth, he sold more 'phone installations. Every cent that the company earned he put back into it in extensions and improvements to service.

As the Macon company prospered, Gary branched out by buying adjoining plants. In a few years he owned or controlled ten companies. The vision he had gained on his original visit to Chicago had crystallized by now into a definite conviction of the form American telephone development was going to take.

Here was the situation as he saw it: The Bell company had adopted a policy of intrenching itself in the great cities and specializing in long-distance communication. In rural communities and in the smaller towns and cities, the independents specializing in local service were generally supreme.

FAMOUS FEET

..how they're kept free from corns

GILDA GRAY'S *Famous Dancing Feet*

"I have several hobbies," writes Gilda Gray, the incomparable dancer and screen star. "*But I do not keep a corn!*

"Keeping a corn these days seems like an eccentricity, when a day or two with Blue-jay will drive the troublesome offender away."

. . .

And what a delightful way to end a corn! A dainty pad . . . like velvet . . . fits over the corn and stops the pain at once . . . One plaster usually conquers the corn. But even the deep-seated corn seldom requires more than two . . . The new 1927 Blue-jay, with the new creamy-white pad, is now ready at your drug store. . . . *For calluses and bunions use Blue-jay Bunion and Callus Plasters.*

American Landscape School 72, Newark, New York

However, the independents had no intercommunication. Each was a unit in itself. Also, there was no intercommunication between independent and Bell lines.

"This is uneconomic," reasoned Gary. "What the country wants is service, not competition."

The solution, as he envisaged it, was coöperation and consolidation. Where the two services duplicated, let them consolidate. Where one was supreme, let it remain so, but connect it up by agreement with surrounding towns and the country as a whole. Gary felt the time would come when the owner of *any* telephone could pick up his instrument and call the owner of any other telephone anywhere. This ideal situation was to become the independents' dream, a dream in which Gary was to play a major rôle in bringing to realization.

By 1906, independent coöperation had reached the point where the International Independent Telephone Association was formed. Gary was made first vice president, and next year its president, in which capacity he served a year. Setting up headquarters in Chicago, he began to weld the independents together. He preached coöperation, nationalism, united effort.

Almost simultaneously, Theodore N. Vail was recalled to the presidency of the Bell system. He broadened the Bell policy, extended Bell lines into small communities, just as Gary had foreseen, and the country began to be dotted with competing telephone plants. Then, in Kansas, at Gary's suggestion, the independents resolved that the telephones should be declared a common carrier, the same as the railroads. Other states endorsed the sentiment, and Congress responded by enacting such a law.

THIS law ended the telephone war. The independents appointed a Committee of Seven to negotiate with the Bell interests to the end that development might proceed on an equitable basis. Gary was one of this committee, and its secretary.

Gary was most active in the resulting consolidations. With his associates, he insisted that no investor lose by them, that nobody be thrown out of work, or no independent factory forced from business. The one independent factory hardest hit by the plan was that of the Automatic Electric Company, in Chicago, making automatic or dial telephone exchanges and equipment.

The independents everywhere were installing automatic service, whereas the Bell would have nothing to do with it. In consequence, every time a Bell company took over an independent the automatic manufacturers lost business. Time and again Gary urged President Vail to adopt the automatic. Vail was obdurate.

It was now the time of the war. Suddenly, in New York, its greatest center, the Bell System was crippled by an employees' strike. This meant one of two things: a big financial loss to the Bell company, or higher rates to subscribers in New York. Either result would set a precedent.

GARY, out in Missouri, saw his opportunity. Jumping to Chicago, he got an option on a majority of the automatic company's stock. Next day he was in New York and in Vail's office.

"I've come," he said, smiling, "to talk automatic telephone. This time I think you're going to listen."

The years had effected a big change in Gary's status since he had first met Vail. He had handled consolidations mounting upward to one hundred million dollars. His interests, through kindred activities of Theodore Gary and Company, had grown to represent millions. He and Vail were now on excellent terms.

"Whom do you represent?" asked the latter.

"Myself," said Gary, smiling even more broadly.

"Bought that company, did you?" growled Vail. "Haven't I told you that Bell wouldn't use machine switching?"

"You have," Gary retorted; "but conditions have changed—and it's my guess that your mind has changed too."

"You've heard of this strike!" Vail accused, and then he, also, smiled. "All right. What's your proposition?"

Gary's proposition was a five-year contract with Bell for automatic equipment at the same price paid by independent companies. Vail signed, a contract that was shortly to be increased by one hundred and fifty per cent.

With Vail's order in his pocket, Gary returned to Chicago, reorganized the company there, formed syndicates and in a remarkably brief period had Gary sales agents spotted all over the globe. In addition, Gary and his associates own, or control, to-day the independent telephone systems of several entire states.

Marvels of the Moon

(*Continued from page 19*)

the earth, so that always the same lunar hemisphere is turned to our view. There is a slight wobbling, called the moon's libration, which permits us to see a bit of the forbidden territory as the moon rolls along its path, but forty-one per cent of the lunar surface is invisible to watchers on the earth.

"Very probably the same character of landscape marks the whole surface, but astronomers would give a great deal to get a good look at the hidden side."

Edgar Allan Poe, in his harrowing story "The Unparalleled Adventures of One Hans Pfaall," hints darkly of the supposed horrors to be encountered on the unknown side of the moon. H. G. Wells, in his "The First Men in the Moon," gives an imaginative account of cave life on the moon, and his hero ventures into that mysterious hemisphere which the eye of man has never seen. Many other writers, including Jules Verne, have dealt imaginatively with the problem of voyaging to the moon, and an American physicist has planned a rocket to be shot to the moon. But Professor Pickering is of the opinion that the only feasible method of getting to the moon is visually, through the eyepiece of a good telescope.

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"A twelve-inch telescope brings you to within approximately a thousand miles of the moon," he explained, "and it is possible to distinguish objects as small as two hundred feet wide on the lunar surface. With the most favorably-placed telescopes it is possible to bring the moon to within five hundred miles; but we do not see it any better than we would with the naked eye at one thousand miles. The higher magnification not only magnifies the moon detail, but also magnifies the atmospheric disturbances which distort the seeing."

WHEN the telescope is turned upon the moon, what a world is revealed! I spent an evening watching through Professor Pickering's reflecting telescope. First he showed me the full orb floating like a translucent sphere in the ether. It was no longer a disk, as it appears to the unaided eye, but clearly a globe. The well-known face of "the lady in the moon" resolved itself into a weird landscape of mountains, dry seas, craters enclosing plains and jagged peaks, cracks and streaks and ridges, points of brightness and great splotches of darkness. From pole to pole I saw the whole lunar hemisphere.

The moon seemed to hang motionless in the sky; but Professor Pickering assured me that it is not only revolving on its axis, but it also is coursing through space at the rate of twenty-one hundred miles an hour.

After the moon had been viewed as a whole, a higher magnifying power was turned on. By this means, particular areas of the moon were isolated, and I was able to see the fine detail of many of the craters, peaks, plains, and seas, and to understand why the moon has been called "a world of volcanoes."

"Its seas are really great dry lava beds, hundreds of miles across," said Professor Pickering. "Early observers thought they were seas, and the name has stuck. We have similar lava beds on the earth. The so-called bad lands of Idaho and Montana are fields that were overflowed by lava in prehistoric times.

"The lunar mountains are not mountains in our sense, but are towering cliffs which edge the 'seas.' The craters are the mouths of immense vents in the lunar crusts through which, in ages past, hot lava bubbled up, melted away the walls of the crater in ever-widening circles, built up inner cones, and finally cooled and hardened into the characteristic surface features that you now see."

Though the moon is only about one quarter the diameter of the earth, these surface features are on a scale so grand as to dwarf much of our earth scenery.

Near the lunar south pole, for example, Professor Pickering pointed out the Liebnitz range of mountains. "By measuring the shadows cast by these peaks, we find that some of them rise from 25,000 to 30,000 feet above the plain," he said.

The earth has Mount Everest as its highest peak, 29,141 feet altitude; and the earth is several sizes larger than the moon. If our terrestrial mountains were proportioned to the same scale as the lunar heights, we would have peaks rising from ten to fifteen miles above the sea.

On an even vaster scale are some of the volcanic craters which pit the moon.

Investigate this new and better way of **Heating**

GET the facts and figures which have warranted more than 1000 of America's foremost industrial institutions adopting ILG Unit Heaters.

Here is a new engineering principle in blast heating whereby live air is tempered with steam or hot water heat at *low velocity* and forcibly circulated at *high velocity*. The range of action of the heat waves is from 60 to 100 feet. There's less than 15 degrees temperature variation between the floor and ceiling.

Each unit constitutes a separate heater which distributes 1,000 to 15,000 cubic feet of tempered air per minute—depending on the size of the unit. There's no long waiting for the warm air to circulate—no necessity of hot overnight fires to insure a comfortable temperature in the morning. The saving in fuel is very pronounced.

Investigate this new and better way of heating which does not require any ducts nor high-powered machinery. Send for pictorial bulletin.

Raised My Pay To $7286 is what F. D. Walsh, of Springfield, Mass., writes after taking this sales training.

Let Me Make You a Master Salesman!

This New Easy Way

IF you are ambitious to become a salesman the Association of which I am president will take you in short, easy steps and make a Master Salesman of you, help to put you in the same class with the big pay men who have all the good things of life.

Easy as A B C

If you have ordinary intelligence you can quickly master the simple A B C's of selling. There are certain ways of approaching a prospect to get his undivided attention, certain ways to stimulate keen interest, overcome objection, batter down prejudices, and make the prospect act.

You can learn these principles of Salesmanship at home in a short period of pleasant, inspiring study. And once you have mastered them you can take advantage of the employment department of the Association without charge. This is a real opportunity, for during the past year the Association received calls for 51,504 salesmen from sales organizations in America.

The book offered below has been the starting point for thousands of men who are now successful salesmen. This book, "Modern Salesmanship," is now FREE, and will be sent to every man who fills out and returns the coupon below.

Rush the Coupon

If I were asking two or three dollars for this book you might hesitate. But I am not. It is Free. And since it may mean the turning point in your life, it certainly is worth two cents to read the astonishing facts given between its covers. You have everything to gain and not one cent to lose, so mail the coupon at once.

Aching Swollen Burning Feet

It is almost unbelievable how quickly all throbbing, burning, tenderness and swelling leaves the feet when Dr. Scholl's Foot Balm is applied. The pores welcome its cooling, soothing, reviving influence.

The tissues quickly absorb its grateful healing properties. You will never forget the delightful ease and comfort it gives you. At drug and shoe stores—35 cents a jar.

Dr Scholl's Foot Balm

"The crater Newton measures 143 miles in length by 69 miles in width," said Professor Pickering, "and is 24,000 feet deep. There are many lunar craters of more than fifty miles diameter. The largest crater known on the earth, the Volcano Bay, in northern Japan, measures only thirty-five miles in diameter; but it is very exceptional, for the next largest terrestrial crater is but fifteen miles across."

"And life? Is there life on the moon?"

"I am confident that there are fields of vegetation," answered Professor Pickering, "I have watched them spring up, grow, and die through the lunar season. Whether or not there is animal life is still a matter of speculation; but there is some evidence in favor of it."

So the moon is more than an opalescent lantern hung in the starry heavens to serve as an inspiration to lovers, poets, and writers of popular songs. It is a world of scenic grandeur, perhaps an example of what our earth might have been, or may some day be. And it is our nearest neighbor in space.

"It is so near," explained Professor Pickering, "that if an airplane, flying at the rate of two hundred miles an hour, could take you from the earth to the moon when it is at its nearest point, it would require forty-six days only to make the trip. But to reach the nearest planet that same airplane would have to travel fourteen years, ten months, and six days.

"You can look at the moon with your unaided eye and see more surface detail than the greatest astronomer, with the aid of the most powerful telescope, can usually see of Mars or any other planet or star.

"The moon is commonly spoken of as our satellite; but if we could watch it from some convenient point in space it would appear as the earth's twin. Indeed, from Venus, the earth and the moon must appear as the most brilliant objects in the night sky—two dazzling planets floating close together, separated by about the distance of the moon's apparent diameter to our naked eye.

"NOT only is the moon our closest companion in space," continued Professor Pickering, "but it is literally our kin, bone of our bone and flesh of our flesh, for once it was part of our earth."

"How can you be sure of that?"

"I'm not, but I'm reasonably certain," answered the astronomer. "Various theories have been proposed to explain the origin of the moon. One holds that the moon is a captured planet. Another, that scattered meteorites massed and fused to form the moon. But the theory which accounts for the observed facts, and which is now almost universally accepted by astronomers, was first propounded by Sir George Darwin, and explains the moon as a torn-off part of the earth.

"According to this explanation, there was a stage in the earth's history, not less than fifty-five million years ago, and perhaps much longer, when our planet was a hot globe of liquid and near-liquid material. Its crust was a thin layer of slag-like substance floating on the heavy liquefied metals below.

"It has been computed that at this stage the earth was rotating so rapidly that its entire day, from sunrise to sunrise, was a matter of about three and one-half hours. Given a plastic globe, rotating at such speed, and you can imagine the result: the earth flattened at its poles and bulged at its equator. Gradually the bulge elongated at one side and the earth assumed the shape of an egg."

"Then occurred the great earth-moon catastrophe. Perhaps it was the gravitational pull of the sun that caused the greater part of this bulging crust to break loose. More likely it was a planetoid or star that passed close enough to set up a vast outlapping tide of the already protruding surface, and wrenched it from the earth, at the same time splitting and tearing apart the remaining continental mass into two portions, eastern and western. Just what outside body exerted the force we cannot know, but we are reasonably certain that the force was exerted. The elongated tip of the egg was torn loose, stripping off great sections of the entire crust, and five thousand million cubic miles of material left the earth's surface.

"OUR precious globe was simply peeled of three quarters of its crust—and the result of the peeling you may see in the ocean beds of the earth, which cover three quarters of its surface.

"If the earth-moon catastrophe had never occurred, there would probably not be these depressions in our earth's surface which furnish beds for the oceans. As our planet cooled, and the heavy clouds of vapor condensed into water, this water would have distributed over the whole surface of the earth, and very likely there would be no continents or islands—only water, water everywhere."

"So we owe our land life to the moon?"

"Seemingly so. Of course it is impossible to say what the underlying crust of a world entirely covered with water might have done in the æons of time that have passed since the earth cooled. But certainly the loss of that great section of its original surface profoundly affected the future of the earth. If we give rein to our imagination, we might even suppose," added Professor Pickering, smiling, "that were it not for the earth-moon catastrophe, we might all be fishes or whales or other marine creatures."

"But how did this great ragged strip of material consolidate into the symmetrical globe that is now the moon?" I asked. "And what determined its position in space? Why did not the body which wrenched it loose, carry the moon off?"

"The wrench was a momentary affair," replied Professor Pickering, "and simultaneously the force of gravitation exerted itself to pull the moon material back to the earth. The moon material was rotating with the earth originally, and its momentum kept it rotating as it left, with the result that it now began to revolve around the earth.

"At this stage the moon assumed the form of a ring of material encircling the earth, and rotating at equal speed with the earth. It was like an immense halo. If you look at the planet Saturn, which is at present encircled by a similar rotating belt, you can get some idea of what the earth must have looked like at this time.

"Gradually, the substance composing our lunar ring coalesced and cooled. Obeying the natural law which causes rain drops and hail stones to take on a

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

globular form, the moon assumed the shape of a globe.

"Many forces were at work at the same time, the strongest being the force of gravitation—the earth pulling the moon back, the moon tugging at the earth, and the moon's momentum of motion tending to carry it away from the earth. These reciprocal forces caused tides to rise in each body.

"The tides acted as a brake, and eventually both earth and moon were slowed down in their rotational speeds. But the heavier earth was able to "brake" the moon more rapidly than the lighter moon was able to brake the earth. The result may be seen in the present rates of rotation, for, while the speed of the earth has been slowed from three and a half hours to twenty-four hours, that of the moon has been slowed to twenty-nine days.

"ANOTHER effect of the tidal drag is the lengthening of the distance separating earth and moon. As the moon's period of rotation on its axis increased, its period of revolution around the earth correspondingly lengthened, with the result that the moon gradually traveled a farther and more distant path around the earth. The path is not a perfect circle, but an oval or ellipse, which brings the moon at its nearest within 221,600 miles of the earth, and at its farthest 253,000 miles.

"Nor is the moon's path yet fixed. Computation shows that it is still lengthening a few feet each year, and will continue to lengthen until the moon is approximately a million miles from the earth."

"But why is it lengthening?" I asked.

"Because of the tidal drag. The earth has already effectively braked the moon, so that it always presents one bulging side to us. Now, the moon is doing exactly the same thing to us; in fact it has been doing it through the ages; but, because of the larger mass of the earth, gravitation gets its results more slowly with us. Daily the tides of our oceans rise, in obedience to this gravitational pull, and every time the tide rises it is as though a clamp were tightened upon the revolving earth. It has been computed that the braking action of the tides amounts, on the average, to twenty thousand million horsepower.

"It is no wonder, then, that this enormous power can brake the earth. As our rotational speed slows, the effect is to give a little slack to the moon, and as a result it speeds faster on its journey around the earth. In consequence of this faster linear velocity, the moon moves farther and farther away.

"Eventually, the time of the earth's rotation will have been increased by this process from twenty-four hours to a period of between three and four months, and when that time is reached the moon will be approximately four times its present distance from the earth. Then both moon and earth will revolve at exactly the same speed, and the moon will appear as a small, faint disk always at the same place in our sky."

"And our earthly day will be between three and four months long," I said.

"Yes. The earth will have long, hot days, when the mercury will rise far above any temperatures now known in the tropics, and the nights will be equally long and correspondingly frigid."

"So the moon delivered us from the sea only to have us alternately roast and freeze?"

"That prospect is too far in the future to trouble us," answered the astronomer. "The rate of the slowing down of the earth has been fixed as a fraction of a second in a hundred thousand years, so it will be uncounted ages before the moon completes its job of stretching out the earth's day. Any number of things may happen in the meantime.

"And, after all, the earth is as much to blame as the moon, for the action is mutual, in obedience to the universal law of gravitation. If any complaint is to be made, certainly the moon has suffered more than we have. During the lunar day of twenty-nine earthly days, the moon's surface is subjected to wide extremes of temperature. The probable range is from approximately 160 degrees Fahrenheit at lunar noon, to many degrees below zero at lunar midnight. A man on the moon would bake during the fortnight of sunshine and would be likely to freeze during the fortnight of darkness—assuming that a human being could exist on the moon.

"It is practically certain that no human being could, for, as a result of the operation of this same law of gravitation, two other factors necessary to human life are scarce on the moon—atmosphere and water."

"What has gravitation to do with the presence of air?" I asked.

"It governs the retention of air and water in exactly the same way that it governs the motions of planets," answered Professor Pickering. "Every gas has its rate of motion, by which its molecules move, and unless the planet can exert sufficient gravitational pull to overcome this molecular action, particles of the gas continuously fly off into space. It can be demonstrated mathematically that the earth has gravitational force sufficient to retain gases which have a maximum velocity of not more than seven miles a second, while the smaller moon has force sufficient to retain only those gases which have a maximum not greater than a mile and a half a second.

"Oxygen, nitrogen, and water vapor—which are essential elements of our atmosphere—all have such high velocities that they would be likely to escape from the moon.

"HOWEVER, the evidence of vegetation on the moon is convincing to my mind; and on the earth vegetation is always associated with the presence of oxygen, nitrogen, and water. Moreover, we have direct visual evidence, through the occultation or eclipse of other planets and stars by the moon, that there is some kind of atmosphere, though, admittedly, it is very thin.

"The atmosphere is so thin that our imaginary man, transported to the moon, would find himself in a world of silence. If a mountain should tumble, he could not hear the crash of it, because there is not enough air to convey audible sound waves.

"He would be surprised, and overawed too, I fancy, by the appearance of the sky from the surface of the moon. Even at

Stop Groping for Words !

If you hesitate and stammer, and grope for words if you say "er" or "what-do-you-call it" or "you know what I mean" instead of using exactly the right word to express your meaning—you tell every one that your mind is asleep. You publish the fact that your education has been sadly neglected. Your limited vocabulary shows clearly that you are dull and uninteresting.

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce or misspell a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

New Invention Makes Mastering English Easy

For many years Mr. Cody, one of our greatest authorities on English, studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years.

Send for Free Book on English

To achieve your ambitions it is essential that you use good English as instinctively as you tie your shoes. Business today demands men and women who use correct, concise, forceful language. Society demands education, breeding, culture, demonstrated by the use of correct, interesting and convincing language.

A new book explaining Mr. Cody's remarkable method is ready. This new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. Address Sherwin Cody School of English, 98 Searle Building, Rochester, N. Y.

His Diet Lacked Bulk
but this solved his problem

He found it all but impossible to avoid dainty, concentrated foods wherever he ate. Bulk and roughage were sadly lacking. His health was affected by this refined diet.

Now he eats a few Sanitarium Bran Biscuits every day. They cooperate with nature in maintaining a most important function. Beside contributing the essentials for strength, energy and endurance, they supply the needed bulk.

Bran Biscuits taste good, put an edge on the appetite and furnish all the nourishment of wheat. Children need them for their growth-stimulating vitamins and blood and bone-building, iron and lime. Used regularly at the famous Battle Creek Sanitarium. For sale at authorized stores. Try a package.

lunar noonday he would see the stars more clearly than we see them at midnight from the earth. The sun would glow as a great spot of light in the dark sky, the stars would glow as lesser points of light, and the earth would appear as an enormous moon. The sun's corona and the outlapping protuberances of flame, which we can see only during a solar eclipse, would be clearly visible at all times from the moon.

"This seemingly strange appearance of the day sky is another result of the moon's poverty of atmosphere, for it is our atmosphere which refracts and diffuses the light, spreading it over our sky, and giving us all the gradations of light and shadow.

"On the moon there are no such gradations. The line between light and darkness is sharply marked. Morning comes, not gradually with a rush of dawn but instantly. From the blackness of night to the full glare of noonday it is but the turn of a second. Shadowed places look like bottomless pits—only where the direct rays of the sun fall is there any light or the possibility of seeing.

"This poverty of atmosphere is also partly responsible for the moon's poverty of surface water. The sun beats down from morn to sunset, for the fourteen and one-half days of sunshine, with never a moment's let-up, with no blanket of atmosphere to reflect and absorb some of the heat, no merciful bank of clouds to shade the torrid sky. Consequently, only the water-vapor which freezes is retained on the surface. The rest escapes into space."

"Perhaps some of these runaway particles of moisture have been captured by the earth," I suggested.

"Yes, that is a likely probability. The earth would attract any molecules that came within its gravitational range, and such molecules would be drawn into our atmosphere, condensed into rain or frost, and so deposited on the surface of the earth."

"BUT if the moon is continually losing water by evaporation, it must be entirely dry by now?"

"It has no surface water, except in deposits of snow and ice which are constantly melting during the lunar day, and passing off. But there must be supplies of water under the surface of the moon. It may be that the lunar crust is porous and contains water in saturation. Water is there, for I have seen snow on the moon. The snow forms from water-vapor escaping from fissures in the surfaces, instead of falling from clouds."

"Are there any clouds?"

"I have often seen fog-like appearances," answered Professor Pickering. "In 1891 I saw steam rising from Schroeter's Valley, near the eastern edge of the moon, which drifted in a faint haze over the surface. I saw this same appearance in January, 1927, in Schroeter's Valley, but it assumed a somewhat different shape. Usually, the steam from lunar volcanoes and vents freezes as it emerges, and is immediately deposited as snow or ice."

One of the conspicuous features of the full moon is the streaking which radiates from three prominent craters, Tycho, Copernicus, and Kepler. Are these streaks, which are of a dazzling brightness, snow and ice? Some of them are many miles wide and extend for nearly a thousand miles in length. The streaks are not visible at lunar dawn and sunset, and are most pronounced at lunar noon. A great deal of scientific speculation has been indulged in with regard to these appearances, and every discussion of the moon eventually takes up the mystery of the streaks.

"My judgment is that the streaks are a white pumice-like powder which has been blown out by the craters and surface vents," said Professor Pickering.

"But the most interesting of the changes which are to be seen on the moon are the variable spots and canals, which can best be explained as patches of vegetation.

"Almost the whole surface of the lunar hemisphere is desert. Some of the so-called 'seas' are dark, and may be covered with vegetation, or this darker tint may be that of the rock or soil which constitutes their surface. But apart from these doubtful areas there are certain patches that grow dark with the progress of lunar day, and gradually lighten and disappear with the approach of lunar night. These spots constitute less than one per cent of the moon's surface, and usually appear near mountain summits where there is snow, and are mostly confined to the equatorial zone of the moon.

"Nearly a hundred years ago a German astronomer, Maedler, reported that he had observed changing spots on the moon. He said that were it not for the fact that the moon has no atmosphere and no water he would believe that these spots were vegetation.

"MY FIRST discovery of changes in the lunar surface was made in 1892, when I was at the southern station of the Harvard Observatory, in Arequipa, Peru. In a little crater named Hansteen, in the west, I saw a black spot that interested me. The next night I looked again and saw that the spot had changed its shape. I wondered if our assumption that the moon was a dead planet was necessarily a correct one, and I determined, if possible, to find out.

"In 1900 I discovered that even more pronounced changes were taking place in the crater Eratosthenes, which is at the end of the Appennines and not far from the lunar equator. Then I found variable patches in the small crater known as Hell. In still another crater, Alphonsus, I discovered 'canals' similar in appearance to the 'canals' of Mars. On Mars, we believe that the 'canals' are strips of vegetation. If 'canals' mean vegetation on Mars, what do they mean on the moon?

"These observations have been confirmed and added to by other astronomers in many parts of the world. I am convinced that there is life on the moon."

"But cannot these dark areas be explained as moving shadows cast by the peaks and cliffs?" I asked Professor Pickering.

"No, because they appear in exactly the reverse order of shadows. The darkening areas are most conspicuous at full noon, when the sun is directly overhead and casts no shadows. Under a low sun either in the lunar morning or afternoon, when shadows are most in evidence, these dark patches are light. In some instances they disappear entirely.

"In the case of Eratosthenes the variable spots are perfectly obvious with a five-inch telescope (refractor), and can be seen with a three-inch one. Eratosthenes is by far the most alive region on the moon, and in recent years I have confined my lunar studies very largely to this crater, which has a diameter of about thirty-seven miles. The crater encloses a level plain with a central peak and several smaller peaks.

"The changes in Eratosthenes are so regular that I can predict what will appear at each approaching lunar season. There is snow on the inner peaks, and no doubt moisture spreads from the melting snow fields at lunar noon. Apparently there are vents and cracks through which the moisture from the under-surface steams and spreads, calling vegetation into existence in the same way that the rising of the River Nile annually revives life along its valley.

"The vegetation is not green, but gray like sage-brush, or black like our lichens. The only greenish spot on the moon is the floor of the crater Grimaldi, but the color is not very pronounced.

"IN ERATOSTHENES I have observed another interesting appearance: Small plats or strips, darker than the vegetable areas, move across the surface. The typical area of vegetation varies from ten to fifty miles square. These darker moving areas are smaller—the largest that I have seen is ten miles long by five hundred feet wide.

"If you looked at a distant hill, and saw dark objects move across its side, you would conclude that the moving objects were not trees or shrubbery."

"Do you think, then, that these moving plats are animals?" I asked.

"The idea is so startling that I don't emphasize it," answered Professor Pickering, taking up a portfolio of drawings of Eratosthenes. "Here are drawings made at every stage of the lunar day, over a period of several years. The strip moves measurably from night to night, continuing in the same direction. One plat moved three miles to the north and coalesced with another plat. Another moved more than two miles to the northwest in less than two days—a speed that averages more than three and one-half feet per minute.

"If these dark plats are masses of animals, the animals must be small. Large creatures would move faster and require greater areas for feeding. The most likely theory, if we insist on trying to explain the plats, is that they are swarms of very small creatures.

"In South Africa, swarms of locusts fifty miles long by ten miles wide have been seen to darken the sun by their flight. When they alight they darken the ground, and may spend weeks moving slowly over fields of vegetation as they feed. Lunar insects may be entirely different from any creatures we know, but there are several species of terrestrial animals that migrate periodically in search of food or to breed.

"To attempt to explain these appearances we must speculate, and adopt temporarily the guess that best accounts for the observed facts. But of the facts themselves there can be no doubt. Anyone who will take the time to watch

IT'S WHAT THE *YOUNGER CROWD* THINKS ABOUT IT!

Author's National Edition

MARK TWAIN

only uniform edition

OF course you have read a little of Mark Twain—everybody has. Perhaps you know the delightful antics of the immortal Tom Sawyer and Huck Finn, or the strange things that happened to the Yankee of to-day who found himself suddenly in King Arthur's court. And you have longed to have these books in your library.

But have you read the rest of the novels, and the short stories and brilliant essays that have made Mark Twain's name a cherished American institution?

In the twenty-five volumes that comprise his work you will find a perfectly balanced library of humor, adventure, philosophy, and fun—every conceivable form of entertainment, from the ridiculous in "The Innocents Abroad" to the sublime in "Joan of Arc."

descriptive booklet on request

THE Author's National Edition is the only uniform edition of Mark Twain's writings. By a plan of exceptionally easy terms, this edition is within the reach of everyone. What these volumes contain and how you may obtain them is told in a booklet "Your Friend Mark Twain," which we are offering free. You should know something about the works of the greatest American humorist. The booklet tells. Send for it to-day.

How Corns

Calluses are ended now

This new way stops pain in 3 seconds

SCIENCE has perfected new methods in ending corns and callus spots. No more paring. That is temporary; that is dangerous.

You touch the most painful corn with this amazing *liquid which acts like a local anaesthetic.* The pain stops in 3 seconds. You wear tight shoes, walk, dance, in comfort . . . instantly!

Then soon the corn begins to shrivel up and loosen. You peel it off with your fingers like dead skin. The whole corn is gone. Works on any kind of corn or callus, hard or soft; new or old. Ask your druggist for "Gets-It." Results are guaranteed.

"GETS-IT" *World's Fastest Way*

Be a Dental Assistant

Amazing New Field for Women—Earn $20 to $35 a week. Now there is a new profitable field open to ambitious women—**Dental Nursing.** Includes assisting dentist, meeting patients, keeping records, caring for instruments.

Earn while learning

We train you for this fascinating, uncrowded field by our wonderful Home-Study Method—the result of 27 years' experience teaching nursing. Hundreds of successful students. If you are over 18 send for full details and large free catalog. Practice outfit included. Money-back agreement.

1,000 Hotel Positions Open!

HOTELS, restaurants, clubs, apartments, hospitals, institutions, schools and colleges everywhere need trained men and women. Over 70,000 high-class positions paying $2,500 to $10,000 a year open annually in the hotels of the United States. Nearly one and three-quarter billions of dollars' worth of NEW HOTELS, CLUBS AND INSTITUTIONS being built this year will need over 200,000 trained men and women. Hotels start you at salaries up to $3,500 a year, with living usually included. At any time there are over 1,000 hotel positions open.

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. The Lewis Schools guarantee to give you the valuable knowledge that it has taken some of the most successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. Past experience absolutely unnecessary. A common school education is all you need.

We train you in your spare time with the Lewis Simplified Study Plan and put you in touch with big opportunities. All of your training under the personal supervision of Clifford Lewis, Managing Consultant for over 225 hotels thruout the United States. Our students employed by leading hotels everywhere. Send today for Free Book, "Your Big Opportunity," showing how we can train you for one of these splendid positions, and explaining our Money-back Agreement.

through a telescope can see these changes occur from night to night.

"Thus we find that the moon is a living world. While we do not yet understand the nature of its life, that fact adds zest to the pursuit. We are, I believe, on the threshold of new lunar discoveries."

Professor Pickering does not find any evidence to justify the hoary beliefs that the growth of crops is influenced by the moon, that sane people are made insane by lunar rays, and that terrestrial weather is determined by the moon.

"When a dog bays the moon, no one need get alarmed at the imminent prospect of calamity," said Professor Pickering. "I suppose the dog turns his nose moonward because the moon is the most conspicuous object in the sky. Very likely, many of our moon superstitions have their origin in this same fact. Primitive man saw the moon as something big and portentous, more formidable than any of the stars, and no doubt felt that so big a power was to be feared and propitiated. The ancient Greeks worshiped the moon as a goddess. The astrologers read various meanings in the phases of the moon, and in earlier days multitudes of people ordered their lives in accord with the 'sweet influences' of the moon. The idea that potatoes planted in the dark of the moon and beans planted in the light of the moon will grow better, is an inheritance, I suspect, from these primitive fears and superstitions.

"The only certain influence that the moon exerts upon our earth life is its control of the tides of the oceans. Some observers have tried to trace a connection between the moon and earthquakes. The earthquake at Charleston, South Carolina, in 1886, occurred near the time of the solar eclipse. Other earthquakes have come at time of full moon.

"These occurrences may have simply been coincidences; but there is a basis of reason in the belief that they may have been directly connected. At time of eclipse both sun and moon are pulling in the same direction. At time of full moon, they are pulling in opposite directions. It may well be that if a fault or crack in the earth's crust were ready to start, the combined pull of the sun and moon, or the opposing pull of the two bodies, might be sufficient to start the quake.

"HOW bright is the moon? Well, that all depends on its phase. The full moon is about twelve times as bright as the moon at its quarter phase.

"Moonlight is only reflected sunlight. The moon has no light of its own, but is simply a great globular mirror which catches the solar rays and reflects them off into space. Sometimes the moon is on the opposite side of the earth from the sun; then we see the light reflected from its entire hemisphere, and we call it full moon. Fourteen and one-half days later the moon and the sun are on the same side of the earth, and then we have what the almanac calls new moon. We never see the new moon, for at that phase only the side of the moon which is turned away from the earth is illuminated. Moreover, at new moon the moon is in the same part of the sky with the sun and so is lost in the blaze of daylight. Gradually, as it moves away from the sun's position, we see the light begin to edge back on our side of the moon, in the form of a faint crescent. Day by day, as the moon slips farther and farther away from the sun, the crescent grows. It becomes quarter-moon, then half-moon, then gibbous, and finally full moon again. From full moon to full moon requires twenty-nine days and represents one complete revolution of the moon around the earth.

"The moon does not travel around the earth in exactly the same plane in which the earth revolves around the sun. If it did, there would be an eclipse of the sun at every new moon and an eclipse of the moon at every full moon. The moon's path around the earth is tipped at an angle to the earth's path around the sun, and it is only occasionally that the paths so coincide as to bring the three celestial bodies—sun, moon, and earth—in a straight line at the same moment. When the moon comes exactly between the earth and the sun, as occurred in January, 1925, we have an eclipse of the sun. If it is the earth that comes between the sun and the full moon, then we have an eclipse of the moon, such as was visible in North and South America last June, and as will be visible in a large part of Europe, Asia, Africa, and Australia on December 8th of this year.

"PERHAPS everyone has noticed that the rising moon looks larger than the same moon a few hours later, when it is high in the heavens. Haven't you wondered why? The reason is to be found in the functioning of the eye, and not in the moon. When the moon is just above the horizon, the eye sees it without strain; but when the moon is near the zenith, the eye muscles must be contorted to unaccustomed tensions, and the result is that the image of the moon appears smaller. It is the absorption of certain light rays by our atmosphere that makes the rising moon appear reddish in hue.

"The diameter of the moon is 2,163 miles, somewhere about one fourth that of the earth. Its mass, or weight, however, is only one eighty-first part that of the earth, which indicates that the material of the moon is a lighter substance than that of the earth. This is what we should expect by our theory of the moon's origin from the earth's crust, for our crust is much lighter than the underlying strata and inner metallic core. The force of gravitation on the moon is one sixth that on the earth. A man who weighs one hundred and eighty pounds here, would weigh only thirty pounds on the moon."

WHEN a famous scientist comes out flatfooted in favor of a personal religion and expresses the belief that the human soul will continue after death, the world sits up and takes notice. Next month, Michael Pupin, who is one of the greatest physicists and electrical geniuses of the age, tells you how God has manifested Himself to him through the marvelous scientific discoveries that have been made in electricity and light, a manifestation that has made Doctor Pupin a sturdy Christian upholding the simple faith of his forefathers.

The Gobbler of Thunderhead

(*Continued from page 31*)

pierced the animal through and through. Of the Old Man he could find not a sign.

He climbed a sapling close to the dead chestnut and with the aid of a pole dislodged the body of the lynx. Then he made his way diagonally up the ridge, circled back to the summit of Hanging Rock and studied the ground there.

Being a fairly good woodsman, he figured out pretty accurately what had happened. Returning to the foot of the cliff, he slung the carcass of Lantern Eye over his shoulders, and set off through the woods for Joe Garey's cabin.

Joe came out on the porch as Crowley entered the gate. Crowley mounted the steps without a word, swung himself around and, with a jerk of his shoulders, dumped the carcass of the lynx on the floor of the porch.

"Joe," he said, "hyar's another fool es' like you. He tried to kill the Old Man this mornin' up to Hangin' Rock, an' hyar's what's left of him."

Joe Garey studied carefully the tale that Crowley told him. It was a strange tale, but apparently Crowley's deductions were sound. In his haste, seeing the gobbler about to take wing, Lantern Eye had evidently lost his head and had leaped upon the Old Man close to the verge of the cliff. The impetus of his rush, and probably the gobbler's powerful struggles, had carried lynx and turkey over the edge.

SO MUCH was plain. But what had become of the Old Man? Had he escaped fatal injury? He must have been able to run when he struck ground, for the woods at the foot of Hanging Rock were fairly open, and Crowley had searched the spot carefully. And what of Crowley's statement that just before he heard the Old Man's first gobble he had heard the far-off call of a wild turkey hen coming from the ridge across Thunderhead valley?

It was this turkey-hen call and the question of the Old Man's fate which chiefly interested Joe. That day he had some farm work to do which could not be postponed, but he suggested to Crowley that they hunt the Old Man and the mysterious turkey hen next morning. Crowley, however, refused flatly.

"Not me!" he said. "I'm through with that-ar gobbler. I've had three warnin's, an' you see what happened to *him*."

He pointed to the carcass of Lantern Eye lying limp and bloody on the porch.

"You're worse'n an old woman, Crowley," Joe taunted him, "believin' in signs an' warnin's."

Crowley was devoting his whole attention to the business of lighting his pipe. He seated himself in a hickory chair on the porch and cocked his booted feet up on the railing.

"Joe," he said presently, "let's leave the Old Man be. Ef a mate's come to him, they'll breed this spring an' we'll have some turkeys in these hyar woods. I was talkin' to the gov'ment ranger last Wednesday from way over by Pilot Knob. They're stockin' the gov'ment lands over thar with turkeys an' elk an' buffalo from the West."

"So I heerd," said Joe scornfully. "Heap o' good it'll do us!"

He drummed with his long brown fingers on the railing of the porch.

"I'm a-goin' after the Old Man in the mornin'," he drawled, "an' ef he ain't dead I'm a-goin' to git him ef it takes me a month."

THE Old Man was not dead. On the morning of the second day Joe Garey discovered fresh "scratches" in the woods—places where the dead leaves had been scratched aside by a feeding turkey—and in the soft soil thus exposed he found tracks so large that they could not have been made by the turkey hen that Crowley had heard. Joe knew then that not only had the Old Man survived the attack of the lynx and the fall from Hanging Rock but that he had recovered from his injuries. More grimly than ever, Joe set about hunting down the big gobbler.

Day after day, dawn found Garey high on the ridges, sitting motionless at the foot of some great poplar or oak or hemlock, sounding his turkey call with all the skill of which he was capable, his hearing strained to catch some answering sound. Day after day his determination hardened. He had boasted to Crowley that he would bring the Old Man home, and Crowley, ordinarily a careful man where money was concerned, had confidently staked five dollars on the issue—a great sum in the Overhills. Joe had accepted the wager with equal confidence, for he believed that something had now happened which virtually assured his success.

This new and, as Garey believed, decisive development was the coming of the turkey hen whose love-calls Crowley had heard.

In all his experience of the Old Man, Joe had never known the wary old bird to gobble. But Crowley had heard him gobbling furiously on Hanging Rock, and it was obviously the love-call of the turkey hen which had revived the gobbling instinct in the Old Man's breast. Joe, proud of his skill as a turkey caller and remembering many gobblers lured to their deaths on the high ridges of the distant Smokies, believed that now the Old Man would prove a comparatively easy victim.

All along the ridges of the Cowees, in all the most likely places, Garey made his amorous music, reproducing with almost perfect art the plaintive, lovelorn notes of the wild turkey hen. Sometimes that music was an eager, tremulous "keow-keow-keow"—the "yelp," as turkey hunters name it—produced by pressing the bowl of his briar pipe against his lips and sucking in his breath; sometimes he employed the more alluring clucking note of the mateless female, and for this he used a turkey call made from the hollow wing bone of a wild hen turkey killed in the Smokies years before. He was sure that more than once the Old Man, standing straight and alert on a high limb of some tall tree in which he had spent the night, listened to that captivating music of love quivering through the misty woods in the soft light of dawn; but to Joe's eager

ears there came no answering gobble to reveal the great bird's whereabouts and encourage the hope that he might be lured within range of the hunter's rifle.

At last Garey began to doubt whether Crowley had really heard a hen turkey calling that morning a week or so earlier at Hanging Rock. It might have been a woodpecker, he suspected—there is a woodpecker note which closely resembles a hen turkey's call. As for the Old Man, he might have gobbled that one morning on Hanging Rock, as Crowley claimed; but when, after tempting him every morning for a week, Garey failed to get a gobble out of him, the hunter became convinced of two things: that Crowley's turkey hen was a myth and that the Old Man would gobble no more that season.

This was a disappointment; yet deep in his heart Joe did not regret it. One thing that Crowley had said stuck in Garey's mind—the suggestion that the Old Man and his newly found mate be spared, so that the Cowee Overhills might be restocked with wild turkeys.

The more Joe had thought about this suggestion, the more the idea had appealed to him. It brought to his hunter's soul once more visions of the old days of which tradition told, those marvelous days when the Cowee wilderness was a hunter's paradise, alive with turkeys and deer and grouse, when the buffalo droves, migrating back and forth across the mountain barrier, still traveled the deep-worn, winding road which the hoofs of the herds had trodden out around the slope of Thunderhead ridge. His inborn obstinacy and his wager with Crowley held him to his task of hunting the Old Man down. Yet, all the while, as long as his belief in Crowley's turkey hen persisted, his conscience troubled him.

These scruples vanished when he became convinced that Crowley's turkey hen was a myth. If no mate had come to the Old Man, there was nothing to be gained by sparing the big gobbler's life. With a clearer conscience and with an even sterner determination to succeed, Joe Garey began the second phase of his campaign.

SPRING mellowed in the Cowee Overhills. A haze, now blue, now golden, floated upward from the deep valleys, and lay like a misty, half-transparent curtain upon the tops of the taller mountains. The Old Man, waking one warm, still morning to a chorus of bird voices, listened with languid interest to the sweet music of wood thrushes, blue-headed vireos and oven-birds, the wild reiterated screams of mating red-shouldered hawks, the last long hoots of the big mountain owls. These sounds meant nothing to him.

Shortly after dawn, just as he was about to fly down from the tall pine in which he had spent the night, a new sound had come to his ears. It was the low, anxious call of a turkey hen to her little ones; and the Old Man knew that it had been uttered by the mate who had joined him early that spring, the mate whose voice he had heard for the first time at Hanging Rock, just before the lynx had leaped upon him.

Yet, though he was aware that in this call there was no menace and no treachery, in some subtle way it had stirred the Old Man's fears.

He had forgotten his mate's existence. After a brief courtship and honeymoon, he had deserted her, and during the four weeks while she was incubating her eggs, he never saw her again. Her seclusion while incubating had not only prevented Garey from discovering her, but had also removed her completely from the Old Man's consciousness. And when, early that morning, he heard the forgotten turkey hen calling to the little ones which in the meantime she had brought into the world, the sound, although he knew it to be genuine, filled him with vague dread. . . . It brought vividly back to the gobler's memory those plaintive, treacherous calls with which Joe Garey had tried for weeks to lure him to his death.

So, while the morning brightened 'round him, the Old Man remained motionless on his roosting perch in the tall pine, his head high, his big, beautifully molded body—slim, yet superbly stalwart—glowing in the light like coppery-bronze. He heard the voice of the turkey hen no more, however; she had evidently led her youngsters elsewhere; and at last, after one careful final search of the forest floor beneath him, he planed noiselessly down, alighting in a grassy spot fifty yards from the pine's base.

For some moments he stood perfectly still, his tall form erect, his eyes scanning the tree trunks and thickets near by. Then he set off at a brisk walk toward the feeding ground where he would find his breakfast.

THE big gobbler reached his destination presently; and five minutes later, Joe Garey, stretched on his back in the warm sunlight behind a chestnut log against which his head was pillowed, opened his eyes slowly, and realized that for an hour or more he had been sleeping. Joe did not stir but, instead, closed his eyes again.

He had come to that spot on his way home after another early morning spent in searching the ridges vainly for the Old Man; and he had lain down to rest there for a while, not only because he was tired but also because the place was an old haunt of his, though he had not visited it for weeks. It was an open, parklike glade in the woods near the foot of Thunderhead ridge; and just below it, swinging around a steep shoulder of the mountain, wound the old buffalo road—the narrow, deep-worn, grass-grown trail which in the old days had been the main highway of the herds.

A hundred times Joe had sat on the chestnut log behind which he was now lying and, with his eyes fixed on the buffalo road below him, had thought of the days that were gone. He had heard the old mountain men tell tales that their grandfathers had told; and a hundred times, with those old stories in his mind, he had sat here and in his imagination had seen the long columns of buffalo pass by.

Those were the days! If only he could have lived then, when the forests of the Cowees teemed with game, when the deer were as numerous as rabbits were now, when the wild turkeys walked the woods in great droves, when the shaggy herds still wound along the buffalo road on their journeys across the mountains!

He lay for a while longer thinking of these things. Then, realizing that it was time to go home, he unclasped his hands, which had been crossed upon his chest. In

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

another fraction of a second he would have sat upright; but, with muscles already flexed, his head already lifted an inch from the log against which it had been resting, he stiffened suddenly.

For a few moments he remained motionless, tense, his whole being focused upon a faint, intermittent sound, barely audible, coming from somewhere down the slope beyond the chestnut log. Then, very slowly and as noiselessly as though his life depended on it, he rolled over so that he lay upon his chest. Even more slowly, even more cautiously, he raised his head until he could look over the log and down the slope beyond it.

HIS eyes widened with amazement, then narrowed to bright steel-gray slits. In the old buffalo road, thirty yards away down the slope, stood the Old Man.

The great gobbler was standing perfectly still, his head high and turned a little to the left. Garey knew that the bird had heard some sound and was listening—feared that in another moment he would stoop, spread his wings and fly. Yet Garey dared not move a fraction of an inch. The Old Man seemed to be gazing directly at the chestnut log, and Joe could only wait, aware that if he pushed his rifle over the log the gobbler would catch the glint of the sunlight on the rifle barrel.

Joe Garey was a man of steady nerves, yet now his limbs quivered, his ears throbbed with the thumping of his heart. Here, by pure luck, in a spot where he had never thought of seeking it, he had almost within his grasp the prize which he had sought vainly for so long. And what a prize it was!

On guard, alert, his senses strained to catch the slightest movement or sound, the Old Man at that moment was a spectacle never to be forgotten. His tall form, compact, powerful, clean-cut as a gamecock's, seemed amazingly tall. In the bright sunlight his burnished feather mail glinted and shone with changing iridescent tints of gold, of copper, of purple and green and bronze. His red legs, with their long, sharp-pointed spurs, glittered like metal; in the poise of his small head, in the gleam of his hazel eye, was all the wildness of the wilderness.

The steely light in Garey's gray eyes brightened as he gazed. He knew that never, even in those old days when all the mountain forests teemed with turkeys, had the Cowee Overhills seen a nobler gobbler.

Joe waited, motionless as a stone, except for the quivering of his limbs, the pumping of his heart. Another minute would tell the story. Within the next few seconds the Old Man would either take wing or else resume his scratching amid the leaves. It was the slight sound of his scratching which had attracted Joe's attention as he lay behind the chestnut log; but Joe wondered what sound it was that had put the Old Man on guard.

The minute stretched to two minutes. Then, with a thrill of exultation, Garey saw the rigid form of the gobbler relax, saw him lower his head, take three steps forward and, with his back turned toward the hunter, begin picking at the short grass in the buffalo road.

Slowly Joe reared himself on his elbows, Slowly, inch by inch, he pushed his rifle barrel over the log. At that short range

Lysol Disinfectant

REG. U.S. PAT. OFF.

To the women who never grow old

To the famous actresses; to women in professional life and to women in public service whom everyone admires:

Isn't it true that sane habits of diet, sane habits of living, sane bodily care have been largely responsible for the success and happiness you have found?

To the thousands of women who want to stay young

THERE are so many false theories and fads about the proper care of yourself. Some are dangerous, some are absurd. Don't be misled by them.

The makers of "Lysol" Disinfectant offer you free a little booklet called "The Scientific Side of Health and Youth." It was written by a woman physician. It is sound *professional* advice. The facts and simple directions it contains should be in the hands of *every* woman. Send for it now.

The fact that "Lysol" Disinfectant has for 30 years been without substitute with physicians and hospitals guarantees the reliability of this little book.

Use the coupon below. We will send to you promptly this free booklet which has helped thousands of others. In the meantime, in using a disinfectant for *any* purpose, be safe, be sure. Buy a bottle of "Lysol" Disinfectant today. Complete directions come with every bottle.

"I'm going to raise his salary"

"I'VE had my eye on him for some time and I know he can handle bigger work.

"He studies those I. C. S. textbooks every chance he gets, and I want to tell you it has made him a valuable man for this business.

"I'm going to raise his salary and give him that new job we were talking about. I wish we had more men like him."

How do *you* stand when your employer checks up his men for promotion? Does he pass you by as just a routine worker, or does he think of you as a man who is ambitious to get ahead? Won't you be far more likely to get the promotion if he knows you are studying at home and are really preparing yourself to handle bigger work?

Think it over. Then act. It takes only a moment to mark and mail the coupon and find what the International Correspondence Schools can do for you, yet that one simple little step may be the means of changing your whole life. "Do it now."

he could risk a fancy shot. He could put his bullet through the Old Man's head the instant it was raised and held momentarily motionless. But Garey would not take the chance, slight though it was. He drew his bead on the gobbler's body just behind the wing, where the bullet would pierce the big bird's heart.

A MOVEMENT beyond the gobbler caught Garey's eye as he gazed along the rifle sights. Out from the thicket of sour-wood saplings fringing the buffalo road stepped a wild turkey hen, and behind her, emerging from the bushes in twos and threes, trooped thirteen turkey chicks about ten days old.

Garey, still gazing along his rifle barrel, counted them mechanically as they came out into the open. This, then, was what the Old Man had heard; he had heard his mate coming with her brood. For the moment Joe's brain was paralyzed with amazement. So Crowley Masterson had been right after all. His wild turkey hen was not a myth. A mate had come to the Old Man. For the first time in a dozen years a brood of wild turkeys had been hatched in the Cowee Overhills.

Desperately Garey strove to readjust his mind to this new development. Within him, as he lay behind the chestnut log, his bead still drawn upon the feeding gobbler, a battle raged. The thing which he had believed impossible had begun to come true. The restocking of the Cowee woods with wild turkeys was under way. To kill the Old Man now would be almost a crime.

Suddenly fierce anger surged in him. His face flamed red; his jaws clamped. Had he hunted the Old Man all these weeks for nothing? Had he won the prize at last, only to throw it away in the end? His cheek pressed tighter against the rifle stock. His narrowed eyes no longer saw the turkey hen and her little ones, but only the great gobbler at which he aimed.

THE thing that happened burst upon them—upon Joe Garey, upon the Old Man, upon the turkey hen and her brood—without forewarning. A jutting shoulder of the ridge some seventy yards to the left of the spot where the Old Man was feeding deflected the sound of the strange procession that was coming along the old buffalo road.

The Old Man heard them just as they rounded the shoulder of the hillside, raised his head high and stood at gaze. Joe Garey shifted his rifle barrel a fraction of an inch. The gobbler's sudden movement had disturbed his aim, and he drew a new bead quickly, fearing that the Old Man was about to take wing. Joe's finger was tightening on the trigger when he heard a swish of leaves and grass, a low thud of plodding hoofs. Instinctively, he turned his head.

Garey remained motionless, suddenly limp, like a man dazed. For one wild moment he believed that he had lost his reason. That agony passed swiftly. He had a quick brain; but several seconds elapsed before his mind, benumbed by the astounding thing that he saw, hit upon the secret of the miracle.

Even then he made no move. Even then he could scarcely credit the evidence of his senses. The great days had come back! Along the old buffalo road a herd of buffalo was marching through the Cowee Overhills!

He knew that he was awake. With his own eyes he was watching them as they came on in single file along the path. The scent of them was in his nostrils; his ears drummed with the thump of their hoofs. He could see the bulging muscles of the great bull in the lead, could catch the gleam of his arrogant eyes through his matted frontlet of hair.

A mad desire came to Garey to leap to his feet and shout. The impulse was gone as quickly as it came. Not for worlds would he interrupt this pageant, shorten by so much as a fraction of a second this spectacle which in two centuries the Cowee woods had not seen.

They were abreast of him now, at the foot of the gentle slope, not thirty yards away. Huge, fantastic, incredibly magnificent in that wild and lonely place, they were all that his imagination had pictured, and more—the grandest sight that he had ever seen or would ever see. With shining eyes and quickened breath he lay motionless behind the chestnut log while the shaggy column passed along the buffalo road below him—twenty-two buffalo in all, the first buffalo that had trodden the ancient highway of the herds in two hundred years. Then, minutes after the last of them had faded amid the trees, he roused himself and looked for the Old Man.

The great gobbler had vanished, and with him the turkey hen and her little ones. Joe Garey, his eyes still strangely bright, smiled happily as he started homeward.

Far down the valley, where his path crossed the main road leading from the Pilot Knob region, Garey met two men on horseback. They drew up and one of them spoke.

"Brother," he said pleasantly, "been huntin' up in the hills?"

Joe nodded.

"Didn't see nothin' of any buff'lo up that-a-way?"

Garey smiled. "What's the joke?"

"No joke," the other replied. "Me an' my friend here, we're gover'ment rangers. The buff'lo on the gover'ment lands over by Pilot Knob has strayed off, an' we tracked 'em in this direction. Thought you mought have seen 'em. Want to head 'em back if we can; but if they ever git up in them hills, guess they'll have to stay there."

Joe nodded again.

"Yeh," he drawled, "that'd be a right tough job."

"Bet your life, brother," the ranger agreed, wheeling his horse. "Well, if you see them buff'lo, don't shoot 'em. They're gover'ment property. An' pass the word 'round, will you?"

AT HIS cabin Joe found Crowley Masterson sitting on the porch, waiting for him; and he remembered that he had asked Crowley to come in that afternoon and help him mend a wagon. Joe went indoors to get a drink of water, and when he came out he held a five-dollar bill in his hand.

"Hyar, Crowley," he said, "you won your bet. I ain't shot the Old Man yet, an' I ain't a-goin' to shoot him."

Tales of the Wayward Sea

(*Continued from page 48*)

ute between the Cape of Good Hope and Australia.

"Yes!" he said, "and a God-forsaken place it is—fit for nothing but seals and sea birds—and about as far out of the way to-day as any place on earth—windswept and desolate, bleak, barren, and cold." He spoke as if he had a personal grudge against them. "I spent eleven months there," he went on. "It was when I was a young fellow. I was only twenty-four; but I had been at sea ten years, and was the second mate of the 'Invernrie.' We thought her a big ship in those days—eight hundred tons. We were taking emigrants out to New Zealand from London."

The old man stopped in his walk, and pulled at my sleeve. "That was where I met my wife," he said. "She's dead many a year ago—died at sea, and buried near St. Paul's Rocks. You know where they are? . . . Well, we stumbled onto the Crozets one night, and when I ran out on deck there was a fine mess—fore topmast gone over the bows and the main t'gallant mast too, and the deck full of raffle, and people out of their berths half dressed. Weather was cold but fine, lucky for us.

"Daylight came soon, and we saw the main island less than half a mile away. We got the boats out and landed the passengers. The Old Man sent me ashore to look after things, and we kept the boats busy all day landing stores and sails and spars and lumber, even the pots and kettles out of the galley. I got the men to work, and we built shelters for the women and children with the canvas and lumber. There was plenty of drinking water close by.

"The day was so fine it seemed more like a picnic than a wreck. The sea was calm, but you can never trust it down there; it is never entirely sleeping, and if it sleeps, it breathes. A sudden storm came up in the night, and in the morning the ship was gone and the captain and the mate, who had remained on board.

"WE WERE two hundred and eighty-seven all told, and of that there were sixty women and forty-seven children. We all came through, and more—for four children were born while we were there. They all looked to me to give orders, and pretty soon we had settled down as if we meant to stay there. I divided them into messes, and each mess had a leader—and that's how my wife and I got together. She just naturally became the leader for all the women and children, and it was wonderful how she handled them.

"We had landed a lot of stores; but they wouldn't last long with that crowd, so we had to go on strict rations. We had a shotgun and a rifle and some ammunition; but there wasn't much to shoot—a few seals and some sea birds; and we sent the boys hunting for eggs. The carpenter had some fish hooks in his tool chest and we caught some fish, but we never had too much to eat at any time.

"We found a hut on the island built by the New Zealand Government. But there were no stores left; somebody had used them up." The old man began to laugh at this, and said, "You couldn't guess what I found in that hut—no, you could *never* guess. So I'll tell you. The most ridiculous thing you could imagine—I found it hanging on a peg behind the door. A silk hat—'Lincoln Bennett, London;' no less. Now, how had that come there? Some skipper's no doubt. But why leave it hanging there?

"We hadn't been there a month till we saw a ship. She passed close by in broad daylight, near enough so we could see the people on her deck. We waved, and made a fire with a big smoke. But they sailed on.

"THEN one day I walked right up to a man before I saw he was a Chinaman. I don't know which of us was the more surprised. He spoke little English; but he made me understand he was after seals. He wouldn't come to our camp, so I followed him and found he had a small schooner in the bay on the south side of the island. I could see ten or twelve more Chinamen on the beach and the schooner.

"I wanted him to take some of our people with him; but he said, 'No savvy' to all I had to say. I ran all the way back to camp with wild schemes of getting some men and seizing the schooner and sailing her to the Cape for help; but when I got back with the men, he had sail on her, and was standing out of the bay.

"The months dragged on and our stores got less and less. Two more ships we saw—one far off on the horizon, and one we thought was coming straight for us; but she went about on the other tack, and nothing we could do could attract her attention. I met one of the skippers in Melbourne afterward, and he told me he thought we were sealers.

"Then a Norwegian bark drove onto the rocks near where our ship had gone down, and twenty-two men came ashore. They saved hardly anything—but they were good fishermen, and when they found we had hooks, they set to work and brought in more fish in a day than we had caught in a week.

"All right. We weren't starving; but we were just existing; and I had lookouts posted day and night, and a fire always ready to light. Then along came the 'Sandridge' as nice as you like—stands in and backs her mainyard, and puts her boats over, and takes us aboard as if she had been sent for us.

"She had no accommodation for us, and not enough water or food for such a crowd, but her skipper was a *white* man. He wouldn't leave us on the Crozets. Six days out we met the 'Jeanie Deans,' Melbourne to Calcutta, and she took half our crowd.

"When I got to be skipper, I always gave that place a wide berth. No more Crozets for me.

"I've often thought," went on the old man after a few moments, "what a queer thing is memory. When I think back to that eleven months on the Crozets, it's not the cold or the hunger, or the snow and fog I remember best. I remember one

No Wonder Men Are Proud of Wives Like Her!

"Clever, brilliant, gifted," say her friends. "A wife in a thousand," says her husband. But she writes: "A Fading Wall Flower has been transformed by your inspiring book."

And This Book is now FREE to All Women!

HERE is the book that has brought new joy and happiness to hundreds of women. Within its 32 pages is described a new easy way to keep abreast of the times: a hobby that will add beauty to your home, that can bring you $10 to $25 a week for your spare time. No canvassing or tedious drudgery. We show you everything.

No Special Ability Needed

You need no special ability to become a successful member of the Fireside Guild. If you love color; if you like the deft touches of decoration that make a home so "livable;" if you like to "make things"—you have all the natural talent that is needed to quickly master all the delightful secrets of Applied Arts by the famous new simplified "3-Step Method."

Your Success Assured

Right at home, under the direction of M. Gabriel Andre Petit and his staff, you quickly gain skill in the decoration of lovely silk scarves, batik tapestries, block printed draperies, colorful book shelves, wall plaques of gesso and polychrome, tallies, bridge prizes, and a hundred and one new articles that will bring you big profits and add distinction to your home. Here indeed is a hobby that will gain the admiration of all who know you, that will set you apart as the "one wife in a thousand!"

Send Coupon for Book

It will bring you the entire fascinating story of the Fireside Guild. Simply fill in and mail coupon, enclosing 2c stamp for postage. Book will come by return mail. No obligation.

FIRESIDE INDUSTRIES

Dept. 60-K, Adrian, Michigan

Fireside Industries, Dept. 60-K, Adrian, Michigan

Please send me your beautifully illustrated 32 page book. I am under no obligation whatever for this complete story of the Applied Arts.

or two of the people, but the rest are like a faded photograph. What I do remember is the woman I married soon after we got to Melbourne.

"I believe she did more than anybody else to carry me all through the months. Her faith and courage never failed. When the ships sailed past us, she said, 'Well, it shows that ships come this way. Maybe the next one will take us off.' She was a great woman and a good wife to me. If she had lived—"

We had reached the Recreation Hall by this time. "Come in and sit down, and have a smoke," said Cap'n Bill. The hall was well filled and we had to go around three sides before we found two seats together. A big red-faced man was sitting on the settee and made room for us.

"Newcomer?" asked Cap'n Bill.

"Yes," answered the big man, "came in to-day. My name's Cooper—Gordon Cooper."

"Gordon Cooper," mused the old man. Then, after a moment, "Ever hear of a ship called the 'Invernrie'?"

"I should say I did!" said the big man emphatically. "I was wrecked in her on the Crozets, my first voyage."

Cap'n Bill was standing up now, jabbing his stick into the floor. "My name's Scott," he said.

Cooper jumped to his feet. "Bill Scott!" he exclaimed, holding out his hand. "Well, I'll swear!" And he did!

They hadn't met for well-nigh fifty years, but they had both come down the long sea roads to the same snug harbor at the last.

THE passing of the old-time square-rigger is reflected in the personnel of the men of Snug Harbor. True, many of them put in their time in the old square-riggers on deep-water voyages to China, Japan, and India, or 'round the Horn to 'Frisco—men who knew what it meant to reef a topsail in a snowstorm off the Horn, or stand their trick at the wheel when running down the Easting between the Cape and Australia. But many have put in all their time in steam, for some of them graduate from the engine-room and stokehold nowadays.

Captain Dan Parsloe had been at the Harbor many years—a very old, silent man who would sit by the hour gazing across the Kill von Kull into the west as if he were seeing with occult eyes that looked across the continent and out by the Golden Gate to the islands of the Western Pacific, where he had spent so many years. "An old whaleman," the Snugs told me, who had settled down to live with the natives in the South Sea Islands. But that was only their loose way of talking.

He was a lonely soul, and seemed to have no interest in the day-by-day chit-chat around him. I was able to supply him with tobacco and a new pipe one day, so we got talking.

At one time and another, Captain Dan told me many yarns, and it would take a Louis Beck or an O'Brien to do justice to his adventures.

From Easter Island to Hongkong, from Sidney to Unalaska, there was hardly an island on which he had not landed. He had even made a voyage into the Bering Sea after seals. He had shipped on a sealer in Yokohama and finished the cruise in Victoria. But the North had no charms for him. It was too cold and bleak. He longed for the swish of the trade winds through the palm trees, for the booming of the breakers on the reef, for the islands coming up over the horizon in the tropic dawn.

"I shipped on the 'Abbie Lowe,'" he said, pulling at his new pipe, "a ninety-ton schooner. She was owned by Tom Johnston. He said he had wanted to make a trip to the South Seas ever since he was a boy, and now that he'd made some money, he'd bought the 'Abbie' to trade and cruise wherever he liked and as long as he liked.

"One day we were lying alongside the wharf at Seattle and I noticed a Chinaman looking the boat all over with his sharp beady eyes. He had on American shoes and dark-colored trousers and a jacket of the Chinese blouse sort—dark blue with little brass buttons, and a little standing collar and wide sleeves. He had a flat-brimmed black soft felt hat on his head, and he still wore a queue, looped into the left-hand pocket of his blouse.

"He walked the length of the boat and back, and stopped opposite where I was checking in some stores. He waited till I looked up, and then he said, 'You wanchee cook?' I motioned him toward Johnston, who was working with the carpenter overhauling the steering gear. He walked along the wharf and repeated his question. Johnston looked hard at him and said, 'You good cook?'

"He came aboard at that, and fishing inside his loose blouse produced a passbook, where he had pasted a number of letters. Johnston looked them over, and in a few minutes Wong Sam was hired.

"As he left Johnston, I heard him say, 'Where you go, this ship? I like go Phi-delphia.' And Johnston answered with a short laugh, 'Oh yes, by and by.'

"'All light,' said Wong Sam. 'I like go Phi-delphia. I got cousin there.'

"We had a horrible trip all the way to Honolulu. From the moment we passed Tatoosh, we had gale after gale, and heavy seas. The 'Abbie' was a good enough sea boat, but light and lively. Wong was a cook, all right, and weather made no difference to him. He was always good-natured and smiling, and contrived to get us our meals—blow high, blow low.

"WE WERE thirty-one days to Honolulu, and Wong came out of his galley as the anchor was let go. He looked around him, and then he said to me, 'What you call him, this place? Phi-delphia?'

"'No,' I said; 'this is Honolulu.'

"'Honolulu,' he echoed. 'Oh, all light. By-m-by Phi-delphia!'

"From Honolulu we went to Fanning Island, to Washington, to the Marshalls. We looked in at Pago Pago and Apia. We were three weeks in Papeete; then to Rarotonga, and Tonga itself; and finally to Suva, after visiting a dozen other islands here and there.

"Wong never wanted to go ashore. I think Papeete was the only place I saw him leave the schooner, and he was always the same happy-natured Chinaman; always on time, and always ready with his question, 'What you call him, this place? Phi-delphia?' every time we made a new island—and always ready with the same

nswer, 'Oh, all light, by-m-by Phi-elphia.'

"At Suva, Johnston sold the 'Abbie owe' to O'Keefe, and she became a outh Sea trader. He paid us off there, nd to such as wanted to go back to the tates he paid their passage by the mail oat. When it came to Wong Sam's turn, Mr. Johnston gave him his money and aid, 'Well, Wong, do you want to go to America?'

"'No,' he said, 'I no wantchee go Melika, I wantchee stop along you. May-be you catch him 'nother schooner. By-m-by we go along Phi-delphia.'

"I went off with O'Keefe to Yap. I was there ten years, sometimes bossing the copra gangs, and sometimes on his schooner. After he was lost at sea, I went home, and found my mother had been dead three years."

"Wouldn't you like to go back, Dan? Back to Yap or Ponape, or somewhere out there?" I queried.

"Many a time I want to go back," he said wistfully; "but it's changed times there, too. The old men and the old ways are gone. And I'm old. Too old. It's a young man's game. If I had stayed, it might have been all right. No—it's Snug Harbor for me."

WE OFTEN sat on the sunny terrace in front of the sanatorium wing, the terrace which looks across the well-kept lawns to the Kill von Kull, and the Jersey shore beyond. On the road is a stream of traffic day and night, street cars, motor-trucks, motor-cars and pedestrians, a section of the busy world of active men. Between the roadway and the Kill von Kull is the railway which serves the Island; close by is the wharf at which barges of coal are unloaded; a tractor busily hauls trucks from the barge to the power plant. Outside the gate, across the wall, all is bustle and hurry, near enough to remind us of the world of struggle and opportunity, of success or failure, of ceaseless work, and comings and goings; not near enough to disturb the serenity and calm inside.

A line of contented old men sat on the benches on the terrace with their backs to the buildings. Every fine day they sat there, and the same ones made the same remarks, and told the same stories day after day. Some of them were blind; one or two had been brought out in wheel-chairs by white-coated orderlies. Some were seeing-men, who served as leaders to the blind. They were mostly smoking their pipes, yarning, and discussing the news of the day. Many of them had been to the reading-room, where Harry reads the daily paper to them every morning, after breakfast. Harry is lame and is brought in a wheel-chair; but he has good eyes and a good voice, and gives all the salient news of the day, at times with pungent comments of his own.

"Here comes Captain Glenn," said one of the men, as an erect elderly man came from the blind ward with his leader. There was a shuffling of feet as a seat was found for him near the doorway.

"How are you to-day, Captain?" asked big Johnson.

"Well, thank you; very well indeed. It's pleasant out here this morning."

"Been to church, Cap'n?" asked another.

"Oh, yes," he said simply. "You know I go if I am at all able."

The clearness and sparkle noticeable in Ansco prints explain their popularity better than all the words in the world.

—the *counter-sign* of good film

RIGHT at your elbow in scores of the stores that you visit every day is the handy new Ansco Dispenser—absolute assurance of fine, fresh film. It reminds you of a purchase you often might forget. Reminds you, too, of Speedex—the principle that distinguishes Ansco from all other film and makes good picture-taking easy under the widest possible range of light conditions.

There is no better film than Ansco Speedex. It adds an extra margin of certainty to every exposure you make.

Ansco percentage is 6 out of 6—in any well-handled camera. You won't know how good your camera really is until you've tried it out with Speedex! Buy from the Ansco Dispenser.

The Sesquicentennial Gold Medal for Excellence in Camera Design and Manufacture was awarded to

ANSCO

Ansco Cameras have never failed to take the Gold Medal in any competition they have entered.

ANSCO

The early history of photography in America is woven about a few outstanding pioneer names—among them Anthony, Scovill, Adams and Goodwin—all now represented in Ansco. The record dates back to 1842. The distinction of originating roll-film, of being the first in America to make cameras and the first to establish a full line of professional supplies all belongs to Ansco.

"*For* THREE *summer uses*

Handiest thing in the house"

Said 2000 women

YOU WILL FIND that a jar or tube of "Vaseline" Petroleum Jelly is an essential toilet aid in summer for:

Vacation First-Aid—When children go away to camp, include "Vaseline" Jelly in their kits. Carry it with you on all motoring, camping or boating trips. You'll meet plenty of emergencies when it is just what you need. And it's easy to carry.

Sunburn—Spread a thin layer of "Vaseline" Jelly over the affected part. The longer you leave it on the sooner the skin gets back to normal. This treatment relieves soreness almost at once.

Hair dressing—Now that so many women have permanent waves in the summer, it's useful to know that "Vaseline" Jelly softens the curl and gives a glossy, natural look. Dampen the hair slightly and apply a small amount with the palms of the hands. Brush vigorously. Use the same treatment for straight bobs—to keep the hair in place. If you go hatless in summer you should use this treatment regularly.

Grown-ups who exercise heavily (horseback riding for example) can find relief from chafing and sore muscles by massaging with "Vaseline" Jelly.

And remember when you buy that the trademark "Vaseline" on the package gives you the assurance that you are getting the genuine product of the Chesebrough Manufacturing Company, Cons'd. Write for free booklet of uses. Address Dept. A-8-27, Chesebrough Manufacturing Company, 17 State St., New York.

PETROLEUM JELLY

"How old are you, Captain?" I prompted.

He sat up very straight and clasped his hands over the handle of his walking stick. "I was mate of a smart little barkentine out of Rockland, Maine, bound for Genoa," he began. "We were crossing the Atlantic when one day an English bark luffed up under our lee. Her captain sprang on the rail, grasping a backstay with one hand, and with the other he held a speaking trumpet to his lips. 'Can you tell me if Sebastopol has fallen yet?' he cried.

"Yes, sir, he asked about Sebastopol. That was in July, 1855—seventy-one years ago, and I was twenty then. I can see that English captain just as plain as if it had been yesterday."

A little procession was marching out by the South Gate, across the road, and up the hill to the cemetery where the old Snugs lie side by side, waiting the call, "All hands on deck."

"There goes Frank," said one, "up the hill at last."

"Yes," said Captain Glenn cheerfully; "we all have to go that road. I've seen a good many hundred go since I came here first."

I turned my face toward the hill I could not see, and the thought gripped me for a moment— What was I doing here? I, who had led so busy a life, and come and gone on my business across oceans and continents.

NEAR the South Gate is a big shady tree around which a seat has been built. I found a group there on a warm afternoon, and listened to their talk. It was about women, that perennial subject which never fails to interest even old men. It had come about through somebody's asking Captain Peter Sargison if he expected a visit from his wife soon. It is one of the standing jokes of the Harbor, for it is currently believed that Peter lives in the Harbor only to get away from his wife.

She is represented as a jealous woman, who even to-day, when Peter is over seventy, believes him attractive to other women, and fond of philandering. She has her own ideas of how Peter must walk the straight and narrow path of rectitude, and is strong-minded enough to enforce her view when she gets Peter within earshot.

He manages, some way best known to himself, to have her live with their married daughter in Boston, while he leads a secure and peaceful life in the Harbor. She has visited him only once in many years, but it is always pretended that Peter is in deadly fear of another visit.

Years ago, when Peter was young and strong, and no doubt dashing and attractive, he was mate on one of the Panama Railway steamers. This was in the long ago, before Cristobal and Colon had come into being, when the town at the Atlantic end of the railway was called Aspinwall. It was a place where the Ten Commandments had been forgotten.

Here lived the lovely Damietta, half-child, half-devil, dancer and gold-digger; beautiful as a tropic night, with jewels like stars in her dusky hair, and eyes that laughed and mocked and bewitched men to their undoing. She had the delicate little feet of the Castilian, and wore a Spanish shawl with a long fringe of heavy bullion. And so they called her a Spanish dancer. But who knows what strains combined in that alive little body of hers? For her mother, who was always within hail, was a Colombian, and her father no one there ever knew.

Impulsive, volatile, and generous, shrewd, calculating, greedy, and unscrupulous, a mass of contradictions, she squeezed men dry and tossed them aside like an empty orange skin.

Damietta owned the best dance hall in Aspinwall.

PETER went there one night. Damietta watched him dance, and a moment after he sat down she stood before him, a most alluring woman, from her high, jeweled Spanish comb to the little shoes with the jeweled buckles.

Peter jumped to his feet when she addressed him in her accented English.

"You dance well, señor. I am Damietta and I too dance well." Her little foot tapped rhythmically to the music as she spoke, and what could Peter do? He asked her for the next dance, and swung down the floor to the throbbing music of the guitars, to the most intoxicating measure he had ever danced.

From that moment Peter had no peace. Damietta would brook no rival. He could dance only with her. She insisted he should come to the dance hall night after night as her guest, and if he had not fought against it she would have lavished presents on him. As it was, he found a magnificent pillow embroidered in gold and silver thread in his room after the steamer had left Aspinwall.

The present Mrs. Sargison saw it, and from that moment her dark suspicions were aroused. He was engaged to her then, and he had some difficulty in explaining how he came by that pillow. It would have been better, perhaps, if he had thrown it overboard.

On Peter's next trip to Aspinwall, Damietta wanted to marry him. She almost overwhelmed him with her volcanic, passionate declarations of love. Money she had; jewels she had; the dance hall brought a big income—all would be Peter's together with her grace and beauty and love such as, she assured him, no girl of the gringoes could ever give him.

Peter was tempted to forget all, forgo his profession and take what was offered him. But he thought of the girl waiting for him at home; and, too, he reflected he could never go back to the States if he married Damietta; and Aspinwall was no place for a white man. He shook off the delirious dream, and put to sea where the clean, sweet air of the Atlantic cooled his brain and blew away the feverish, hothouse passion of Damietta's love.

He applied for a vacation and got married in New York, and thought that settled the matter.

When he went to Aspinwall again, he found that Damietta had been inquiring for him; but he stayed on board his ship and did not go near her. Then he heard she had said she would come to the ship and take him ashore. He was sure she would not get past the guards at the gateway to the pier.

Then one morning a message came to him that she was at the gate, and he had better come, as she refused to go away without seeing him. So he went up the

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

pier, cool and trim in his white uniform.

Damietta was outside the gate in all the glory of her Spanish shawl and her jeweled comb. Jewels sparkled on her fingers and around her wrists. She was pacing up and down restlessly, her heels clicking on the stones like castanets.

"Ah, Pedro, *amigo mio*," she called, "why you no come veesit me?"

Peter stopped inside the gate, the two guards between them.

"I'm not coming any more, Damietta," he said. "I'm married now."

"So! You marry the American girl! You no love Damietta. All right, Pedro mio. Damietta can get *otro amigo*. *Adios*, Pedro. Come kees me, just one time."

"No, Damietta," said Peter firmly. "All that's finished."

There was a rush and a flash of jewels and steel, and Damietta sprang at him as the guards grabbed her.

Peter jumped aside just in time, for the blade of the long knife slit his sleeve from shoulder to wrist and ripped along his arm like living fire.

That was Damietta's last kiss for Peter. He never saw her again.

"Well, Peter, how about it?" asked Captain Bill Duckett, limping up, "is the wife coming down this summer?"

"Oh, I dunno. Maybe. Maybe she won't be able to leave the grandchildren," grinned Peter. "She's powerful fond of 'em."

Well, fifty years ago is a long time, I reflected, and who knows but Peter is better off as he is, after all.

The Kind of Story I Like Best

Prize Contest Announcement

FEW of us have the opportunity to live lives as rich in incident and wealthy in adventure as the old seafaring men who are passing the twilight of their days in The Sailors' Snug Harbor. That's one reason why we enjoy reading fiction. It enables us to live in our imagination what we would like to live in real life. Some of us prefer mystery or detective stories; others give love stories first place; many folks prefer stories of business or domestic problems; others revel in "atmospheric" yarns of far-off, exotic climes; still others choose historical fiction, adventure stories, sea yarns. . . . Write and tell us what kind of story *you* prefer, and why. Let us know just what you get out of this type of story—what it puts into your life.

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes August 20th. Winning letters will appear in the November issue.

Address Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of your contest letter and of any enclosures, if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

"Hot water or cold — it works swell with either!"

Keep that Schoolboy Complexion

The years roll off with your whiskers when you shave with Barbasol.

It's a gladsome fact, men! You, yourself, will be surprised to see how fresh and smooth and young you look when you've shaved with Barbasol. It's a tube of Perpetual Youth.

Because Barbasol leaves the natural oils right in the skin. Takes nothing away but the whiskers. Does it so easily, swiftly, gently. Just like this:

1. **Wash the face** (but leave it wet)
2. **Spread on Barbasol** (but don't rub in)
3. **Shave!**

No brush. No rub-in. No after-sting or smart. All cool and grateful is the skin, protected now from sunburn, windburn, chap. And no more ingrowing hairs to trouble you. Isn't that enough to make you want Barbasol?

"Mister, you're next!" **Try Barbasol three times, according to directions.**

Barbasol

For Modern Shaving

COUPON

The Barbasol Co.
Indianapolis, Ind.

I enclose 10c. Please send trial tube and I'll give it a fair trial.

There Will Always Be Something New to Do

(*Continued from page 16*)

because everything was going to be all right.

From a dusty room in a factory to the Grand Ballroom of the Waldorf; from crude volunteer programs to programs that will cost this year more than two million dollars for talent alone; from broadcasting stations of limited radius to the National Broadcasting Company, which on February 22d linked up forty-three stations and caused the voice of the President of the United States to be heard by more millions than had ever before heard a single human voice—this is the story of radio.

And the most important man in radio entertainment at the moment is Merlin H. Aylesworth, known to a lot of us affectionately as "Deac."

He was born in Iowa forty years ago, the son of a preacher. One third of the sons of preachers remain obscure; one third achieve mediocre success; the other third rule the world. Lest I should be suspected of prejudice, as a preacher's son myself, allow me to recall the names of just a few of the distinguished members of our fraternity.

Among Presidents and statesmen we have Grover Cleveland, Woodrow Wilson, James Buchanan, Chester A. Arthur, Charles Evans Hughes, Henry Clay, and Jonathan P. Dolliver. Harriman and Cecil Rhodes are enough to represent the quality of our financiers. We are represented in science by Agassiz, Jenner, Linnæus, and Morse, to name only a few. We have Hallam, Hobbes, Froude, Sloane, and Parkman among the historians; artists like Sir Joshua Reynolds, and architects like Sir Christopher Wren. We have so many writers that it would be impossible to count them: Tennyson, Coleridge, Addison, Cowper, Goldsmith, Emerson. And as for eminent living Americans, "Who's Who" includes more sons of preachers than sons of any other profession.

IF YOU ask why the preacher's son gets off to such a good start, be well assured that it is not by accident. He enjoys several distinct advantages: First of all, he has what S. S. McClure once said he hoped to bequeath to his children, "the advantages of poverty." Very early in life he makes the acquaintance of hard work. He must save money, and has very little of it to save. He understands, as early as he is able to understand anything at all, that whatever is to come to him in life will come as the result of his own hustling. Hence, he loses no time in the delusion that somebody is "going to make him."

Furthermore, he is brought up in an atmosphere of good books and fine conversation. He learns the use of words, which are the magic tools by which men's minds and actions are influenced. And, lastly, he is surrounded by the expanding power of faith.

The earliest sounds that reach his ears are assurances that great things may be accomplished in the world if one will only believe. In sermon and prayer and daily conversation he hears again and again that the Lord is on the side of those who trust and go steadfastly forward. "If ye have faith and doubt not, . . . if ye shall say unto this mountain, Be thou removed and be thou cast into the sea; it shall be done" —that is the faith that has built railroads and cities. And, "Trust in the Lord and do good, so shalt thou dwell in the land, and verily thou shalt be fed." Consciously or unconsciously, the makers of business have operated on that great premise.

AT AN early age Aylesworth was removed to the new and splendid state of Colorado, where his father became a college president. He himself went through the schools in regular order, studied law, and was admitted to the bar at twenty-four. His first professional employment was collecting bad bills for the local medical society. For reasons that will be apparent before this piece is finished, I wish to state that if I owed a bad bill there are very few men whom I should so little like to have on my trail.

The excellent jurors of Colorado learned very quickly that when young Aylesworth came to court it was never a dull day. He had a persistent habit of turning up with all the facts, and whatever he lacked in experience he more than made up by an impetuous energy which swept things before it. A wobbly mind in the jury box wobbled worse and worse as the force of his will-power beat against it; it was like facing steadily into a strong, fresh wind. His record of favorable decisions became imposing. Meanwhile, he was spending his evenings in politics, learning even the technique of handling men, which has been so useful ever since. And presently, at the age of twenty-eight, he blossomed out as chairman of the Colorado Utilities Commission, and so began what has been his life work—the guidance of big business in its delicate task of forming and maintaining good public relations.

One night recently, when we were sitting in the Lotus Club and settling the affairs of the world in general, I said, "Deac, what an amazing whirligig this thing called Business is. You get caught up on one of the little cogs of the machine two thousand miles from here; the big wheels turn over, and, presto, you're flung up behind a mahogany desk in a skyscraper on Fifth Avenue. When you were out there collecting bills for those doctors in Colorado, did it occur to you, in your wildest dreams, that you would ever be at the head of the biggest business of its kind in the world, with your office here in New York?"

"Believe me, it did not," he answered with a laugh. "I suppose I used to wonder occasionally what was going to become of me. Every man has day dreams. But mostly I was busy just doing the next thing that had to be done. We hear a lot about the importance to young men of thinking about the future. I sometimes think that too much is said on that subject. There are thousands of young chaps who are looking so hard at the future that they forget to make any real dent on the present.

"How could I ever have foreseen what was going to happen to me? How could I plan to become president of a company operating in an industry that didn't even exist? All I did was to take care of the public relations of my company, as best I could. That brought me into touch with other companies, and when the National Electric Light Association was formed, a coöperative movement of all the light and power companies, they picked me up and brought me to New York as executive secretary.

"That gave me a chance which was just as big as I cared to make it. For a long time I traveled thousands upon thousands of miles a year. I came to know the chief executives in the electrical industry from one end of the country to the other. I met men like Owen D. Young, of the General Electric Company, and Guy Tripp, of the Westinghouse Company, as well as the leaders in the great interconnected power companies. When the National Broadcasting Company was formed, Mr. Young persuaded me that it was an even bigger and more important job than the one I was busy with. And there you are.

"ALL of which means simply this, as I see it—that a big change has come about in American business life. A man used to choose his business; now, business selects the man. I sat at dinner the other night beside the president of one of the biggest banks in the country, a director of many companies. He said that for two years he and some of his associates had been looking for a man to whom they could pay two hundred and fifty thousand dollars a year, and so far they have not been able to find him. A day or two later I saw a letter from a titled Englishman, the head of an international business. He wrote to his American director that he was coming over here to find a man for an important position, and that salary would make no difference. But he made one stipulation: The man whom he selected must be employed. He wanted someone who would have to be persuaded to leave and step up higher.

"Take a man like Owen Young, or any other industrial leader," he continued. "If you could read their mail for a few weeks you would find that they have two piles of letters on their desks all the time. One pile is from companies that want to find men; the other is from men who want to find jobs. And the tragedy of it is that the two piles of letters just don't match. The men who are unhappy and always wanting to change are the men whom nobody wants. The men who are completely immersed in what they are doing are the men whom everybody is after. So when you ask me if I had any plan back there in Colorado for getting to New York, I say, 'No.' I've never had any particular plan for getting anywhere. I've just done the day's work, and taken care to get as much fun out of life as possible while doing it.

"You remember in Gilbert and Sullivan's 'Pinafore' the stuffy old admiral

They do a $125,000 business —in a 73-family town!

DEALERS: ***Send for the folder which tells how the 3 Knights built up their big retail business!***

IN a little Indiana village, the three Knights—father and two sons—run a retail store that averages better than $400 in sales every day in the week except Sunday.

You can't get into this village by interurban, bus, or train. It has only 73 dwellings in it. And it hasn't even a newspaper. Yet here in this tiny hamlet is the store that did a $125,000 retail business last year—and is aiming at the $150,000-mark this year with every indication of hitting it.

How Do They Do It?

The Knights' merchandising methods ought to be interesting to every small-city retailer in the country.

For the kind of selling that pushes a store's daily sales volume above $400 must be built on the soundest and most progressive merchandising ideas.

And it's for this reason that Farm & Fireside sent its special interviewer out to visit the Knight store—to talk to the men who run it, and to get their viewpoints on surefire selling methods—in order to pass the information on to other dealers throughout the country.

Told in the Folder

The Knights' own story of the methods they used to build up their big success is now printed in folder form, ready for distribution.

If you're interested in how to overcome the disadvantages of location by widening your trading area—send for this folder and see how the Knights did it.

If you want to know their substitute for newspaper advertising—what they've learned about farmers' buying habits—how they keep their trade from driving into nearby cities to buy—get this folder which carries Farm & Fireside's personal interview with them. It contains a lot of tried and proven merchandising ideas which every dealer who wants to get more trade and bigger profits can apply simply and easily in his own business.

This is another of Farm & Fireside's *successful-dealer* interviews. Others will follow throughout the year. And thus, in making available the business methods which successful merchants have used in building up farm trade, Farm & Fireside is simply meeting an obligation to retailers and advertisers which its leadership confers.

But—getting these interviews and publishing them is only a part of Farm & Fireside's service to retailers.

Farm & Fireside's Bigger Service to Small-City Retailers

The biggest benefit comes when the dealer ties up closely to the products that are offered in Farm & Fireside's advertising pages—and specially displays and features them.

As every dealer knows, Farm & Fireside is a real force for influencing farm people to buy And the yearly growth of advertising in Farm & Fireside proves that manufacturers recognize this fact, too.

A glance through a copy of Farm & Fireside quickly tells *why* its advertising pages register in more than 1,200,000 farm homes—for here is a 100-per-cent *personal* magazine—edited straight to the individual—and read with *warmer interest* than any other farm publication.

FARM & FIRESIDE
Retail Merchandising Department
250 Park Avenue, New York City

Send me Farm & Fireside's interview with the three Knights—in which they explain the methods they used to extend their trading area and build up their farm business.

sings a song about his career. He started as an office boy polishing the handle on the door.

"And I polished up the handle so carefulee,
That now I am the Ruler of the Queen's Navee!

"Well, that's me. I just polished away at whatever handles were handiest. And now I am an admiral in the radio business."

"Tell me about this radio business."

"We're just beginning to find out about it ourselves; but already we know some things that have human interest. We know that there were 5,200,000 radio receiving sets in the country last June, which means, if you assume five listeners to every set, a total radio audience of twenty-six million people. New York State, with 654,000 sets, has the most listeners, and Nevada, with 7,200 sets, and New Mexico, with 7,800, the fewest. The four cities that have the largest number of listeners in proportion to their population are Los Angeles, San Francisco, Chicago, and New York, in the order named.

"So far as we can discover, the male and the female audience is about evenly divided. Of course, when it comes to a prize fight or a baseball game, the number of men is greater, though the ladies are beginning now to discover the secret lure that has made men leave home for the bleachers and the ringside all these many years. But the average program is strictly a family affair. For instance, a recent mail canvas conducted through station WEAF brought 1,943 letters signed by men, 2,190 letters signed by women, and 929 signed by 'Mr. and Mrs.' Naturally, the daytime audience will consist almost entirely of women, though it might surprise you to know how many offices of busy executives now have radio sets.

"AS MOST people know, the National Broadcasting Company began by acquiring WEAF, the station of the American Telephone and Telegraph Company, and WJZ, the station of the Radio Corporation of America, and setting each of these up as the head of a network of leased stations extending throughout the country. The company is a commercial enterprise in the sense that it is owned largely by concerns interested in the sale of radio equipment, to whom its activities are of benefit.

"Six months is not a long time in which to judge the performance of any institution, but it has been long enough to show what can be hoped for. We have broadcast the President of the United States and the Vice President; we have carried the voice of Mary Garden, Louise Homer, Mary Lewis, Martinelli, Titta Ruffo, and Mme. Schumann-Heink into homes that had never hoped for such happiness. We have had Harold Bauer, Mischa Elman, Josef Hofmann, Percy Grainger, and John McCormack; the orchestra of Walter Damrosch; the laughter of Eddie Cantor, Elsie Janis, Will Rogers, Laurette Taylor, Weber and Fields, and Van and Schenck.

"We have broadcast the Chicago Opera, and brought the Leland Stanford-Alabama football game back from the Coast, giving to millions of people in their snow-covered homes the voice of an announcer sitting in his shirt sleeves under the sunny grand-stand in California.

"We have carried the sermons of Harry Emerson Fosdick and the life questions and answers of Doctor Cadman. We have sandwiched in H. R. H., Prince William of Sweden, between Vincent Lopez and Reinald Werrenrath, and, in a period when the farmer feels that the city folks get everything and he gets nothing, we have at least made him equal to anybody in his ability to enjoy what's on the air. From Seymour, Texas, a man wrote me recently that our programs, coming to him as they do from so many different points, 'make a fellow in a small town feel as though he had been somewhere.'

"THAT is our hope for radio—that it will make the people of the United States as a whole feel that they have 'been somewhere;' that their lives will be richer, their experience wider, their appreciation of life more satisfying because they have been in touch, through this magic, with the wisest, the most talented, and the most high-thinking folks of their time.

"To imagine that radio will ever compete with the magazine or the newspaper is absurd. Nothing takes the place of anything else. When the telephone was much newer than it is now, the telephone company advertised: 'Don't travel; telephone.' They soon found that advertisement was a mistake and withdrew it, for the more people travel the more they telephone. You've discovered that in your own experience. Every journey provokes a dozen 'phone messages.

"Similarly, the more people read, the more they will listen, and vice versa. Radio is only one more recruit in the great forces of modern education, every one of which is going to be more and more needed. It is in its infancy, and we can hardly dream what its ultimate possibilities will be; but thus far the men who have dreamed most audaciously have been most nearly right.

"I remember a dinner about three years ago, given by Owen Young to certain radio engineers who were sailing to Europe for research work. Talking to them informally, he said something like this:

"'You men think you have done a wonderful thing, and you have. You are able to take the front page of the London "Times," for example, and break it down into columns, the columns into paragraphs, the paragraphs into sentences, the sentences into words and letters. Then you invent a symbol to represent each letter, and that symbol is flashed across the Atlantic, and the page is laboriously built up again—letters into words, words into sentences, sentences into paragraphs, paragraphs into columns, columns into the page. Thus by infinite work and skill we can, if we wish, have the London "Times" in New York on our breakfast tables as they have it in London. And this is a magnificent and wonderful achievement.

"'But let me put a little dissatisfaction into your souls: Mr. Eastman sets a copy of the London "Times" in front of one of his cameras, touches a little lever and, presto, the whole front page is transferred to his film *instantly*. Now, gentlemen, why isn't it possible to have the lens of your camera in London and the plate in New York, and by one pressure of the finger tip do instantly what you now do by the intricate process of tearing down and building up?'

"It was interesting to hear the comment of those men. Their expressions revealed clearly the two types of engineering minds, or, rather, the two types of minds in every profession and business. One group spoke to Mr. Young with a tolerant smile. 'Your address illustrates the possibilities of the lay imagination when unfettered by any technical knowledge,' they said. The other group did not smile. 'You have given us something to think about,' was their comment. 'It looks impossible at the moment; but we shall go to work and see what can be done.'

"They went to work," Aylesworth continued, "and already we have the wonder of pictures transferred across the ocean by radio. To say that we are at the end of the development of the art would be absurd.

"We know for a certainty that great things are just around the corner, and we suspect even more exciting wonders: that we shall live to see motion pictures flashed onto the walls of our homes; that we shall be able some day to *see* the friends to whom we are talking over the telephone; that science, in some far-off era, may even find a way to break down food into electrons and transmit them to our kitchens by radio, and there reassemble them for our nourishment—all this seems the wildest kind of nonsense at the moment. But radio itself seemed like wild nonsense only a couple of decades ago. And what I have said before will stand repeating again—that in radio, and in pretty much everything else, the men who dare to think most boldly, even most absurdly, have been more nearly right than those who have believed that only the little things were possible."

"That's all exciting," I said, "and I agree with you. When I look around the laboratories of big business, and see the hundreds of scientists at work—the first time in history that scientists have ever had all the money and all the equipment and all the time they could use for their experiments; when I see how many different sorts of investigations are going forward, I feel that I'd like to live a hundred years, just to see what's going to happen. Meanwhile, since we have to make the best of what we have already, I want to finish you off with two more questions. Here they are:

"What three mistakes do people most commonly make in using their radio sets? What five simple things can they do to add to their enjoyment of radio?"

"I CAN'T tell you anything very profound in answer to those questions," he replied. "The good sets are now so nearly fool-proof that almost anybody ought to be able to get good results from them. However, here are the three most common mistakes: (1) Not learning to tune the set properly so as to shut out 'cross talk;' (2) Forcing sets to produce the last possible bit of volume; (3) Carelessness in jarring or dropping what is, of course, a very sensitive and highly technical piece of apparatus.

"And here are your five suggestions: (1) Keep the batteries adequately charged; (2) Burn the tube filaments at the specified voltage; (3) Keep antenna and lead-in tight; (4) Keep all connections tight and clean; (5) Leave the set alone and call in a competent repair man when anything goes wrong."

Your reading problem solved by Dr. Eliot of Harvard

THERE will be a dozen competitors for your big opportunity when it comes. What will influence the man who is to make the decision among them?

"In every department of practical life," said Ex-President Hadley of Yale, "men in commerce, men in transportation and in manufacture have told me that what they really wanted from our colleges was men who have *this selective power of using books efficiently*."

Not book-worms; not men who have read all kinds of miscellaneous books. Not men who have wasted their whole leisure time with the daily papers. But those who have read and have mastered the few great books that make men think clearly and talk well.

What are those few great books? How shall a busy man find them? The free book offered below answers those questions; it describes the plan and purpose of

Dr. Eliot's Five-Foot Shelf of Books

The books that make men think straight and talk well

Every well-informed man and woman should at least know something about this famous library.

The free book tells about it—how Dr. C. W. Eliot put into his Five-Foot Shelf "the essentials of a liberal education;" how he so arranged it that even "fifteen minutes a day" are enough; how in pleasant moments of spare time, by using the reading courses Dr. Eliot provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this page is invited to have a copy of this handsome little book. It is free, it will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

Dr. Charles W. Eliot, for forty years president of Harvard University, Editor of the most famous library in the world, "Dr. Eliot's Five-Foot Shelf of Books." You can buy these books by the Collier plan which enables you to enjoy them while you are paying for them.

Since 1875 COLLIER Good Books

Send for this FREE booklet that gives Dr. Eliot's own plan of reading.

P. F. Collier & Son Company
250 Park Ave., New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books, and containing the plan of reading recommended by Dr. Eliot; also please advise how I may secure the books by small monthly payments.

Name Mr. / Mrs. / Miss .....

It occurs to me, as I draw toward a close, that I have not told much about this friend of mine, this new captain of a new industry, *as a man.* I have mentioned his age, forty years; but as to what he looks like, how he lives, and what qualities he has that have made him what he is, I have not said a word. Let me hasten then to say that he is about five feet ten inches high; with dark hair and sparkling black eyes; that he has kept his slim figure and most of his hair; that he has a dandy wife, and a boy whose name is Barton (though he was named about thirteen years before Deac ever knew me), and a little girl of seven.

I THINK I know why he has made such remarkable progress in so short a time. At least I am sure of four of the reasons:

First: He has tremendous energy. Whatever we may say of the importance of mental endowment—and we can't say too much, of course—the fact remains that health is a greater necessity to-day than it has ever been. Few of us realize how completely the conditions of the life contest have changed in the past century. Fourteen years have been added to the average length of human life in three generations. In Shakespeare's day a man of thirty-five was already old. Montaigne retired to his tower at thirty-eight to spend his remaining years in contemplation, and he assumed that they would be few. Lincoln bade farewell to his neighbors in Springfield with these touching words: "No one not in my position can appreciate my feeling of sadness at this parting. To this place, and the kindness of these people, I owe everything. Here I have lived a quarter of a century, and have passed from a young to an *old man.*" He was just fifty.

We speak of our age as the day of the young man; but it is much more truly the age of the young-old man. A recent survey of the nation's principal executives shows that the average age of chairmen, presidents, and vice presidents is sixty. Bank officials are youngest, but even they average fifty-seven; while chairmen of the boards of railroads average seventy-six. The period of preparation and education is so much longer in modern life, and the competition is so severe, that the man who lacks sturdy health is just out of luck. You must be able to stay, and stay a long time, in order to make a really big record.

Deac Aylesworth has energy in abundance, and it is the foundation of his career.

Second: But his initiative and his terrific persistence are equally impressive. I speak feelingly. I have had him on my trail.

There is no escaping him. Last year he invited me once to lunch at a club, and as we hung up our hats, he said to me, "I want you to do the greatest service that has ever been performed for an industry in its public relations."

He proceeded to empty a great bundle of material onto the table, and explained that what he wanted was twelve little pamphlets that could be mailed out, one a month, with the fourteen million electric light bills of the country. It was at a time when I was sunk to the ears in work, and I explained just why I couldn't possibly do it.

The conversation ended by my taking the material back to my office, promising to "think it over."

The next morning I arrived very early at the office, dictated a letter explaining why I couldn't possibly write the booklets, called a boy, and sent the material back to Deac.

That night we dined at another club, and I came away with the material again, promising to think it over.

The following morning I was at the office even earlier, in order to send it back again. But I was not early enough. On my desk were about a dozen telegrams, from Owen Young and leaders of the electrical industry from coast to coast. The wording of the messages was so similar that it was perfectly evident Deac had inspired them all. They read as follows:

Delighted that you are to perform this great service for the electrical industry. Magnificent opportunity to create a better understanding between the companies and the great public whom they serve. We will all be indebted to you for your kindness in adding this work to your already busy life.

What can a man do against one who goes after results in that fashion? You just have to let him have his way. Trying to stop Deac Aylesworth when he gets started is like bucking a ten-ton truck.

Third: But it is really fun to go along with him, and that's the third element in his progress. The longer I stay in business the greater value I place on friendship as a power. Men tend to do business with the people whom they like. It would surprise the average man in the country to know how many of the big affairs in Wall Street are done over the telephone by men who call each other Jim and Charley.

The power to form friendships, which is nothing more nor less than the habit of showing one's self friendly, is one of the great powers that lift men up. Deac Aylesworth has it.

Fourth: I spoke at the beginning of the asset which a preacher's son has in growing up in an atmosphere of faith. Faith is one of the big elements in every success; it has been a big factor in Deac Aylesworth's.

I PITY more than anything else the men of little hopes, of petty worries and enfeebling fears. The men who forever pore over charts, expecting the end of good business; who look with worried brows for signs of the saturation of the market, or the slump in consumption, or other evidence that to-morrow is going to be worse than to-day. The most thrilling thing in business to me is that nobody can possibly imagine what the limits of the future are going to be. About the time that we think all human wants are in process of satisfaction, along comes the automobile and creates a mass of new wants, and the biggest industry in the world. The automobile inspires good roads, which are another great industry; it builds tire business, which is another, and turns the oil business into something so much bigger than its original founders had ever dreamed of that the men who sold their stock upon the dissolution of the Standard Oil Company were practically giving it away. The automobile had hardly started when along came the movies, to make another new industry, employing hundreds of millions of capital and thousands of talented people of all sorts. And now it's radio. Aylesworth is right.

"There will always be something new and exciting," he says. "I started in the oldest business, law, and here I am in the newest, radio. You can't tell what the future has for you; that's part of the joy of the game. But if you keep going you know that it will be something bigger and more interesting. There will always be something new."

You Can't Live Your Own Life!

(*Continued from page 49*)

in the evenings to do as you choose. Until you marry and have a home of your own, you may come home here, change your clothes, eat dinner with your mother and me, and, if you like, go out later with your friends. You can have a sweetheart and with her go to the theatre occasionally; you can have friends, vacation trips, neighbors, and all that makes a happy, normal life. There will be days when your work will seem like drudgery; but if you take that job, you will always have freedom and the right to enjoy those things which please you best.

"The other job, which you may have heard of and which you may be tempted to take, will pay you no regular wages. You will "get something for nothing"—but you will do it as a lawbreaker. Eventually, you will be working for the State, twelve hours a day in the most miserable of factories with the most miserable of men. When night comes, they will lock the door upon you; you will sleep upon a hard, narrow cot. You will have no sweetheart, no amusement, no friends, no father and mother to dine with, and no hope to look forward to.

"There they are, my boy—the two jobs which are waiting for you. Which are you going to take?"

And the youngster who told this to a friend of mine added:

"That's all my dad said; but that night I thought it all out for myself, and I decided that I wanted to make something of myself. I've heard the gang on the street corner talking about 'easy money,' but they never once mentioned the price you have to pay. I hadn't realized there was a price, until my dad talked to me that way."

Lack of imagination is often the father of tragedy, because it keeps us from realizing our importance—to others. Without imagination, we fail to see how many may be concerned by our blunders. A reckless boy driving a car fancies that he is alone. He thinks that if an accident should occur, he would be the only one injured. If he used his imagination, he would know that

riding with him in the car are all the members of his family and all his friends. He cannot hurt himself without hurting them.

Is it not possible to doom ourselves to mediocrity because we do not let our imaginations show us our possibilities? We grow accustomed to the idea that we do not count for much. We forget that our lives can be shaped and molded by our own will to do and be.

A good name, a useful life, happiness—none of these is the result of luck. Men do not drift into high places by chance. The average clean-minded, kindly, honest citizen who has made a good job of himself has looked at life as his opportunity. He has recognized his own importance as an individual.

When in camp, the Boy Scouts sometimes play a very interesting game: The patrol leaders give each lad a hatful of rubbish—bits of tin, nails, string, paper, canvas, anything which has been gathered up about the grounds. A prize goes to the boy who makes the most ingenious article from this unpromising material. The finished objects are judged both for workmanship and for usefulness.

I witnessed the judging last summer, and I was impressed by the variety of things which can be made from practically nothing. It occurred to me, as we examined the trinkets, that we were finding out not only which were the best articles but also which were the boys who knew how to make the most of their opportunities.

Life is like that Boy Scouts' game. It gives us bits of joy and sorrow; it hands us friends, hopes, disappointments. And we prove our worth by what we make of all these things.

THE accident of birth puts us into this world, and the miracle of death takes us out of it. But between age and youth, we are in the main the shapers of our own destinies. Any number of things can drag us down, but only one thing can lift us up. And that is the will to make the best of the opportunity life has given us.

It is impossible to measure the influence of any individual.

"I knew him when . . ." is a very human utterance. It represents the desire of every man and woman to express partnership in the life of another. If the boy who delivered groceries at our door twenty years ago is now the head of a great business, we take pride in the thought that once his feet ran across our little patch of lawn. We even like to think that perhaps something which he caught from us is reflected in his achievement.

As the triumph of one we have known delights us, so also does the failure of another grieve us. The most casual of acquaintances can cause us a twinge of sorrow. Perhaps we read with little feeling about an accident which has stricken down a total stranger, but let a name we know ever so slightly appear in the record, and the whole thing takes on a different complexion.

It is impossible not to take an interest in others. Once they have crossed our paths, they become a part of our lives. Let the tramp at the back door commit a crime, or save the life of a child, and the neighbors will all be out to talk about him. If he has outraged decency, those who have fed him will shudderingly regret the fact; if he has made a hero of himself, all who have seen him or fed him will boast of the fact.

What you do and what happens to you mean much to your friend. You can prove this by considering for a moment what your friend's life means to you.

Once you have said of another, "He is my friend," you have admitted that he is important to you. You are interested in his welfare; his happiness becomes your happiness and his sorrow your sorrow.

IF a man is your friend, he can make you break your business engagements, keep you from your golf game, or interfere with your vacation. You may wake in the morning determined to follow to the letter the program you have mapped out for yourself, and yet within an hour you may find that your friend's need of you is greater than your need for selfish gain or glory. Let the word come that he is ill or in trouble, and you close your desk with a bang and fly to his assistance. Is there a death in his family? You are at his side, and you remain there until there is nothing further you can do to comfort or aid him.

What are all these big home-comings and rejoicings about? Why did the people of Atlanta carry Bobby Jones on their shoulders when he returned to them with the British golf championship? To hundreds of those who gathered about him and shouted and cheered, the championship was merely the excuse for celebrating something far more important. Had Bobby Jones been a victorious tennis player or horseman, or had he written a prize-winning song or book, the rejoicing would have taken place just the same. The joy was in the boy!

Bobby Jones of Atlanta! Their Bobby Jones! Bobby Jones, their playmate and companion; Bobby Jones, the youngster they had watched grow up, the son of their friends, and the schoolfellow of their sons and daughters! This lad had triumphed over the golfers of the world! And, in doing so, he had made them all proud and happy.

"Did you hear about young Jack?" said a friend to me the other day.

"No. What's happened to him?"

"They've promoted him and given him his second raise in salary, and he's been with the firm only about a year. His dad's tickled to death."

"*You* seem to be pleased about it, too," I said.

"I am," said my friend. "I'm as proud as if he were my own boy. His folks were neighbors of ours a few years ago and I took quite an interest in Jack. Fact is, I got him his first job. He's making good. He'll be a big man some day!"

Now, I didn't get Jack his first job, and I don't know him as well as my friend does; but I do know his mother and father. And his success has made me happy, too.

It is not often that we smile or weep alone.

Several years ago, when I was a reporter, fire destroyed a shoe factory and two workmen were burned to death. It fell to my lot to break the tragic news to the bereaved families.

I remember vividly the scene as I walked along the narrow little street on which one of those men had lived. The children were playing on the sidewalks in the summer sunshine. A woman was hanging out her washing. A group of housewives were standing at a wagon bargaining with a peddler for his vegetables. Another woman across the way was working in her garden, and watching her from the veranda next door was a gray-haired old woman in her rocking chair.

It was a peaceful and happy little street when I entered it. But when I left it a few moments later, it was in a turmoil of tribulation. The shriek of grief from the stricken widow instantly changed the aspect of the whole neighborhood. The huckster quit haggling over the price of his vegetables to find out why a woman had swooned on her front porch. The children stopped playing, and neighbors poured out of their houses to learn what had happened. Not until many days later did laughter ring again on that street as it rang the afternoon I ventured into the neighborhood with my sad news.

We owe it to our friends to be loyal to the faith they put in us.

Years ago, when I was first beginning to publish my verse, I got a letter from a friend in Grand Rapids, Michigan. Some line of mine had caught his fancy and he was moved to write me a word of appreciation.

"Eddie," he closed that hasty note to me, "I want you to know that I think so much of you that should you ever do anything to lessen my opinion of you, it would hurt me beyond reparation."

No doubt my friend has long since forgotten that sentence; but I shall never forget it. I have always felt that I am important to that man; that I can never afford to disappoint him.

THE self-indulgent life and the wise one do not travel the same road. For one, you must abandon the other. You'll seldom find Wisdom sitting on Folly's doorstep. Old Man Afterthought sobs, "What a fool I've been!" Better listen to Forethought's whispered warning, "Don't be a fool!"

Bill Brown (and that isn't his name) would give everything he owns to-day to recall one foolish hour. Up to a few months ago, Bill was a respected citizen. Happily married, the father of three fine children, successful in business, he was admired by all who knew him.

But Bill had one mighty foolish idea tucked away in his head. He thought that it didn't matter much what he did so long as he himself was sure that he was doing no wrong. And in that spirit, one night Bill joined a gay party. There's no harm, argued Bill, in getting a little hilarious now and then.

But when an automobile crashed at two o'clock in the morning, and the young driver and a woman were killed, and another woman and another man and Bill were taken to the hospital, even Bill couldn't convince himself that he had done the wise and right thing.

Physically, Bill eventually recovered; but his wife and children are still paying the price of his folly. They have been hurt beyond recovery. And all because lovable, sweet-natured Bill had not found out that his life was not his to live!

don't fool yourself

Nice people don't

Nice people realize that anyone may have halitosis (unpleasant breath) without knowing it, and so take the simple precaution against offending others.

Every day, and especially before an engagement, simply rinse the mouth with Listerine, the safe antiseptic. Immediately it destroys unpleasant odors—the breath cannot offend. And the antiseptic essential oils combat the action of bacteria in the mouth.

1/3 Had Halitosis

111 manicurists say that halitosis is apparent in about every third customer—every one of them men from the better walks of life. Who should know better than they?

Face to face evidence

If your pleasures or your work bring you in contact with other people, common decency demands that you, too, take this precaution.

It's a good idea to keep a bottle handy in home or office for this purpose. A free trial bottle will be sent on request. Address Lambert Pharmacal Co., 23rd & Locust Sts., St. Louis, Mo.

LISTERINE

—the safe antiseptic

IS THERE ANY?

What is the point of paying more when Listerine Tooth Paste is a scientifically correct dentifrice and sells for 25c for a large size tube?

To Those Who are Building a Fortune

SAFE Investment is the surest way to fortune. By steadily putting one's surplus in sound, interest-yielding securities, and re-investing the returns, one can amass a comfortable fortune to take care of "the rainy day" or old age.

S. W. STRAUS & CO. offer their services — based on 45 years experience — to all investors with large or small sums at their disposal. We specialize in safety, and the sound first mortgage bonds we offer yield a better rate than other equally safe investments.

We suggest that you write today for literature describing safe and attractive bonds, in $1,000, $500, and $100 denominations. Ask for

THE FAMILY'S PROBLEMS

Our Troubles Began to Disappear When I Stopped Complaining

JOHN was born and brought up in the country; but I had never lived outside the city limits until our marriage, which was before the World War. While John served overseas I lived with his mother on the old farm. She died soon after he came home, and he inherited the farm. It was small and badly run down, but John loved it.

I had never even pretended to like farm life. The returns seemed pitifully small to me, in comparison with the early and late hours and the heartbreaking labor. I made no effort to hide my discontent, especially after the children came and there was more work to do.

Our house was badly in need of paint. The sheds and fences were tumble-down and disreputable. The children were teasing for a radio and an automobile, neither of which we had the means to get. John was discouraged and heartsick, and I added to his burdens with my own complaints. The children had caught my spirit. They talked openly about how much they "hated the old farm."

So far we had kept out of debt; but several seasons of extremely wet weather and poor crops, with prices far below the cost of raising them, drove us almost to despair. Always when I had suggested selling out, John had opposed the idea; but one evening he came in from the field utterly discouraged.

"We will sell if I can find a buyer," he said, in answer to the suggestion I was in the habit of making whenever things went a little wrong.

I was somewhat taken aback at this unexpected reply. "Are you sure it will be for the best?" I asked him.

"What else can I do?" he answered. "I get no encouragement from you, no help from the children."

It was the first word of criticism I had ever heard him utter. It came over me in a flash that what he had stated so matter-of-factly was the absolute truth. When he came home tired from the fields, I used to compare my life on the farm unfavorably with my life in the city. I grumbled about the lack of conveniences, the appearance of the house.

The children were big enough to help both their father and me, but the tasks we imposed on them they performed grudgingly. Having heard me praising city life, they had formed a very exaggerated idea of its joys. They felt abused because their father forced them to forgo these pleasures, and were continually whining for things they knew we couldn't give them.

I couldn't sleep that night. And I lay in bed thinking, trying to see things in their true light. Here on the farm we were sure of a roof over our heads and enough to eat. The children were healthy. They would have been happy if I had not sown the seeds of discontent. If we went to the city we would be exchanging a certainty for a great uncertainty. By morning, I, too, had made a decision. Our family problem, as I then realized, was to make the best—not the worst—of what we had.

"John," I said, "let's try it one more year."

That evening at the supper table, Robert began talking again about how we were the only people in the neighborhood who did not own a car. I took up the cudgels.

"Why, we don't need a car," I said. "You children go to school on the bus; we are only half a mile from church and less than that from the city traction line. A car would be a needless extravagance."

The children were dumfounded, but the look in John's eyes was good to see.

Summer vacation was approaching. It was a time we always dreaded, for when the children got out of school they didn't have enough to do to keep them out of mischief, yet they resented being asked to help around the place. John and I talked the problem over together, the first time we had ever had this kind of discussion.

"I wish I could pay Robert a little each day," he said. "Perhaps then he would help me more willingly."

"Couldn't you afford to give him one of Toots' little pigs?" I suggested. "He could fatten it up himself, and sell it in the fall."

We also planned to have a fourth of the garden spaded, and give it to Miriam. The child dearly loved flowers, and there was a good market for them in the city, or she could sell them to motorists on the highway that passed our farm. Little Jean was given a hen with nine fluffy little chicks. In return for these gifts, we required that the children do their tasks promptly and cheerfully. We arranged a regular schedule for each one of them, with plenty of time off for recreation.

IT HAS not been easy, but my reform is succeeding better than we had dared to hope. The children are extremely interested in their private enterprises, and are eager to make the farm a pleasant home. I am doing my bit too. One of our neighbors owns a hardware store in the village three miles away. I was calling on his invalid wife one day when she deplored the fact that she could not bake her own bread and pastry, as she used to do. Our paintless house flashed into my mind. I offered to exchange home baking for paint from her husband's store. She was more than willing. Robert and I, with a little help from John, gave the house three good coats of paint. It has improved the place so much that I am now bargaining to do her summer canning to get paint for the barn and chicken house.

At odd times, John and the children have straightened and repaired the fences. The old, useless sheds have been torn down and chopped up for firewood. The children have cleaned up the yard and cut the grass in front of the house. Our farm looks a hundred times better; but the best part of it is that the job has been accomplished by all of us working cheerfully and loyally together. We solved our problem by becoming good sports. M. S.

Men And Women

How they differ in mind, motives, and character

By Will Durant

GORKI and Tchekhoff were walking in the Crimea. They came upon Tolstoy as he sat on the beach, his great head bent in meditation, his beard sweeping the sand. They squatted down beside him, and began to talk about women. For a long time Tolstoy listened in silence. Then suddenly he said, "And I will tell the truth about women only when I have one foot in the grave. I shall tell it, jump into my coffin, pull the lid over me, and say, 'Do what you like with me now!'"

Bernard Shaw invited by Count Keyserling to contribute an essay to "The Book of Marriage" refused, saying, "No man dare write the truth about marriage while his wife lives." Nevertheless—

1. THE literature of this subject is the most interesting and the most unreliable in the world. It is interesting, because it directly concerns ourselves. It is unreliable, because it is autobiographical; and all autobiography is fiction. It is frequently the voice of revenge; only defeated warriors contribute to it; and when a man writes a book about women it is his wounds that speak. (This does not apply to essays.) When a man wins with a woman it is usually (if he is a gentleman) with the Pyrrhic victory of marriage; after which he preserves a judicious silence—two cannot speak at once. When he loses, he writes books.

But much more interesting than the essays which Schopenhauer, Nietzsche, Weininger, and other jilted men have written about women would be a candid analysis of men by women. For women understand and manipulate human nature much more intelligently than the hesitantly intellectual male. But women are too clever to reveal themselves in literature; they are content to have realized Job's wish: that their enemy might write a book.

Any normal person must be one-sided on our present subject: he knows only one half of it from within, and perhaps but a fraction of that half intimately, and perhaps not even that fraction honestly or well.

Let us, however, be as careful as we can. We shall (conveniently but artificially) divide human nature into the basic instincts which so largely make it up, and ask in each case how the mind and character of women differ from the mind and character of men. We shall assume that man is born with certain instincts—like food-getting, fighting, flight, and play—which tend to preserve the individual; and other instincts—like gregariousness, speech, and love of approval—which tend to preserve the group; and other instincts still—like mating and parental care—which tend to preserve the race. There are some questionable statements here; but we must not enter into technical controversies that do not vitally affect our problem. We need only ask whether men and women are differently endowed with these instincts, in kind or in degree. And we shall begin with the racial or reproductive instincts.

2. EVEN the male biologist is struck with the predominance of the female in the animal world. In certain parasites the male is a little organism obliquely attached to the side of the female, like an appendix or an additional organ, comparatively minute; in the sea worm Bonella the female is ninety-six times larger than the male; in the butterfly the female is fifteen times as long and ten times as substantial as the male; the queen bee is far larger than any of the males who suicidally court her. The lady spider is so easily superior that in some species she eventually eats the male.

In vertebrates and mammals the male becomes superior in strength; the development of maternal care, and the replacement of external development by the internal growth of the embryo, puts a greater strain upon the female, while the male is left free and largely irresponsible, getting killed or becoming stronger in the endless war for food and mates.

AGAIN, the female has a certain biological priority, as the direct carrier of the body of the race. Man's function is incidental. Nature and the laboratory have corroborated each other in demonstrating the ultimate superfluity of the male. Jacques Loeb persuaded the unfertilized eggs of sea anemones and starfish to develop by contact with acids, or alkalis, or salts, or sugar, or alcohol, or ether, or chloroform, or strychnin, and other substances—so easily and variously was the male replaced.

Thus it becomes bitterly obvious that the female is primary and basic, the male secondary and tributary, in the species. In the great drama of reproduction about which all life revolves, he plays a minor rôle; in the crisis of birth he stands helplessly aside, understanding at last how trivial and subordinate an instrument he is in the development of the race. At that moment, he knows how much closer to the species woman is, how the great current of life flows resistlessly through her, making creation the work of her flesh and blood; and he begins to understand why primitive peoples and great religions worshiped motherhood.

"WAR DRUMS"

A stirring romance of the early American wilderness

By Herbert Ravenel Sass

Original from STATE UNIVERSITY SYSTEM OF FLORIDA

3. THE function of the woman is to serve the race, and the function of the man is to serve the woman and the child. They have other functions also, but they are wisely subordinate to these. And it is in these fundamental and half-unconscious purposes that nature has placed our significance and our happiness.

Hence, the natural industry of the male is protective, acquisitive, and adventurous. His task is to leave the home in search of food; he is life's agent of nutrition, as woman is life's instrument of reproduction. Food is his great aim; if he becomes acquisitive of other things, or of everything, it is because (though he may not think of them so) these other things represent wealth, which in a crisis would offer some assurance of food. Man loves food with a surpassing love, and can be easily subjugated with it; he is fonder than woman of eating and drinking; and ever since Eve offered Adam an apple, woman has ruled man through his stomach.

4. VENTURING about for food, the male becomes a fighter; among the animals he fights with tusks and claws, among men with economic rivalry, among nations with armies, navies, and newspapers. The woman's nature is to seek shelter rather than war; and in some species the female seems quite without the instinct of pugnacity. When she fights directly it is for her children. But visibly she is less given to violence; and her crimes are often associated with periods of physiological disturbance. She is more patient than man; and though she has less courage in the larger issues and crises of life, she has unbounded fortitude for facing the smaller and endless irritations of existence. She bears illness more quietly, whereas the male, unused to quietude, bears illness restlessly, and informs the universe of his pains.

Woman is pugnacious vicariously; she delights in a masterful man. Some strange element in her thrills at the sight of strength. Occasionally, this ancient joy in virility overrides her more recent economic sense; and she will marry a fool if he is brave. She adores a man who can command; if she seems less submissive in our days, it is because men have less force of character than before; perhaps the stupefying routine of industry and the enervating artificiality of the intellectual life have habituated man to slavery, and stolen his courage away.

Woman wins her victories not through fighting nor through bravery but through persistence and tenacity. The male's pugnacity is more intense and open, but less sustained; he is readier to make up, or to surrender for the sake of peace. He may growl; but she will triumph by repetition, like an advertisement.

Napoleon, who could master a continent, could not rule his wife. "My force of character," he tells us, "has often been praised; yet to my own family I was nothing but a weakling, and they knew it. The first storm over, their perseverance, their obstinacy, always carried the day; and from sheer fatigue they did what they liked with me."

This sounds the characteristic note of every domestic symphony. Man is often defeated before the battle begins. And if by some chance the man should win, the woman need only cry, and he is lost. The wise wife will put it down as a fundamental rule of war: "If at first you don't succeed, cry, cry again."

5. IN WHAT might be called the instincts of action—crawling, walking, throwing, leaping, climbing, running, play—the female of the species seems less positive than the male. He is inclined to useless movement, and she to superfluous stability. She is lazier, and usually the more she receives the less she does. Hence, she is the more dangerous sex, for idleness is the mother of flirtation. To be virtuous, as to be happy or graceful, one must be busy.

6. IF THE woman surpasses man in the game of love, he surpasses her in friendship. Men may be friends, but women can only be acquaintances. They haven't that passion for disinterested friendship that men have. They find it difficult to entertain one another for any length of time, unless they get down to personalities. And it is all very natural; as La Rochefoucauld long since noted, "The cause why the majority of women are so little given to friendship is that it is insipid after they have felt love." Love, as the poet said, is for man a thing apart, but it is woman's whole existence. We are what we must be.

7. IN THE group of instincts which we have just surveyed—the instincts that preserve the individual—man's superiority is manifest and natural. But in the instincts that preserve the group, woman is as superior as in the instincts that preserve the race. She is more social and more sociable; she likes company and multitudes. She does not ask which are the best plays, concerts, or resorts, but which are the best attended; though the difference here between herself and her mate is microscopic. (At least she tries to like the best, whereas the normal male is dragooned into attendance upon concerts, exhibitions, and problem plays only by wifely compulsion.) She is less capable of solitude than man, and far less likely to

Husbands and Wives—Here's Something You Can Argue About!

BEFORE you read Doctor Durant's discussion of the differences between men and women, you should consider the nineteen points he sets out to prove. Here they are. Read them carefully; then thresh them over in the family circle. You may agree with Doctor Durant in all of his statements, in some of them, or in none of them. But you will be interested in what he says, for the subject he has selected is one upon which everyone has lively, definite opinions. The numbers given below correspond to the numbered sections of the article. After you have agreed, or disagreed, with these brief statements, read the author's elaboration of the points he makes, and see if your opinion remains the same.

1. Women understand men better than men understand women.
2. Woman is biologically the more important and fundamental sex.
3. Man is more acquisitive and adventurous.
4. Man is more pugnacious and violent; woman more tenacious and subtle.
5. Man is more active, woman lazier: "the more she receives, the less she does."
6. Woman surpasses man in love, and is surpassed by him in friendship.
7. Woman is more social, man more solitary.
8. Woman is more talkative; "she is a sieve for secrets."
9. Woman is more imitative, more addicted to custom, convention, fashion, fads.
10. There is more difference between man and man than between woman and woman.
11. Woman is more dependent upon social approval; more polite, considerate, and kind; richer in the qualities that make for altruism and morality.
12. Woman is more religious; man more skeptical.
13. Man is more intellectual, but less intelligent.
14. Woman is cleverer, surer, and more practical: "No man under thirty is a match for a woman of twenty."
15. Woman matures more rapidly; man more fully.
16. Woman is more conservative.
17. Fewer women are geniuses and fewer are idiots.
18. Woman inspires art, but seldom creates it.
19. These differences are acquired rather than inborn, and are visibly diminishing as woman passes to a wider and rapidly changing life.

PHOTOGRAPH BY D. JAY CULVER

Dr. Will Durant, author of "The Story of Philosophy," and one of the best known scholars of to-day, was born in North Adams, Massachusetts, forty-one years ago. Besides being an author, Doctor Durant is director of Labor Temple School, of New York, and is a lecturer of wide experience and great popularity. "The Story of Philosophy" has had one of the most sensational sales records ever made by a non-fiction book

become a hermit. She feels more incomplete without him than he without her—doubtless because she needs his protection and, usually, his leadership. She is a gregarious animal.

8. And, being gregarious, she is more talkative. Rumor has it that she is a sieve for secrets. Franklin said: "Three can keep a secret if two of them are dead;" but to make this true of both sexes one would have to raise the rate of mortality. Woman is more expressive, because she is more frequently possessed with feeling and emotion. And her face is almost as expressive as her speech. She has not learned, like the cautious business man, to maintain a countenance unchanged in the flux of profit and loss, of pleasure and pain. With this fluid immediacy of facial expression goes a greater ability to detect the signs of feeling and thought in others; hence, it is harder to deceive a woman than a man—as everyone discovers after trying both.

9. Gregariousness varies with timidity and imitation. Woman usually leaves the initiative to man, even in love. Here above all his mastery lies. The woman is uncertain of herself; always her physical weakness and her economic dependence weigh upon her, dulling the edge of her courage, withdrawing her from rebellion and enterprise.

She clings to the customary and the conventional, piously imitative of the past, and nervously imitative of every present wind of fashion in dress, or manners, or ideas. She offers slightly readier material than man for the fads and crazes which tend to replace the orderly advance of thought; the spiritualist medium comforts her with apparitions, and new and fanciful cults find bread and butter in her trustful fantasy.

10. Woman dares not vary from the norm and average so recklessly as man. She gives the world fewer idiots, and fewer geniuses. She is more like the others of her sex than the man is like other men; the compulsion of a changing environment, and of diverse occupations, professions, and trades, has differentiated man into a thousand varieties; but the traditional industry of the home and the ancestral tasks of finding a mate and rearing a child have operated on almost all women, forming them in one mold, wherein the face is always different, and the soul always the same. Perhaps this is part cause of the male's complacent passage from one love to another; he need only learn a new name, but no new artistry; even the old letters will sometimes serve. But a woman who has loved and lost may find her loss irreparable; she has bound her spirit to a specific image; and wherever she may go her heart will linger with her memories.

11. The last corollary of this greater gregariousness in woman is her passion for social approval. The opinion of her neighbors weighs more with her than with the man, for social relationships tend to absorb such hours in her life as are unfilled with love and motherhood. She surpasses man in vanity; she is more conscious of her virtues and her beauty; and will spend half an hour in powdering her nose. Her expressiveness often lends itself to gossip, and her imitativeness to conformity. Even more than her mate, she is anxious to rise in the world; and her hunger for position forms half the wind in his sails. Therefore, she is ingratiatingly inferior to her superiors, and proudly superior to her inferiors.

But, for the same reason, she is more polite; and (her social sensitivity merging with her motherhood) she is kinder and more sympathetic than the male. Her vanity is amply balanced by her considerateness and her gentleness, her readier disposition to nurse or help the ill or the weak, and her richer endowment in the qualities that make for altruism and morality.

12. Finally, these characteristics of mind and heart make her more religious. Her emotional tension renders her quickly sensitive to the profound appeal which religion makes to the senses and the feelings. She feels more keenly the bereavements that sadden life; and her longing for reunion with loved ones whom she has lost convinces her of immortality. Nature remains (*Continued on page 96*)

This Haunted House Has Only Happy Ghosts

By Appleton Street

AS YOU enter New Orleans from the east a large sign greets you in the railroad station: "America's most interesting city." Hotel folders and guidebooks repeat the slogan. And, although effusive publicity takes the edge off any virtue, most visitors to New Orleans grant that there is a great deal of truth in the claim. The old city behind the levee is distinctive, and certainly it is among the half-dozen most interesting urban spots on this continent.

While there last winter, it occurred to me to ask, Who is the most interesting person in this most interesting city?

So I asked various members of the community: policemen, school-teachers, two bankers, a merchant, store clerks, a librarian, clergymen, a river pilot, a tugboat captain, an engineer, a restaurant proprietor, and the landlord of an apartment house.

The name that was most often mentioned was that of William Jennings Warrington.

"Where does Mr. Warrington live?" I asked a policeman.

"Mr. Warrington, huh? You looking for Mr. Warrington?" said the officer, eying me appraisingly. "Well," he finally decided, "go to Royal Street, and ask anybody. They all know Mr. Warrington. Ask for the Haunted House."

The Haunted House! Can you imagine anything more exciting? Living in a haunted house? "Most assuredly," I said to myself, "this man is going to prove interesting."

I had no trouble in finding the Haunted House. The next man I asked answered with the precise number—1140 Rue Royal. "Just five blocks more." I walked on, pausing at intervals to study some of the picturesque houses, for I was in the center of the old French and Spanish city that was the original New Orleans.

I was reading a tablet in the wall of an ancient dwelling, when a gossipy old lady stopped and began to volunteer historical details. She pointed out other buildings, and rattled off the names of former residents: Adelina Patti lived in this house, Jenny Lind in that, General Beauregard in another, Paul Morphy, the chess champion, a few blocks back, and yonder was the house from which the Black Hand kidnapped a small boy. The house built for Napoleon was in the next street. Finally, she seemed at the end of her catalogue, and I turned to go, but she stopped me: "Then, there's the Haunted Exchange."

"You mean the Haunted House, where Mr. Warrington lives?"

"Yes, Mr. Warrington—God love him: He lives there with all his men; but they do say as a ghost walks it at night. People have heard things, and seen 'em. I don't put much stock in such ideas, but there's a story about that old house and the rich society lady what lived in it before the War. They say as how she tortured her slaves to death, and the ghost of one comes back every dark night. Once my sister saw it at the balcony."

I hurried on and found No. 1140. Its great door of carved ivorywood was open. I walked into the entry and met a man coming down the winding stairs of the hall. He said I would find Mr. Warrington in the room on the left. So I turned in another door, and came face to face with a gray-bearded man, whose eyes, looking straight at me, were the gentlest and kindest and twinklingest I have ever looked into.

I KNEW instantly that this must be Mr. Warrington—there could be no superior to him under the same roof. I explained the reason for my call: the desire to talk with him—many people in the city had said he was the most interesting individual in it.

"That's a good joke," he answered, laughing quietly. His voice was like his eyes, friendly and hospitable, a pleasant Southern voice, but brisker than most. He invited me to come up to his room, and we climbed two flights of the Haunted House to a snug apartment where coals glowed in an open grate. And there we talked for three hours.

There were interruptions. Men dropped in to get instructions from "the old man," as they call him with the familiarity bred of deep affection. A party of sightseers, curious to explore the Haunted House, made a clamor in the halls. Finally, a genial fellow, John, came up with cakes and a steaming pot of coffee.

I paid many visits to that room and spent many hours with its master before I got the story of Mr. Warrington and his house.

"It was built by my great-great-grandfather, Jean Remairie," said Mr. Warrington, "and stands on land which was a royal grant to Jean and his brother Henri. They planned to erect a double mansion where they could dwell side by side, with their families. But Henri soon became disillusioned with Colonial life and returned to France, and only Jean's half of the plan was completed."

Even at that it was a considerable project and required three years to carry through. The stones and brick were brought from France, the architect from Spain. Richly carved doors, delicately figured wall frescoes, solid mahogany stairs, and other luxurious fittings, were imported. When at last, in 1780, this mansion of forty rooms was completed, it at once became one of the show places of the Colony. The house was surrounded on three sides by a tropical garden, and was the setting for many brilliant social events.

"In the course of years, my great-great-grandfather returned to France," continued Mr. Warrington, "and the house passed into other hands. Marshal Ney, General Lafayette, Louis Philippe, Henry Clay, and other notables were entertained here. Its owner at this period was the aristocratic and beautiful Madame Delphine Lalaurie, daughter of a wealthy widow, Lady MacCarthy, who lived on a large plantation below the city.

"Lady MacCarthy was a very humane woman of strong progressive ideas. She established a school on the plantation for the many negro slaves whom her husband had brought from San Domingo. In fact, she sent all the way to Connecticut for a teacher, and I am told that this was the first school for negroes in the South.

"A tragic irony followed her. In the early years between 1840 and 1850 there was an uprising among natives of San Domingo, which was reflected in a similar uprising among those who had been imported to Louisiana. In the rebellion here thirteen white people were mysteriously killed, and among them the benevolent Lady MacCarthy.

"The murder of her mother was a terrible shock to Madame Lalaurie. Unable to discover the murderers, Madame brought three suspects—a man, a woman, and a girl—to New Orleans and confined them in the servants' quarters of her Royal Street home. Crazed with grief, she tortured these slaves, hoping to make them confess.

"ONE day Madame Lalaurie gave a great party. As was the custom, guests brought their children, and the children were allowed to run over the place in their play. Some wandered back to the servants' quarters, and later at home reported what they had seen. In this way, three or four families learned what was happening, and a few days later a self-appointed committee of citizens waited upon Madame Lalaurie.

"Just what was said at this interview never became known, but its results were swift and final. Madame Lalaurie allowed the slaves to be released, and she prepared to leave the country. She closed her Royal Street home and never saw it again. She lived at the estate of a friend outside the city until her ship sailed for France.

"After this abrupt abandonment of the house, strange rumors began to circulate. The facts were soon twisted into the most fantastic stories—it was said that slaves had been killed (*Continued on page 118*)

WHO IS the most interesting man in New Orleans?" asked a writer for THE AMERICAN MAGAZINE. "William Jennings Warrington" was the answer from most of those to whom he put the question. Whereupon the writer sought out Mr. Warrington, whose picture is at the right, and from him obtained the remarkable story of the famous "Haunted House" of New Orleans; a house where human hopes are revived and human hearts set again upon the road to happiness. Mr. Warrington has given all his means, and still gives all his time, to those who are in need.

TO THE left is the magnificent door of the "Haunted House," through which hundreds of desolate men have gone, to find inside a kindly man who has the rare gift of imparting courage to his fellows. (Below) The "Haunted House" itself.

Edward E. Shumaker

MR. SHUMAKER is president of the Victor Talking Machine Company. He was born on a mountain farm in Somerset County, Pennsylvania forty-five years ago, and at various times he has taught school, worked in a stone quarry, sold Bibles, farmed, mined coal, and earned a living as a detective. "I can't say that I ever had a definite goal," says Mr. Shumaker. "Work was work, and I was ready to follow wherever it led. The same fundamentals that make for advancement in one line, make for it in another." The article beginning on the opposite page relates how his idea has carried him along. He was a leader in the recent rejuvenation of the phonograph industry.

His Questions Were Hindside-'fore But He Got His Answers Straight

Out of the mountains came Edward E. Shumaker, bringing his Pennsylvania-Dutch dialect, and his incurable habit of asking questions—Men laughed at his curiously twisted sentences, but respected his determination to learn, a determination which, two years ago, saved an industry

By Sherman Gwinn

TWO years ago one of America's most widely known factories stood idle. Its shops were empty and silent. Its storerooms were loaded with unsold goods. Business men acquainted with its plight shook their heads over the catastrophe. They said the company, known the world over, had reached the end of its market, and was through!

Not this company alone, but the entire industry in which for two decades it had been dominant, was at stake in that year of 1925. This was the talking-machine industry. Almost overnight a new toy—radio—had swept into popular favor. At the mere twirl of dials on a box, music and speech could be plucked from the air by any novice.

"The phonograph is dead," was some men's verdict; "doomed by radio as surely as the horse-drawn vehicle was doomed by the automobile!"

Others said that, regardless of radio, the phonograph market was saturated. The demand had been met, the country was surfeited.

Already one big phonograph company had been taken over by a creditors' committee. Many smaller ones had ceased to exist. Dealers were abandoning the phonograph for the radio, to forestall threatened failure. The future of the industry was black.

But over in Camden, New Jersey, in the idle plant of the Victor Talking Machine Company—the stricken company first mentioned—one man, and he almost alone, "saw white!"

"The talking machine is not doomed by the radio," he kept insisting. "The market is not saturated. Conditions are not bad. What we need is a better product. It is *we ourselves* who are at fault!"

Edward E. Shumaker was the tall, spare, bespectacled and earnest speaker who stood up to dispute the almost unanimous verdict of the leaders of the industry. Not yet forty-three years old, next to the son of the company's president he was the youngest member of the Victor company's board of directors.

He had farmed, taught a hill-country school, and had sold books from house to house. He had mined coal, labored in stone quarries, and been a detective. As an errand "boy," almost six feet in height, paid nine dollars a week, he had poked about the Victor factory, laughed at by everybody for his Pennsylvania-Dutch accent and his habit of expressing himself "hindside-before."

But nobody laughed now as Shumaker faced that worried group of directors. Twenty years of practice had taken most of the kinks out of his speech, and while learning to talk straight he had also learned to see and to think straight. No longer was he the gangling errand boy. This big, lank Dutchman was the man who mounted the bridge in the storm; the one among them who held out hope!

"The public is not tired of the talking machine as an instrument," he went on. "But it *is* tired of the talking machine we are offering it. It wants a radically better instrument and better records. Produce such an instrument and records, and we will be swamped with orders."

DISAPPOINTMENT and chagrin showed on every face around the directors' table. Shumaker had not propounded a solution, but an impossibility.

True, for some years no major improvement had been made in the talking machine; but there was a reason. In the several laboratories of the industry, and particularly in that of the Victor company, several millions had been expended in experimentation and research; and the money had netted nothing of real value. Minor improvements had been developed, more beautiful cabinets had been designed, greater artists had been engaged to make records. But, *fundamentally*, the talking machine had undergone no change.

But, wait. Shumaker wasn't through. All of the direct research to date had been made *within* the industry. Its improvements, consequently, had come from within. The experts had evolved their conclusions within their own factory walls. They had not looked *without*, whereas Shumaker had. It was a sort of habit of his, this looking without.

And in looking outside of the industry, he had observed, in a certain famous laboratory in New York, that experts had for years been experimenting with the recording and reproduction of sound. They had been trying to improve telephone communication—something which had nothing to do with the talking machine. But the talking machine, like the telephone, deals with sound.

"While we have been spending thousands on research," said Shumaker to the directors, "these telephone men have been spending millions. There is no greater laboratory for the study of sound in the world. It has equipment with which we cannot expect to compete.

"I have learned that the experts of this laboratory have made discoveries in sound reproduction of which we do not dream. If we can utilize those discoveries we can revolutionize the talking machine!"

IT WAS an unprecedented proposal that he made—that the largest manufacturer of talking machines should go to the research laboratories of an unrelated industry to learn something to its advantage! Nevertheless, a few days later, Shumaker went to New York to study the discoveries made by Bell telephone research workers. As a result of his report, in June, 1925, the Victor company contracted for the use of certain of these discoveries in the talking-machine field. At once Victor's own experts began to adapt them to their own use.

"What about our old talking machines?" demanded the directors. Over two hundred thousand of them were unsold.

"Cut the price! Sell them!" advised Shumaker.

The price was cut in half, a loss to the company of five million dollars! Machinery, a few months earlier considered the best in the world, was scrapped or converted. Methods that had stood for twenty years were changed in a night. A fortune was expended on the heels of that fortune lost, all because of the courage, faith, and vision of a single man!

In November, 1925, the resultant product was announced—a talking machine that *was* new, that *was* radically improved, that *was* different. The impossible had been done. The public alone was to sit in judgment: Had Edward Shumaker, the ex-errand boy, been right?

And the public in two weeks' time rendered a verdict that has few parallels in industrial history. Two weeks after the first announcement of its new instrument, the Victor Talking Machine Company, which had been perilously near the rocks, had $20,000,000 in orders on its books and 8,000 workers on its pay rolls! During 1926, which saw further revolutionary improvements in its product, the sales total mounted to $48,664,000—and 1927 looks equally good. (*Continued on page 144*)

Old Jupe

A story

By James C. Derieux

ILLUSTRATED BY STOCKTON MULFORD

"YOU just go ahead, Uncle Jupe, as you have always done," said William Preston. "The cabin is yours as long as you and Lucy live, and you can farm as much land as you please. Of course I won't charge you any rent."

"Yassir," replied Jupiter. "Yassir." There was much more than simple acquiescence in the old negro's heart, but words were always few with him. And today he could find none at all, for Colonel Henry Preston, his Marster, lay in the family burying ground beneath a mound of fresh earth. Beside the grave of the Colonel was another mound, almost as fresh. The old Missis had died only a week before her husband.

The children, five daughters, and William, the only son, had come home for the funeral of their mother, and even as they were wondering how to make the Colonel's remaining days comfortable, he had solved the problem by failing one morning to awake.

The family was quickly roused to hear of the quiet death of the old Colonel. "Heart failure," said the doctor who was hastily summoned. "Or maybe I should say a broken heart. You Prestons," he added, turning to William, "have always been people of deep devotion, especially to women. Your father never had a thought except of your mother. Jupiter knows how he depended upon her."

"Yassir, he was powerful faithful to de Missis," said Jupiter simply.

"You are a lucky young man, William," the doctor went on, "to have such a fine inheritance. Character, my boy, that's what has come down to you! These acres are not much good, and the house is old; but that doesn't matter. You are rich, William—rich in the memory of your father and mother."

"I am sure of it," answered the young man. "If I can be half the man Father was, I'll be satisfied."

THE funeral had been held the day after the old Colonel's death. Once more the minister reviewed the lives of the Prestons, who had fought on against increasing odds; who had kept Preston Hall open for the sake of the children, the grandchildren, the tradition; and who had died at last still strong in the faith that all was, or would be, well with the world.

The grief of the children was sincere and deep; but not so deep as that of old Jupiter. For him the world had ceased to exist. Mechanically he listened as young Marse William told him to keep the cabin and the acres he had always planted in cotton; to go on as he had always done. Mechanically, after the departure of all the children and relatives, he resumed his daily routine.

Life had run serenely for Jupiter until the old couple died. Poverty is nothing to a negro of his type. There are two ways to be rich: one is to have much, the other to want little. Jupiter had ever chosen the latter way. But now he wanted something, and his want could not be supplied. He wanted the guidance, the companionship of his Master; he wanted the knowledge that in the Great House was one to whom all troubles could be taken, and with whom they could be left.

But the Marster was gone, the Missis was gone; and the Great House stood gaunt, empty, and lonely.

Yet, in the vanished days of its glory, this same Preston Hall had been the greatest plantation house in all of that countryside. Not even the Civil War, with its disastrous results to the South, could bring about the downfall of the proud old place. Colonel Preston was a subdued but not a crushed cavalier.

Neighboring plantations were abandoned after the slaves were freed; some because their owners had been killed, others because the families moved away to start life over again. But the master of Preston Hall lived on within its spacious walls, and the fine old Colonial house, with its six tall white columns, still invited the friendly to come inside and partake of its hospitality, still bade defiance to the unfriendly.

"Preston Hall may surrender some day," the Colonel said, "but, by the eternal, sir, it will not be in my time!" And he had looked toward the grove of big cedar trees where lay the mortal remains of the older Prestons, the men and women who had made this plantation famous. Family burying grounds, in Colonial days, were generally on the family estate, and the Colonel, when he made this assertion, was serving notice to the dead as well as to the living that he would go on with his task.

But though the Colonel's money had gone the way of the Confederacy, his standing with his negroes was altered not at all. In a vague sort of way they knew that something of tremendous importance had happened; but nothing had happened to their master—nothing that they could see.

ESPECIALLY was Jupiter oblivious to the changing times. The son of a slave, himself a slave until he was nearly grown, Jupiter knew nothing except to do the bidding of "Marse Henry." Old Mercury, Jupiter's father, had been a house man at Preston Hall, and had gone off to war with the Colonel as a body servant, returning

"Whut else I gwine do?" asked Jupiter, hopelessly. "O Jesus, he'p me—de Marster done gone!"

only after a spell of fever had made him too feeble for the hard campaigning in the Confederate cavalry. Venus, the cook, was Jupiter's mother. One of the early Prestons had been an amateur astronomer, and his hobby was still reflected in the names of the negroes on the place.

Before the war it had been Mercury's duty to come up to the big house each morning and wake all those who slept there. But when he went off with his master, this task had fallen to his son, and Jupiter had never relinquished it. There were many bedrooms in the old mansion; and at eight o'clock each week-day morning Jupiter knocked at the doors of these rooms. "Breakfuss 'most ready, Marse Henry," . . . "Breakfuss 'most ready, Miss," . . . "Breakfuss 'most ready, Marse Will," he would call, until he had gone the rounds.

From most of the rooms, as the years went on, there came no answer to his knocking, for the house was not always full, as it had been in the old days. But this made no difference to the negro. He rapped at each door, because the Colonel had told him to. That was reason enough.

In the main, the Colonel had adapted himself to the new conditions of life; but he still held to certain customs of by-gone years, and to have a servant knock at each door was one of these customs. It was a tie to the past. It helped him to shut out from his mind the unpleasant realities of the present by holding fast to evidences of what had once been.

"Jupiter," he would say, "remember that you are to call at each door every morning. You never can tell when guests will come in for the night; and it isn't my idea of hospitality to have breakfast without giving all under my roof a chance to eat it."

"Yassir, Marse Henry," Jupiter would reply.

The Preston children had grown to young womanhood and young manhood. First, Cynthia, the eldest daughter, married, then the other girls followed her. The Colonel's hopes for the future of his plantation were centered upon William, who still was unmarried. But William grew restless, and after two years at the state university, he announced that he had accepted a job with an engineering firm in Atlanta. Families break up—especially those that have been reared on unprofitable farms, and in sections that have seen their best days.

AND so it came about that Preston Hall had entered upon its period of loneliness. Colonel Henry still rode a shapely horse, and superintended the work on the place, but he was the "Old Marster" now, and his wife was the "Old Missis." And Jupiter, the faithful, was "Old Jupe," or "Uncle Jupe." Only to the aged people in the great house was he still Jupiter. His kinky hair was becoming the color of unbleached wool, his hands were hard and knotty; but still he did not sense the fact that life was moving on. For him, it was the same. He lived in the little cabin in the master's yard; he attended to various tasks about the house; he planted a small field in cotton—and he knocked, each morning, at all the bedroom doors.

At Christmas, the children would come back. The daughters began to bring their own children with them, and so, at least once a year, old Jupe had the pleasure of hearing his raps answered. True, the answers were not always pleasant, for no man, least of all a man on vacation, likes to be waked early in the morning.

"For goodness sake, what's the matter with you, Uncle Jupe?" one of them would call in answer to the insistent raps of the old negro. "Didn't I tell you last night not to wake me until day after to-morrow?"

"Breakfuss 'most ready," Jupiter would reply, and then slip down the hall to escape any further denunciation. They weren't denunciations, of course. He knew that, and though they sounded ever so angry they made the blood flow warm about his sturdy old heart. This family loved Jupiter.

NINE months had passed since Jupiter had entered upon his aimless, hopeless life without a master; but during these months the old negro had been faithful to his lifelong habits, faithful to the instructions given him by the Colonel, and repeated, as he believed, by young Marse William.

Every week-day morning at eight, and every Sunday morning at nine, Old Jupe had gone to the Great House, and knocked at every bedroom door. Not once had he received any response, though often he listened intently, a strange, expectant expression on his face. Jupiter, like his old master, was unwilling to look facts in the face—or perhaps his withering brain could not grasp them.

Lucy, his wife, had humored him at first, thinking it best not to interfere with this useless custom of his. "He been gwine up to de Gre't House and rappin' at dem doors so long," she explained aloud to herself, "dat he carn't quit suddenlike." But after a time she heard that people thought her husband had gone crazy, and she began to remonstrate with him.

"Dey ain't no sense in you goin' up dere ever' mornin', Jupe, and knockin' at dem doors," she said. "Dey ain't nobody dere now, lessen it be ghosts, and ghosts don't want to be woke up in de mornin'. Dey walk nights, and want to sleep when daylight comes!"

"De Ole Marster tole me to knock," answered Jupiter, a troubled look on his wrinkled face. "And de Young Marster tole me to go on doin' like I alus done!"

"But Young Master never meant for you to wake folks whut ain't nowhere 'round. Man, you's 'stracted!"

"Whut else I gwine do?" asked Jupiter, hopelessly. "Whut else I gwine do? O Jesus, he'p me—de Marster done gone!"

The unconscious rhythm of the old man's remarks cut a deep furrow in his failing mind. He had no idea then that he was, in his answer to Lucy, composing a chant that was to comfort him thousands of times. There was no logic in it, but there was rhythm, and rhythm is very close to a negro's soul. In time he came to sing this chant over and over again, especially in the late afternoons, when the day is merging into night, that hour when men's emotions get the better of their reason, and "sperrits" begin to walk.

"He's ha'nted!" the negroes would say, when they heard him chanting softly to himself:

> Whut else I gwine do?
> Whut else I gwine do?
> O Jesus, he'p me,
> De Marster done gone!

In the mornings, too, he would take refuge in this sing-song prayer after he had gone to the Big House, rapped at the doors, and come out again. Somewhere in his mind a spark of his old-time sanity was telling him then that it was useless to rap at doors in an empty house, and this chant was the answer his emotions gave to the faint voice of reason.

Once the negro preacher had come to see Jupiter, with the intention of casting out the evil spirits that were reported to live in his rusty old frame. But Jupiter talked in such a weird fashion that the preacher regretted his visit; regretted it especially when he came out of the cabin to go home, and discovered that darkness was near at hand.

He walked a wide curve to avoid going close to Preston Hall, and struck into a jog trot when he realized that unless he hurried night would come before he got past the church with its cemetery. Jupiter had awakened the primitive fears in his mind, and he had no intention of taking chances with "ha'nts" when he was alone.

To members of his congregation, the preacher talked about his visit. He even enlarged upon what Jupiter had said to him, and described in detail some mighty curious things he had observed about the Big House. What he said passed from one negro to another, and so Preston Hall, stately old house that it was, became a place of terror to all the countryside. And old Jupe became a man possessed of the devil. The negroes were kind to him. Deferential, in fact; but they did not care to be near him after the sun had gone down.

THUS came the first silent Christmas Preston Hall had ever known—the Christmas following the death of Colonel Preston and his wife. Old Jupe rose long before light that morning, mumbling to himself that he would have to "wake de chilluns, 'cause dey allus wants to be up betimes on Christmus Day." Up to the Great House he walked, a suggestion of sprightliness in his step, for the magic of Christmas time had entered his wearying soul, and had crowded out of his mind what reason was left there.

Eagerly he entered the house, and went straight to the room that had been William's. "I'll wake him fust," he muttered. The door stood open; but when he gazed into the empty chamber, his memory returned. He seemed to recall that this was merely a form he was going through, and that nothing would come of it. Yet he knocked at the half-open door, mumbled something to himself, and went on to other doors.

Outside the house again, he looked wildly about and hurried back to his cabin.

"Whar you been?" demanded Lucy.

"I been doin' whut de Marster tole me to do," answered Jupiter.

"De Lord have mercy on him!" prayed Lucy.

The second Christmas after Colonel and Mrs. Preston died, William came back to the old home, bringing some friends with him. They were young engineers like himself, and they came to join him in a

"Jupe!" she called. "Come here, man, and see who done come!"

week's hunt. William had left his share of the furniture in the house for just such an occasion as this. He had arranged with Sam Morgan, a country merchant near by, to superintend the estate for him, to keep the taxes paid out of the small income from farms that were tenanted, and attend to anything else that might be necessary. But not much superintending is required to look after an abandoned plantation. The task is mostly to stand by and watch the place go down.

"How's everything, Sam?" called William, as his car stopped in front of the store.

"Oh, about like it always is," answered the merchant. "Your old nigger Jupe has gone crazy. I reckon that's all the news there is. Others paid their rent, or part of it, and I've kept up the taxes, like I wrote you."

"You say Uncle Jupe is crazy?" asked William, with a worried look on his face.

"Crazy as a bedbug," replied Sam. "Goes up to the old house every mornin', they tell me, and knocks at all of them doors."

WILLIAM started the car, heading slowly toward his old home.

"Who is the crazy nigger?" asked one of his friends.

"Our old house man," answered young Preston simply. "Gosh!" he added, "I'm sorry to hear about him. Uncle Jupe always seemed like a solid tie to the old days."

They reached Preston Hall, and got out of the car. Out in front the men stood looking at the impressive old house.

"If I had a place like that," exclaimed Joe Tomason, "you'd never catch me in an office messing around with blue prints and plans."

"It *is* great," admitted William, his bright eyes a little sad, and his voice more subdued than it had been in months. "Makes me wish I lived here again. But you ought to have seen it when everything was fixed up. The bushes and vines are about to take it now. Guess I'll tell Uncle Jupe to cut them back."

"Don't tell him while I'm here!" put in Joe. "A crazy nigger with an ax in his hand is not my idea of a Christmas decoration!"

"Crazy or not," countered young Preston, "Uncle Jupe will never hurt you. He never did anything yet but for our good, and I'll bet he can't go crazy enough to hurt one of us or one of our friends."

The young fellows went hunting almost immediately. William had a negro guide go with them. "I can't go," he explained. "Got to look after some things." The things he had to (*Continued on page 177*)

Science Is Leading Us Closer To God

An interview with Michael Pupin, the distinguished scientist

By Albert Edward Wiggam

SCIENCE is making us better Christians.

Science is teaching men how to coöperate more intelligently with God; it is teaching men what God's laws are, and how to obey them.

Science is increasing our belief that the human soul is the greatest thing in the universe, the supreme purpose of the Creator.

Science is increasing our belief that the human soul will continue after the death of our physical bodies.

Science is leading us closer and closer to God.

These are a few of the impressions which I carried away from a recent Sunday morning spent in talking with Michael Pupin on what science means to man's spiritual life. It was a great privilege to sit and talk with one of the foremost mathematical physicists and inventors working in scientific fields to-day.

He sat at his big work table, over which were scattered sheets and sheets of paper covered with mathematical calculations. These were beyond my power to comprehend. But the philosophy, religion, and spiritual life about which he talked, and which he said were the lessons that mathematics, physics, chemistry, and biology have taught him, he made so plain and simple that anyone could understand them.

If you have never read Doctor Pupin's story of his own life, entitled "From Immigrant to Inventor," I hope that sometime you will have that opportunity. It is a great book. Michael Pupin came to America fifty three years ago as an ignorant Serbian peasant boy of fifteen. Last year, he was elected president of the American Association for the Advancement of Science, one of the highest scientific honors in the world. What he says, therefore, is the outcome not only of profound scientific knowledge but also of an intimate knowledge of life—its hardships, struggles, disappointments, failures, and successes.

"When I was a boy in Serbia," said Doctor Pupin, "I used to spend a part of my summer vacation, along with other boys, herding the grazing oxen that belonged to our fathers. At nighttime I was enchanted by the stars, blazing in the firmament. I imagined that the light of these stars was a message from God telling us the hour of the night and the direction of the approaching dawn.

"Whenever the vesper bell would ring, my mother, who was a pious woman, would say, 'Michael, do you not hear the divine message which calls you to church to assist the priest in his service at the altar of God?' Thus gradually I began to imagine that the sound of the church bell also was a message from God.

PHOTOGRAPH BY MISHKIN, N. Y.

Dr. Michael Pupin, one of the most distinguished living scientists, was born in Serbia sixty-eight years ago. He came to America as a boy, and made his own way while getting his education. He holds degrees from Columbia University, where he is professor of electro-mechanics, from the University of Berlin, and from Johns Hopkins. Last year he was elected president of the American Association for the Advancement of Science, one of the highest scientific honors in the world. To mention only one of his inventions which has profoundly affected our daily life, we owe to the Pupin loading coil the great range of the modern long-distance telephone. His book, "From Immigrant to Inventor," giving the story of his own life, is widely read

"IT IS not surprising that in my boyhood days I often asked myself two questions: What is sound? and, What is light? A search for an answer to these two questions has undoubtedly directed my scientific career.

"Now, in answer to the first question, many professors of physics stop when they point out that sound is due to the vibration of material bodies. They say nothing about the message which sound is conveying to our *souls*.

"To get this part of the story, we must follow the vibrations in their passage through that marvelous receiving instrument, the ear, which speeds the message along myriads of tiny nerves to the central station, the brain. There, the soul of man interprets the *language* of sound. The physical vibrations are only a small link in the connection of the external physical world with the internal world of the soul. And the more I think of this, as a scientific man, the more do I recognize that my boyhood fancy was right

Digitized by Google Original from UNIVERSITY OF FLORIDA

when I imagined that the sound of the vesper bell was a message from God.

"To-day, when I hear Kreisler playing a Beethoven sonata, or when I hear any other great musician, I feel that he is making the vibrating strings speak a language which is a true message from heaven. It recalls again my mother's words: 'Michael, do you not hear God's message which calls you to praise His everlasting glory?'

"That is one answer which science has given me to that boyhood question: What is sound?

"Now, the second question: What is light? The greatest glory of nineteenth-century science was the discovery, made by Faraday and Clerk-Maxwell, that light is an electro-magnetic phenomenon. But what does that mean? In a purely physical way, it means that a ray of light is a swarm of tiny electrical dots and dashes speeding through space like the electrical dots and dashes of wireless or ordinary telegraphy. These countless dots and dashes tell us that innumerable tiny electrical clappers—the electrons—are set in motion by the atoms and molecules of the radiating source. In our case, the chief radiating source is the sun. Each atom and molecule in the blazing sun is really an infinitesimal radio station, from which tiny electrons are being broadcast in all directions.

"NOW, what do I mean by that? Let us see what happens when you ring a telephone bell. You transmit a rapid succession of electrical pulses along the telephone wire; that is, a rapid succession of electronic motions. The electrons which you thus set moving are tiny electrical clappers; each of these clappers gives a jerk at the clapper of the telephone bell and makes it strike; the bell responds with a ring.

"Now, the sun is always sending these tiny electronic pulses to our earth; we call them radiation. They, like the electrical pulses which ring the telephone bell, strike the material bodies on earth, and communicate to their atoms and molecules the energy of their life. These terrestrial bodies are the receiving instruments for the messages transmitted by the luminous sun and stars; they are the bells which respond to the electronic clappers of the sun and the stars.

"Each terrestrial body responds to these solar clappers in harmony with its own structure. For example, one rose responds to an electronic clapper which makes it sing out, 'I am red.' Another rose sings out, 'I am yellow,' when struck by another type of radiant clapper. The lily responds equally well to all the electronic rays and has no color; it sings out, 'I am white.' The whole terrestrial globe is a bell which responds to the strokes of these solar clappers. In this way, the sun is the source of all the life-giving energy on our Mother Earth.

"But this is not all that light means: Just as sound sets going the nerves of the ear to carry (*Continued on page 194*)

If You Ask Me:

A little dash of faith sweetens the sauce of life

PEOPLE who "view with alarm" are having a heyday. They point to the wave of murders, hold-ups, divorces, and student suicides, not to mention the national mayhem committed on the Volstead Act and the Eighteenth Amendment, as indicating that humanity is headed for the chutes.

Now, I refuse to concede that the world is going to hell. With slight recessions, the trend of life and of morals is on the up grade; and it has been on the up grade since the beginning of recorded time. Just now, however, we seem to be in a bit of backwash. What's the trouble?

First of all, there is a great unrest in the land. Part of it was stirred up by the war. But most of it has a deeper source.

Too many human beings are sailing without a compass!

Generations ago, most people, even those who were not openly religious, had an implicit faith in a personal God who ruled the affairs of men. They believed in a Divine purpose—in a fixed plan for the orderly conduct of the universe. They had a simple and literal faith in the Bible.

And I suspect that the share of inner happiness per person was much greater then than it is now.

In this era of intellectual challenge, the average man is less ready than his ancestors to accept a hand-me-down faith. He wants to reach his own verdict. And he wants all the evidence in. If science, in sending out its searchlights, seems to uncover facts that do not match the literal interpretations of certain passages in the Bible, he adds that to his evidence. Doubt enters his mind. Unquestioning faith is no longer his. His compass has been taken away—and those who have taken it away have given him nothing to replace it.

Through the ages, man's mind has been triumphing over matter. To-day, matter seems to be taking its revenge by triumphing over man's mind.

What are we going to do about it? Well, it seems to me that one trouble is the readiness with which so many people assume that everything in the universe can be solved by the mind alone. That is absurd!

Frequently I chat across the luncheon table with scientists who hold to the "mechanistic theory" of life. For them, the old-fashioned personal God has vanished. The most that any of them will concede is some vague kind of "Intelligence" that operates through universal laws. They have given up any impression of a personal God because they cannot "work Him out" by due processes of intellect. They flout the idea that human personality survives death. But, somehow or other, they do not convince me. Both my reason and my instinct respond more readily and truly to a philosophy such as Doctor Pupin—one of the most distinguished living scientists—gives you in the article beginning on the opposite page.

If my friends the mechanists can make me understand by intellectual processes two of the oldest and most elemental mysteries in the universe, I may feel more like trailing along with them. Can they teach my mind to grasp the mysteries of *time* and *space?* Can they make clear to me how time and space can be without beginning or end—or *with* beginning and end? They cannot!

Nothing seems to have been put inside the skull of man that makes it possible for him to understand these mysteries. And nothing seems to have been put inside the skull of man that will enable him to *prove* God. God has to be taken on faith—a faith that is grounded in instinct and reënforced by experience and common sense. God cannot be proved like a mathematical formula.

One of the needs of our time is to have the simple faith of our fathers poured into a twentieth-century mold. We need the old-fashioned religion—but dressed in a free and flowing robe, and not in the strait-jacket in which bigots would encase it. We need more sincerity, more simplicity, more tolerance, more reverence, and less smugness. We need more people who can say "Our Father Who art in Heaven," and really believe it.

Merle Crowell

If his program is long enough, he gets down practically to his B. V. D.'s

The Program Must Go On!

Inside stories from a big radio station—Temperamental artists sometimes have tantrums; cocksure performers sometimes forget their parts; and occasionally there is a fire—But the audience rarely knows anything about the disturbances

By Keene Sumner

DRAWINGS BY R. M. BRINKERHOFF

HOW'S your radio to-night? What sort of program are you getting? I can make at least one good guess about it. Unless the air itself is misbehaving, your evening's entertainment runs like clockwork: a succession of music, and talks, interrupted only by the unruffled voice of the announcer.

As far as you can tell, the broadcasting studio is as peaceful as your own quiet living-room, where you sit listening to the scheduled program. If the demon Static is playing pranks, you may get some weird breaks. Otherwise, nothing unexpected occurs.

But if you could suddenly be transported to the studio, if you could hear not only what does, but also what does not, go on the air, it would be a very different story.

The atmosphere of a broadcasting studio is quiet; but, believe me, it is never dull! The unexpected is always happening; and sometimes these unexpected incidents are more dramatic than the regular features provided for your entertainment.

All station managers "could a tale unfold" along this line; but no one of them is better qualified to do it than Charles B. Popenoe, for several years manager of broadcasting at WJZ, and now treasurer of the National Broadcasting Company.

MR. POPENOE is the original broadcast manager. He was the first man to hold that position.

That sounds as if he began a long time ago. But radio broadcasting, the kind we are familiar with, was born only five or six years ago. Mr. Popenoe helped to "born" it. He has had a hand in making it the infant prodigy it is to-day. He has been behind the scenes throughout those amazing years. And that is why I induced him to give us, too, a peep behind the curtains.

"What was the most exciting thing that ever happened in your studio during a program?" I asked him.

"The most exciting?" he repeated. "Well, how about an invasion by the whole Fire Department of New York City? Possibly a few companies didn't get here; but the studio was so full of hard hats and slickers that it looked to me like a firemen's convention.

"It happened during one of the recent good old summer-times, when every window in the building had flung its awning to the breeze. Somebody must have dropped a lighted match, or cigarette, on one of these awnings. It caught; and the flames ran from awning to awning, until the front of the building was a fiery checkerboard.

"We were broadcasting from an inside studio which had no outer windows. But as the fire might work into the building—in which case we would want to get out of it—the temptation was to shut off the program and go while the going was good.

"The members of a studio staff have plenty of contradictory ideas about how to run the business. But there's one idea

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

that is absolutely ingrained in them all: The program *must* go on! It's like the spirit in a newspaper office, where the paper *must* go to press, no matter what happens.

"We might have explained the situation to the listeners-in and have signed off, at least temporarily. But we should have regarded that as a blot on our record, to be avoided if we possibly could. So we went right on with the program, while the firemen chased through every room, even the very studio where we were broadcasting.

"I had another experience with fire several years ago. As you know, the walls and ceiling of a studio are covered with cloth, to prevent echoes and reverberations. A photographer, who was going to take a picture of some artist standing at the microphone, held his flashlight 'gun' too close to this fabric covering and set it on fire.

"You never saw flames travel so fast! They burned out the whole room and its contents, including a fifteen-hundred-dollar grand piano. The camera man got his picture, of course; but that was the most expensive photograph I ever had anything to do with.

"ONE of the subjects of endless argument among broadcasters is this matter of taking the radio audience into our confidence. Shall we describe what is happening in the studio? If something occurs which forces us to change the scheduled program, shall we explain it to the audience? Or shall we confine ourselves to plain, unadorned announcements?

"There is a perennial discussion of this question, but the general policy of WJZ was simply to present the program. If you go to a concert hall, for example, you don't expect someone to come out on the platform every little while and tell you that one of the artists is having a temperamental tantrum, or that the soprano is spraying her million-dollar throat, or that the basso has burst a button and is having someone sew it on for him.

"You might be highly amused by these confidences, but they wouldn't help you to enjoy the program.

"Occasionally, however, we break over that rule. Not long ago, for instance, a musician was to play one evening at a certain hour. As he is one of the finest saxophone players in the country, we knew that thousands would tune in to hear him.

"The hour came—but the musician did not! So we had to explain this and announce a substitute number. Then, just as we made this announcement, a member of the staff came hurrying in. He had been hanging out of the window, watching for our missing performer, and had seen a taxicab draw up at the curb. A man carrying a large case, which might contain a musical instrument, had got out of the cab; so perhaps the saxophone player had arrived at the last moment.

"Instead of beginning the substitute number, the announcer told the audience just what was happening; about the taxicab, and the man with the big case, and that we were waiting to see whether the elevator would bring us our saxophone player.

"But it didn't! So the announcer said: 'We're sorry, but the man in the taxicab wasn't the one we were looking for, after all; and you will now have the pleasure of listening to—' and so on.

"I imagine that the audience rather enjoyed being taken into our confidence that time.

"There have been other occasions when we were tempted to do it! A studio is a great place to study human nature and, being human ourselves, we sometimes wish we could describe it as we are seeing it. Not all artists are temperamental. But we do get a few who would try the patience of a saint; and I don't claim to have a saint's halo in my wardrobe.

"If you do not play, I shall take that violin, get some kind of sounds out of it and let the audience think *you* are doing it!"

"I REMEMBER one woman—a famous singer and composer—who gave us about the worst half-hour we've ever had. For instance, we always tell a person where to stand, in relation to the microphone. But could we tell *her?* We could not! She intimated that any such attempt was gratuitous impertinence on our part.

"She complained of everything, from the piano to the fabric on the walls. And finally she worked herself up to a point where she ordered the announcer to 'take his funny face out of the room!'

"The audience had absolutely no hint of the perspiring struggle we were having with that woman. Curiously enough, she gave a perfectly beautiful performance, and we received hundreds of letters of appreciation. But the whole studio staff heaved a sigh of relief when the ordeal was over.

"Afterward she came to us and apologized, explaining that her irritability had been due to nervousness, as it was her first experience in broadcasting. We readily believed her, for we have seen dozens of seasoned public performers succumb to microphone fright. It's just as bad as stage fright.

"One case was that of a well-known United States senator. I arranged for him to give a talk over the radio and suggested that he prepare it in advance. For various reasons, this is our custom, We can't allow the station to be used for partisan propaganda, for instance, or for personalities. So we want to know what a speaker is going to say.

"But even aside from that consideration, we know that extemporaneous talks are almost invariably (*Continued on page 198*)

"We will now stand by, to listen for distress signals!"

East Side is East Side,
and West Side is West Side—
and sometimes the twain do meet!

Heat

The story of a small boy who ran away from his ancestors

By Gordon Malherbe Hillman

ILLUSTRATED BY WORTH BREHM

PERCIVAL ANTHONY WAYNE sat on the edge of a hard chair and looked at his ancestors. It was very hot; but as they were all painted in oils they did not seem to mind. Percival Anthony did. Moreover, his ancestors were not the sort to be lightly looked upon on a warm day. Their faces were scarlet, their clothes seemed made of heavy stuffs, their noses were bony and prominent. Gazing upon them would hardly make the casual spectator feel cooler.

Percival Anthony disliked them all. In his short course of twelve years he had been steeped in information concerning them. There was Mad Anthony Wayne glowering in the northeast corner, and the history books were full of him. There was Zachary Wayne, in blue with buff facings, and he had beaten the British out of Michigan in 1812. There was Betsy Wayne, his wife, who looked disapprovingly down on small boys from brown ferret-like eyes.

There was Thomas Wayne, who had covered himself with dust, glory, and defeat at the battle of Bull Run, and therefore was immortalized with a big nose and beefy jowls. And, skipping down to the southwest end of the red parlor, there was the most glorious Wayne of all, Grandfather Desmond Augustus, who, so Percival Anthony understood, had taken the Tammany tiger by the tail and taught that unregenerate animal a much-needed lesson.

In other words, Desmond Augustus had been Collector of the Port of New York. Percival Anthony was rather vague as to what this meant, but it could not have been for lack of information. His father and mother constantly discoursed to him on the Wayne ancestors, and when they ceased his English governess took up the tale. Even the French lady, who appeared in the afternoon and made Percival Anthony speak pure Gallic for hours at a time, had much to say of the advantage of having famous forbears.

Percival Anthony had a hard time living up to them. He could not be trusted even to the most exclusive private schools, but was turned over to Mademoiselle during the afternoon. The rest of the time he was looked after by Rebecca. Just at present she was arranging Percival Anthony's personal wardrobe for the yearly migration to the North Shore, which had to be made just the same, even though his parents were in England for the summer. In an hour he and Rebecca would be on their way to Magnolia, where Percival Anthony could play in the sand with the small Cabots, and sail boats with the slightly larger Saltonstalls.

SO HE sat in the library, very limp, very damp, and very dejected. He had just discovered that he was stuck to the chair in which he sat, when Rebecca's angular figure appeared for a moment in the doorway.

"Master Percival," said she, "don't you stir out of this room! We're going in a few minutes."

"Yes'm," said Percival Anthony miserably. He thought it would be improbable that he could leave the chair in which he

"Master Percival," said Rebecca, "don't you stir out of this room! We're going in a few minutes"

sat—even to go to Magnolia. His light blue trousers seemed permanently attached to its varnish.

Suddenly the short hairs stood stiff upon his neck. The Wayne nose quivered. Somewhere down the street, a siren wailed. Percival Anthony could be trusted not to bolt to baseball games, football contests or circus parades—but he was not proof against fire engines.

Bells clanged, a scarlet streak shot past the window. There was a faint ripping sound. Percival Anthony had become unstuck from the chair.

Up to this day and date, Percival Anthony had been denied the society of even the most immaculate small boys. Consequently, a shaven urchin with a dirty dog seemed a most fascinating companion

THE street was a-roar with whistles. The stern of the hook-and-ladder truck swung past, its steersman wrenching at his wheel. The chief's helmet was a white blur in a racing crimson roadster as Percival Anthony passed rapidly down the front steps, his small stout legs going like pistons.

The policeman at the corner, red-faced under his blue cap, was holding back traffic, so Percival Anthony knew there were more engines coming.

He crossed the Avenue like a startled rabbit just as the gas company's lean red truck came screaming down the street.

Dim wreaths of smoke rose from near the river, and Percival Anthony ran till his breath came in gasps and his knees knocked together. But beyond the brown girders of the Third Avenue Elevated, he could see spidery hose spread from a scarlet engine.

He rounded the corner into an ecstatic group of slum children, held in check by a line of amiable patrolmen. Shirt-sleeved citizens hung out of windows, corpulent women were wedged in doorways. A long ladder wavered uncertainly near a window where wisps of smoke went skyward. As its top rungs gritted against stone coping, firemen climbed it gingerly, bearing with them brass-nozzled hose that glittered in the sun.

"Gosh!" said Percival Anthony, in blissful anticipation.

Above the brazen clamor that heralded more apparatus charging through the side streets, rose a staccato shout:

"Turn on y' water!"

Somewhere a motor-pump began to throb in sharp, cadenced beats that seemed to shake the pavement. Percival Anthony crowded closer to the front line of spectators. Hose writhed, snakelike, in the wet street. From its coupling, a jet of spray swept up like the spray of a fountain. Percival Anthony was the smallest spectator and the most enthusiastic. Consequently, he was also the wettest. His hat dripped upon his head, his sailor blouse was soggy, his short blue trousers were a tragic ruin.

"G'wan back there!" said the policeman. "D'y' wanna get drowned?"

The wreck of what had once been Percival Anthony retreated dismally. Already the smoke was lessening at the window, already firemen were descending the ladder, declaiming in disgusted tones. As far as the spectators went, the fire was a failure; for Percival Anthony it was a pungent and personal tragedy.

As his mind revolved upon the impossibility of confronting an angry Rebecca until his clothes had dried, his hand fell upon the shaggy head of a most disreputable dog.

"G-r-r!" said the dog, wagging his tail.

"Fella!" observed a superior voice. "You'll get bit!"

Percival Anthony looked at the dog, which would have been white with black spots if it had been washed. "No, I won't!" said he.

The superior person, very snub-nosed, very wide-eared, and all of twelve years wise, disdained the argument. "Say!" he remarked. "You sure got wet."

"I most certainly did," said Percival Anthony, surveying the sad remnants of his traveling costume.

The superior person's head was round, and recently shaven with horse clippers. He rubbed its sparse stubble as he spoke. "Gee, it's hot! I run clear from the Park when I heard ol' Ladder Twelve come clangin' by. Let's go back. 'S cooler."

NOW, up to this day and date, Percival Anthony had been denied the society of even the most immaculate small boys, and his mild attempts to fraternize with the young gentlemen who brought the groceries had brought him condign punishment. Consequently, a shaven urchin with a dirty dog seemed a most fascinating companion. Also, since he had been rebel enough to run after fire engines and

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ruin his clothes, nothing he might do could add much to his criminal account. Furthermore, he was afraid to go home.

"Slep' on fire escape two nights," mumbled the superior person as they threaded their way toward the Park. "Nothin' doin' to-night. Too hot! Say, I sweat a bucketful!"

Percival Anthony thought of his own two breathless nights, spent in the stuffy bedroom of a stuffy-smelling New York house, thought of the humid parlor cars of the Boston train, and his soul arose from slavery.

"Is the Park cool?" he asked.

"Nope!" said the superior person. "But it ain't as hot as anywheres else. I'm Spike. What's y' name?"

"Percival."

at an Italian family sprawling on scattered newspapers, but his two companions were too exhausted to do more than sink down beneath a heat-parched tree and feebly fan themselves. Opposite them a bus slid shrieking to a stop, steam spouting from its radiator.

"Engine got too hot," said Spike wearily. "Must be 'most a hundred right here. Hey, Battling!"

A very black and very undersized person stopped his slow pad-padding up the concrete walk to survey them.

"Where y' goin', Battling?"

"I'm goin' to Misto' Dever's picnic. That ice cream ain' goin' to las' much longer in this heah sun!"

"C'mon, Perce!" Spike got slowly to his feet. "It's Paddy Dever's picnic, an'

Percival Anthony perceived that here was a companion every bit as fascinating as Spike, so he fell into step, and they went up the hill at a slow and gasping trot. Paddy Dever's picnic was visible from afar, with its brightly clad little girls scampering about a Maypole, its cadet band, feebly pumping away at glittering brass instruments, and the rotund figure of Alderman Paddy Dever himself, splendid and perspiring in a frock coat.

With uncanny precision, the Battling Kid wedged his way into the largest crowd and stretched forth a black and grubby paw.

"Strawb'ry!" he wailed.

Percival Anthony found himself pushed into perilous proximity to a red-headed damsel who was consuming the last of a sticky ice cream cone.

"Choc'late's better," said she. "Try it!"

To the horror of Percival Anthony, she hospitably extended the ice cream cone. He had been brought up on strictly hygienic principles, but the damsel's eyes were stern upon him. He meekly bit at a blob of chocolate.

Spike miraculously reappeared, his hands held aloft. "Here y'are, Perce. Grab it before anybody else gets it! Strawb'ry an' choc'late mixed!"

Percival Anthony bit deep into delicious coolness. Never in his life had he met so satisfying a confection.

"THE nex' event—" roared the voice of Paddy Dever.

"Boom! Boom! Boom!" went the band.

A thin stream of chocolate trickled down Percival Anthony's face. He was idylically happy.

He suddenly found himself shoved into a ragged line of urchins, male and female, who were under the stern survey of two energetic young gentlemen with notebooks, and the Honorable Paddy Dever himself.

"A hundred and fifty-six on this one!" said the youngest gentleman.

The Honorable Paddy Dever mopped his scarlet face.

"I got more'n that," said a shrill voice beside Percival Anthony, and he looked up to see the lady of the ice cream cone. "Last year I would 'a' won, but there was two twins that looked like speckled eggs!"

The eyes of one of the young gentlemen

At a convenient distance, Twisted Face stopped and howled defiance through a damaged mouth. "Wait till we get youse guys again!"

"That's a sissy handle to carry 'round," commented Spike. "Y' folks wished it on y', huh? They wanted to call me Alboit, but Gran'pop wouldn't let 'em. Y' must be a good guy, Perce, or Dempsey wouldn't leave y' touch him. He's a darn particular dog!"

The Avenue shone before them, a torrid stretch of barren asphalt, but beyond the dusty trees of Central Park whispered in a faint breeze. Beneath the trees the grass was lush and green.

Dempsey, the dog, barked disgustedly

it's free. Gee, I forgot all about it. Perce, this is Battling Kid Robinson. He licks his weight in wildcats!"

Battling Kid Robinson was airily attired in a singlet, well ventilated with ragged holes, a pair of knickerbockers, similarly decorated, and run-over sneakers, from which one large toe arrogantly protruded.

"Two gemmun done fall down in front of ouah house an' the amb'lance took 'em off," said the Battling Kid cheerfully. "Ain' never seen it so almighty hot!"

fell upon Percival Anthony. "Say!" he caroled. "Will you look at this mug? It has all the rest of 'em beat to a fare-you-well! Step out here, kid, and take the prize!"

Percival Anthony found himself confronted with the Honorable Paddy Dever, a gold penknife and five dollars. Men prodded him with pencils, and asked his name, a black box was shoved almost into his face.

"Yeh!" said Spike from the edge of the crowd. "They're takin' his pitcher. Lookit, Battling!"

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"The freckle contest," proclaimed the Honorable Paddy, gesturing with plump hands, "has been won by Perce Wayne of the Eas' Side. Young Kid Wayne has got more freckles than any other guy in Manhattan, an' so cops the genuwine gold knife an' five dollars in cash. Here, take 'em!"

Percival Anthony blushed. In his family, freckles had been considered a disgrace, but in this new and marvelous world he had just discovered they were apparently regarded as rich ornaments. He thanked the Honorable Paddy, and harkened to the strident call of Spike:

"Say, the ice cream's all melted, an' there ain't no more candy. Say, let's drift!"

"They's a orange drink stand ovah on Broadway," suggested the Battling Kid, feeding the shreds of his cone to Dempsey.

Paddy Dever's party had already begun to disintegrate. Limp little girls and humid small boys were straggling across the street under the chaperonage of the purple-faced policeman, who was sublimely unconscious that a general alarm had just been sent out for Master Percival Anthony Wayne, who was at that moment passing under his nose.

Central Park shimmered in the heat. Straw-hatted men slumped on benches, women with crimson kerchiefs on their heads spread newspapers on the grass for squalling children. The asphalt oozed and bubbled; there was not even the shadow of a breeze.

"Guess Perce has got maybe two thousan' freckles on his face," ruminated Spike, as they progressed slowly across a side street that stretched westward to where the sun hung above the Hudson, a huge orange disk burning through hot blue haze.

At Columbus Avenue, a street car was stalled on the cross-walk. A shifting crowd milled around its front seat, where a pair of stiff heels and trouser legs were dimly visible. A policeman's blue tunic bobbed about on the car's step, and from Broadway came the blurred clamor of an ambulance gong.

"Guy prostrated, mos' likely!" said Spike, stopping to wipe his face on a villainous handkerchief. "Heat knocks 'em out if they ain't careful."

Percival Anthony shivered a little. The sight of those stiff legs made him feel curiously sick inside. Suppose the man was dead? Suppose . . .

"Aw, c'mon," said the Battling Kid. "They ain't nuffin to wait for. All they does is pour col' water on him till he sits up. If I don't get ma'sef a drink, I'm gonna pass right out!"

Percival Anthony suddenly found himself at a long, cold, marble counter, ornamented with a staring sign, "The Only Original Orange Drink 10c!" Spike held up three dingy fingers, and a miraculous being in a white coat and apron ladled yellow liquid into slim glasses. The glasses themselves were filmed with a thin frost.

"Ovah de ribber—" suggested the Battling Kid.

"An' through the woods!" finished Spike.

Percival Anthony said nothing, but tilted the glass to his lips. A delicious coolness slid down his throat. When he paused to draw breath his glass was empty.

"T'ree more!" said Spike. "An' how about a hot dog, Perce?"

On a little gridiron at the back of the store, a serried row of pinkish frankfurters were sizzling. (*Continued on page 158*)

What To Do With Your Dollars After You Get 'Em

By Arthur G. Davis

EDITOR'S NOTE: Mr. Davis is field secretary of the Investment Bankers' Association of America. In the following article, he gives you some tips on avoiding investment pitfalls, and offers an investment program for the average young man.

FIFTEEN years ago a very rich man died, and by his will divided the bulk of his estate, which amounted to many millions of dollars, equally between his son and his daughter.

The daughter, who had no special knowledge of business and investing, employed a man who had held an important position in a bond house to look after her money. This man required a salary well up in five figures. For this he did, and still does, nothing but invest and reinvest her fortune, and finds it ample occupation. Following his employer's wishes, he invests to secure the safety of the principal first, and to get a fair interest return second.

The son, who is a competent and reasonably able man, decided to take care of his money himself. Although he was not a gambler, he bought speculatively to quite an extent. He also took occasional "flyers" in new enterprises at the suggestion or solicitation of friends, making a great deal of money in some, and losing in others.

Fifteen years have passed, and the two investment programs have had a thorough test. Both brother and sister are still immensely rich. But to-day, the yearly income of the sister is approximately one hundred thousand dollars more than that of the brother.

The moral of this little story, not only for other millionaires but also for the man who has yet to lay up his first thousand dollars, is the moral of the fable of the hare and the tortoise. Safety, the tortoise, runs a better race than the leaping and bounding hare.

For more than a quarter of a century I have been helping people invest, and have also been doing my best to make life miserable for those who, through crookedness or incompetence, get investors' money away from them without rendering them anything in return.

My business wisdom teeth were cut in the place where investment programs start. I was secretary of a building and loan association, and assistant cashier of a bank. This was in Harrisburg, county seat of Saline County, in southern Illinois. From all over that county farmers, miners, teachers, clerks, merchants, came to our bank and to the loan association. I helped many of them as well as I could with their first investments, and later had the satisfaction of watching and to some extent guiding their adventures in accumulation.

As a result of the war, I had an excellent opportunity to see another phase of investing. The Liberty Loans enormously increased the number of buyers of bonds and other securities, and there soon sprang up a host of confidence men, sharks, and venders of half-baked securities, to prey on them. To meet the situation, most states passed blue-sky laws to prevent these fellows from raking in their golden harvest. Illinois passed such a law, and in 1919 I was appointed by the Secretary of State to examine proposed security issues, and to assist in administering the law.

The enormous volume of unsound securities that would have been released on the public in the absence of regulation may be gathered from the fact that, in less than three years, we refused to permit the issuance of *four hundred million dollars'* worth of securities that were unsound under the Illinois law. Not all of those turned down were crooked. Some were the half-baked projects of honest men. But money lost when good intentions go astray is lost as effectually as when it is stolen.

PHOTOGRAPH BY MATZENE, CHICAGO

Arthur G. Davis is an arch-enemy of "promoters" who sell fraudulent or foolish investments. For more than twenty years he has been advising investors, and hunting down predatory firms which prey upon the gullible and the inexperienced. He is in charge of the Investors' Protective Bureau of Chicago

IN 1923 I saw still another phase of the investment problem. I quit the employ of the State to take charge of the Investors' Protective Bureau of Chicago, an organization supported jointly by banks, the Association of Commerce, investment bankers and brokers, for the purpose of helping investors, without charge, and coöperating with officers of the law to run out the dishonest and unscrupulous security peddlers.

Under the law, when an issue of securities is illegally sold, the promoters may be prosecuted, or they may be granted the alternative of making good their wrong and the losses of their victims, and thus soften or avoid the law's penalty. We induced certain frightened confidence men, and some honest but misguided business men, to return to investors more than two million dollars taken from them unlawfully; and by a determined campaign sixty-eight bucket shops were put out of business.

Through the Investment Bankers' Association of America I am endeavoring to extend the results of these practical efforts in preventing fraud to the entire country, by means of coöperating with blue-sky officers of the various states, the Better Business Bureaus, and other

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

organizations that are making the country safe for investors.

The result of this experience is that two things have come to stand out in my mind as all-important:

First, every investor should have a definite program; and,

Second, safety should be his guide.

It is obvious that no confidence man can get my money unless I give it to him. In this article, therefore, I am going to tell you some things that make investments risky or safe, as I have seen them; I am going to outline what I think are the essentials of an intelligent investment program; and I am going to describe a typical program.

First, let me say emphatically that honest securities far outnumber dishonest securities; and that, among honest securities, those which are reasonably safe far outnumber those which are decidedly risky. In one recent year it was estimated that *eight billion dollars'* worth of *new* securities were sold in the United States. Some of these were dangerously speculative, some were sensibly speculative but the bulk were strictly honest. In the same year it was estimated that about five hundred million dollars' worth of deliberately fraudulent securities were peddled in the United States.

ONE of the most dangerous things is the lure of a high rate of return. Naturally the thought of eight or ten per cent is far more exciting and inviting than five or six. Nevertheless, it remains unpleasantly true that a high rate of return frequently denotes a highly speculative or fraudulent security.

Here is a case in point: Three years ago a widow came to me in Chicago and asked my advice about investing in the bonds of a certain company. She was not the first inquirer. Others had already brought the bonds to our attention, and we were investigating. Needing the extra income, this woman was very eager to buy the bonds, because the rate of interest was eight per cent.

"I know a little about this company," I told her, "not much, yet, for we're still investigating. But I know enough to warn you to be very careful before you part with your money."

The organization which was selling the bonds was a small, new house, without an established reputation, and since it had never handled an issue of bonds before, that of itself counseled caution. For another thing, we had not been able to determine that the company behind the bonds had enough property to protect such an issue. The high rate of interest also seemed suspicious.

"Could you," I asked, "afford to lose the money in case the company went broke or turned out to be a fake?"

She admitted she could not.

"Let that be your guide, then," I advised; "and be careful."

She thanked me and left. It was not long, however, before she was back.

"I just want you to know," she said stormily, "that I understand now why you were so eager to steer me away from those bonds. You're interested in savings banks. You want folks like me to put all our money in savings accounts at three per cent, so the banks can turn around and loan it at seven or eight. But I'll have you know that if the banks can play that game, I can play it too!"

She had gone back to the alleged bond house, repeated my arguments, and heard them knocked over by a fast-talking salesman who did not care what he said, so long as he convinced her. She wanted to believe him rather than me, and she did. She invested seventy-five hundred of her precious dollars in the bonds.

The sequel you may have guessed. In a few weeks the officers of the company which issued the bonds, and of the organization that sold them (the two outfits were really one) were indicted for operating a confidence game. The bonds were worthless scraps of paper.

I am going to explain how this particular group of promoters operated, for they are fairly typical of other fake-security peddlers. They were not honest, and never intended to be. They were hunting "suckers" first, last, and all the time.

'WAY back in the hills of a Southern state where they knew nobody from Chicago would be likely to go, they found an abandoned fire-brick plant, which they bought for a song, paying a little cash and giving notes for the balance.

The whole plant, including some fifty acres of land, a small remaining deposit of fairly good fire clay, a half-dozen old kilns, some dilapidated machinery, a few huts, a general store, an office, and a stable, was valued at sixty-five thousand dollars before it passed into their hands, and was probably worth even less. But figures did not matter much to these men. They had vivid imaginations, and prepared fake appraisals, in which the fire clay alone (little of it, by the way, could be used, because most of it lay under a cemetery!) was valued at *three million dollars*.

The promoters then organized what they called a trust company, with a name so similar to that of a splendid Eastern trust company that people would be deceived into believing that the fake trust company was the reputable concern. This is a favorite trick of crooks.

The "literature" describing the property was romantic. Strikes and labor problems were said to be utterly unknown; this was true, for there was no labor! The five huts, which were actually occupied by negro tenants, were described as "residences for employees." A small general store at the cross-roads became "a splendid commissary where employees buy supplies." And so the fairy tale went on. The bonds were offered "under guarantee plan with stock purchase privilege."

"Money," the circulars urged, "is getting cheaper, and eight per cent bonds are soon to be a thing of the past."

THE promoters did not demand cash from their victims. No indeed! They were willing to accept Liberty bonds at par. In fact, they gladly took automobiles, pianos, and even washing machines in part payment. They fleeced a good many victims, but eventually were put behind the bars.

Bonds, broadly speaking, are the safest securities. But there are bonds and bonds, as this instance shows. Furthermore, high interest rates alone are not sufficient to distinguish the bad from the good. In fact, many bonds bearing a high return prove perfectly good, and are paid at maturity; although this does not alter the fact that some element of risk was apparent at the time of issue. To a large extent, therefore, in the absence of other distinguishing characteristics, investment safety lies in doing business with an absolutely honest, reliable, and competent firm, and in getting the best possible disinterested advice.

One of the best qualifications an investor can have is a healthy doubt of his own infallibility. Reliable investment firms, before they underwrite an issue of securities, make most exhaustive investigations, sometimes lasting for months, and the investor can take a leaf out of their book in making sure of the reliability of the firm he deals with.

Furthermore, (*Continued on page 186*)

Here Are Some Rules That May Save Your Money

The American Magazine asked Mr. Davis to give a few rules for inexperienced (and also experienced) investors. Here they are:

IF YOU want to get rich surely, do not try to get rich quickly.

An unusually high rate of return is a warning of danger.

Be sure that what you *want to believe* coincides with the facts.

Buy through an absolutely responsible, honest, and competent business house.

Never buy from a friend *merely because he is a friend.*

Remember that the best invention ever patented never built a successful business all by itself.

Do not pick a security merely because *one* factor looks favorable.

Good investments will await investigation. Don't go too fast.

Tips, rumors, and "hunches" dig the graves of millions of easy-go dollars every year.

Do not sell a good security the moment the price drops a little; it may go up again.

Putting Your Best Foot Forward

By Clarence Budington Kelland

FOR many years it has excited my curiosity to see two men of almost equal capacity enjoying widely separated degrees of achievement. One of the two will be regarded by his contemporaries almost as a genius in his line, while the other must content himself with a hand-to-mouth livelihood. Why is it?

And that leads us further. Why does anybody fail, and why does anybody else succeed?

It seems to me, as I study the men I meet, that there is very little difference indeed between their mental equipments. In other words, almost every normal person is pretty nearly as smart as every other normal person. I have talked to policemen, for instance, who exhibited a mental grasp and agility and keenness which a captain of industry or a first-class artist might envy. Why, then, do they remain policemen? I have talked with men in high places, and have been surprised at the mediocrity of their mental processes. Certainly they were no more able than the policemen. Why, then, did they become Cabinet officers or presidents of banks or famous authors?

It has brought me to the conclusion that the difference between the mentalities of an admitted success and of an admitted failure is so slight as to be difficult of measurement. I believe we are all cut off one piece, and that we vary but slightly in actual abilities. We run pretty much to pattern, so why does one piece of goods climb in value, while another remains stationary—or even sinks to a lower level?

Why, for instance, am I considered a successful author, as success goes, when I see about me numbers of men, not successful, who in my judgment can write better than I can? How have I, in the current phrase, put myself over, when they have failed to do so—and with more excellent wares to sell than mine? It has puzzled me and worried me. Sometimes I have thought that the whole scheme of things is unfair and prejudiced. At other times I have veered around to a belief in blind luck. But now I have abandoned both those theories. I am quite sure it is something else.

I am also quite sure that every human being can come closer than he believes to accomplishing what he wishes to accomplish. I believe every normal man has the ability to do so. I believe there may be excuses for failure, but no good reasons for it.

This is going to be no amplification of copy-book maxims. I don't believe in cut-and-dried, ready-made maxims. When somebody recites one to me I like to go out and prove it is all wrong. But facts are something else. Black is black, iron is hard, water is wet. When you meet a fact like that, you don't have to write a maxim about it—and I believe I have discovered a few such facts about success and failure.

Fact Number One: The majority of people do not want to succeed.

Fact Number Two: Most folks never take the trouble to find out which is their best foot, so they can put it forward.

And there you are. There are your facts. Let us amplify them a bit and see if what I think I have discovered is not true.

Don't Be Misled by an "Opening"

"TRADES and professions run in families," says Mr. Kelland, "and that's why so many families run in ruts. Grand-dad was a lawyer, so his son becomes a lawyer, and his grandson becomes a lawyer. Why? Well, there was an opening. Each son could go into his father's office. But the chances are against each son's being especially fitted to follow his father's profession.

"That word *opening* gets a lot of people into trouble, anyway. It's a lazy word. An opening is something free of barriers. It is a hole to crawl through. It looks easy. It is the line of least resistance. Now, my idea is that you should forget about *openings*, especially those which open into some place you don't at all want to go. What good is an opening that leads a potentially fine artist to be a very poor broker? Or a good banker to be a sad teacher?"

You can't go out in the woods with a gun, shoot at random, and bring home any game. No. You have to make up your mind whether you will shoot birds or deer or bear; you must hunt that particular creature, find an individual of the species, take aim at him—and then pull the trigger. A general wish to shoot something won't help you at all. You must have a specific wish to shoot a definite sort of game.

BUT when we go out shooting in the forest of life, most of us just go shooting. We don't pick out bear or deer or partridge, but just bang away at any animal that comes in sight. Now, it stands to reason that if your gun is a twenty-gauge and is loaded with bird shot you won't have any luck at all if you meet a moose. On the other hand, if you have a high-powered rifle and shoot a partridge with it, you will have nothing to bring home but feathers.

The answer is that you really didn't want to bag any game. You just went out under a general roving commission, depending on chance. You wanted chance to succeed for you; you didn't want to succeed for yourself.

A general wish to be successful is no better than no wish at all. It must be a specific wish in a definite line.

Having a couple of sons, I am, at the moment, intensely interested in young men. I talk to them when they will let me, especially young men just out of college and at the commencement of actual living. And not college men alone but any fellow who is about to start the endless task of earning a living for himself. I have found it to be quite general that what they are looking for is a job.

They don't care much what job, as long as it does not lower them in this idiotic thing we call "the social scale," and as long as it pays what they think is a reasonable wage. They want to be earning, and the more the better. Some few, of course, have made special preparation—for the law, for medicine, for engineering. But the majority are just shooting at the forest.

NOW, it is a mighty important thing to decide what you are going to do with the major part of your waking hours for a lifetime. But most young men leave it to chance. Some friend offers a boy a job in a bank or in an office or in a factory, and the boy takes it—because it is a job. Most young fellows don't even stop to consider whether they will enjoy the line of work which is offered to them. Think of that! Why, one of the most important things to do in this world is to enjoy yourself. As the boy learning his catechism said, "The chief end of man is to glorify God and to enjoy himself forever." Maybe that is a bit strong, but it will do as a starting place.

But that isn't all. The idea back of this selection is to have a definite mark to shoot at. You certainly can't hit a mark if you aren't aiming at all—unless you have a lot of luck. Of course everybody has some of the thing called luck, both bad and good. But my observation is that the fellow who has the most good luck is the one who stands alertly at the spot where the kind of good luck he wants is being passed around. I don't know whether any of you folks play Kelly Pool or not. I do. And through a long and costly experience in this game I have perceived, and know, that the player who "lucks in" the (*Continued on page 170*)

Clarence Budington Kelland

TO READERS of THE AMERICAN MAGAZINE Mr. Kelland is best known as the author of the Scattergood stories. But his writing is by no means confined to these fascinating tales about the imaginary hardware merchant of Coldriver. For years Mr. Kelland's short stories, serials, and articles have been appearing in many of the leading magazines of America, and in the accompanying article he gives you the key to his remarkable popularity as a writer, a key, by the way, which may be used in any walk of life. Mr. Kelland was born in Portland, Michigan, in 1881. He studied law, worked as a reporter, and for a time was editor of "The American Boy." His present home is in Port Washington, New York.

Dr. Catherine M. Cox

FOR YEARS Doctor Cox has made a study of the childhood of geniuses. She selected three hundred outstanding figures, and studied their biographies so closely that, as she puts it, "I came to think of them as my boys—children just as real to me as those whom I had watched grow up." In her book, "Early Mental Traits of Three Hundred Geniuses," she gives her findings, which are summarized in the accompanying article. Doctor Cox, now psychologist of the Central Clinic of Cincinnati, was formerly at Stanford University. She is seen above with her little nephew.

Have You A Budding Genius In Your Home?

By Elizabeth Jayne Wiggam

BACK in 1922, when she was at Stanford University, California, Dr. Catherine M. Cox adopted three hundred geniuses—a strange thing, you might say, for a woman to do.

But there was a very sound reason for her act. Doctor Cox is a psychologist, and where psychology touches on the lives of unusual children she is particularly interested. Moreover, she wanted to discover, if it were humanly possible to do so, the stuff of which geniuses are made.

Professor Lewis M. Terman was at that same period engaged on his now famous study of one thousand gifted children in the California schools. He suggested that Doctor Cox undertake on a large scale a scientific investigation of the childhood of three hundred geniuses born between the years 1450 and 1850, thus approaching this fascinating study from the angle of genius at its height instead of from the Terman angle of genius in the making.

So Doctor Cox searched through the centuries, and from history, science, literature and the arts made her selection and adopted the geniuses into her home.

During the first year of her investigation into the lives of her charges, Doctor Cox, with two assistants, collected over fifteen thousand biographies, cyclopedias, memoirs, and other documents containing material about these three hundred geniuses. She later reduced this enormous mass of material to three thousand volumes, for intensive study, finally condensing her findings into a book of nearly nine hundred pages, entitled "Early Mental Traits of Three Hundred Geniuses," which is published by Stanford University.

It was a stupendous task, and recently I spent two days with Doctor Cox talking with her about it. She is now psychologist of the Central Clinic of Cincinnati, helping boys and girls to discover their real abilities and make the most of themselves in life.

"I lived with those adopted book children of mine so closely for four years," she told me, "that I actually came to think about them as my boys (only eight of the three hundred children, by the way, were girls). They were real children to me, just as real as the boys and girls whom I watched grow up."

"Before we go into the specific characteristics of different geniuses," I said to Doctor Cox, "I should like to know if some of the traits you discovered were common to all of your geniuses; that is, did, for instance, Benjamin Franklin, George Washington, Rembrandt, Goethe, Bach, Humboldt, Charles Dickens have the same *fundamental* characteristics?"

"They certainly did," she replied. "Four things stood out very clearly in the lives of nearly all the geniuses I investigated: Obstacles brought out their fighting powers; they were steadily persistent in their undertakings and motives; they carried important tasks through on their own hook; and their wish to excel amounted almost to a passion. These four were their outstanding characteristics, and I am convinced they are the strong characteristics of nearly all the successful men and women of to-day.

"And you'll be interested to know," she went on, "that these four traits not only marked these famous men and women in adult life—they were the strong features of their childhood.

"My investigation, of course, was made for comparative reasons. We wanted to know whether these children who actually did become famous men were like the gifted school children Professor Terman investigated. Professor Terman's question is: What do children who score high on intelligence tests become in later life? My question was: Would those persons *who have already become famous* have scored high on intelligence tests when they were children? Also, how did their other personality traits compare with those of Professor Terman's children?

"He is looking from the child forward to the great man or woman. We are looking from the great man or woman backward to the child. We shall have to wait for his children to grow up to determine how closely our results agree. But in the end we are really trying to answer these two questions:

"First, What are the childhood signs and symptoms of future great abilities and strong personalities?

"Second, Do great abilities and strong personality traits in childhood prophesy future achievements of a high order?

"OUR first step was to collect each child's sayings, writings, achievements, and early doings of all sorts, and from these to try to calculate how each one would probably have scored on our present-day intelligence tests, which show us each person's 'Intelligence Quotient,' or IQ, as it is familiarly called. The average person's IQ is 100.

"The material for each child was divided into two parts: From birth to the age of sixteen, and from sixteen to twenty-six. We thus obtained two IQ estimates on each genius. In most cases, the second IQ was considerably higher than the first. The average for the first sixteen years was 135. The average for the second period was 145.

"We have a number of technical reasons for believing that the actual IQs were considerably higher than these. For example, we rated John Bunyan, author of 'Pilgrim's Progress,' Copernicus, the astronomer, and Faraday, the great scientist, at 105. We rated Andrew Jackson, General Grant, Raphael, and Rembrandt, at 110; Admiral Farragut, DeFoe, author of 'Robinson Crusoe,' Garibaldi, Haydn, and President James Madison at 120; George Washington, General Sherman, and Bach, at 125. However, Charles Dickens, Thomas (*Continued on page 80*)

You Can't Create Genius But You Can Encourage It

"PARENTS cannot create talent or genius," declares Doctor Cox, "but they can greatly discourage, or even suppress it! Also, they can encourage and develop it, a fact I should like every present-day parent to know. Liebig, the great German chemist, was taken by his father to see all sorts of manufacturing operations. Benjamin Franklin's father took him to see what could be seen of the world's work. This intelligent interest on the part of the parents gave these two boys a chance to become familiar with numerous activities and occupations. The same sort of thing was true with many other boys who later became famous. It is a great mistake to exclude children from adult interests. We should bring them in contact with conditions they are going to meet in real life."

"Love's A Lie!"

Another story of Helga Lind, the mail rider of Sweden Hollow

By Nelia Gardner White

ILLUSTRATED BY VICTOR C. ANDERSON

WHEN I want to tell of Helga Lind, something seems to catch in my throat. All her life she gave out to others, and precious little she got in return. I say precious little—yet, perhaps, it wasn't little.

It's not a little thing, at twenty-two, to know all the joys and sorrows along the Sweden Hollow mail route, to have folks watch for your coming and depend on you like children.

It's not little, with every other woman's head shorn, to be able to keep fair, smooth braids wound 'round your head, and retain the dignity and beauty of a princess from a Norse fairy tale.

It's not little to come home at night with a tirelessness as of dawn, and have all the other Linds waiting to tell their day to "Helga." Helga Lind is a person, a real person.

It hurts a bit to think that she became such a person through suffering. But she did. Rell Stannard jilted her. That's what makes her eyes so sober above her fine, slow smile. That's what gives her her dignity, the apartness won through fighting a trouble of the soul.

I think she thought she had conquered that trouble. But one night she sat at her place at the long Lind table, between Carl, the sullen, dreamy one, and Anna, the pert, pretty one. Across the way jolly plain Hilda, and sturdy John, and thin little Emil chattered and contradicted and laughed. At the ends sat Emanuel Lind and Anna, his wife—silent, but not unhappy in their silence. Carl's last fight—last night's party—the day's happenings on the route—and then, quite suddenly, and apropos of nothing, John good-naturedly taunted:

"Ha! Helga's got a beau! That man that paints pictures rode up with her to-night. Anyhow, he's better'n that old Rell Stannard!"

There was a shout of laughter around the long table, and probably no one but Emanuel Lind saw Helga's face get white and her lips come straight with pain. In a second Helga was laughing, too.

"He wants to paint a picture of those trees down by the bend—and he doesn't know a buttonwood from a beech!" she said scornfully.

But after supper, Helga slipped away from the house, and Emanuel Lind, pretending to do some chore or other, went to the barn and found her there, her cheek tight against the satin cheek of Net, her horse. It was probably only through the inarticulate closeness of these two that Helga Lind had been able to keep that high-headed courage of hers the last years. To-day her father found words, as he fussed over a harness. The late October dusk made their faces dim to each other in the barn's shadows.

"Helga—I thought that was done with," he said slowly. "You aren't caring about Rell Stannard . . . still, Helga?"

Yes, it was plain enough now that that was what made her eyes so sober, and so understanding.

"I guess we Linds don't change much," she said quietly.

"But—Helga—" he groped.

"Oh, I'm not grieving my life away!" her voice was a little bitter; "I'm too busy to think much about him, but sometimes—sometimes—like to-night—" For an instant it was as if all the strength had gone out of her.

"Yes! Yes!" Emanuel Lind put in quickly. "I'm sorry, Helga!"

He started out of the barn, hesitated:

"Helga—this artist—Rush Sloan—he wants to get his meals here while he's working down by the grove. Will that be too much extra, do you think?"

She did not answer, and he went out and left her there. As he went toward the house, he muttered, in a hard voice:

"He wasn't worth it! He wasn't worth it!"

Nor had he been worth it; but, as Helga said, "We Linds don't change much!"

WHEN she started out next morning the hurt was still in her eyes. It's a cruel thing to have an old hurt come new in you. The cruelty of it blotted out, for the time, the youth in Helga's face. She loved the route in October, the shout of sumacs on the slopes, the ditches strewn with bright leaf drift, the squirrels scampering everywhere, the little, wind-twisted swirls of leaves in mid-road, the birds south-winging.

She loved all seasons. The green of winter wheat showing through half-melted snow, the gray majesty of a wind-swept November day, the stretch of a field white-starred with daisies, the sight of the first snow—these were as much a part of Helga Lind as her own name or skin. They had helped to heal that place wounded by the cruelty of Rell Stannard; but to-day the wound gaped afresh, and the crisp sunshine and sift of leaves across the buggy were bleak as February sleet to her.

"Autumn seems to get stuck here—and grow," that artist, Rush Sloan, had said to her last night. She had liked that thought, but to-day she hated the artist for calling forth Rell Stannard's name from John's lips.

Grandma Wheeler came hurrying down to tell her the latest about her daughter-in-law, but Helga could not laugh about it to-day.

"I hear that Rush Sloan's buzzing you up," Grandma said finally.

"Oh, nonsense!" said Helga. The sentence did not even touch her youthful consciousness.

Sary Overhiser was sending away for her new fall coat, and she brought the mail-order catalogue down to show Helga.

"The red's awful pretty—but kind of faddy. I suppose brown'd be more sensible," Sary said wistfully.

"That green would be lovely—with your hair," Helga said. But in her heart she didn't care. She just wanted to go on, get away from Sary and everyone.

But it seemed she wasn't to get away from folks to-day. Lars Larsen was waiting for her at the foot of his driveway. Lars was the only Swede up Sweden Hollow. Helga had always liked him, perhaps because they came from kindred lands, perhaps because they both knew hard work and poverty, perhaps because he was a shy man and yet unafraid. He was nearly forty, and had lived alone on his farm ever since he had come to this country, nineteen years before.

Lars didn't get much mail. Once a month a letter from Sweden. Once a week a farm paper. Sometimes Helga would read a bit from the paper to him, and sometimes he would tell her, his blue eyes wistful beneath his burnt-flax hair, the news about his mother and sister over there. It was through one of these letters that Helga first knew how really deep was the loneliness of the man.

"My sister—she want to come this country—Ay not bane going let her! She sing in choir there—she have a lot friends. Ay tank she bane too lonesome here."

So when she saw his bent shoulders by the mail box, she knew he had something to tell her. She did not want to hear it, any more than she had wanted to listen to Grandma Wheeler's troubles, or hear about Sary's coat; but she had listened to folks along Route Three for years now. They expected it; it was part of her job.

"'Ello, Helga!" Lars said to her, his face a little red. "Mabbe you help me write a letter?"

THE Linds had taken root in America, but, somehow, that broad 'a' of Lars's homeland came always sweet to Helga, like an old lullaby from babyhood taking on new tenderness across the years. She pulled herself out of her thoughts in response to that homely voice.

"Yes, I'll help you," she said. "To your girl?"

To her amazement, the red of his face deepened to a most painful crimson.

STATE UNIVERSITY SYSTEM OF FLORIDA

"Yes, I know," Helga said quickly. "I know how 'tis, Lars. And it's a beautiful letter, just like it is—I'd send it just that way!"

Suddenly Helga found her interest unforced.

"Ja," he brought out with labored honesty. "Ay bane hope so. Ay make letter for girl in paper—now she answer!"

"Why, Lars! A girl in the *paper!*"

"Ja. She thirty-three—yust right for old man lak me!"

Helga found herself laughing aloud.

"But, Lars, why don't you marry some girl from around here that you know?"

"No one lak me, Helga! No one but you, and Ay not fool enough for asking Helga Lind! She have better man love her already!"

Helga went white. It was like a knife in the raw, new-opened wound. But she was too innately kind to strike at Lars.

"What about the letter?" she asked at last.

"What you tank of this?"

He pulled a paper from his pocket and gave it to her, while his hand went out embarrassedly to pat her old sorrel mare.

The letter was full of pompous, high-flown phrases of love. It sounded as if Lars must have memorized it from some "Handy Guide for Lovers." Helga wanted to laugh, and then she had a still stronger desire to cry.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Mrs. Larsen! Selma!" she shouted at her. But Selma did not answer

"It doesn't sound like you," she said honestly, looking up at his anxious, hopeful eyes. He shrugged his shoulders a little.

"Vell—I dunno—mabbe she not come if I write lak myself! Ay tank Lars Larsen know he bane not much!"

"But," Helga said doubtfully, "it would be so hard to live up to such a letter!"

His blue eyes seemed to grow suddenly dull.

"Ay bane lonely, Helga!" he said, and looked back at his gray old farm.

"Yes, I know," Helga said quickly. "I know how 'tis, Lars. And it's a beautiful letter, just like it is—I'd send it just that way!"

He looked up gratefully.

"You tank so, Helga? Mabbe that all a lie—that about love—but she came from Smaland—Ay tank Ay be very good to her!"

A lie—a lie—that about love! Oh, love *was* a lie, anyway, Helga's heart cried.

LARS sent the letter to her—Miss Selma Bergesen, 540 Park Street, Jamestown, N. Y.—and Helga found herself waiting impatiently for the answer. She told her father about it one night as he helped her unhitch.

"I wouldn't encourage him if his eyes weren't open," she said, a little bitterly. "If he didn't know, as well as I do, that love's a lie, anyway!"

Emanuel Lind shook his head, almost sternly.

"Love's no lie, Helga," he said, as if he had tested the truth of his statement past all doubting. "Love's no lie!"

"No?" There was an instant's silence, then, "Well, love or not, it'll be a good thing for Lars. He needs a housekeeper!" But she couldn't, somehow, look at her father as she said it.

The letter came at last, thick, and on the best stationery of a Jamestown physician. Lars was waiting at the mail box for it, and Helga called out:

"Here 'tis!"

But he didn't show it to her. He thrust the letter into his pocket and went back up to the house.

It was November now, and all along Route Three the trees were bare. Helga always felt a tingling within at this time of year, as if she were waking to some majestic new birth. She belonged to winter. The very bleakness and grayness of it seemed like an echo of the somber music that made up her being.

But this November she somehow had no sense of coming alive. She had begun to feel free from her pain, and the knowledge that it was still with her weighed her down like some Atlas-great burden. She thought often of Lars's words, "*Ay bane lonely, Helga!*" And the man's loneliness seemed to come echoing back from her own heart.

Even when Rush Sloan, that tall, homely artist with the kind eyes, stopped her one night on the road and said to her, "I wish you'd have let me come to see you, Miss Lind; I'd have given a lot to paint you," nothing stirred in her. Nothing but loneliness.

Lars told her about the letter, shyly, on Saturday. "She bane coming," he said, as he took the farm paper.

"Really? When?"

"Oh, vell—after Christmas, I guess. She say they count on her for the Christmas cakes. She do housework for a Fru Pickering in Yamestown. Ay guess 'twill wait! Mabbe you help me buy few little things for the house, eh?"

"Yes, of course!"

"Ay lak send her some nice present for Christmas—mabbe candy or a nice blue dress—what you tank?"

"Well, you wouldn't know her size for a dress," she said doubtfully. "You might get cloth, though. I'll help you pick it out; shall I?"

He nodded in obvious relief. She laughed a little to herself on the way home, thinking of how Lars was going to so much trouble for his counterfeit of happiness.

BUT, nevertheless, she helped Lars, in the weeks after that, to pick out two new chairs, some things for the kitchen, new pillow cases.

"If you can afford it, seems as if you ought to have new curtains for the living-room," she said.

"Vell—Ay could—mabbe cheap ones," he told her.

She made the curtains herself, though her family seemed to think she was foolish. But she had given out bits of herself to this home and that all along the way by now. Nursed the little Vickery boy nights when his mother was dead for sleep; helped Grandma Wheeler pick ducks when word came that her boy in the city was bringing ten for a duck dinner; made out the mail orders for Sary Overhiser; gone to a country dance with Len Manning when he wanted to bring the flip little Davis girl to her senses. So now she could do no less than make curtains for Lars Larsen. And, anyway, she wanted to be busy, wanted to fill her hours too full for thought.

With the curtains up, and the new chairs drawn companionably near the big heater, the little old farmhouse grew strangely homelike. Helga looked about

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

at it, half resentfully, half wistfully. It seemed a little silly, this gesture of buying new curtains, when all Lars wanted was a housekeeper! She and Lars had made a sweet, pleasant place of it—and for what? A girl from a paper! Oh—well—better that than what *she* had known!

Selma sent Lars a scarf, knitted of red and gray mixed yarn, and he was pathetically pleased and proud.

"Ay tank that's what's held me back—there's been nobody to work for, Helga!" he said.

"No, it's no fun—alone!" she replied.

Then there were three frightening weeks when no word came from Selma Bergesen, and a lost look began to grow in Lars's blue eyes.

"She ain't change her mind, you tank?" he demanded of Helga.

"Maybe she's sick, or they need her there," comforted Helga.

"Mabbe she change her mind," he insisted, his voice a little numb.

That night Helga said to her father, "Lars is all upset—his girl doesn't write. You see, even paper romances don't pan out!"

Emanuel Lind put down the coal scuttle.

"I don't like to hear you talk that way, Helga," he said, troubled.

BUT the letter came at last. The Lind's telephone rang that night—three short and a long.

"It's for you, Helga!" her mother called. "It's some man."

Helga could, even after years, find her every nerve tautening at that. But it was Lars Larsen.

"'Ello . . . that you, Miss Lind? . . . Helga, she bane coming to-morrow!"

She knew better than to ask for explanations.

"Really? What can I do, Lars?"

"Could you, mabbe, come to-morrow night? Yust you and Reverend Fields and Mrs. Fields? You tank Ay should have, mabbe, some cake and coffee after?"

"Yes—oh, yes! Let me bring the cake! I'd love to! And I have a present for Selma. I'll bring it. About eight?"

"Ja! That's fine for you to do that, Helga!"

IT WAS cold the next day and beginning to snow.

"Settling down for a good blizzard," said Helga's father.

But the wind stayed down and toward evening the snowing ceased. Still, the air was keen and stinging cold when Helga set out for Larsen's house, and the horse's breath made frost about her.

Lars's gray house sent out several paths of yellow light across the snow. In the paths were strewn diamonds. Helga found herself dreading, somehow, to enter the house. It looked so happy there, and she felt so old within. But she put her horse up and came 'round to the side door. Lars opened to her.

"'Ello, Helga!" he said. His blue eyes seemed very bright and proud.

"Miss Lind, I want you should know Selma!"

And there was Selma—Selma out of a paper! Big and (*Continued on page 162*)

She loved the route in October, the shout of sumacs on the slopes, the little, wind-twisted swirls of leaves in mid-road, the birds south-winging

What! You Don't Know That? Then I'll Ask You Another

An interview with Lucian Esty and Justin Spafford, the "Ask Me Another" boys

By Rosa Strider Reilly

IN a noisy New York editorial office, two men faced each other across a disordered desk. One was Herbert Bayard Swope, executive editor of the morning "World." The other was Lucian Esty. Many things separated them besides the litter on the desk. The first had risen to a place of prominence in the journalistic world; the second, fresh from Amherst College, had only an idea with which to win his spurs.

Swope had a puzzled expression on his face. But it wasn't any difficult editorial problem with which he was wrestling. The question troubling him was a simple query which Esty had just repeated: "What is the line that comes after 'What is so rare as a day in June?'"

"I know that just as well as I do the name of this newspaper," the editor answered. "'What is so rare as a day in June?' It's from the 'Vision of Sir Launfal,' by James Russell Lowell. Do I get any score for that?"

"No," the young man replied. "You must give the exact line."

Swope strode up and down the room, mumbling as he strode, "What is so rare as a day in June? What is so rare? . . . What is so rare? . . . Then—then come—then if—then, if ever, come perfect days," he shouted triumphantly. And then, exactly like a nine-year-old, he added excitedly, "Ask me another!"

Lucian Esty had been asking the executive editor of the "World" another question since seven o'clock. Early in the afternoon, the young man had telephoned the busy Mr. Swope, requesting a few minutes in which to propound a set of questions—one of the forty quizzes which he and his co-author, Justin Spafford, were about to publish in the form of the book "Ask Me Another." The editor, although very much occupied, had granted Esty this favor. And so enthusiastic had Mr. Swope become over these questions, that, for five hours, or thereabouts, between the high lights of getting out his paper, he had been engaged in answering them. And by midnight he had covered more than a quarter of the entire book.

NOR was the executive editor of the "World" the only person who became enthusiastic over these questions. Esty and Spafford interviewed nearly a thousand persons, in all walks of life, giving these preliminary tests in order that the readers of the two "Ask Me Another" books might have averages against which to match their wits. In every case, the individual rose to the challenge of the question mark: Editors, firemen, writers, soda clerks, professors, stenographers, rabbis, cartoonists, ministers, policemen, anti-

Easy Questions

1. What family of birds drills holes in the bark of trees?
2. What name is usually given to the large grinding teeth?
3. Is brass a basic metal or an alloy?
4. How many persons serve on a petty jury?
5. From what is cork derived?
6. Do the lines of latitude on maps run parallel or at right angles to the equator?
7. Of what industry is Akron, Ohio, a center?
8. How is the date of Labor Day determined?
9. What is the superstition about the bridesmaid who catches the bride's bouquet?
10. What is the name of the elongated dogs popular in Germany?
11. What causes the filament in an incandescent electric light to glow?
12. In politics, what is meant by "the solid South"?
13. Why is it always dangerous to run an automobile engine in a closed garage?
14. Why is a certain type of cosmetic called rouge?
15. What is the first legal holiday in the year?
16. Give the common name for either (a) H_2O or (b) sodium chloride.
17. For what purpose are the commands "gee" and "haw" used?
18. What name is given to the final sermon usually preached to graduating students?
19. Of what type of commercial enterprise are Sears-Roebuck and Montgomery Ward exponents?
20. What two of the so-called primary colors make purple when mixed together?

Questions Not So Easy

1. Identify one of the nations of which the following are the capitals: (a) Asuncion, (b) Quito.
2. With what field of activity was Sir Anthony Wing Pinero identified?
3. What is the emblem of Neptune?
4. What was the sobriquet of William of Nassau, Prince of Orange?
5. Give the literal meaning of the Latin expression *Agnus Dei.*
6. Who was the father of Jonathan, the friend of David?
7. Who wrote "Monsieur Beaucaire"?
8. What country owns (a) Corsica and (b) Sardinia?
9. What is the purpose of the Plimsoll lines on merchant ships?
10. Give within fifteen years the date when Louis Philippe ascended the French throne?
11. What is the real name of O. Henry?
12. What event do the French commemorate on July 14th?
13. To what university does the Yerkes Observatory belong?
14. In what body of water does the island of Cyprus lie?
15. Of what European country is Sofia the capital?
16. In what play do the following characters appear: Bottom, Hippolyta, Puck?
17. Who was Hugo Stinnes?
18. Of what book is John Ridd the hero?
19. What U. S. city had a district known widely as the "Barbary Coast"?
20. The mouth of what great river is in Venezuela?

Questions on American History

1. What event was commemorated by the Jamestown Exposition of 1907?
2. What U. S. general was nicknamed "Unconditional Surrender"?
3. What ex-President of the United States paid a visit to the former German Kaiser, William the Second?
4. Who was William H. Seward?
5. In what U. S. city have families bearing these names taken a prominent part: Stuyvesant, Van Rensselaer, Roosevelt?
6. What English general in 1755 led an ill-fated expedition against the French in western Pennsylvania?
7. Whose Presidential aspirations were sponsored by Mark Hanna?
8. What was the native state of most of the first ten Presidents?
9. Tell which of the following Indians lived West of the Mississippi: Geronimo, Philip, Sitting Bull, Tecumseh.
10. Who was Nancy Hanks?
11. With what section of North America is the name of each of the following associated: (a) Cortez, (b) Ponce de Leon, (c) De Soto?
12. What British major, implicated in Benedict Arnold's treason, was hanged as a spy during the American Revolution?
13. What state in the United States was once an independent republic?
14. What Revolutionary general was called "Mad Anthony"?
15. What have the following in common: Rochambeau, Von Steuben, Pulaski, De Kalb, Kosciusko?
16. In what battle did General Pakenham oppose General Andrew Jackson?
17. To what English nobleman did Charles I grant the colony of Maryland?
18. Give within two years the date when the British burned the White House at Washington.
19. Who is responsible for the phrase, "Too proud to fight"?
20. What popular name was given to the king's American adherents before and during the War of the Revolution?

The answers to these questions will be found on pages 112, 114, 115

quarians, bond salesmen, explorers, actresses, students and graduates, husbands and wives, mothers and sons, and fathers and daughters.

From the interviews, and the subsequent reaction to the books after they reached the general public, the co-authors of "Ask Me Another" have found one characteristic, common to all: *Everybody has weak spots in his knowledge.* The question mark levels us all. Nobody, of all the scores who took the preliminary general quizzes, was able to make a perfect grade, even though presidents of Smith, of Yale, of the Massachusetts Institute of Technology, and of Clark, were given tests. Furthermore, the compilers of these books found that:

Men achieved far higher scores than women.

Women do not have the competitive instinct so highly developed as men.

Editors, writers, and journalists received the best average grade of all.

Specialists—outside of their own field—fell down surprisingly.

Older people answered the quizzes better than younger folks.

The more general reading you do, the wider the range of your knowledge becomes.

All of us are lacking in information on the arts.

An ability to do well on these queries is not definitely related to formal education—or the lack of it.

IT WAS the gaps in their own knowledge which led Justin Spafford and Lucian Esty to become what might be termed the official interrogators of America. In that capacity, they have prepared six tests, especially for readers of this magazine. But before enlarging on these questions, it might interest you to learn how the "Ask Me Another" books first started.

There is nothing new about a question, nor, in fact, about interrogatory games of all kinds. Ten years before our Revolutionary War, Oliver Goldsmith in "The Vicar of Wakefield" wrote of the vicar and his family playing "at Questions." But neither Esty nor Spafford had any recreation in mind when they started out. They were engaged on far more serious business.

Esty and Spafford, both Amherst alumni, were living in New York at the Amherst Club, trying to settle that age-old question—where and how to find a career. During intervals in their long, discouraging weeks of searching for work, they used to devise intellectual parlor games to while away the time.

One night, at dinner, they were joined by another Amherst man, Richard Clarke. He started to ply them with pointed questions on literature. Fresh as they were from the campus, they were astounded, and not a little chagrined, at the weak spots in their knowledge. Instantly challenged, they determined to bridge over their own weak spots and also to make up a list of queries to spring on Clarke the next time they saw him.

But many weeks passed before they met Clarke again, and during that time they had collected some two hundred questions on many topics—literature, music, art, geography, history, sports, the Bible, and so on.

During the research necessary for contriving and answering these questions correctly, both men were surprised at the amount of vividly interesting knowledge they collected. Spafford soon came to the conclusion that the questions which he and Esty had started as a diversion might interest others as intensely as they had interested them. So, quietly, they set out to compile a book of two thousand questions.

BEFORE their work was one third completed, Spafford and Esty had found a publisher in the Viking Press. One of the men at the Amherst Club was acquainted with the publisher. And, having seen his two colleagues at work, he broached the "Ask Me Another" subject to the head of the firm. Naturally, every publisher was looking for something to take the place of the cross-word puzzle idea and, seeing possibilities in these questions, the Viking Press agreed to publish the book. Esty's mother supplied the title.

When this innocent-looking little volume came off the press February 5th, 1927, it hung up a new record in the publishing world. Over a hundred thousand copies were sold the first month. And thereafter the publishers were almost unable to keep up with the demand. Book number two was published late in April, and by the first of May over two hundred thousand of the first and nearly fifty thousand of the second had been sold.

Esty and Spafford created these tests in order to find out the range rather than the depth of a person's knowledge. Questions like, "What is the largest continent?" and, "What is caviar?" (*Continued on page 108*)

Tricky Questions

1. Does the equator cross India?
2. Distinguish between (a) the Diet of Worms and (b) the diet of silk worms.
3. With what army grade does the rank of lieutenant in the U. S. Navy correspond?
4. Which is nearer the North Pole, New York City or Constantinople?
5. The initials of what President of the United States were J. C. C.?
6. On a balance sheet does "surplus" appear as an asset or a liability?
7. Who was commander-in-chief of the U. S. Army during the Civil War?
8. What is the capital of Monaco?
9. How did the bald eagle get its name?
10. What have the following in common: Vaseline, B. V. D., Victrola, Thermos, Kodak?
11. How do the English pronounce the name Cholmondeley?
12. A goldsmith measures a pound of gold and a housewife measures a pound of feathers; which is heavier, the pound of feathers or the pound of gold?
13. What would the magnetic needle of a compass do at the North Pole?
14. What was the name of the party led by Thomas Jefferson, who is sometimes called the founder of the Democratic party?
15. At 12 P. M. Monday, San Francisco time, a cable is sent to Tokio. According to Tokio time, does it arrive on Monday or Tuesday?
16. What is the title of the wife of (a) an earl and (b) a count?
17. Was the year 1900 a leap year?
18. When, during the last ten years, has the United States had no President?
19. Who was the Roman equivalent of the Greek god Apollo?
20. Is there a tide in (a) the Hudson River and (b) Lake Superior?

Questions Men Should Answer

1. Which is the better poker hand, a flush or a straight?
2. Who was the last French prize-fighter to take part in a heavyweight title bout?
3. Identify both of the following advertised products: (a) Bull Durham and (b) Durham-Duplex.
4. During what war were Enfield rifles used by American troops?
5. Give the first name of one of the following: (a) Merriwell, (b) Rover, (c) Swift, (d) Carter.
6. Name three of the common methods by which gas is made to flow from the tank to the carburetor of an automobile.
7. What have the following in common: drop, fadeaway, floater?
8. The initials of what great manufacturing concern are G. E.?
9. What product is advertised by the slogan "Next to myself, I like —— best"?
10. At what season of the year was bock beer sold?
11. In what general category of officers is each of the following: (a) sergeant, (b) major, (c) sergeant-major?
12. Name two of the three branches of service in the U. S. Army indicated by the following shades of hat cord: (a) red, (b) blue, (c) yellow.
13. What is a grenade?
14. What is the best-known make of American automobile with a valve-in-head motor?
15. Is the baseball team known as the Philadelphia Athletics in the American or in the National League?
16. Give the next line after: "Mademoiselle from Armentières."
17. What is a caucus?
18. What have the following in common: James Braid, Henry Vardon, H. H. Hilton, Ted Ray?
19. What trophy was contended for by both the "Resolute" and the "Shamrock IV"?
20. What product is advertised by the slogan: "Takes all the fight out of a beard"?

Questions Women Should Answer

1. What is a jabot?
2. In what connection are the names Wilton and Axminster ordinarily used?
3. For what is Dr. Emmett Holt famous?
4. What have the following in common: scrim, cambric, dimity, marquisette?
5. Identify two of the following advertised products: (a) Crisco, (b) Pyrex, (c) Fels-Naptha.
6. What is there in batter for muffins which is not in batter for popovers?
7. Who is Coty?
8. What have the following in common: Mrs. Lincoln, Mrs. Rorer, Fannie Merritt Farmer?
9. Who makes Gold Seal Art Rugs? Fab? Community Plate?
10. What article of clothing is named for a member of the present U. S. Cabinet?
11. What one verb is used to indicate both "stitching together" and "moistening roasting meat"?
12. What is a peignoir?
13. What is purling?
14. What is a casserole?
15. With what handicraft are all of these terms associated: lazy-daisy, couching, buttonhole, French knot?
16. What is a fichu?
17. What is feather-stitching?
18. Which should be cooked longer per pound, a roast of beef or a roast of pork?
19. What name is given to perforated vessels used as strainers in cookery?
20. What is a white sale?

"I'm Having A Great Time Playing Dead!"

The story of Daniel W. von Bremen, who, at thirty-four, gave his million-dollar business to his associates as a "legacy," and is having the fun of seeing it run "just as if I had died"

By Helen Christine Bennett

ON THE tenth of May, 1926, nineteen men who headed the departments of the Indiana Flooring Company, of New York City, were enjoying dinner at one of New York's great hotels. They had been invited there by the president of the company. There was an element of surprise in the invitation, for although such dinners were not unknown, they had learned of nothing to account for this one.

As the dinner progressed, and no hint of its purpose trickled through the courses, the suspense deepened. The boss must have something up his sleeve for this occasion. They were right. He had.

When coffee had been served, Daniel W. von Bremen rose. He had some difficulty in speaking. The men listening found an equal difficulty in comprehending. They looked at one another in amazement. Could they believe their ears? Their president was telling them that hereafter the entire business would be in their hands. He was quitting the company, and in leaving he had arranged for them to take over the control of the stock. If they managed it successfully for six years it would be theirs without let or hindrance, to be shared by them and such other employees of the company as had helped build it up.

The speaker concluded in a silence heavily charged with unspoken questions. What did it all mean? Their president, admired by all for his fairness and great ability, a very whirlwind of energy, a man whose work was his joy, was *quitting!* They knew he had built the business out of nothing, against the keenest competition. Starting fifteen years before with a borrowed capital of two thousand dollars, Daniel von Bremen on this day headed a concern capitalized at over a million, which was doing a business of more than four millions annually.

The majority of the men at the table had been with the business long enough to know D. W. well. They knew how vital the business was to him, how interested he was in its every detail. And now he was giving it up; he was going out of the business and, because he believed they and their associates had contributed so largely to its success, he was giving it to them. It was unbelievable!

Then, like water rushing over a dam, there broke through the silence a babel of voices, protesting, urging the president to reconsider, pointing out to him that he was the hub of the organization, insisting that he stay.

Although the turning over of the control of the stock meant the gift of three quarters of a million, the interest of the group was not in the gift, but in the giver. When he had convinced them that he was in dead earnest, and that this plan was the result of many years of thought, they were very sober. In bewildered fashion they took stock of their retiring chief, seeking a reason. They saw before them a powerful man with unusually broad shoulders, gray hair, a heavy head and decided features. But they also saw youth and vigor. Despite the miracle of his success and the equal miracle of his gift, Daniel von Bremen was not yet thirty-five years of age!

Before the nineteen men dispersed it was agreed that for a time the transfer of the business was to be kept a company secret. But before six months had passed the news leaked out in some fashion, and came to me.

Here, I said to myself, was a business story with a fresh angle. Men of thirty-four years of age, giving away million-dollar businesses were scarcer than the proverbial hen's teeth. So I immediately set about finding Daniel von Bremen.

It took some persuasion to get him to talk with me.

"IF WRITING anything about this helps the company, I am for it," he said with decision; "but I have no personal interest in the matter. Moreover, you must get most of your material from the people who worked with me, and not from me. I want you to go to the plant and talk with the men there."

I knew that Von Bremen meant just what he said.

"I'll do as you wish," I said; "but you must tell me one thing: *Why* did you do it?"

"Well," he said with a smile, "as I'm the only one who can answer that question, I suppose I'll have to consent to do so."

He settled himself comfortably in his chair.

"About four or five years ago I began to wonder what would happen to my holdings in the company in the event of my death. My family consists of my wife and my son, who is ten years old. They are well provided for by insurance. I never have had any desire to leave my son riches. He will have a competency. As I considered the many things I *might* do, it seemed that the people who had worked with me in the building up of the business merited consideration. I knew when I died I wanted the business to belong to them, and I went so far as to make a will to that effect. I thought that settled the matter—but it didn't. I wasn't satisfied. So I experimented a little with one of the profit-sharing plans which were then being tried out, but the effect was not good.

"IT WAS a bonus plan, by which *all* the workers in the concern received a proportionate share of the profits. However, I soon discovered that not all workers *build* a business, some just *work*. Others actually push the business ahead. I abandoned the bonus plan; but I kept on thinking how I could give the people who were really building the business a share in it. I studied other businesses. In no case, so far as I could see, was there a running concern that could not dispense with the man at the head and still carry on. I saw men die, and their business lived after them, and flourished. I began to realize that I was not essential to my business. One day this thought occurred to me:

"Why wait to die before you turn this business over to those who are building it? I had all the money I needed. I was not interested in the piling up of dollars. Why not see my will put into effect? I took one man in the company into my confidence. He is a lawyer, and he kept the legal aspect of the matter straight. Together we worked out the details. A year ago the time seemed ripe for me to leave. I had worked very hard; I could not let down easily, and I wanted to spend more time with my wife and son. But my primary interest was in seeing that the people who had worked with me received what they merited."

"Then you believe," I said, "that any business can be managed successfully by the people employed in it?"

"Any running business," he qualified. "This statement does not apply to the professions, where a man and his work are one, and the work dies with the man. But the idea that the man at the head of an ordinary business *is* the business, is all wrong. He may be at the start, but as soon as policies are established, and the

STATE UNIVERSITY SYSTEM OF FLORIDA

business gets into its stride, he can step out, and see the business go on successfully. After all, I am only watching what might have happened had I died!"

"Haven't you anything to do with the company now?" I persisted.

"I own some stock in it," he replied; "but I keep out of the management. There is one great advantage in this plan of turning my business over while I'm still alive. If they do need me, I am here. So far they have not needed me. And the business is running very well indeed."

The nineteen men who attended the dinner were the men who held the most responsible positions in the company. They have been made trustees for the majority of the stock formerly held by Von Bremen. As trustees, they are responsible for the administration of the business and for the selection of the other employees who are to share in the ownership of the business. When the plan was put into action they selected fifty-five men and women for inclusion in the sharing. These men and women occupy various positions. Most of them are in the office; but there are superintendents and foremen from the shops, and the office list includes stenographers and 'phone operators.

THE number selected is subject to addition. A man who comes to the company to-day, and who markedly contributes to its building, may be an owner in the company within a few years, by vote of the trustees. This shrewd move was made in order that the growth of the organization should not be handicapped. If the number of owners had been fixed, men of ability would hesitate to join the working force, as they might find a bigger opportunity elsewhere. But as the plan stands, a man whose contribution to the company is recognized by the trustees as meriting a share in ownership may be received into ownership by their vote.

The most astonishing feature of the whole matter, save for Mr. Von Bremen's youth, is that to an outsider this business looks very much like a one-man affair built and dominated by Von Bremen. Von Bremen denies this absolutely.

"From the very beginning," he said, "I had friends with me, friends with whom I had gone to school, or whom I knew well.

"I knew they were the kind of fellows who wanted to get ahead and could be counted on to work hard. I have never formulated any fixed policy about the people who worked with me, but I did want people without preconceived notions about the business, who would work according to my plans, and I did want people I liked. Our office life has, I think, differed from the ordinary in that we believed in having a lot of fun along with our work. There was a good deal of give and take in our relationship. We didn't grow solemn over duty, we went at it as a game. We were on a grand adventure.

"When I left the company I knew that the men were competent to run it. I also knew that I was dispensable. There is nothing so remarkable about the situation. If through good health, good fortune, and a fair ability one is able to accomplish something that people call remarkable, that doesn't necessarily make it so."

PHOTOGRAPH BY JOHN O. TROWERN

Daniel W. von Bremen, who before he was thirty-five had built up a large business—and given it away!

I TALKED for some time with four of Von Bremen's associates, two of whom are president and secretary of the "gift" company. All these four men had known Von Bremen for years, and two had been with him from the beginning.

"We all worked like the dickens, it is true," said one of them thoughtfully. "But D. W. could run rings around the rest of us. He was a bear for work. We miss his stimulating presence, but we feel perfectly competent to run the business. And, more than anything else," he continued, "we want to justify D. W.'s belief in us."

The business which Von Bremen has arranged to give to his associates is said to be the largest flooring company in the world. Its sales operations reach from coast to coast in this country, extend into Canada and South America, and during the past year have crossed the ocean to operate upon American buildings on the continent of Europe, South Africa, and the West Indies. To serve this extended clientele there are twenty-seven sales agencies and offices maintained in the United States. A maple mill at Reed City, Michigan, an oak mill at Coal Grove, Ohio, and two mills in New York City are owned by the company. There are also various warehouses, and general offices in New York City. These give employment to a working force of six hundred.

AS FOR customers, if *you* have not walked upon at least one of the floors of the Indiana Flooring Company, you must stay close at home. They are laid in every city in the Union: in Yale, Princeton, Harvard, Columbia, Cornell, Pennsylvania, Williams, Michigan, Vassar, New York University. They cover the ballroom of the Mayflower Hotel, in Washington, D. C.; the floors of the New York Public Library; The American Red Cross Building, Washington, D. C.; the Art Museum at Minneapolis; the Cathedral of St. John the Divine, New York City; the Waldorf-Astoria Hotel; and many other places.

The list of private customers reads like a combination of the "Social Register" and "Who's Who." It begins with *our* private residence, the White House, and includes the home of J. P. Morgan and those of Willard G. Straight, Anne Morgan, Galli-Curci, Chauncey Depew, Elihu Root, F. W. Woolworth, Frank A. Vanderlip, of New York; E. T. Stotesbury, of Philadelphia; Alfred Du Pont, Delaware; P. D. and Ogden Armour, Samuel Insull, George Pullman, Chicago; the late H. E. Huntington, California; Hon. W. A. Clark, Montana; and so on through the whole country.

But no job is too unimportant for the Indiana Flooring Company to handle. It has laid floors in offices ten by twelve feet and in thousands of small homes.

Nineteen years ago, Von Bremen left high school to flounder, as many another boy flounders, (*Continued on page 166*)

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

PEOPLE always talk about suffering broadening you, making you more understanding, and everything like that. I never took much stock in this when I heard it said, but I have certainly come to see that it is true. For if I hadn't suffered a little myself over Vera Yost's visit, I shouldn't have been any better able than the other girls to understand what happened to Rosemary Merton.

Every crowd seems to have at least one Horrible Example, and since her fourth baby came Rosemary had become ours. When Dulcie Lane got her new raccoon coat, and her husband threw such a fit about what she paid for it, she told me she just said:

"Well, of course, if you want me to go around looking like Rosie Merton—"And he stopped talking, like the radio when you switch it off.

When Will kicked so about painting our kitchen floor, and said I nagged him about it, I finally said:

"All right then; I'll just stop taking any interest in my house at all, let it go the way Rosie does."

And the very next night Will came home with a can of paint and a bottle of turpentine, and went right at the kitchen floor.

I ALWAYS stuck up for Rosie, though, when people criticized her. Rosie and I had played together ever since we were babies, and Will and Howard Merton had always been chums. Besides, having two babies of my own to the other girls' one apiece, I had more of an idea what having four meant.

But the rest of the crowd, never having had the chastening effect of twins, were more harsh.

"That's all very well," Dulcie Lane would say; "but I'll bet I'll never take to wearing outing flannel nightgowns if I have ten children!"

"Well, I don't think the outing flannel nightgowns are so bad," said Mrs. Frank Kirsted, who, I secretly suspect, sometimes wears them herself in bitter cold weather. "But look at the way her house is kept! Baby clothes drying over the radiator in the living-room—as likely as not an empty nursing bottle, all sour and milky, standing right on the piano. And look at her portières, sagging all over the floor. Half the rings have been broken for months."

"I see myself letting any child of mine swing on the portières, in the first place," said Dulcie.

"Rosie lets hers do anything on earth," said Mrs. Kirsted. "I just don't go there any more. There's no use trying to carry on any conversation in such a bedlam—Betty and Junior playing tag all around your chair, Bumper rattling pans in the kitchen, and the baby yelling its head off in Rosie's lap."

"And the way Rosie looks herself!" Dulcie took it up. "She hasn't curled her hair since the baby was born, and she must comb it while she is putting on her shoes. And she wears a bungalow apron from morning till night. Honestly, she's getting to look forty years old."

"And dull!" said Mrs. Kirsted. "She never goes anywhere any more, so she doesn't have anything to talk about except the babies, and whether butter's gone up half a cent a pound. She says herself that by the time they've got the supper dishes done—Howard always helps her with them—she just drops down on the couch and goes to sleep. A lot of fun that must be for Howard, night after night."

"If I were Howard Merton," said Dulcie, "I'd never go home at all."

Well, I said all I could to stick up for

What a dinner for Sunday! And how it was served! Why,

Rosie Merton

and something else to get her stopped!"

Kilbourne

BY T. K. HANNA

Rosie, but it was hard to find much to say. Because every word the girls said was true. Since the fourth baby had come, Rosie had lost her morale. She had gone sloppy. Goodness knows, four babies under five years old is enough to make anybody lose their morale; and Rosie had just stopped trying. I couldn't find it in my heart to blame her; but there's no denying that even Will and I didn't enjoy going there the way we used to.

Howard would come over to our house once in a while of an evening, while Rosie was asleep on the couch at home, and he and Will would practice sleight of hand or fool with the radio. And once, when I had gone up to put another blanket over the babies, I accidentally overheard a bit of their conversation that I wasn't meant to hear.

"I wish Dot would get Rosie started to going out a little bit again," Howard said. "She doesn't seem to take an interest in anything, any more. Of course I know she's got her hands full since the baby came, but—"

Will said something I didn't hear.

"I tell her to go ahead and get one of those Hungarian girls who go to high school to come in afternoons for mother's helper; but she says they don't know how to do anything, and it's easier to do the work herself than to teach one of them. And, of course, we aren't keen on spending any more than we have to. Four kids is going to be some proposition to bring up!"

HOWARD didn't make such an awful lot of money. He was working in Doctor Van Vliet's office on a salary, and Will had been after him for years to go in business for himself. But it costs a frightful lot to fit up a dentist's office, and Howard never could get up his nerve to borrow the money to do it.

He'd gone in right out of dental college, and Doctor Van Vliet had been awfully nice to him. Just as Howard would be ready to leave, a new baby would come along, and Doctor Van would raise his salary a little and he'd stay on. He decided now to wait till there was a vacancy in the Prescott Block. That's the perfect place for a dentist's office.

"Those mother's helpers don't cost an awful lot, though," Howard went on, "and it'd do Rosie no end of good to get out a little once in a while. It's pretty dull going—for Rosie."

Howard gave a kind of heavy sigh. He's too nice a fellow to complain about his wife, even to his best friend; but you couldn't make any mistake about the sigh. Rosie wasn't the only one that it was pretty dull going for.

"If I say anything," Howard went on, "she thinks I'm criticizing her. But if Dot could just kind of get her started—"

I came back down-stairs then, so nothing more was said. And while I would have been tickled to death to help Howard out, I didn't see how I could say anything to Rosie. We all asked her to all the parties we had, and everything like that; but she had got into the way of saying she couldn't make it, she didn't have anybody to leave the children with. The one party to which she came, and brought all four, was an occasion that none of us ever urged her to repeat.

I tried to give her a hint or so—to no avail—and I couldn't see how I could say anything more pointed without hurting her feelings terribly. I really worried over it a lot, trying to figure out some tactful way, because, sloppy or not, I was terribly fond of Rosie. And yet I was the one who played the meanest trick in the world on her.

STATE UNIVERSITY SYSTEM OF FLORIDA

Goodness knows, I didn't mean to. I thought going there would be safe enough on a Sunday afternoon. Besides, having Vera Yost drop in like that was a shock to me, and I was so anxious to get her out of the house that, I must confess, I didn't think much about anything else.

VERA YOST was the only girl, besides me, that Will had ever gone with. There was one winter that he took her around an awful lot. He always said he had never been crazy about her, though, and the Yosts having moved to Chicago years ago, I'd practically forgotten all about her. I had heard that she'd got married, but that was about all.

And then, out of a clear sky, didn't our doorbell ring one Sunday just as we were getting up from dinner, and who should be standing there but Vera Yost!

At first, I scarcely knew her. She was the most stunning thing I'd ever seen. Slim and slick and smart, with a fur coat that looked like a million dollars. She was on her way to visit her sister-in-law, who lives in Tanhasset, a little town up beyond Verblen, and had just stopped over in Montrose between trains.

She came in and took off her coat, displaying a perfectly stunning cloth dress. She was terribly friendly, asked about everybody, wanted to see the twins, and said how cute they were, and everything like that. On the surface, it was the pleasantest sort of call you could ask for. But there's no denying that it was an ordeal. For while she was pleasant and friendly and even flattering, that girl had an appraising eye.

While she was talking, I could see her casting it about the living-room. There was something baleful about Vera's look. Everywhere it fell, I suddenly saw something that wasn't the way I'd like to have it.

The davenport which the moths had got into—I'd moved it against the wall, and thought the corner they'd eaten didn't show; but I saw now that it did. We were going to have it recovered as soon as we felt we could spend the money; but everybody knows how you let a thing like that go. The worn places on the floor in front of the doors, and the end of the rug under the window, that had faded. It just happened that the children had been playing out in the snow and I hadn't changed their rumpled clothes, thinking I'd wait till after their nap.

Suddenly, the home and the life that I'd thought I was running pretty well seemed just one mass of faults, and I could see Vera's cool, calculating eye ranging about, and lighting on every single one of them. She was very polite, of course, but nobody needs to write an idea out and let me read it slowly three times in order to get it. Under her politeness, Vera was sizing me up, and deciding that if Will had used a little more judgment he might have done better.

So when Vera said she had only an hour before her train, and how she'd love to see the Mertons, and Will said, "Let's all walk over," I was relieved, and anxious to get her out of the house as quickly as possible.

If it had been summer, I'm sure I'd have thought enough to call up Rosie and tell her that we were coming; but by the time you've got two babies ready to go out in the winter, you're distracted. Leggins, galoshes, and mittens, and heaven knows what not!

The Mertons' house is on a corner, and the snow plow hadn't gone along the street at the front yet, so we tramped up to the side door, which opens into their dining-room. The Mertons were at the table, and the second Howard opened the door, I realized what a mean thing I'd done to Rosie.

Although it was Sunday, the place was a perfect mess. All the four children were at the table, three in high chairs, and Rosie holding the baby in her lap and feeding it spinach. Of course its face was green from ear to ear.

And what a dinner for Sunday! And how it was served! Why, there was a milk bottle standing right on the table! Betty had upset her dish of stewed tomatoes, and was trying to scrape it up as we came in. Both Betty and the next to the youngest baby were crying.

Rosie wouldn't have minded us. She just said, "Why, hello, Dot! Hello, Will. Come in."

And then she saw Vera Yost. Her face turned as red as a gasolene tank. And even then, I didn't realize what a frightfully mean trick I'd played on Rosie.

It had completely slipped my mind that Howard had once been engaged to Vera Yost. It had just been a kid affair when they were in high school, and everybody had practically forgotten about it.

Rosie got up hurriedly from the table, insisting that they were all through dinner, anyway. The three children began wailing that they hadn't had their rice pudding, but for once Rosie simply ignored them, marshaling us all into the living-room.

That wasn't much better than the dining-room had been, though. Rosie hastily swept baby's underwear off the radiators, and got the toys out of chairs enough for us to sit down on. As she hurried around the room, I could see Vera Yost's baleful eye following her.

Rosie had on an old beaded georgette that had got too draggled for best any more, and that she was wearing out around the house. It was miles too long and the beads were falling off, one long string dangling after as she walked. Her hair straggled all over her face, and she had on a pair of old buckskin sports shoes that were doubtless comfortable, but were just the final terrible touch with beaded georgette.

SOMEWAY, in spite of how much the girls had said about Rosie, I had never quite realized before how completely she had let go. You get used to a person you're with every two or three days. But now, seeing her suddenly through Vera Yost's eyes, remembering what a pretty, peppy girl she had been when Vera had seen her last—Rosie had really cut out Vera with Howard—I saw her in a clear and frightful light.

It was a simply hideous call. The children climbed all over Rosie, still yelling about the rice pudding. She told them to go up-stairs and play, but they didn't pay any attention to her. She had long since given up trying to make them mind, so of course they didn't know how. We all sat down stiffly and tried to make conversation. It was ghastly. Rosie's face kept getting redder and redder and redder.

Vera tried to talk politely to Rosie, but there wasn't a chance. Rosie didn't have anything to say, and if she had, she couldn't have said it, the children were mauling her so, getting their little heads between her and the rest of us all the time. After a few trials with Rosie, Vera gave up and began to talk to Howard. And there was no mistaking her bright, determined tactfulness. From the bottom of her heart, she was pitying Howard.

"How long are you going to be in Montrose?" Howard asked her.

"Only about fifteen minutes right now," Vera answered. "But I'm stopping here for a week-end with Dulcie over next Sunday, on my way back to Chicago."

"Well, we'll have to plan to see something of you then," said Howard.

Of course this was just politeness, and it wouldn't have been polite if he hadn't managed to sound eager. But I couldn't help feeling terribly sorry for Rosie. That eagerness of Howard's might well be the very last straw. It was a terrible call. I never was so relieved as when we could with decency depart. Will went home and got the flivver and drove Vera down to the station.

I WAS about to say something to Will about how sorry I was to have played such a mean trick on Rosie; but when I remembered the way Vera had looked at me, as though she were wondering what Will could have seen in me, I changed my mind and said nothing. As every married woman knows, there's no use putting ideas in a man's head. I just held my tongue, and decided to get my new tan flat crêpe done before next week-end if I broke a blood vessel doing it. Rosie Merton might have given up the ship, but, believe me, I hadn't!

Early Monday morning Dulcie called up and invited me to a luncheon that she was going to give for Vera Saturday. That would mean I'd have to finish my dress by Friday night; but I accepted just the same. I would wear with it the amber beads Father had given me, and I felt confident Vera couldn't look at me in that combination, and think I'd been a sort of consolation prize.

"I suppose there's no use asking Rosie," said Dulcie.

"She won't come; I'll promise you that," I said decidedly, remembering the last agonized look with which she had seen Vera out of the house.

"Well, I may as well ask her then," said Dulcie, "and get the credit for inviting her, anyway."

I was so busy that week—when you take on any sewing on top of twins, I'll say you're busy—that I couldn't see any of the girls. But Thursday afternoon I ran into Father's store a minute, and met Rosie coming out of the ready-made department with a big box under her arm.

"Hello, Dot," she said excitedly. "Come on over home with me a minute and see the dress I've got for Dulcie's luncheon."

I was surprised at her having accepted the invitation in the first place, and simply flabbergasted at her having bought a new dress.

I went home with her while she tried it on, and it really was very becoming. Black satin with white embroidery, and a

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

white-lined scarf. I was about to say, "Oh, so you got that dress to show Vera Yost!" but then I remembered the tan one I was finishing up, myself, and decided to let sleeping dogs lie. Rosie was looking at herself in her bureau mirror, in which human life stops well above the knees, and of course didn't see the effect of her buckskin sports shoes.

"What shoes are you going to wear with it?" I asked tactfully.

"Why—" Rosie looked down at her feet and then evidently thought better of whatever she'd been going to say. "I'm going to get a new pair of black lizard-skin slippers," she said.

And she did, the very next day. Also, a pair of gun-metal chiffon stockings. And then, after all her preparations, Friday afternoon, the luncheon had to be postponed.

Vera had telephoned from Tanhasset that her sister-in-law had the measles—of all the silly things for a grown person to get! And Vera was going to stay another week to help them out. Dulcie put off her luncheon until the next Saturday.

This was quite an anti-climax for me, having rushed so to get my dress finished, and I thought it would be even more so to Rosie. But I was all wrong. Rosie had evidently seized it as a heaven-sent opportunity to complete her effect. Wednesday afternoon I went into Miss Hallie's to get a jar of vanishing cream, and I could scarcely believe my eyes. There, strung up to the ceiling by a thousand wires, sat Rosie Merton. Getting a permanent wave.

"I just had to do something about my hair," she explained. "I never realized how tacky it was looking till I saw myself in the mirror in that black dress."

"It will be nice to have it for the luncheon for Vera Yost," I observed.

"Oh, yes," said Rosie in the most careless tone in the world. "Though, of course, a luncheon isn't anything you have to have a permanent for. I've been meaning to get one ever since the baby came; but I just haven't got around to it." And then, "Dulcie says you've got a new dress for the luncheon."

"No, indeed," I said hastily; "I was making it before I knew anything about the luncheon." This was perfectly true, and, anyway, even if you suspect that you and another girl understand each other perfectly you've got to keep up your self-respect.

THAT night Dulcie called up to tell me that the luncheon would have to be put off again. One of the children of Vera's sister-in-law had caught the measles from its mother.

"Vera's going to stay there two weeks more," said Dulcie; "and then she's going to stay here in Montrose a week. Bee Duncan wants her to visit her, too."

That meant, I suddenly realized, more parties than just Dulcie's luncheon. I should have to fix over my velveteen, then. I couldn't wear my new tan to everything. (*Continued on page 149*)

Rosie didn't seem surprised to see me, and she didn't try to hide the fact that she was crying. She seemed suddenly past all such things

Eight Downs—But Nine Ups!

The story of a man who took the worst wallops fate could hand him, but who never took the count of ten—At sixty, he made a new start, his ninth, and his jinx gave up for good

By Mary B. Mullett

ON a certain business corner in Minneapolis there is a big brick building. To the people who pass it every day it is just one of the many such buildings on other corners. Yet this one is an interesting monument to battles fought and won.

Sitting in the office of its owner, Frank W. Nevens, I listened to an extraordinary story, told in an extraordinary way.

In this story—of his own life—most of the chapters were about poverty, struggles, sickness, failure. Yet, as he told them, his eyes would twinkle as if he were repeating a good joke.

Finally, he told me of the time when, at sixty years of age and weakened by a long illness, he was, through no fault of his own, completely "broke."

I felt as if I were watching an actual fight between Frank Nevens and Old Man Circumstances; as if I had seen Nevens knocked down with almost monotonous regularity—and with the same regularity get up and go on fighting.

When it came to this knock-down blow at sixty, I couldn't repress an exclamation of pity. Whereupon he stopped, thought a minute, then gave a sort of pleased chuckle.

"I *have* had a heck of a time, haven't I?" he said, as if he had just discovered the best joke of all.

So, as I tell you about his "heck of a time," I want you to see Mr. Nevens as I saw him. He is a tall man, although his shoulders are a little bowed by those years when life was "just one darned thing after another." But his eyes are bright and eager; his smile quick and contagious, and even the crisp wave in his iron-gray hair seems somehow to express cheerfulness.

The good old state of Maine turns out a surprising number of hardy human beings—men and women of strong fiber, physically, mentally, and morally. F. W. Nevens is one of them.

"I was born, January 16th, 1850, in Bowdoinham, Maine," he said to me. "My father was a Baptist minister and I was born in the Baptist parsonage. But my father died when I was a baby, leaving my mother with two children—and two hundred dollars!

"Split two hundred dollars three ways, and you'll find it doesn't go far. The family itself had to be split! So my mother went back to her parents, in Limerick, Maine, taking my sister with her, while I was sent to my father's people, in Danville, another Maine village.

"From that time until I was twelve years old, I shuttled back and forth between Danville and Limerick. I suppose old people get sort of 'fed up' with a mischievous youngster; so when one grandfather was tired of having me around he would ship me off to the other one. I felt as if I was just 'boarding 'round,' as country school-teachers did. No real home anywhere.

"Finally, I got tired of it myself. I knew I could work. My Limerick grandfather had three hundred acres of land, and I had helped on this farm. If I could work for him, I could work for myself. So I started out 'on my own' when I was twelve; and I've never had a dollar from anybody since then, except what I have earned.

"That was in 1862, during the Civil War. A firm in Boston used to cut out army overcoats and send them to the small towns to be made up. Some of the women in Limerick worked on these coats; and I hired out to pull basting threads. I cut the prongs off an old steel table fork, ground the stub, and used it to pull the threads. I was paid two cents a coat and could earn about a dollar and a half a week.

"My next job was in a small woolen mill, where I earned three dollars a week, and worked from five A. M. to seven P. M., with thirty minutes off for breakfast and again for dinner.

"I didn't have time for anything except to work, eat, and sleep. A woman who boarded where I did used to get me out of bed every morning, stand me on my feet, and *keep* me standing there until I was awake.

"My next move was to Portland, where I worked in a notion store. I made the fires, swept out, ran errands, and occasionally was allowed to sell a skein of yarn or a paper of pins.

"WHILE I was on that job there was one incident which I remember vividly. The store did not close until nine in the evening; but my work wasn't over even then, for I still had to deliver parcels to our customers.

"The night I speak of was a bitter cold one; but all I had on was cotton flannel underclothes—I couldn't afford anything warmer—a thin jacket and pair of pants, a cap, muffler, and overshoes. I was so cold I could hardly walk.

"At one house where I had to deliver a package, I could look through the windows on the ground floor; and in a bright, cheerful room I saw a table with a lighted lamp on it. Sitting around the table, with their books and papers were four people: a man, a woman, a girl, and a boy about my own age.

"If it had been made to order, it couldn't have been a prettier picture of family life. I stood there, my teeth chattering, and thought how strange it would be if they could look out at me, as I was looking in at them.

"It *was* a contrast, wasn't it? I've never forgotten the idea that flashed through my mind; the idea that if I could ever have a home like that, I wouldn't want to go to heaven!

"FROM the notion store I went to work in a tailor shop run by a dour old Scotchman. I was only the chore boy, but I kept my eyes open just the same; and one day I made the mistake of opening my mouth as well. The Scotchman had turned out a suit which was a misfit. I saw him studying the pattern, trying to figure out what was wrong, so I spoke up and said, 'If you'll change that line there, it will be all right.'

"'What do *you* know about cutting garments?' he growled.

"'Not much,' I admitted; 'but I know how to fix that one.'

"Two days later I was fired.

"When I was fired out of that tailor shop, I was fired *into* being a sort of tailor myself. The old Scotchman's contempt rankled. I'd show him! So I hired out to a man who agreed to teach me cutting, and then I got a job with a clothing merchant in Sanford, Maine.

"I had my board and lodging in return for doing the pressing and the chores; but I was paid extra for the cutting I did. I slept in the store. At least, I had a little cot there. But the place was full of rats; and if *they* slept at all, it certainly wasn't at night! I was only fifteen; and if I'd been Daniel in the lion's den I couldn't have been any more scared than I was by those rats.

"I stuck it out for several months, during which I saved a little money. Then I took the Portland boat to Boston, where a friend of our family lived. All the next day I tramped the streets, hunting a job. I was a lanky, awkward country lad; so green that if a cow had seen me she'd have bitten my head off, thinking it was a cabbage!

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"I didn't find work; and I was so lonesome that I got my bag, which I had left at my friend's, and started for the docks, intending to take the boat back to Portland. Of course I walked; I didn't have money enough to ride; and if you know the Boston streets, especially down toward the docks, you know that they're a perfect labyrinth of twists and turns.

"I had to ask my way at every corner, and the result was that when I reached the pier the boat was starting. I ran down the wharf, intending to try to jump the few feet to the deck. But a man grabbed me and held me back until the gap was so wide that even I realized I couldn't jump across it.

"BUT for that few seconds' delay, my life might have been entirely different. Forced to spend another day in Boston, I thought I might as well keep on looking for work; and this time I did find a job. A man named Russell hired me as a traveling canvasser, or peddler, on commission.

"I went from house to house in the towns west of Boston, finally arriving at Springfield, where I happened to make friends with the night watchman of a hotel. I wasn't satisfied with my job, and he didn't care much about his, so we decided to go back to Boston together.

"We managed to pay our fare as far as West Brookfield; and there, in order to earn the money for the rest of the journey, we hired out to a farmer at three dollars a day and our board. This was better pay than I'd ever had before, so I stayed two months.

"By that time the farmer's busy season was over; but I went back to Boston almost a plutocrat, with a new suit of clothes on my back and one hundred and twenty-five dollars in my pocket! I was so proud of my prosperity that I took a trip to Limerick to show off to my home folks.

"I showed off until my money was gone, then I returned to Boston, where I drove an ice wagon. With my savings from that job I made another visit to Limerick.

"These visits," he went on, "weren't really for the purpose of showing off. Down in my heart, I was just a homesick boy who wanted to see his mother. For years and years, until she finally came to live with me, I never failed to write to her at least once a week; and I kept every one of the letters she wrote to me. I still have those letters—and I still read them.

"This particular visit home was just after the close of the Civil War. At that time, a great many young colored boys were coming North, where people received them with enthusiasm and helped them to get an education. In Limerick, I met two of these boys; one of them a typical 'black man,' the other as white as I was. His name was Boling; and I had good reason, later, to remember this chance meeting.

"It was always hard for me to leave Limerick, the only home I knew, so I stayed there several months until my money was getting pretty low; then I returned to Boston.

"I could have had my old job, driving an ice wagon; for the business was owned by some friends of mine. But I couldn't see any future in that. Anyway, I didn't want to depend on my friends. I wanted to prove that I could hoe my own row.

"The trouble was, I couldn't find a row to hoe! Day after day and week after week I scoured the city, hunting a job. My money slowly melted away until I hadn't a cent. For four nights I slept on the grass in Boston Common. For four days I hadn't a mouthful to eat.

"On the fifth day, as I was going along the street wondering how much longer I could hold out, I met Boling, the 'white' colored boy I had known in Limerick. When he found out the situation I was in, he took me to a restaurant and gave me a meal. Then he handed me the key to his room and told me to go there and make myself at home, as he had a position and must get to work.

"One day, happening to glance at a passing street car, I saw a young chap from Limerick standing on the rear platform. I ran after the car, jumped aboard, and found that he was the conductor. When I told him that I wanted a job he offered to help me get one with the street-railway company. The result was that I was a street-car conductor for the next three years.

"While I was on that job, 'Pat' Gilmore, the famous band leader, got up the great Peace Jubilee to celebrate the end of the Civil War. Hundreds of thousands visited it; and I was chosen as one of the conductors in charge of the cars that handled the crowds.

"You know," he said, "I've always been proud of that. Of course they picked the men with the best record for collecting fares quickly and honestly. And I'm glad that I met both those tests.

"WELL, three years went by. I was nineteen—and I was still only a street-car conductor, even though I could claim to be a capable and honest one.

"I was boarding then with a man named Burns; and one day I happened to say to him that I wished I could get into some other line of work.

"'What can you do?' he asked.

"'Well,' I said, 'I used to be a cutter in a clothing shop.'

"To my surprise, he told me that he was a tailor himself. He offered to help me get a job with a clothing manufacturer, and inside of three days I had one. I did so well that I was soon earning forty to fifty dollars a week, which was big money for those days.

"In the autumn of 1872, I came back one night from my vacation just in time to see the great Boston fire sweep through the business section of the city, the very next day. The clothing factories were destroyed; so I promptly packed my things and went to New York to look for work.

"Going along a street there, I saw a sign, 'Cutters Wanted.' But when I applied for the job I was told that the men were hired at twenty-four dollars a week. That didn't sound very good to me, for I had been (*Continued on page 139*)

Up Where The Blue Begins

By George W. Gray

COURTESY ASIA MAGAZINE

WIDE WORLD PHOTOS

A remarkable photograph of Mount Everest, the highest mountain in the world. No man, so far as is known, has yet climbed to the top of this magnificent 29,000-foot peak, though in 1924, Andrew Irvine (in the circle) and George H. Leigh-Mallory are known to have come within 600 feet of the top. The intrepid mountaineers were seen at that altitude by watchers from a lower level, and were still climbing. Their ultimate fate is a mystery, for neither man was ever seen again. Thus ended one of the most dramatic efforts of brave men to penetrate, by foot, into the upper air

CHRISTOPHER MORLEY has written the story of the restless and inquisitive Mr. Gissing, who wanted to know where the blue begins.

It is a subject in which everyone might be expected to be interested, for we see more sky the year 'round than we see of anything else: in winter, more sky than snow; in summer, more sky than green vegetation, and at sea the blue dome above is many times the expanse of the blue-green floor of water below. The spacious firmament is universal—and commonplace.

Indeed, "this most excellent canopy, the air," to borrow Hamlet's phrase, is so common a sight that many of us take it for granted, with never a thought of the beauty—much less the mystery—of the spectacle. When mist or smoke blot it from our sight we are annoyed, and petulantly complain of the weather. Prisoners, after long confinement, say that the sight they miss most is the friendly sky. Dyers and painters and other colorists have sought to imitate the heavenly hue and fix it in textures and pigments; but they have never succeeded in capturing its translucency.

Pure air is more transparent than the purest quartz glass. Yet it appears blue. All that we see of the stars, the faint signals from the most remote nebula, and the burning rays of the sun at its zenith, come to us through this blue transparency. Do you know why it is blue? How high up does the blue reach, and how near does it approach the earth? Where does the blue begin?

Man has pierced the sky to a height a little more than eight miles above sea level. The world's altitude record, for an airplane, was achieved on August 24th, 1926, by Jean Callizo, a French aviator, who drove his plane up 40,820 feet. "I saw the queer deep, dark blue of a cloudless and mistless sky," he reports, "a far deeper blue than that seen from the earth's surface."

This height was surpassed on May 2d, 1927, by Captain Hawthorne C. Gray, an American aëronaut, who was lifted to 42,470 feet in a free balloon. "A deep, dense blue," is his description of the ocean of upper air which he navigated.

And up beyond—what there? Is eight or nine miles the upper limit of our atmosphere? Did these airmen scrape the ceiling of the sky? Or is there a ceiling?

But these are technical questions, not for the aviator or the balloonist, whose business is navigation, but for the specialized scientist who studies the atmosphere.

RBERT PHOTOS, INC., N. Y.

Ten miles south of Boston, perched on a ocky hill top, is the Blue Hill Observatory, ounded by Abbott Lawrence Rotch for investigation of the upper atmosphere. It is ot a weather-forecasting station; its purpose purely research, and for forty-three years ne research has gone forward, night and ay. During this period Blue Hill observers ave been studying not only figures reorded by barometers, thermometers, wind auges, rain gauges, and other surface nstruments, but also the signals from pilot alloons, sounding balloons, kites, and the ehavior of clouds, lightning, solar and lunar alos, meteors, the aurora, and all phenomna of the air. The body of data thus ccumulated has made possible many vestigations and discoveries.

AST spring I made a pilgrimage to Blue Hill, climbed the mile-long trail that inds among boulders, flowering shrubs, nd rugged trees to the fortress-like bservatory building, and spent a day ith Professor Alexander McAdie, ne director.

It was the day on which Lindergh began his flight across the tlantic; but the whole Massahusetts coast was wrapped in hick haze, and nothing could be learly seen in any direction. Peraps that was fortunate for my nterview, because on a clear day he panorama is so enchanting that ne is tempted to spend hours vatching—cities and towns and oodland threaded by silver rivers nd traversed by toylike locomotives ulling their obedient trains, the sea ith its distant arm of Cape Cod, far to he north the blue cone of Mount Modoc ising above the New Hampshire foothills, nd, more glamorous than all the rest, the loating navies of clouds moving, unhurried, through the clear everlasting blue. But on that day mist draped itself over the hill, and views were at a discount.

"How high is the sky?" I asked Professor McAdie, "or does the blue extend upward to the stars?"

"Oh, there is a limit," answered the aërographer. "In proportion to the size of the earth, the atmosphere is only a thin skin." There was a globe on the desk. Indicating it, he continued, "On the scale of a globe with a diameter of one foot, our entire atmosphere would be represented by a coating of paper covering the globe to the thickness of about one tenth of an inch."

"And all our thunderstorms, hurricanes, tornadoes, and airplane flights take place within that thin layer of paper?" I asked.

"They take place in the under stratum of the paper," said Professor McAdie, "within the first one tenth of its thickness—in other words, in about one one-hundredth of an inch—on the scale we have indicated. The upper nine tenths is not touched at all by airmen. It is a vast, mysterious, unexplored region of our planet, for don't forget that the air is just as much a part of our world as are the land and the sea.

"If astronomers are correct in their understand-

ing of the origin of the solar system, the earth was at one time all gaseous. Gradually, as the earth cooled, some of the gases liquefied, and as the cooling continued some of the liquid froze into rocks and metals. Thus, our planet to-day represents the three states in which matter exists. The crust of the earth is its solid surface. The seas, lakes, and rivers are its liquid surface. And the atmosphere is its gaseous envelope.

"If the sun's heat should fail and the earth's temperature fall below the freezing point of water, the liquid part of our planet would soon become solid. By further lowering of the temperature it would be possible to liquefy the gases which form our atmosphere, and finally to freeze the atmosphere into a solid film covering the whole earth. But until this occurs we'll probably continue to inhabit a solid-liquid-gaseous planet.

"THOUGH the air is an integral part of our planet, it is relatively a very small part. I have seen pictures representing the earth as a globe floating in fluffy billows of clouds—the clouds almost as large as the globe. Poster artists seem especially addicted to this idea of the cosmos. All such representations are quite fanciful, and not at all in accord with the facts.

"If," continued Professor McAdie, "you keep in mind the one-foot globe enclosed in a jacket of paper, you will have a fairly proportioned portrait of the earth with its envelope of air; but to represent the weight, or mass, of the atmosphere in proportion to the solid and liquid earth, you should make your globe of iron."

"A globe of iron enveloped in a jacket of paper. Why, the air can scarcely be said to have any weight at all," I said.

"It weighs less than one-millionth part of the weight of the earth," answered the scientist; "but you must remember that our planet is very massive. Even one millionth of it is a respectable load. The average weight of the air pressing against each square foot of the earth's surface is one ton, and the total weight of the whole atmosphere is fifty-eight billion tons."

Billions of tons of air! And we speak of "airy nothings!" Because air is thin and its density is low it requires about 27,000 cubic feet of air to make one ton. But a ton of air weighs just as much as a ton of lead or a ton of sea water. We live and work and play down at the bottom of fifty-eight billion tons of mixed gases which constitute our ocean of atmosphere.

Mankind may be likened to the deep-sea fish which live along the ocean bottoms, and whose bodies have become adapted through æons of development to the enormous pressures which exist there. In the same way, our human bodies, breathing apparatus, and blood circulation are adapted to the pressures which prevail at the bottom of the sea of air.

"This atmospheric weight exerts an average pressure of fourteen and seven-tenths pounds to each square-inch surface of every object on the earth," said the professor. "This amounts to about seventeen tons pressure on the body of every human being, though, of course, it varies with the size of the body. It is less on a child's body than on an adult's, and a fat man is subjected to more pressure than a thin man—a fact that may be of some encouragement to those who are ambitious to reduce.

"The pressure decreases as you ascend from sea level, because, obviously, the higher up you go, the less air there is to press down upon you. At an altitude of three and two-tenths miles the atmospheric pressure is reduced by half, and at twelve miles the pressure is only one tenth that at sea level. From there up it diminishes rapidly, by geometrical progression, until the extreme edge is reached, where there is no air at all, and therefore no pressure. Theoretically, a man, hermetically sealed, would explode from the internal pressure of his body cells when he reached this fringe of air—assuming that he could endure the other hardships incident to this impossible journey."

"And where is this extreme upper edge of our atmosphere?" I asked Professor McAdie.

"Its exact limits are still uncertain," he replied; "but it cannot be less than one hundred miles above sea level, and it may be half as far again. The truth is that the atmosphere gradually thins out, so that even if we were able to get into the upper air it would be difficult to say just what height marked the last faint trace.

"The only evidence we have of an atmosphere at these extreme heights is indirect," continued Professor McAdie, "for it has been impossible to get sounding balloons above twenty-two miles, and the limit for human ascent is much below that. But through that brilliant phenomenon known as the aurora, we have been able to make calculations of the upper sky. These great, arching, delicately colored streamers, which in our Northern Hemisphere are frequently seen as far south as New York or Chicago, originate above sixty miles in the air and extend upward forty to eighty miles. We know this by trigonometric measurements. Obviously, these lights could not occur in empty space—there must be particles there to be illuminated—and so we assume that here is the last outpost of our atmosphere.

"Between the auroral region and the surface of the earth lies approximately sixty miles of air made up of zones with varying characteristics and peculiarities.

"UNTIL about twenty-five years ago, it was believed that the whole atmosphere grew thinner and colder as one ascended, but that otherwise it was much the same throughout. Practically the whole knowledge of the upper air at that time was based on such facts as had been gathered by observers in balloon ascensions.

"A balloon was first used to explore the air in 1784, when Dr. John J. Jeffries, an American, made an ascent over London. He took up with him a thermometer and other instruments, and also six stoppered bottles filled with water. When the balloon reached its highest altitude, about two miles, the bottles were emptied of water and then sealed. Thus were obtained the first samples of the upper air. Doctor Jeffries made careful readings of his instruments, and found that the temperature of the air decreased from 50° (Fahrenheit) at his starting point on the ground to 20° at the height of the ascent. Other observers in later balloon ascensions confirmed this discovery of the 'lapse rate' of temperature. The rate varies with the humidity of the air, but in general is one degree for every 540 feet of ascent in cloudy weather, while in clear weather it is only one half as much.

"Many details were added to our knowledge of the air during the next one hundred years, through the courage and endurance, as well as the scientific skill, of the atmospheric explorers. In an ascent in 1875, which was made under the auspices of the French Academy, two men died and the third was rendered unconscious. In spite of such hazards, explorations continued. As far up as balloonists could get they found that the lapse rate continued to apply as a constant decrease in temperature. It was regarded as a fundamental law of the atmosphere.

"BUT in 1902, a French observer, Teisserarc de Bort, announced a discovery which has revolutionized our knowledge of the upper air. In fact, since de Bort's discovery there has developed a new science of aërography, or meteorology. It is a matter of interest that a close friend of de Bort, and his collaborator in the experiments which resulted in this discovery, was Abbott Lawrence Rotch, the founder and first director of Blue Hill Observatory.

"De Bort's discovery was made with the aid of sounding balloons, small balloons which carried automatic registering instruments, and which, when the maximum heights were attained, would release their gas and drop to the earth, bringing their records with them. In this way he secured reports of air conditions as high as ten miles, and his records all showed a remarkable fact which no one had suspected: As the balloons rose the thermometers registered a constantly lowering temperature until a height of about six miles was reached. After that height, the temperature remained the same, though the instruments were carried up many miles higher.

"De Bort and his co-workers repeated these experiments in various parts of Europe, and Rotch made similar tests with sounding balloons in America and from a ship in the Atlantic Ocean. They all found that the results were the same. There could be no question of it—the atmosphere was not a one-story structure; it had a second floor.

"The discoverer named this second floor, or area of constant temperature, the stratosphere, because it seemed to be a definite stratification. He named the lower region the troposphere. The latter word means "zone of turning," and is appropriate, for it is in this zone that the great winds blow. Up above in the stratosphere the air is serene and calm, though thin, and of constant temperature, while below the air is in continual motion. The formation of clouds, rain, storms, lightning, and all our weather are activities of the troposphere.

"Later experiments have revealed an astonishing fact about the ceiling of the troposphere. Tests show that the height varies as you move north or south from the tropics. At the equator the troposphere extends up about ten miles; in the latitude of Atlanta or New Orleans it is about seven miles high; in the latitude of Boston six miles, and in the Arctic it is only four miles. For the even colder south

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

polar region it has been estimated that the ceiling is lower still, probably not over three miles.

"Why is there this variation? Many factors enter in, but primarily it is because of the contrasting areas of heating and cooling on the surface of the earth. All of our winds and rain are born of these differences. The polar regions are cold, and they rapidly cool the air that comes in contact with them. When air is cooled it contracts and becomes heavier, and in obedience to gravitation sinks. At the same time the polar heat absorbed by other parts of the earth's surface, and conspicuously by the tropics, is warming the air of those regions and causing it to expand. Incidentally, winds are created by the effort of the atmosphere to adjust these inequalities; but the point I am driving at now is that the rising air of the tropics and the falling air of the poles would theoretically affect the troposphere in exactly the way that we find it does. At the equator the ceiling is pushed up. At the poles there is no such equivalent upward push, so the ceiling rests lower.

IT MAY seem a paradox, but the coldest region that has yet been found in the air is in this equatorial bulge of the troposphere, right over the blistering heat of the equator. This temperature was registered by the recording thermometer in a sounding balloon which was sent up from the island of Java on December 4th, 1913, at 4:39 o'clock in the morning. The temperature on the ground was 76° Fahrenheit, and the thermometer showed a constantly decreasing temperature until a height of ten and one-half miles was reached, when it registered 130° below zero. The balloon continued to ascend; but now it had entered the stratosphere, and the temperature, instead of continuing to fall, rose. At the highest altitude reached by the balloon, a little over sixteen miles, the thermometer recorded a temperature sixty degrees warmer than that found at the ten-and-a-half-mile level. Many subsequent tests have been made in the same region, and these figures are fully confirmed."

The coldest spot yet discovered on the surface of the earth is the village of Verhoyansk, in Siberia, with a temperature of 90° below zero. But this is temperate compared with the cold ceiling of the troposphere over the equator, with its 130° below.

I asked Professor McAdie how high up we have plumbed into the stratosphere.

"The greatest height to which we have been able to get instruments is twenty-two miles, and that was accomplished with sounding balloons," he replied; "but we are confident that this by no means represents the ceiling or *upper* limit of the stratosphere. Airmen have penetrated about two miles into the stratosphere."

It is doubtful if aviators or balloonists will be able to rise much higher into the upper air, because of three conditions: (1) the low temperatures, which in the stratosphere average about 70° below zero Fahrenheit, (2) the scarcity of oxygen, which at the floor of the stratosphere is only about one fifth that contained in air at sea level, and (3) the low pressure of the atmosphere. Low pressure affects not only man but gasolene motors as well, and the flights of airplanes into the stratosphere have been made possible only by equipping the planes with an air-pumping device, the supercharger, which compresses the thin air to sea-level density and feeds it to the motor.

Lieutenant John A. Macready, who has made many flights into the stratosphere, has expressed the opinion that of the three conditions named, the most serious handicap to aviation is the diminished pressure of the upper air.

THE annals of air exploration are filled with stories of the hazards caused by these three natural conditions of the upper air. It was a frequent occurrence with the early balloonists to be overcome during a high ascension, and be aroused from unconsciousness by the descent of the balloon to lower levels, where increased pressure, oxygen, and temperature acted as restoratives. A few pioneer aëronauts died in the upper air. But at least balloonists are not in great danger of falling; they can generally count on the balloon to bring them down safely. With the aviator, the case is quite different. He can scarcely afford to be unconscious in the upper air, and expect to remain an aviator—though one army airman, Major R. W. Schroeder, accomplished even this feat.

Major Schroeder was making a high-altitude test in an airplane over McCook Field, near Dayton, Ohio, in February, 1920. When he had reached an altitude of 33,000 feet, the automatic feed of his oxygen equipment ceased to work. He reached for his (*Continued on page 103*)

DE COU, FROM EWING GALLOWAY, N. Y.

Two climbers high above the Yosemite Valley, but still far below the stratosphere, or second story of the earth's atmosphere. The "ceiling" of the lower story of the air varies in height from four miles at the poles to ten miles at the equator. This "lower story" is but a tenth or less of the total thickness of the earth's atmosphere, but in it all our storms take place. The "upper stories" of the air are free from disturbances such as we know on the earth's surface

Grandfather

He loves the good old days

By Don Marquis

ILLUSTRATED BY NORMAN PRICE

"THE calendar," says Granddad, "has slipped, somehow. May is just about like March used to be, and March and April are practically winter months nowadays. Yes, sir, the calendar's slipped!"

And it's not merely the climate, almost everything has changed—and for the worse: horses, and tobacco, and apples, and houses, and people, and politics.

Especially people and politics, and politicians. There aren't any politicians nowadays who amount to a tinker's dam; let alone statesmen. Why, Granddad remembers Abraham Lincoln, himself! Heard him speak one time right over there, standing on the Courthouse steps!

"I remember every word he said, too," says Granddad.

"When was it, Grandfather?" you ask him.

"It was in the late fifties, the late fifties of the last century."

"How old were you, Granddad?"

Grandfather is a little past seventy, but sometimes he likes to talk as if he were at least seven hundred.

"I was just a lad, just a little lad," says Grandfather; "and I remember every word Abraham Lincoln said!"

"Was it 1859?" you ask him, persisting.

"It was," says Grandfather.

In 1859 Grandfather was just five years old, as you remember and he may temporarily have forgotten.

"Yes, sir," says Grandfather, holding up his right hand, "this is the hand that shook the hand of Abraham Lincoln."

"It doesn't stand to reason, Grandfather, that you could remember everything he said. You were only five years old in 1859."

"Don't remember it!" says Grandfather. "Don't remember it! Of course I remember it! My father said to me, 'Son, I want you to listen hard to-day. I want you to drink in every word Mr. Lincoln says. Mr. Lincoln is going to be President of the United States, and he is going to free the slaves, and every word he utters to-day will be history.' I listened. Yes, sir, I listened, and I could repeat that speech almost word for word now. It started with something about, 'We, the people of the United States,' and it went on from that to 'the course of human events,' and it kept going in a mighty high-toned statesmanlike way right on to the end. And when he sat down there wasn't a dry eye in the place, and everybody knew that this country was going to stand single and undivided as long as Abraham Lincoln was at the head of things. And there wasn't any doubt he was going to be elected President, and *be* at the head of things, too. Remember it! Of course I remember it and I remember exactly how he looked!"

YOU can't talk politics with Granddad, or people, or anything of that sort without he gets right back to Abraham Lincoln and the speech he heard him make that day on the Courthouse steps. But I sometimes think his recollections of the Courthouse, and the Courthouse Square in our town, may have been a little bit confused at that. For a couple of years ago at an Old Settlers' Meeting, Granddad got up and made a speech, and told about the wonderful progress that our country has made within the life of a man still living.

"Why," said Granddad, "I shot a deer right over there in the Square where the Courthouse now stands!"

He used to get a licking if he so much as whistled on the Sabbath Day

I asked him about it later. I said to him, "Grandfather, how old were you when you shot that deer on the spot where the Courthouse now stands?"

"Quite a lad, quite a lad," says Grandfather. And then he must have seen something in my eye, for he retreated a little. "Quite a lad for my age," he said. "I was a big boy for my age. Yes, sir, I was quite a fellow when I shot that deer. Father didn't know I had the gun. It was one of those old-fashioned muzzle-loading guns with the octagon barrels—a cap-and-ball gun. It wasn't like these new-fangled rifles that use cartridges with just so much powder in 'em. One of those old-fashioned guns you could load yourself, with as much powder as you wanted to put in. You could load her for turkey or you could load her for bear. It was your own option what you did with her. You could load her to shoot through a pasteboard box or through a brick wall. But these new-fangled guns can only be loaded as heavy as the manufacturer wants to put powder into a cartridge.

"BUT, as I was saying, I was a mighty big lad for my age and I was pretty young to be toting that gun—the same gun my dad carried in the Mexican War, and he didn't know I had it. Well, this deer came out of the woods—"

"Grandfather," I said, interrupting him, "I think it would be impolite for a grandson to apply the acid test to too many of his revered ancestor's stories, but I remember your saying that you shook the hand of Abraham Lincoln, when you were five years old, on the Courthouse steps. Now, let us suppose the Courthouse had been finished only a month before Abraham Lincoln made his speech from the steps of the edifice—I think it is reasonable to give it a month. That makes it necessary for you to have been somewhere between four and five years old when you shot that deer where the Courthouse now stands, if you really shot it before the Courthouse was built there. It seems to me possible, Grandfather, that you may have got a little mixed in your dates, and may have shot the deer *after* the Courthouse was erected."

Grandfather looked thoughtful for a while and hummed a little tune, an old-fashioned tune that I never heard anyone else use, and his only tune. Then he frowned and appeared to consider, and then he laughed.

"Say," he said, "you know, I think I

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

nay have been a little mixed! It was ither my dad or else my oldest brother, Tom, that shot the last deer ever seen in hese parts, right over there where the Courthouse stands now. And I heard 'em ell about it so much when I was a young ellow that it sort of got grafted onto my wn recollections. Anyhow, whether it appened to Dad or whether it happened o Tom, it is a *true* story! And what I said bout those old-fashioned guns as compared to these new-fangled weapons they ave to-day is as true as gospel!"

You expostulate mildly. You remind Grandfather that the trend of modern hought unanimously hands the palm of fficiency to the breech-loading firearms, s compared with the old-fashioned nuzzle-loaders.

"I am not talking," says Granddad, about how many times you can shoot vith one of these repeating rifles or nachine guns. What I am talking about s this: that in the old days every feller hat shot a gun had a chance to decide for *himself* just how far he wanted that gun o shoot, and how hard he wanted it to hoot, and how many slugs and bullets he vanted it to sling at one shot. No, sir, ou can't go back on the good old-ashioned weapons that the Revolutionary War and the Civil War were won vith—the weapons that cleared the Indians out of the country. In those days, man had a chance to decide for himself ust what kind of shootin' he wanted o do."

PEOPLE in general aren't what they were in the good old days, and especially young people. Young people aren't polite to their elders and considerate, the way they used to be, because they aren't brought up in the proper fashion. They get no training and they get no discipline. Grandfather says that in his young days he used to get a licking if he so much as whistled on the Sabbath Day. And that gave him a respect for orderly institutions and elderly people, which he, himself, has never lost, but which he is grieved to see does not obtain in the world to-day.

"All these confounded modern inventions and contraptions are partly responsible for the change in people," he says. "From the time a child is born until the time he is grown up, he has too many slick toys to play with—these confounded automobiles, for instance. And the next thing you know every fourteen-year-old kid in the whole country will have an airplane for his own and be circling around the church steeples, flinging down sarcastic remarks as he flies, at his elders and betters.

"As for houses—well, there was something like comfort in the houses in the good old days: comfort, summer or winter. There were none of these darned steam radiators that hiss at you like a bunch of poisonous snakes had crawled into the house. You used to have a base-burner or an open fireplace, or you had a long-barrel wood stove that would take a log four feet long; and you could *see* the fire!"

What you really want, Granddad contends, when you come in and stomp the snow off, is a fire you can *see* and *feel* as a real fire. It is like a red heart beating and pulsing in the center of the house. It is personal! It isn't remote or mechanical.

In the old-fashioned type of fire—the real fire that people used to warm themselves by, when people were people and not merely the slaves of devices and contraptions—you used to warm yourself in front until you got thoroughly and completely warmed and dried. And then you turned around and warmed your back. And then you turned around and warmed yourself in front once more. And then you pulled off your boots and sat down and lighted up your pipe—and that was *comfort!* That was something to come in to, out of a cold day. You might get a little chilly ten or fifteen feet away from the fire, that is true. But you could always come back to it, couldn't you? Anyhow, you knew it was a real fire; and not water gurgling and goggling, or steam grunting and knocking and grunkling through a lot of brass pipes, and getting ready to hiss, or squirt, or something. No, you knew you were *inside* in those days and that the winter was *outside*, and there was some comfort to it.

And that was *comfort!*

"Pipes, pipes, pipes—pipes all over the house nowadays—a man don't feel like he's living in a *home*, with all these pipes around him," says Grandfather. "Brass pipes, and lead pipes, and iron pipes. It makes a man feel like he's living on the inside of some kind of mechanism. It makes him think he's got in a kind of trap at the center of a steam engine.

"A drink of water in those days was a drink of *water!*"

"You can't even get a drink of water nowadays, not even an ordinary, common, simple drink of water, unless it comes out of a pipe," says Granddad. "Water isn't what it used to be. It don't get enough air in it, any more, to make it taste right. As a matter of fact, it has been nearly thirty years since I've had a drink of water that could really be called *water!* Water used to come out of wells and springs; but heaven knows where they get the stuff they call water nowadays! It has all of it got chemicals in it. But if it hasn't, it is probably just as poisoned as if it had. In the old days you would tilt a bucket up on the edge of a well curb, on a hot day, and bury your face in it *and that was a drink of water!* But there just practically *ain't* any water any more!"

It doesn't do any good to point out to Grandfather the superior hygienic virtues of our modern water system as compared with the old haphazard wells and springs that got so much surface drainage and used to spread so many diseases through the country. Anything, he says, is better than drinking, out of pipes, a fluid of which you do not know the previous history. He affirms that if you could see into the middle of his joints you would find a layer of red rust there. And that rust, he says, is what gives him what they call his rheumatism. The rust comes from drinking water out of pipes.

When he was a young man, and drank exclusively from wells and springs, he never had a twinge of rheumatism, and his digestion was good in those days too. He could digest the bark of trees, stones, horseshoe nails, or jack-knives.

"NOT," says Grandfather, "that anybody *had* to digest nails or jack-knives in those days, for people knew how to cook. But cooking is a lost art. Everything you get to eat in this day and generation comes out of tin cans. The idea of eating green vegetables out of tin cans! As a matter of fact, I don't believe most of them really *are* vegetables at all. They are things, I'd swear to it, that are all made in some big factory, in a lump, and afterward cut into shape to represent all the different kinds of vegetables; and they are colored up with some kind of dye made out of coal tar; anyhow, they all taste just exactly alike to me!"

Granddad says that these vegetables make him really glad that he hasn't got any teeth to speak of any more. They don't affect his false teeth, but he knows that if they came (*Continued on page 127*)

"Tenny Tragg!" he exclaimed. "As I'm alive! Where in the world did you come from?"

The Vagabond Comes Home

And Emily Flayne finds romance where she least expected it

By Philip Curtiss

ILLUSTRATED BY VICTOR C. ANDERSON

BETWEEN nine and eleven on a summer morning, the Shiloh general store was a sociable spot—and a fragrant spot, too, with its spacious air of white paint and freshness. A flavor of ground coffee and cloves, of dried beef and cinnamon always hung over one side of the store; on the other side the clean, clothy aroma of calicoes and new ginghams. And during the summer months, verdant counters of "specials" were ranged at the front—early melons and peaches, and tight heads of lettuce constantly watered by a little fountain.

At "Butler's," as the store was known in Shiloh, one never hesitated to drop in for the most trivial article, even during the busiest hours—a yard of braid or three lemons—and as a result the double screen doors were constantly swinging back and forth, each time with a little swish of the air-check. Going into "Butler's" one always met someone else coming out, and thus little sociable groups were constantly forming at the front of the store, greetings and banter passing back and forth, and stray bits of laughter rising into the summer sunshine.

The morning deliveries also contributed to this sense of bustle. As a matter of fact, all the delivering was done by one sixteen-year-old boy and a light flivver truck. But as the truck was always backed up at the curb during exactly those hours when everyone else was in the near vicinity, one could never form a mental picture of Butler's store without including the image of a lanky boy in a long white duster

STATE UNIVERSITY SYSTEM OF FLORIDA

incessantly pushing out the screen door with a basket or crate held in front of his body, crossing the six or eight feet of tar walk, and slamming his burden into the back of the truck with a bang that rocked the whole vehicle.

At eleven o'clock, however, came a sudden hush, came almost in an instant. With the first toot of the eleven-six train the whole population of Shiloh began instinctively to edge away in the direction of the post office. Butler's at once felt the lull, and between twelve and one it became as empty and still as the village library. The lettered green shades were drawn halfway down the big front show windows, and brought a pleasant shadow of coolness with their descent. Two of the three clerks went home to dinner. The one who remained began to put up bolts of cloth and boxes of embroidery skeins on the dry-goods side of the house, while the proprietor, Lemuel Butler himself, retired to enjoy his ease and his first cigar in the little wired-off enclosure of the cashier's desk.

Here, on a pleasant noon in the early summer, he had buried himself to the ears in the morning paper when suddenly he was called back to reality by a quiet, amused voice, three feet away.

"Good morning, Mr. Butler."

The storekeeper glanced, startled, over the top of his paper.

"Oh, good morning, Miss Flayne."

By a sort of professional instinct he grabbed a pencil from the telephone desk and passed out behind the broad general counter.

FACING him at the other side of it was a slender, tallish young woman who might have been any age up to thirty. She was dressed in an absolute perfection of cool, clinging sports clothes, light gray and cream white; but the features that one noted instantly about her were a pair of drooping jade earrings and a pair of humorous, slightly sardonic brown eyes.

Emily Flayne was one of the "summer folks," who were coming to Shiloh in increasing numbers, and were furnishing the town with no small part of its present prosperity. Early that season, Miss Flayne, with her mother, had purchased "the Porter place," a small white cottage a mile out of town, and Lem Butler's admiration had been captured by the report that she had signed the deed and paid for the equity within half an hour after she had laid eyes on it.

He had liked her still more when he had actually seen her, but, with his usual rare accuracy, he had had a presentiment that the rest of Shiloh would probably not share his opinion. Emily Flayne was a little too brisk, a little too commanding, to fit in with the usual Shiloh methods of doing business. In the common, loose phrase of the village she was the kind of person who was known as "sarcastic."

At the present moment, however, Lem Butler had only his own opinions to consult.

"WELL," he asked cordially, "what can I do for you this morning?"

His visitor laughed. "You can do a great deal; but I didn't come in to buy anything. I came for some heavy advice. I'm in serious trouble."

"Dear me!" replied Butler. "What's the matter now? Have you lost the keys to the salmon cans, or won't the lamps work even yet?"

"Oh, it's worse than that," answered his customer, "very much worse." She nodded to the wired enclosure. "Mayn't I go in there, or is that the holy of holies?"

"Not at all! Not at all!" replied the storekeeper. With eager hospitality he dusted the chair in which he himself had been resting. Passing around the end of the show case, the visitor seated herself and crossed her knees with gay nonchalance, displaying a length of light gray silk stocking.

"I guess you don't know," she explained, "that I'm a storekeeper myself for nine months in the year. I never feel quite at home unless I'm behind a counter."

The merchant greeted the statement with an air that was polite but still mildly incredulous, and his customer laughed.

"I see you don't believe it; but look me up in the New York telephone book and you'll find that it's true. I've got one of the best book shops in Brooklyn. It's not the largest, but I've got the trade that I want. I've had my nose to the grindstone ever since I was sixteen years old, so this summer, at last, I thought I'd do what I pleased. I wanted to get a place 'way off

Filled up with gardening books and good will, Emily had taken a tape line and spade, and gone to work beside Oscar McComas, a dour Scotch gardener. . . . By noon she had driven the old fellow nearly insane

in the hills where Mother could get some air and I could forget all about work and sales and help, and the whole blooming business."

"But it hasn't turned out that way?" asked the storekeeper.

Emily Flayne threw up her hands in despair. "I should say it hasn't! I never knew what trouble was until I left New York."

Distinctly interested, Lem Butler leaned back against the bookkeeper's high stool. "You find, as we all do," he suggested, "that your business won't run without you?"

"Oh, no," replied his visitor. "The shop's fine. It's Shiloh that's driving me crazy. I don't know how we are going to exist."

The girl made a sudden, sweeping gesture as if to unload all her troubles at once. "Isn't there anyone in this town," she demanded, "who wants to work? Isn't there a soul in the village who wants to earn any money?"

Lem Butler did not smile. Indeed, a faint shadow crossed his face.

"Of course we all have to work," he answered evasively. "But, you know, on the farms this is a very busy time of the year. They've just been cultivating their corn, and in a day or two they'll begin their haying."

"But the women don't work in the corn fields, do they?" retorted the visitor. "I've had three women and three men in less than a month, and all of them were fine—as long as they lasted. But just as they were beginning to get used to the work, the same thing would happen. We'd come down to find the stove cold and the milk still outside the door. Then, about ten o'clock, some neighbor would come in to say that Lizzie Brown had telephoned that she wouldn't be up that morning, or that Ollie Perkins had decided to go to work on the lumber job. The Hackett boy was the last one, and *he* didn't go to work on any lumber job. He's been sitting in front of Tyler's garage all this morning!"

HER tale of woe trailed abruptly to an end, and Lem Butler stirred uneasily. "You do seem to have hard luck," he suggested. "The only thing I can think of is that you leave it with me to try to get you someone else."

Emily Flayne rose eagerly. "That would be wonderful!" she exclaimed. "Man, woman, or child, I don't care who it is, and I'll pay them whatever you tell me to. Only," she added with returning doubt, "won't they be just as bad as the others?"

"Well, perhaps they won't," consoled Butler. "I'll do my best."

With this cheering promise the visitor left, in better spirits. But Lem Butler did not go back to his newspaper. The truth was that Emily Flayne had not told him any news. Every atom of village gossip seeps sooner or later across the counters of the general store, and for nearly three weeks Lem Butler had been listening to the other side of the story. As the sage Yankee merchant had feared the first time he saw her, Emily Flayne was one of those unhappy persons who, with the best intentions in the world, have a positive genius for stepping on all the sore points of local tradition.

Oscar McComas, a dour Scotch gardener, had been her first employee. He was a man who had spent thirty years among flowers and vegetables, and could make a plum tree grow in a stone pile; but he had his own ideas of just how to do it. Filled up with gardening books and good will, Emily, on the first morning, had put on a linen skirt, taken a tape line and spade, and gone to work beside him. The result had been that by noon she had driven the old fellow nearly insane, and after the second day he had gone to work on the ice truck.

NEXT in line, to help out in the kitchen, had come a young French-Canadian woman, the wife of a section hand on the railroad. She had proved to be a neat, docile worker until the end of the week, when Emily had tactfully brought forth a black dress, a white apron and cap, and suggested that she wear them while serving tea on the lawn—in sight of the highway. It was this young woman who had sent word by telephone that she was coming no longer.

Just what had happened to the next two employees Lem Butler could not remember, but the last of the dynasty had been Luther Hackett, a youth in his twenties who had "got through" because he couldn't stand being called "Hackett."

First and last, it did make a ridiculous tale of misunderstandings, and more than once, during the slower hours of his afternoon trade, Lem Butler found himself smiling. His promise of aid had been wholly sincere, but one candidate after another had been rejected in his mind when, on the following afternoon, he received a second unexpected visit.

This time he was bending over the grocery counter, adding figures on a slip of brown paper, when he heard a low, whining voice at his ear:

"Please, mister, could you give a little cheese and a few crackers to a poor man who's walked all the way from Temple's Falls and ain't had a bite to eat since yesterday mornin'?"

The storekeeper straightened sharply, stared a moment, then burst into a roar.

"Tenny Tragg!" he exclaimed. "As I'm alive! Where in the world did you come from?"

"Paris, France," grinned the visitor. "Just got in this morning. Matter of fact, I did walk from Temple's Falls—except I got a lift for a couple of miles."

In clothing, at least, the newcomer might well have played the part which he had assigned himself, for he was clad in a blue denim shirt, a pair of stained khaki trousers and broken white canvas shoes. Otherwise, however, one could well understand the enthusiasm of his friend the storekeeper. His chest, his features, and the throw of his head were those of the traditional Greek god. Lem Butler was still holding his hand, a hand as big and hard as that of a laborer.

"Well, say!" Lem repeated, over and over. "The last time I heard of you, you were starting for Florida."

Tenny Tragg grinned harder than ever. "I did start," he answered, "but did you ever hear of such luck? I had a dandy job promised me in a winter hotel, but, of course, being me, the hotel had to burn down. It was actually in flames as my train pulled into town. So then I beat my way over to Galveston, and got a job on a tank steamer bound for the Baltic ports. On the way back another chap and I decided to see Paris, and we did it so hard that we used up all our pay. But I got a berth all right as second-class steward on an English ship out of Cherbourg, so here I am, back home, and broke."

"And what are you going to do now?" asked Butler.

"Well," replied Tenny, "the subtle indications are that to-morrow morning will find me piling boards in the paternal lumber yard."

"What did your father say about your adventures?"

The younger man beamed shamelessly. "I can't pretend," he confessed, "that he was very much pleased. In fact, he told me at dinner to-day that the only job I could ever hold would be that of tester in a hammock factory."

Lem Butler looked at him for a moment, then suddenly jerked his head in the direction of the little enclosure around the cashier's desk.

"Come here, Tenny," he said. "I want to talk to you. I've got something in mind that's just about your speed."

THUS it was that, three days later, when Emily Flayne came again into the store, Lem Butler greeted her with a grin almost as broad as Tenny's.

"Well," he demanded, "and how do you like your new hired man?"

Emily Flayne threw up her hands in the familiar gesture which she used either for joy or despair. "He's marvelous!" she replied. "But what's the mystery? The man's a gentleman!"

"Certainly he's a gentleman," answered the storekeeper; "although that's all the good it's done him, so far. Then you like him, do you?"

"Like him?" repeated Emily. "He's too good to be true! There's absolutely nothing he can't do, from fixing the pump to cooking the breakfast. He's doing outside work mostly, but the other night we had some company over from Sharon, and he volunteered to wait on table. And he did it like a million-dollar butler too! My friends didn't know what to make of it, and I didn't tell them. The only trouble is that he makes me nervous. He always insists on calling me 'madam.' 'Yes, madam. No, madam.' And at the same time I feel that he's laughing at me inside."

"I don't think he is," replied Butler. "That's just Tenny. He's playing the game."

"But what's the game?" insisted Emily. "What is the mystery?"

"Well, I'll tell you," answered the merchant. "It's a long story."

It *was* a long story, as Lem Butler told it, but only because of his rambling, reminiscent style. Tendall Tragg was, in short, the beloved vagabond, the favorite younger son of the town of Shiloh.

His father was one of the really big men of the village, the kind of man who, without the change of a line, might have been put on the stage for a typical, tight-lipped deacon in a rural melodrama. He owned the lumber and coal yards, sold masons' supplies and builders' hardware. He was president of the savings bank, and invested shrewdly in timber lands. He had

The heavy work in the house had been completed, and together, as if in joint ownership, they were enjoying the interest of putting the furnishings in place

lled in succession all the responsible ffices in the church society and the ownship, and lived in a beautiful old hite Colonial house that might have been aken out of a chromo. Here he had aised six children exactly like himself. ll had grown up into exemplary men and omen.

But when it had come to the seventh, Fate had decided to play a joke on him.

It was not that Tenny was lazy, but simply that he had that queer kink which forces young men of his type to wander all over the world, looking only for those jobs which would never appeal to anyone else. The Baltic trip had been typical.

At this point in the narrative Lem Butler came to a pause, and Emily Flayne looked over the neighboring counters with rather cold eyes.

"Of course that's all very picturesque," was her comment; "but the question is, What's going to become of him in the end?"

"That's just the point," agreed Butler. "There isn't a man or a woman in Shiloh who wouldn't lay down his life for Tenny Tragg; but, just (*Continued on page 130*)

The Troubles Of A Humorist

By H. I. Phillips

H. I. Phillips, on a Florida beach, enjoying a respite from what he calls the *troubles* of a professional funny man

NOBODY is as funny as people think a professional funny man ought to be. And that's one of the things for which perhaps both sides should be thankful.

Just as so many moving picture sheiks are just so many flat tires in private life, just as the famous author of love and adventure stories is so often a strictly home man who has never been through anything more exciting than a dispute over electric light bills, and just as the professional parachute jumper is often the first man in the party to show alarm when he discovers he has been sitting in a draft, so is a professional wag anything but merry company to himself and others.

You can get a good cry any time by walking into the office of a newspaper columnist and taking a look at the poor slave trying to spread little rays of sunshine through a tattered typewriter ribbon.

He has all the care-free buoyancy, scintillating gayety, exultant jocundity, and reverberating cheerfulness of a man who has received news that his bank has failed, that his house has burned down, that his wife has eloped with the piano tuner, and that there is a man outside who wants to see him about writing some happiness jingles for Look-at-the-World-Through-Rose-Colored-Glasses Week. Every professional funny man of my acquaintance snaps at his friends and bites strangers.

Most column conductors act as if they had a great hidden sorrow. They have. It's the next day's column.

All this is at odds with the idea held by the general public. The public pictures a professional funny man—if it bothers to picture him at all—as a gay young lad who leaps out of bed singing, whistles on the way to the office, paralyzes the elevator man with a few funny stories, helps the janitor start the day right, telephones a message of cheer to the office boy at home with the grip, bellows a hearty "Haw! Haw!" through a megaphone to increase the morale of the other office workers, and then goes into an eruption of bright ideas, which is quenched with a fire hose purely for the conservation of his own vitality.

Few newspaper readers believe a column writer spends much time in the office. And they're not far wrong, at that.

THE best conducted newspapers don't want a columnist in the office more than two or three hours a day. Some papers prohibit his coming down at all. They figure his bearing depresses the rest of the staff. The New York "Sun" has allotted me an office with only one small window in it. The window cleaner took one look when I first joined the staff, and now, when I want the window cleaned, I have to take it out and send it to him. Like so many professional funny men, I am what might be called a hale fellow well avoided.

I also have an office at the Associated Newspapers, Inc., which syndicates my work. But H. H. McClure bought me a desk at some public school auction. It is so low I can't get my knees under it. That's probably just why he bought it.

The greeting most commonly addressed to me by friends who run into me on the street is, "Why so sad?"

It always disturbs me.

"I'm not sad," I insist.

"Well, you look it," is the reply.

I can't explain it. My face is my misfortune. Often when I look the saddest I feel the happiest. The deepest frown may be my reaction to the glad tidings that I have made the last payment on my automobile, won a trip to Europe, or that the tailor has found the pants to my new blue suit.

Mine is not the face to launch a thousand Cheer-Up Drives, but its bark is worse than its bite.

ONE of the reasons a professional funny man is so likely to seem habitually gloomy is that he must ever concentrate on the job of being funny. The strain of always looking for material is responsible for an enormous amount of wear and tear on the poor fish. He must consider everything from the standpoint of its humorous possibilities. A subway jam, a row with a traffic policeman, a summons for tax delinquency, a fall on the ice, a visit to the dentist, an encounter with a hold-up man, a breakdown of the automobile may be just pieces of tough luck to most men, but to the professional humorist they must be gay little episodes full of merriment.

"What's the closest call you ever had in your life?" a magazine editor asked me recently in feeling around for a subject for a humorous article.

"I once drove off an open drawbridge in a runabout at night," I told him.

"Great!" exclaimed the editor. "Write me the funniest yarn you can about that!"

And that's the way it goes. Once a man gets a reputation for seeing a laugh in everything, he can't fall off a roof without raising a cry of "Louder and funnier!"

The average man can go through his experiences and then "leave 'em lay." The funny man has got to pick them up and make them dance.

Another drawback to being a professional giggle broadcaster is the fact that whenever you meet any new people you are expected to floor them with a barrage of witty remarks. The attitude implied, if not expressed, is, "So you're a humorist! All right, amuse me!"

When the portrait painter comes to a house party the guests do not gather about him and demand that he drag out his oils and paint something for them. When a prominent architect is introduced nobody thinks of exclaiming, "Oh, Mr. Fithelbert, do be a nice man and dash off a few blueprints of the ground-floor plan

STATE UNIVERSITY SYSTEM OF FLORIDA

f the new gas works!" A business man an safely attend any party without nticipating any requests that he do some ightning calculations and drive a few harp bargains with his host or hostess. A manufacturer of shingles is never asked o demonstrate that he is all that he is racked up to be, by putting down his ridge hand and driving a few shingles nto the parlor wall. If a fireman goes to birthday party, he is not asked to put ut a fire. The great bakery magnate is ever haunted at a week-end party by the ear that he will be asked to bake a cake.

But the man with a reputation for eing even thirty per cent clever is exected to prove it.

The mere feeling that people expect me o be even mildly clever makes me a hrinking violet at all parties. When a nan thinks of a clever remark, he should leliver it with conviction and with speed. Ly trouble is in delivery. It is necessary, n putting over a fast one, to cut the plate, and I am always positive before etting it go that mine will be a wild pitch. The inferiority complex they call it tolay, although it used to be called shyness.

Of course a great help to a professional unny man is the fact that so many people neeting him for the first time are all set to xplode at his every remark, good, bad, or ndifferent. They evidently fear they nay miss a fast one, and thus label themelves boneheads; consequently, they ften howl at the wrong place, or if the emark be made in all seriousness burst nto laughter on general principles.

It is a natural impulse, I suppose, enountering a man with a reputation as a umorist, to anticipate some speed balls. And most people probably consider it etter to have laughed at everything than ever to have laughed at all.

A stranger has a right to expect a man vho makes his living writing humorous tuff to be particularly well equipped with ood anecdotes. That also is most annoyng, because an anecdote never stays with ne overnight. I am the world's worst tory-teller. In the first place, I can't emember a story for any length of time, nd, even if it does come to mind in a inch, I never fail to get the point all alled up. Very seldom does a good, smart ne occur to me when anybody is around o grab it. My flippancy cells seem to jell n company.

I can, and do, spend many hours at arties without making a single clever emark; but the moment I get into a taxiab and start home I think of dozens of nifties" that I might have sprung.

THE bane of my life, consequently, is the vaudeville actor who desires some ide-splitting material and who calls for in person, usually with a chum, pulls up chair, and says, "Now, I want some tuff for a new act. Something that will wow' 'em. Shoot me something while I vait."

I assume most writers of newspaper olumns are continually appealed to by ctors for material. These comics blow n and give you a sketchy outline of their ct like this:

"Now I do an act with a flapper. I'm he snappy man-about-town, understand. he's a chorine. She comes on with a etter, and says so-and-so and so-and-so. hen she goes into a song, and I come on and I find the letter she has dropped and I pick it up, and say so-and-so and so-and-so and so-and-so. See? Now what I want you to do is to *brighten it up a little!*"

This outline rarely varies.

I look at the visitor dumbly, which is no effort, and suggest that it will really require considerable thought and time. He always seems greatly disappointed. It is his idea that a professional funny man just oozes sparkling lines. Little does he suspect that at times the extraction of a single line is a major operation.

THE actor in search of wise cracks is not the only man who thinks that a professional humorist produces stuff out of a silk hat. There is the man who says, "I always read your stuff, and admire it immensely! I wonder if you would do me a great favor and help me get up a little speech I have to make next Thursday!"

Then there's the chairman of the entertainment committee who wants you to get up "a comical circular letter announcing the next banquet." And last but not least of the humorist's worries is the man or woman who wants you to say a few words at a meeting or dinner. You insist that you are a dud as a speaker and will do any meeting more harm than good; but he or she hears you through, and then says laughingly, "Oh, you're so amusing. If you'll only come and talk just as you have to me it will be splendid."

No matter how wrought up and indignant I get over a thing, nobody will take me seriously. This is a terrible handicap. Every man gets "het up" over some question of more or less importance now and then, and yearns to express himself vehemently and earnestly on the subject. My capacity for honest indignation is just as great as any other man's. Very often something strikes me as so wrong that I toss my hat into the ring and start turning handsprings in righteous wrath. But nobody pays any attention. People think I'm putting on a comedy act.

Fully three years ago the taxicab of a very large transportation company collided with my car and tore off the rear bumper. The driver admitted it was his fault, gave me his name, and told me to write to the company. I did so. I wrote a five-page letter denouncing traffic conditions, taxicab companies, and taxicab drivers. I never got an answer, nor did I get a settlement. A few months ago I happened to meet an official of the company, and he floored me with the remark, "Say, Phillips, that was a very funny letter we received from you some years ago. We have it framed at the office. It gives us many a laugh."

I had a similar experience with a service station. A repair job was done very poorly, and I wrote a letter to the company saying so. All the come-back I got was a letter assuring me that "your most amusing comments lightened our burdens considerably. I passed your letter around among the boys, and they enjoyed it immensely."

What's the use?

The only way I can work off a grouch is to write a letter to the newspapers and sign it "Constant Reader," or, "E Pluribus Unum."

The first question a stranger asks after being introduced to a man who writes a daily newspaper column is, "How do you do it every day?" That calls for a shy little gesture and a choice of four answers:

1. "Oh, I dunno."
2. "It just has to be done, you know."
3. "Oh, I dunno."
4. "Oh, I dunno."

This is generally followed by the question, "It's awfully hard, isn't it, to have to fill a certain space every single day?"

The correct answers made optional by the International Social and Protective Association of Column Conductors are:

1. "Oh, no, not so very."
2. "It's all a matter of getting used to it."
3. "No, you just get in the chair, take a deep breath, and before you know it it's all over."
4. "Yes."

Then comes, without fail, and under all circumstances, "Dear me! Where do you get all your ideas?" This is a sticker. The reply to this will either make or break you. I never go outside the following three forms:

1. "I used to know your brother Edgar."
2. "Isn't it stuffy in here? Let's go into the conservatory."
3. "Don't miss Bobby Clark in his new show. He's immense."

But in a written confession like this it is impossible to get away with the ritual. Since so many people ask these questions, there must be some desire to know the truth. The honest answer to "How do you do it every day?" is that it is in the contract and a requirement of the job. I've been writing a column every day except Sunday for eight years. I've written it because I had to.

This is not to say that I haven't enjoyed it. I get a kick out of it, and like it better than any other kind of work. But I know very well if the job called for only three columns a week I would find it no easier. As a matter of fact, the experience of writers who have retired from the grind of a daily column to write one feature a week has been that the less they did the less they wanted to do. It took 'em six days to get into the mood to write the article for the seventh; then they were all worn out, and felt they should go South for a rest.

A column a day keeps procrastination away. The job won't take "No" for an answer. Some day, I too may decide to write one newspaper feature a week, and I haven't the slightest doubt that when I do so I shall feel more crowded than ever before. There will be so much more time for me to sit around and think about the working man's rights.

"DO YOU do your work in the daytime or at night?" That's another question a writer always faces. James Wiffington Oops, the great novelist, says he never can work in the daytime. He thinks clearly only after dark. He can't do a thing until the sun has set. Wilbur Tweezlebeck Hammerhead, the famous poet, can't get his mind on his work except in the quiet hours between daybreak and the bacon and eggs. He can't think of a rhyme for "love" by electric light, nor grasp a word to rhyme with "stars" between high noon and five A. M.

This writer can do his best work only in bed; that writer can do his best only when leaning against a drop forge in a boiler factory. As for (*Continued on page 175*)

"Scotch Valley"

A story you will never forget

By Mildred Cram

ILLUSTRATED BY W. H. D. KOERNER

RETURNING from the district attorney's office at midnight, Gladden found that Olive Smith had gone.

The lamp left burning on the kitchen table was mercifully clean. He saw at once what she had done. For him? For the children? Or simply to satisfy a feminine passion for order?

It is hard to know, where women are concerned, the difference between a gesture of love and a gesture of charity, the instinctive and the deliberate.

He observed the transformation of the familiar kitchen, a kitchen regenerate, reclaimed. It was like coming into a strange room. Or, rather, like a curtain rising on a reset stage. The garret refurbished. Squalor transformed.

The tin pans ranged on hooks, like a row of bright mirrors. The sink scoured. Window panes clear. Floor swept. Tin cans and trash thrown out. Dishes parading like soldiers on white shelves. Spoons and knives in rows. The stove black as a top hat and the kettle making a new appearance in its original, blue-agate skin. A smell of soap and water. The odor of sanctity, that godliness which comes of cleanliness.

It was the same all over the house. Olive Smith had gone through the rooms like a beneficent tornado, wielding a broom and a mop. It all looked different, somehow; not quite so comfortable, but marvelously antiseptic. Any germ, even the most exclusive, would have hesitated to cross that clean porch and enter that scrubbed and shining hall.

"Why, the place is almost livable," Gladden thought.

Before he went to bed he examined with a certain awe the miraculous fact of tucked-in bedclothes, a folded blanket, a plumped pillow. Even the candlesticks had been reduced from their habitual swollen state, the melted wax scraped off, fresh candles inserted. A clear, unwavering flame rewarded him, in place of a splutter and a dark, sooty reek of scorched wick.

He stretched out, trying his toes against the taut sheets. This is comfort. At last. Sleep. Quick, merciful, healing. He thought, as men sometimes do, with gratitude, of the peculiar mercy of women, wondering, as men seldom do, whether he was, after all, worthy of it.

CERTAINLY his uncle Steven had been wrong: a *croix de guerre* with palm was nothing to hide away in a steamer trunk against the arrival of hypothetical grandchildren. The district attorney had served with General Neville, and a *croix de guerre*, with or without palm, meant quite a lot to him.

"Pelgram had me convinced that you were a particularly poisonous crook, a sort of underworld Pied Piper, luring children into gingerbread houses. Only, I'm hanged if I see why you felt that you had to keep a promise made to the father of those particular Smiths. I understand that he was pretty poisonous himself."

"Did you know him?"

"I can't say that I did. But I've heard all about him."

"From his enemies! He was a fine man."

"I'm glad to hear that. Pelgram must have found him hard to get the best of; he has no luck with his neighbors, it seems."

A WEEK later, in a brief hearing, Gladden was made legal guardian of the children. He was sorry that his record must be made public, since he had hoped to remain anonymous in Scotch Valley until his work there was done. Yet it was pleasant to hear men like Hansen and Gibbs testify that he was honest, sober, moral, and efficient.

Pelgram's vitriolic accusations, voiced by an unctuous giant with small stiff hands, sounded somehow too vile to be credible, proving to be an overdose of poison and acting as an emetic. The court laughed.

Now that he was legally and very publicly a father, Gladden conformed. The children went to school like other children, leaving the ranch every morning in a school bus that paused at the ford long enough to squawk a warning and a summons. Like other children, they went washed and combed, licked and brushed, shining like apples in a grocer's show case.

To clothe them, Gladden worked for ten days on Gibbs's ranch, repairing farm machinery. He had the reward of his labor in dollars and cents that were convertible into shoes, socks, shirts, and pants.

Lily, gathered wide-eyed into kindergarten, blossomed ecstatically in gingham rompers with bloomers, a hair ribbon and a gold heart-shaped locket starred minutely with a turquoise and a pearl. Gladden was embarrassed to discover that Lily might some day be a beauty.

Bertha, to Gladden's surprise, proved to be a senior. Whereas the younger children attended a small grammar school in the Valley, Bertha was more exclusive. She went all the way to Vaccatown. She had to wear shoes every day, until, returning at five o'clock, she kicked them off. The yellow braids went around her head, until, at five o'clock, she shook them down. "I hate to study, Jim. I hate facts. I like to think!"

At night, Gladden had to be both cook and tutor. He found that he had forgotten everything he ever knew about geography and grammar, Latin and history. He wondered, now, why they had gone to so much trouble to teach him statistics, and had neglected to interpret races and arts, migrations and conquests. He had forgotten when things happened, because no one had thought of telling him why they happened.

He was a good teacher, because he had imagination. He could spin a yarn about gravity or sound or space or light that was as good any day as the Arabian Nights. But when it came to the elemental textbook problems: if John had ten apples and he gave Sue three, how many—he was no good at all. Pete had to tell him. "Don't you *see*, Jim? He had *two* left? Gosh, that's *easy*."

"You're wrong, Pete. See here, let's work it out."

They did most of their problems with eggs. The hens were laying with the prodigal, inane generosity of happily married fowls. Every night, in the warm boxes, placed like pearls in a nest of straw, Gladden would find snow-white spheres with faintly crackled, bubbled shells. Leghorn eggs. They fetched forty cents a dozen in Vaccatown. They bought Pete a dollar watch and Henry a leather belt. They gave Bertha a pair of silk stockings. All the girls, she said, had silk stockings.

HENRY and Nancy turned out to be scholars and citizens. School produced in them a sanctimonious virtue. They bristled with gold stars and good marks. Henry's cowlick was always wet and brushed marvelously from left to right, while Nancy went in for curls.

Nancy was the sort of little girl that gives her skirt an upward fling away from the rumpling contamination of a chair; she fell into the habit of shaking her curls from side to side, in order, Gladden supposed, to see them fly, like fat sausages with wings. He had liked her better in rags; but now, at least, she conformed.

"I'll make respectable men and women of them yet," he said to himself. "Will they do me credit, or will I do them credit? The chances are about equal, either way. They are being turned out of the Great Mill, true to pattern. Millions of little cowlick Henrys and millions of little Nancys and millions of Lilys, all alike. Only Pete and Bertha are in danger. In spite of the bureau of education, in spite of everything, they're going to be themselves!"

Pete wouldn't study. He preferred Tuerta's stall, the orchard, the pasture, to the schoolroom where he was one of a

crowd, to be disciplined and pounded, threatened, beguiled, and taunted into the shape of an American. Gladden, watching, both pitied and envied him. He was to be an outlaw, a protester, an original, fighting single-handed for his impossible, incredible dreams.

Pelgram appeared at the trestle crossing, carrying a rifle. "I warn you," he

THEN, one night, they woke out of silence to hear the faint rustle of rain on dry leaves. The first rain. The first drink for the thirsty earth.

The rain fell softly at first; but Gladden detected in the murmur of little splashes a note of insistence that deepened, becoming before dawn the steady thunder of water. Wind, high in the trees, lashed the eucalyptus, and a sound like the brittle whishing of great faggots split through the roar of the rain.

Gladden got up at daybreak to feast his senses on the fact of rain. He went out on the porch and held his hands cupped, to catch what he could from the eaves. The dog would not venture down the steps. He sat, shivering, unable to comprehend the mystery.

Great strips of bark hung from the trees; they peeled like sunburned noses, revealing the satin-smooth yellow bark beneath. The yard was littered with fallen leaves, twigs, and pungent, scented cones. There was such a sweetness and freshness about the drenched world that everything looked new and different. Gone the dusty landscape. In its place, dark brown and purple hills, a clean horizon, sharpened, intensified.

As Gladden watched, the rain diminished, became a driving, fine mist; stopped altogether. Clouds raced in from the sea, gray streamers, tangled and ragged, that fled before the sun. Already there was a trickle of water in the river bed.

Gladden went down to look at it. The bone heap had become a stream again. And this was more wonderful than anything that had happened.

While he stood there, he felt the beauty, the promise, of the land. "Lord," he thought, "before long there'll be grass! The hills will be green. The orchards will blossom!"

"We'll have the picnic Saturday," Gladden said. "That will give you all day Sunday to get over it."

"Is Olive Smith coming?" Bertha asked.

Gladden hadn't thought of inviting Olive. So he said promptly, "Of course."

HE DROVE up the Valley toward the Smith wells. The road was already rutted and pitted; mud sluiced off into the river bed, thick as a flow of lava. Soon the guards were caked, the windshield plastered.

When the sun broke through, the earth dried and hardened like a sculptor's mold. Only the sweetness remained, and the new color of the hills: wine-brown and purple against a clean blue sky.

Olive Smith lived in an unpretentious frame house facing the wells. Gladden didn't know what he had expected: a palace, perhaps; a rococo atrocity, a plate-glass show case. He had seen too many artless dreams realized in brick and stone to look for excellence. Perhaps this explained why he had remained at the ranch, staving off disillusionment. He wanted to walk into love with his eyes open.

This was an ugly house; but it was at least honest. A hedge of tall cosmos bloomed behind a wire fence. Chickens scuttled and picked on the lawn.

Gladden inquired for Olive. A woman in a gingham apron directed him to the offices, a small brick building across the road.

"I'm Mrs. Smith. You Mr. Gladden? Olive's told me about you. You're a mighty stubborn young man. But I'm glad to hear things have turned out right for you."

Gladden thought: "For a mother-in-

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

said. "If you calculate on getting water at my dam, you're on the wrong track"

aw, I could go far and fare worse. Wouldn't it be fine if I could really like her? It *has* happened! What's the Latin for it? *Mirabile dictu*, or you never can tell."

Here before him was a candidate for a life job. She was as different as possible from his own mother, whom he remembered as a misty figure in floating chiffons, and whose hands were always a frosty sparkle of diamonds and platinum.

Mrs. Smith was frankly rotund and frankly uncorseted. Her cheeks were all an explosion of tiny broken veins, her eyes as blue and as clear as ice. She had the broad cheek bones of a Slav, the capable, short-fingered hands of a farm woman, and she wore no rings save the broad gold wedding band that had sunk deeply into the encroaching flesh.

"You're wondering," she said, "how I happened to be Olive's mother? I was a beauty, myself, thirty years ago! My oldest son's twenty-nine."

"I was wondering how to make you like me," Gladden said.

She laughed and with one accord they clasped hands. Gladden drew her toward him, stooped quickly, and kissed her cheek.

OLIVE would come. "A picnic! Hurrah! I like picnics. They're so dangerous!"

She gave him one of her level, challenging looks. "Would you care to see the wells?"

"No," he said, "not now. They might scare me off."

She shook her head. "The money belongs to Mother, not to me."

"But I'm afraid of it, all the same."

"Don't be an ostrich!"

They were sitting in the small waiting-room of the office building. Beyond the polished redwood barricade a clatter of typewriters advertised the presence of the staff. Olive glanced up at a panoramic photograph of the oil field, which hung, brightly framed, on the wall.

"I'm pinching myself all the time to make certain that I'm not dreaming. When my father went to the war, no one knew whether or not the first well would bring in oil. He put everything he had into it. He left us, because he thought it was his duty to fight. He was like that. He could see only one thing at a time. The oil came in. And a week later we heard that he was dead."

She met Gladden's eyes again. "You can't blame me if I don't take our luck seriously."

"You're all right," Gladden said.

BUT he didn't see the wells. Somehow, it didn't appeal to him to be led from one fountain of wealth to another by a girl with whom he intended to fall in love, and to have it driven home that he had nothing of his own to offer except a large family, a second-hand car and a blind horse!

"Saturday," he thought, "I'll fall definitely in love; and then I can map out my campaign."

In the meantime it was highly satisfactory to look at her. She was like a fine symphony, or a deft drawing, or a paragraph of flawless prose, or a strong, graceful bridge, or a neat dance step by Pavlowa. She had the proportion, the excitement, the style of a work of art.

But the best part of it was that she remained unaware of all this. No one in Scotch Valley had thought to tell her that she might have been imagined by Arthur Symons and executed by Paul Manship, with music by Respighi.

The picnic began on schedule early Saturday morning. Olive arrived in the roadster, and Gladden noticed with a pang of annoyance that she was wearing red. It was a giddy red, at that, as uncompromising as the brazen gold of her hair. Bertha gave Gladden a queer look. He knew, then, that it is worse than useless to argue with women about clothes; they wear, not what (*Continued on page 74*)

INTERESTING PEOPLE

He Has Been Chauffeur to Presidents And Kings

FOR years Fifth Avenue's parade-gazers have known Ray Nunnally. They have come to accept him as New York City's special motor driver for her most fêted guests. Not one in a thousand knows his name perhaps, although they all recognize his erect figure and square, Celtic type of face under the angle of his cap. But to police, military and naval aides, secret service men, and all the rank and file of guards and attendants who surround the great, he is as much a part of the panoply of high occasions as the celebrities he pilots.

Taft, Wilson, Coolidge have sat behind him to receive the cheers of the crowd. The Prince of Wales has many times been his passenger. King Albert of the Belgians and Marshal Joffre of France have saluted New York from Ray's car. On other occasions, Ray has been chauffeur for Marconi, Carnegie, Viscount Ishii, the late Senator William A. Clark, and Mary Garden. Mrs. Harding often did her shopping with him. He has driven both Mrs. Wilsons.

For twenty-four years Nunnally has been driving automobiles. Practically all that driving has been done in New York City. Yet, in nearly a quarter of a century behind the wheel of a car, Ray has never got a summons and never had an accident.

Such a record is perhaps sheer luck. Nunnally says it is. Luck also accounts, in a way, for his unique standing among New York's three hundred and fifty thousand-odd chauffeurs. For years it has been the custom of the big automobile companies to place cars at the disposal of notables on special occasions. And Nunnally is the star driver of one of these companies which has won special favor from Presidents and Kings.

Of these distinguished passengers, Nunnally's first White House patron was President Taft.

"I've never driven too fast for Mr. Taft," says Nunnally. "Of course, on all big occasions, we have to work on a strict time schedule, and there is always something to interfere with it. So the usual custom is to make up the lost time on the road between appointments by driving rapidly.

"That is where a little trick driving comes in. One has to get through traffic fast without appearing to do so. But when President Taft got into my car, I knew we were going to be on time.

"The first time the Prince of Wales visited New York, he worked everyone to death," says Nunnally. "He had to keep going all day. At midnight he would find he was expected to drop in at one or two parties that had been arranged for him. So he often got to bed at four o'clock in the morning; but at nine o'clock he would step into my car, fresh as ever, and ready for another day of it.

Ray Nunnally is the crack driver for an automobile company that places cars at the disposal of distinguished visitors to New York City. During his twenty-four years of service he has driven many notables, including President Wilson and the Prince of Wales

"The Prince of Wales liked my driving too. The last time I saw him he shook hands and said, 'You're a very clever driver, and I wish you'd accept this.' He gave me an enamel and gold tie pin with his coat-of-arms on it."

King Albert of Belgium is a motor enthusiast, and an admirer of good driving. One morning on his New York visit, His Majesty called up Ray's headquarters and suggested that they take a little spin out into the country.

"The King drove, and I sat beside him," says Nunnally. "He is a good driver and he likes to 'step.'

"By the time we were in the country, the King was so interested in the car that he wanted to stop and look at the motor. So we pulled into the driveway in front of a roadhouse and the King got out and examined the car from end to end. He crawled in under the car on his back so that he could see how the brakes were connected.

"When he went away he said to me, 'Nunnally, you're a wonderful driver. I've driven with a good many, but you're the best.' He bought one of the cars we had been using and had it shipped to Belgium."

President Wilson was one of Nunnally's favorites. The President always stopped and shook hands with him after a drive. Once at the Pennsylvania Station in New York Mr. Wilson forgot this attention and started for his train. Mrs. Wilson reminded him of the oversight, and the President immediately came back, shook hands and thanked him.

"I drove President and Mrs. Wilson in the worst crowd I ever saw in New York. It was the night of Wilson's speech in Madison Square Garden, in November, 1916. There was such a mob around the Waldorf that the car could move only a foot at a time."

While Nunnally's job of chauffeur for celebrities is no easy one, he says most of his trouble comes in trying to protect his automobile from enthusiastic crowds. There is a fascination about the car in which a king or prince rides that is irresistible to some people.

"Girls are the worst," says Nunnally, "and next to them come the souvenir hunters.

"A few people always want to jump in and sit for a moment on the seat. Others want to pat the seat, or even touch the car. If there are flowers in a holder, the souvenir hunters try to get them. They will even take metal fixtures from the inside of a limousine.

"Then there are people who seem to think I can introduce them to whomever I am driving. Three young girls once of-

STATE UNIVERSITY SYSTEM OF FLORIDA

fered me twenty dollars apiece if I would fix it so they could shake hands with the Prince of Wales."

The automobiles that royalty uses have a very fair sale demand. After each visit of a king or other notable, the motor that conveyed him is eagerly sought out by buyers.

"I've probably had three hundred jobs offered me," Nunnally told me, "jobs with winters at Palm Beach, and summers in Europe thrown in. Tips? Plenty of them. I figure they amount to more than five thousand dollars. The biggest one I ever got was fifty dollars."

Nunnally is married, and lives in New York City. When he is not using his driving skill on state occasions, he is an automobile salesman.

The greatest fault of the ordinary driver, in Nunnally's opinion, is his tendency to uneven pace and direction.

"Most people drive with their eyes on just one car—the one that's ahead of them. They don't pay any attention to the general pace of traffic. They are never traveling at the right speed, and so their cars are never really under control—and that means accidents.

"I can take a car through traffic in an almost straight line and make as good time as the next one. But to do that I can't keep my eyes on only the car or the two cars just ahead of me. I've got to have an idea of what the cars fifty yards ahead of me are going to do." W. S. ABBOTT

American Women See Paris in Mary Bendelari's Shoes

AS YOU loiter along that street of small shops in Paris, the rue Saint Honore, you come upon a high arch between two buildings through which you catch a glimpse of an open courtyard just beyond. Across its cobblestones at its very back stands a small square building with yellow trimmings and window boxes filled with green. It is more like a small, gay bird cage than a building.

In the large high display window are slippers—fairy slippers of woven gold, slippers with toes all stitched in colored raffia, blue satin slippers painted with delicate black and gilt designs and set with rhinestones. Slippers, indeed, such as might have come into being for the Princess Cinderella by the magic of her Fairy Godmother's wand.

And through the glass door one catches glimpses of other gay, attractive things to make glad the feminine heart and foot. They rest on shelves in glass cases against the wall, shut in like bright-colored birds.

It was the idea of Mary Bendelari, an American girl from Joplin, Missouri, to take over the drab little building at the back of the courtyard and paint it up with pale yellow and touches of lavender, both inside and out, and line its floors with lovely soft mauve carpets, and turn it into a place where tired American women sight-seers could come for shoes that would really fit their feet.

Though the enchanting shop was born only last summer, it has already become one of the places which American women visitors to Paris often visit. For it was almost solely for her countrywomen that Miss Bendelari opened it, just as it was for them that she began manufacturing hand-made shoes in Paris four years ago, and now has a factory, employing one hundred and fifty workmen, on the edge of the city.

French shoes do not fit American feet, as every American woman knows who has tried to buy shoes in Paris. The foot of the French woman is short and broad, while that of the American is longer and more narrow.

But there are thousands of American women who have to buy shoes in Paris, for even the stoutest soles wear out under the strain of tramping the galleries and seeing the sights.

Mary Bendelari believed she could earn a good livelihood by going into the business of supplying shoes made on American lasts to the tourist trade. No one with uncomfortable feet can appreciate the Venus de Milo, or the other treasures of the Louvre.

PHOTOGRAPH BY BONNEY, PARIS

Mary Bendelari, formerly of Joplin, Missouri, with her mascot, a peasant shoemaker made of yarn. She has her own shop in Paris, where she sells shoes to fit the American women tourists

She was of an artistic nature, and, when she finished school and went to New York to study costume designing she secured a big and important position designing creations for a smart New York dress firm.

Miss Bendelari's costumes were so successful that she was asked to design for several of Broadway's best productions. And this she did—working out every part of the elaborate ensembles down to the most minute detail, which included shoes.

Miss Bendelari had always been a skillful fancy skater from the time of her boarding-school days in Canada. She was just becoming well established in her work when she hurt her foot one day on the ice.

While she was lying in bed with far less use for shoes than she had ever had in her life, she began reading about them, and studying their history. And, just to while away the long hours she designed the kind of shoes she would like to wear herself.

After a time, her walking was restored, and the first thing she said, after she found that she was going to be able to go about again, was "I am going to make shoes."

But it was not until after she and her mother and her sister had gone to Paris that she really decided to do it. In searching for shoes, she came upon a small group of shoemakers who had been driven from their home in the Balkans by economic pressure, and were plying their art of making hand-made shoes in Paris.

Among other things, they were making the woven sandals worn by the natives of their own land. The possibilities of adapting these sandals to shoes built on American lasts appealed to Miss Bendelari at once.

It had been through the friendly offices of a young woman of her acquaintance that Miss Bendelari had found the peasant shoemakers. The other girl was also interested in making shoes. Together they decided to experiment, hired a small room and an experienced shoemaker, got what machinery was necessary and started in. Miss Bendelari financed the venture.

And then the girl friend withdrew. But just at that time, Mary's father came to Paris from Joplin, and invited Mary to go on a trip with him through Italy. She asked him to give her the thousand dollars the trip would cost, and let her put it into her business.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Gradually she added more workmen to her staff—shoemakers from Russia, Bohemia, Czechoslovakia, Serbia, and other countries. One knew how to enamel Russian designs on leather. Another had the secret of painting gilt slippers with roses of powdered glass.

Miss Bendelari sought larger quarters, and undertook production on a larger scale. She began exporting her shoes. People in the shoe trade began watching her, and consulting her, and copying her styles. In 1925, the Shoe Congress invited her to talk to them.

A few days after the opening of her present shop, a very noted dancer came in and took away with her ten pairs of shoes. No one in the world is more fussy about the fit and quality of her shoes, as everyone knows who makes shoes. It thrilled Mary Bendelari. And thrilled even more the sales girl in the Bendelari shop who fitted the dancer to her ten pairs. She is an American college girl from St. Louis. All the girls who are helping Mary Bendelari run her shop are old school friends. They think selling shoes in Paris is a great adventure and are taking courses in art and going to opera in their spare hours.

BETTY SHANNON

Rice is the Man in His One-Man Town

RICELAND, OHIO, is a town boasting of a good hotel and restaurant, a piano store, an automobile accessories store, a gasolene filling station, a large garage, a nine-hole golf-course, and a real-estate business; but it has little population. Apparently it does not need any. The gross revenue at Riceland is already in excess of $50,000 a year, and next year is expected to reach $75,000.

Riceland is located on the Lincoln Highway between Massillon and Wooster, Ohio, at the intersection of a road to Orrville, Ohio, Akron, and Cleveland. From Massillon it is fourteen miles; from Wooster, nine; from Orrville, three. All around are the rolling, rich corn fields of Wayne County, with occasional farmhouses and villages of three or four hundred inhabitants.

The proprietor of the town is T. E. Rice. His enterprise constitutes a distinctive method of merchandising.

Until after the war Mr. Rice conducted a music store in Wooster, Ohio. Much of his business was with pianos sold on a basis of "pay while you play"; that is, with a small sum down, and the balance on time. Before the war the scheme had worked well; after the war it did not.

The deferred-payment plan seemed to have been applied to all possible products. The collector who got around first was the one who got the money. If the purchaser had only enough for the radio man, the piano dealer had to wait, or take back his piano. Besides all that, the landlord, complaining of much higher taxes, demanded one hundred and fifty dollars a month instead of seventy-five dollars.

Whereupon, Mr. Rice did a usual, and then a very unusual, thing. He held a removal sale, and, that over, went nine miles into the country and started a town of his own. He wanted a new class of customers; he wanted freedom from rent.

At the point where the Orrville road runs to a dead end at the Lincoln Highway Mr. Rice bought a seventy-acre farm. To this he afterward added twenty-six acres. The brick building he put up at the corner is seventy feet wide, with storerooms below and hotel rooms above. Back of that is the brick garage.

In the center of the main building is the restaurant and hotel entrance. At one end is the piano store, at the other the accessories store. The gasolene station is in front, the golf course across the highway.

Mr. Rice, with his wife and son, conducts all the different enterprises, except the restaurant and garage. The space for these he rents for $102.50 a month, or $1,230 a year, the sum in itself a reasonable return on the money invested in the two buildings, approximately $25,000.

The hotel is to be enlarged. It has nine rooms now; but hardly a night passes, except in winter when automobile travel is slack, that they go unoccupied. Tired motorists driving out of the darkness on the transcontinental highway are startled by the brilliantly-lighted citylike building in the open country. Enough of them stop and enter their names in the hotel register to yield net profits of one hundred dollars a month, which is a very fair return on the investment.

The cross-roads golf course run by Mr. Rice is as trim as that of a country club. The country-club idea prevails, in fact, for one hundred and fifty golfers pay twenty-five dollars apiece for season tickets to play on it. They live in nearby towns that have no course, or in small cities where a golfer, to play, must own stock in a country club. Outsiders are welcome if they pay a greens fee of one dollar.

Mr. Rice evolved the golf course idea to interest his son, who prefers outdoor life to music-store routine. Two workmen keep the place in shape. The cost of maintenance comes from the sale of tickets; the profits from the greens fees.

Mr. Rice, along with his other work, sells building lots in town. Incidentally, an acre that cost $500 two years ago makes three lots now, at $500 apiece.

The music store is what might be expected in a small city. Besides phonographs, records and sheet music, it holds twenty-five or thirty pianos of various values and styles. The store sells about seventy a year.

"When I got the idea of coming here, my family thought it a joke," said Mr. Rice. "Yes, there may be a town on this corner some day. I suppose there will be. Getting a name for the place worried me at first. Finally, since this is a location of Rice's piano store, Rice's automobile store, Rice's hotel, Rice's golf course and Rice's everything else, we're going to call it 'Riceland.'"

DONALD MAC GREGOR

THE GREEN STUDIO, NEW PHILADELPHIA, OHIO

T. E. Rice, who ran a music store in Wooster, Ohio, until the taxes went up and his landlord raised the rent. Then he went out on Lincoln Highway between Massillon and Wooster, and built a town of his own. Riceland contains stores, a hotel, garage, and a golf course. Even the Men She Sentences Learn to Like Judge Ker

THREE HUNDRED dollars fine—that's the maximum. And I'm not fining you the limit because of having liquor in your possession, but because of your attitude in this court-room. Your children are entitled to a good example. If you smile sarcastically at the power of the law, then you need an awakening. But," and this was added kindly, "you may pay your fine in instalments, if that will make it any easier."

The speaker was Julia Waldrip Ker, woman police judge of Olympia, Washington. As she addressed the man before her, his smile faded, giving place to an expression of marked respect. Mrs. Ker has won the respect of everyone in Olympia, not only because she is the woman police judge, but also because she is an extremely able lawyer.

This I discovered when I tried to interview her, for I had to wait my turn among a crowd of men and women who confidently expected her to right their wrongs or straighten out their difficulties. She had three traffic violators and four liquor offenders coming up on the police court calendar that afternoon, and in the morning a personal injury suit, in which she represented the plaintiff, opened in the Superior Court.

Mrs. Ker was brought up in the state of Washington. She was married when she was a young girl. A few years later, she was left with two small children, hardly more than babies, and no way of providing for them. But she didn't give herself time to worry about the future. She took a course in stenography and typewriting, and went to work in a lawyer's office in Shelton, at a salary of forty dollars a month.

"My employer kept telling me I had a legal mind, and finally I began to believe him," Judge Ker told me. "And of course I knew that I could never pay for the education I wanted for my children on a stenographer's salary. So I started digging into law books."

She worked all day at the office, tried to keep house and care for her babies after she got home, and when the babies were safely tucked in bed she studied law. The thought of those sleeping children was a great inspiration to her while she sat with the big books propped up in front of her on a dry-goods box, and plugged away by the light of a kerosene lamp.

She had never been to high school, and had to pass college entrance examinations before she tried for those that would admit her to the bar. It took her just three years to pass both.

Mrs. Ker was admitted to the practice of law in the state of Washington in 1912. She served her apprenticeship as law clerk and secretary to several Supreme Court judges of Washington, and in 1915 entered the active practice of law in Olympia, the capital of Washington. In November, 1925, she was appointed police judge of that city, an honor that had never before been bestowed on a woman.

As police judge, she handles only criminal cases, these numbering about ninety a month. Seventy-five per cent of these are violations of the liquor law, for the thick wooded hills back of Olympia are frequented by moonshiners.

PHOTOGRAPH BY MAUDE JAY WILSON, OLYMPIA, WASH.

Mrs. Julia Waldrip Ker, lawyer and police judge of Olympia, Washington, with her little granddaughter, Shirley. When a young woman, Mrs. Ker was left with two children to support. She worked in a law office and studied at night to pass her bar examinations

"I'm not satisfied when I fine a man, or put him in jail," Judge Ker says. "I want to help the bootleggers and moonshiners break away from this new 'business' that has spread so rapidly in recent years. Every time one of these men comes with an instalment of his fine, I have a little talk with him. Pretty soon he tells me about his wife and family. I try to show him that his children will be looked down on, or his wife avoided, because he is a bootlegger. And that gets a man sooner than any jail sentence or fine in the world.

"If the law is to be administered well, we must consider each case personally, make offenders see the purpose of the law, feel the seriousness of breaking laws, and instill in them a desire to do better next time.

"I make it a rule always to stand by my officers. If they say a man was speeding, I'm pretty sure he *was*. The officer's speedometer is tested, his word is tried daily, and he must have the backing of the court if respect for law is to be maintained."

As a lawyer, Mrs. Ker specializes in non-contestant cases. She has many divorce suits and some probate work. She draws her practice from half a dozen large counties.

Judge Ker secures divorces for only about half of the couples who apply to her. "Where there is any affection left," she says, "I always try to bring husband and wife together again, especially if there are children. It cuts down my bank account; but I get it all back in personal satisfaction.

"Sometimes my efforts at a reconciliation are misplaced. Not long ago two sisters came to me for divorces. After several weeks of conferences between husbands and wives, they returned home together. It looked as though they were going to live as happily ever after as the prince and princess in a fairy story. Just three weeks later, another lawyer got the divorces, and a nice fat fee for the job. But I wasn't sorry—I had done what I could to straighten things out.

"I believe there would be fewer unhappy women to-day, and fewer child delinquents if a woman who has made an unfortunate marriage would strive for economic independence. Too many wives are so terrified at the prospect of an unpaid grocery bill that they endure cruelty for years, rearing their children in an atmosphere of bitterness and hatred. It's easier for women to break away from unhappy homes in these days. There is another even more important result of the increased economic independence of women; that is, girls no longer have to get married because there is no other bread-and-butter job open to them. I believe that this condition is gradually making far wiser and happier marriages."

Mrs. Ker lives with her mother and her little granddaughter. She swims, plays bridge, and goes to the movies for relaxation, and she's very fond of detective stories.

This Parson Raises Strawberries to Pay For His $50,000 Church

AWAY down in the hill region of the Ozark Mountains of Missouri, in a town named Ozark, which has some eight hundred inhabitants, there is a big church, and a preacher who also is of considerable size, Rev. J. J. Parten by name. Out in the country a few miles there is a ten-acre strawberry patch. It is the connection between the church and strawberry patch that this story is about.

Preacher Parten belongs to the hill region. He was born there, grew up there and, by every token, is a native, yet not so different from other preachers to be found in the small towns far removed from the Ozarks. He doesn't slick up much. It isn't required in the hill country. They say he never waxes eloquent in the pulpit, nor gets excited over petty civic problems. He goes quietly about his business, never taking upon himself any of the credit that is due him.

Years ago, when Reverend Mr. Parten was called to the pastorate in Ozark, he found his church house greatly in need of repair—with the usual lack of funds for such labors. As a result, his people were not attending worship with any regularity.

To make matters worse, the State Highway Department began its extensive plan of road-building down in the hills, which gave the autoists new avenues of entertainment. Mr. Parten saw all of his young people leaving the church and Sunday-school for other activities, until finally he faced possible abandonment of his church, because of the lack of funds. So he called in the members of the board and told them to make arrangements for a new church building, and he would contrive to pay for it somehow.

Soon the old building was removed from its place on the public square, and carpenters began the new structure. No one knew how much it was to cost, since no definite arrangements had been made about the means of raising the money. But they went on working and borrowing money, until the job was finished, and then a final check-up showed that, including fixtures both up-stairs and down, their institution had cost nearly fifty thousand dollars, with an indebtedness for almost the full amount.

Just as the preacher had predicted, the church began to grow and prosper. New faces appeared in Sunday-school and church. More funds drifted in than had ever before been found in the contribution boxes; but with all the added income the board could not see its way out of its indebtedness. And here is where Preacher Parten jumped into the breach. At one of the board meetings he suggested that he help pay for the building by growing strawberries, and asked for ten acres of land for a period of five years.

A member of the congregation who had a rough hill farm covered with a mass of small stones offered Parten the required amount of ground, and he gathered a bunch of boys to help him roll stumps and brush off the patch. They prepared and planted it to berries in the spring of 1922. The preacher and the boys kept the weeds pulled during the first summer, and when spring came in the second season of their history, the plants blossomed, and bore a wonderful crop of fruit.

Picking gangs were organized in the church. Men and women and young folks all joined the crowd that donated its time in preparing the berries for shipment. All of the first-grade strawberries were sold through a marketing association in another section of the state, which made room in refrigerator cars that were consigned as far away as New England and Canada.

Because Ozark berries are firm, and ripen early with a luscious flavor, high prices rewarded the growers. All of the fruit not shipped was sold locally for home canning. A final summary of the first year's profits netted the church close to $226 per acre, which gave them over two thousand dollars to apply on the indebtedness, a sum the bankers received as the initial payment.

It was a great lesson to the large and small land owners near by, who had been cultivating grain crops on the stony hillsides, with little if any profit. Immediately scores of them set about to grow berries in a small way.

The second picking season for Reverend Mr. Parten brought greater rewards than the first. Notwithstanding the fact that he had to pay men to pick and pack their crop, the church netted over $378 per acre from the patch.

In the spring of 1925, their efforts netted them a total of $417 per acre. This last spring a late dry season cut their net returns down to $312 per acre. The slight let-down last spring did not, however, deter the farmers the least bit. In addition to the grand total of hundreds of plots already given over to strawberries near Ozark, over eleven hundred acres of new patches were set out, and it would seem, from the number of new settlers who have bought cheap land back in the hills, that an even greater acreage will be planted this coming season.

All of the first-grade berries have been marketed through the coöperative association that handled their first crop, and who have since established grading bureaus and loading stations near the little hill town of Ozark. A total of some $10,000 has been paid on the church debt in four bearing seasons; but in the future that debt will melt away faster than ever, because the "hill" preacher, besides directing the picking and packing of last season's crop, also directed the planting of another patch that will double their acreage, and, they hope, their annual profits.

And Mr. Parten now has a successful church. Everything in Ozark seems to center pretty much around it. All sorts of horticultural, agricultural, and civic gatherings, to say nothing of basket suppers, are held in the spacious basement of their building.

LON SCOTT

SCOTT FEATURES

When Mr. Parten took a pastorate at Ozark, Missouri, the congregation was scattered and the church in disrepair. So he went into debt to build a $50,000 house of worship, and he's raising strawberries to pay for it

Rich vegetable nutriment in this delicious Pea Soup!

Tripping blithely on my way,
Here's a rhyme I gladly say:
Campbell's Soup inside of you
Makes you happy through and through.

12 cents a can

It is a wise mother who serves good pea soup as a regular dish on her table, not only for the sake of her children but for every one in the family.

Campbell's Pea Soup is pure, rich, wholesome vegetable food—the kind of food that contributes so much to rosy, vigorous health.

Sweet delicious peas are blended by Campbell's in a smooth puree, with golden country butter and delicate seasoning. A soup that mothers can trust for its strict quality and that all enjoy for its appealing pea flavor. Especially attractive prepared as Cream of Pea Soup according to the simple directions on the label.

"Scotch Valley"

(*Continued from page 67*)

men prefer, but what they themselves consider becoming.

Bertha was going to the picnic in the new dress with the patent-leather belt; she wore the new silk stockings and a pair of high-heeled slippers. Olive's shoes were rubber-soled. She moved with typical grace and ease, balanced on earth like a young animal.

She said to Bertha, "How pretty you are!" And to Gladden's surprise, Bertha answered, "Not as pretty as you!"

"Well," he thought, "they'll be friends. That's that. They'll get along." His spirits rose. He forgot both of them in the pleasurable excitement of stowing the portable part of the picnic into the car.

THE children's faces were transfigured. Pete was pale with anticipation, restrained, on the verge of that nervous elation which slips easily into depression. Pete enjoyed happiness anxiously and seriously; he was afraid of dropping and cracking a single precious instant.

Nancy and Henry were frozen into their new respectability, conscious of starched skirts and clean khaki pants, stiff shoes and brown-ribbed stockings. Some gypsy element in Lily's blood broke free. She was a new soul making footprints in experience. She was mischievous and diamond-eyed and fearless. She was exquisite. She made of the picnic a primitive occasion, a feast, and a romp of godlings.

Gladden thought, "I wish we could have a picnic every day. It sensitizes the mind. It knocks all the old stale ideas into a cocked hat. Already, I'm free. I don't care what happens. You'd think, at my age, that the cheerful business of being young would begin to wear a little stale. But for heaven's sake don't stop to analyze anything!"

"Here, Pete," he bawled, "give me a hand with this box!"

Everything was different, because it was Saturday and because this was a picnic. Already the ranch had receded into a rather wistful distance. If you thought of Tuerta, the cats, and the goat, you wanted to cry, only you were too happy to manage it. Billoo was a member of the party. He ran heavily through the sand, chasing sea gulls and barking. From the top of the dunes, where the cars had to be left, Billoo looked like a strange dog. But everything was strange.

Even the sky, which was threaded with tissue-like clouds. And the earth, which was white and sang beneath your feet, and dragged at your heels and seeped into your shoes. Even the trees, squat cypresses that flattened themselves out to escape the wind, trees that crawled and twisted and unjointed themselves, like contortionists on a square of carpet.

The children ran down the dunes toward the sea, arms outstretched as if they could embrace everything. The warm sea in this place stole softly upon a vast semicircle of white sand, the waves dissolving into a hiss of bubbles that ran up a little way and broke in the sun. Far out, an invisible reef foamed and surged. And farther still a ship trailed an enormous banner of black smoke that reached from one end of the horizon to the other.

The children squatted on the rim of wet sand and took off their shoes and stockings. Bare toes curled away from unaccustomed wetness. Heels sank deep, pressing out moisture. The children's legs, brown and covered with a fine silvery down, splashed into the waves that hissed up and hissed back again. "Cold! Cold! Cold!" They ran out, capering and shrieking. Even Pete forgot himself. Olive waded too; but Bertha would not.

"Don't be silly, Bertha," Gladden said, digging his own toes into the gritty coolness.

But she shook her head, and left them, a small red figure growing smaller and smaller in the great white globe of sea and sky. Her going worried Gladden; it made him mad. "I don't see why she has to sulk, when the rest of us are having a good time."

He found it hard to concentrate on the fact that he was alone with Olive, and that now was the time to let himself fall headlong into love. It wasn't fair of Bertha. He watched her until the glare of light hurt his eyes.

She had been so quiet lately. Actually, she had tried to reform. He had come upon her sweeping out the arbor, or washing and ironing the younger children's clothes. Unconsciously, perhaps, he had begun to depend on her to make the beds, to keep the kitchen in order, and to bathe Nancy and Lily. Awkward, absorbed, bewildered, she tried to help him.

Now that he thought of it, Bertha, for Bertha, was transformed. The change had taken place under his eyes, and he had failed to notice it until now. Trifles occurred to him: Bertha, covered with defacing smudges, trying to black the stove. Bertha, scrubbing the back of her neck. Or flapping the ragged blankets out of the window. Or crooking a little finger delicately at dinner.

"Confound it!" he thought. "She's growing up. She's ashamed. As if bare legs—"

Olive's bare legs were like silk: warm brown fading upward into milky white. The wind lifted the thick, brazen hair away from her forehead, showing the smooth brow; she looked like a little girl, startled, innocent, and gay.

THIS was a lonely place. Wherever you looked, there were no houses, no people. Only Billoo, chasing sea gulls, and the children, seeming to walk in a glass sphere, bright little figures infinitely brave and dear. They were part of the loneliness, and yet apart from it.

Later, they would go back to houses and beds, while all this world of sea and birds and beach would be alone under a dark sky. The tide would reach in, leaving slippery kelp and stranded shells. There would be a whisper and murmur of voices over the dunes; wind, blowing the sand, twisting the coarse grass, nudging the cypresses. Far out, the reef would reach up and sink down, white, white and silent under a crystal arch of stars.

"Catch me! Catch me!" Olive cried. The children gave chase, in and out of the water, splashing and shrieking. The momentary shadow of loneliness had passed. They forgot Gladden, the everlasting grown-up, and were themselves.

Gladden sat down to watch them. He put his stockings and shoes on again, wondering why he had wanted to imitate these small, thoughtless, pagan humans. He lay back on the sand, stretching his arms above his head.

He was startled by Olive's voice, her face just over his, upside down. "Lazy! Lazy! We're going to have lunch!"

"Lunch!"

"Lunch!"

They swarmed up the dunes to the cars. Gladden tumbled the boxes out. "Everybody gather firewood!"

He found a hollow behind one of the dunes, a scooped-out place filled with warm sunlight. Here, he made a fire of smooth gray cypress sticks, very old and powdery and fragrant. He enjoyed showing Pete how to lay the foundation. Then the cone of large branches, built like a wigwam.

"Indians used to be here," Pete said. "Gosh, I wish—"

He retreated behind his dream of smooth brown warriors, of *conquistadores* in metal helmets and velvet doublets, of priests and tawny topaz galleons drifting on oily seas.

OLIVE set the table. The sandwiches were gritty, of course. The coffee pot, scorched like a burning brand, sizzled and sputtered. Olive crouched on her heels, laughing at Pete, who had bitten off more than he could chew.

How lovely she was, how desirable. Gladden imagined himself married to her. She was real, clear, and flaming, close to him. He wondered whether it was essential to feel more than he already felt before asking her to marry him. He had planned all this: the picnic, the jubilee of sunlight and laughter; now, he was impatient of the very thing he wanted.

Here was beauty, and it was enough. If he spoke to her, demanded that she love him, he might shatter the clear crystal of the moment. "I love you. I love you." He said it over to himself, while he ate gritty sandwiches and drank scorched coffee without any sugar. Someone had forgotten. . . .

"Where's Bertha?"

They all looked up, startled.

Nancy's face quivered, her lip drooped. "Bertha!" As if they could forget Bertha. But happiness had made them forget.

"I'll go!"

Gladden raced over the top of the dune and down. At first he could not see her anywhere, there was such a glare of light, so faint a tracing where sea and sand met. The wavering line of surf, shallow, tepid, lazy, broke into his vision and bewildered him.

When at last he saw her, he began to shout and to run. The little fool. The

Made for You, Sir—

Do us the kindness to try it

GENTLEMEN:

One thousand men were consulted as to what they sought in a shaving cream. From them we learned four things in which they said others had failed.

With these as our goal our laboratories started in. Time after time they failed, only to try again. The 130th formula brought success. Brought, too, a fifth feature to assure still greater shaving joy.

Now we ask you to try this shaving cream we've made for you. In simple fairness let us send a 10-day tube to try. We believe we'll win you.

We know how

Our laboratories are competent, superlatively equipped. For 60 years they have studied soap chemistry. The leading toilet soap of the world—Palmolive—is one of our creations.

Before we would consent to put our name on a shaving cream we had to know that, in this highly competitive field, our cream would be outstanding. And today millions are flocking to it, deserting the shaving preparations that never quite satisfied.

These 5 advantages

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Don't buy—yet

Now we ask that for ten days you shave our way. At our expense. If we have excelled, you will want to know. If we have not, you will know that, too. You can't fool men about shaving.

Do us the courtesy of a ten-day test. Cut out the coupon now.

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILLINOIS

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream There are new delights here for every man. Please let us prove them to you. Clip the coupon now.

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-1380, Palmolive, 3702 Iron St., Chicago, Ill.

Residents of Wisconsin should address Palmolive, Milwaukee, Wis.

little fool. She was wading out into the water. Alone. Purposefully. As if she intended to walk in, over her head. Gladden tried to hold her back. She either could not or would not hear him. The red dress sank into the water as step by step she advanced.

Gladden stumbled to his knees, and when he got up again the water had reached her shoulders. He began to swear. He knew now why she was frightening him. She was jealous. Maybe, after all, she loved him. Not love. Maybe she was fond of him. It was his fault for not having known that jealousy is a dark and bitter suffering, a dangerous poison.

Suddenly she disappeared.

Gladden ran, but he could not make any speed; the ground moved backward. His teeth were chattering. Everybody has a pet fear, and Gladden's was the fear of drowning. That was why he made such an extraordinary swimmer: he was swimming away from his fear.

Now he ran with fear at his heels. The water took him. Cold. Not tepid. Cold. It bubbled and hissed past his ears. Groping down for her, his hand touched her dress. Dead? He pulled hard and brought her to the surface. Limp dress. Limp, streaming braids. Suddenly she shook her head, struck away from him and laughed. He saw her eyes, full of a bitter, adult mischief, a ferocious and tender suffering.

"Catch me! Catch me!"

And she swam away, hand over hand, straight out to sea.

Later, Gladden found her slippers on the beach. She had kicked them off when she saw him running toward her, had tried deliberately to frighten him.

She swam like a boy, with swift, strong, overhead strokes. It was all Gladden could do, in his heavy clothing and waterlogged shoes, to overtake her. When he did, he shouted at her, "You ought to be ashamed! I didn't know you could swim."

She circled around him, puffing and laughing. "Pop taught me, when I was a little kid. We used to come over here, just him and me."

"He and I."

"It sounds queer."

"It's correct, nevertheless."

Gladden started back, riding the smother, that hissed like siphoned water and was infinitely smooth and warm. "Let her drown," he thought. "I guess she can follow me." He plunged under, and opened his eyes.

THE picnic was spoiled for everyone except Bertha. She had taken the center of the stage away from Olive and Gladden. An unexpected audacity had made of her a potential creature of mystery. She was at Gladden's side when he touched the shallows, and she waded out, molded in red, with already a little spark of victory in her eyes.

Gladden saw then that she was possessed of something brave, ruthless, and fatal. For a moment he was afraid, not for her but for himself.

They climbed the dune in silence. The sand weighted their wet clothes, stuck to their legs. They grew heavier with every step.

"Did I scare you?" she asked presently.

"It would have served you right," he said darkly, "if you had drowned!"

"I can't drown," she assured him.

"No," he thought, "you can't; you swim like a young seal. But I'll be hanged if I tell you so, because you want me to! How can I make love to Olive after this?"

With a feeling of angry frustration, he delivered Bertha to her triumph.

They surrounded her. Their voices were shrill with excitement and fear. They looked at her as if she were a stranger, a fascinating newcomer. They dried her out before the fire. They gave her hot coffee. They slapped her hands and rubbed her arms and unbraided her hair, spreading it across her shoulders. They questioned her, and cried over her.

She had one more weapon, however. She turned blue. She began to chatter. Worse, she sneezed.

"We must take her home at once," Olive said to Gladden. "She's catching cold!"

They stamped on the fire, scattering the charred wood, packed the boxes again.

The picnic was over.

A WEEK later, Hansen drove out from Vaccatown and advised Gladden to relay the pipes to the dam. "Why take it to court? The law's on your side. If Pelgram interferes again, you've got him."

"I'd do it like a shot. Only, I can't pay for the material."

"I know a man who'll help you out. The day you came to Scotch Valley, you spoke to a man who was driving a small coupé. You remember?"

"Yes. But how—"

"He didn't forget you. He came in to see me yesterday. His name's Beale. Charlie Beale. He's a scout for one of the oil companies."

Gladden looked uncertain. "A scout?"

"He makes his living tracking down oil. Not with a willow wand; it's not as easy as that. He has a certain amount of scientific knowledge and a sixth sense where oil is concerned. Sometimes he finds it; sometimes he doesn't. He spotted the Smith wells up the Valley. He might be induced to take an oil lease on this property for his company."

"A lease?"

"It amounts to this: The big fellows aren't interested in you, personally; they are concerned only with the possibility of oil on your property. They don't want it now; but they might want it in the future. So they lease your property. You retain a nominal interest, and if oil is found you benefit. If not, you still have your land, your orchards. They won't touch the trees."

"Why not do my own drilling? Look at the Smiths!"

"Leased! To Beale and his crowd. The Smiths are living on royalties. They had four hundred acres, all of it good land. Either way, they were lucky."

Hansen rose, a mountain of good-humored flesh. "The time's coming when we'll need all the oil we can get. The earth is being sucked dry. Her ribs are being picked of coal. Her timber's going fast. Against that eventuality, Beale is crawling on his hands and knees all over California, sniffing for the precious essence."

"What makes him think there is oil on this place?"

"There's oil everywhere in the Valley."

"I'd like to drill my own well!"

"You'd need at least fifty thousand. Better cultivate your garden. And leave the rest to Beale. I'll send him out to see you."

Beale appeared a few days later.

He had exchanged the frivolous coupé for a white-enameled roadster. "How d' you do? My name's Beale. Perhaps you remember me."

"Of course."

"You found the children, eh? Hansen says you're doing mighty well out here."

Gladden smiled. "We aren't hungry," he admitted.

Beale glanced around the yard. Gladden had repaired the broken fences. He had raked and burned the fallen leaves.

"Looks pretty shipshape to me. I see you've plowed. You must intend to improve the place. You don't want to sell, do you?"

"I can't. The property belongs to the children."

"But you might lease, eh?"

"I might."

"*H-mm.* Would you mind letting me walk around a bit? I'd like to see the view from the top of that hill over there—where the horse is grazing."

On the way up the hill, Beale stooped to pick up bits of rock, which he examined with the aid of a pocket magnifying glass. He crumbled clods of earth between his fingers, and sniffed at them, staining the end of his long nose. But he seemed most deeply concerned with the slope and the form of the land, the shallow hollows, the smooth contours, the broad depressions.

THEY gained the summit of the hill, and sat down. Gladden liked this spot, since it afforded a view of the mountains, the sea, and a great checkerboard panorama of farm lands, orchards, towns. Far off, a little train—engine, cars, caboose—moved like a toy in and out of groves and culverts.

"Freight," Beale said. He made a vague gesture. "This is a great country. A great state. Things moving. Growing. There's no end to it. I'm glad to be alive, and to be a part of it. When I get up above it, like this, I feel small, but I feel proud. It's mine, just as it's yours and the next fellow's."

Without further preamble, in a dry, emotionless voice, Beale made an offer. So much down and so much a year, and royalty.

Gladden accepted. He reminded himself that it was his duty. In no other way could he be certain of saving the orchards. In no other way could he put Pelgram to the test, and either conquer him or surrender to him.

He had not seen the rancher since the trial. But Pete had been ordered away from the wire fence, threatened by one of Pelgram's men, who patrolled the barrier with a rifle under his arm, on the lookout for any attempt to bridge the canyon.

Gladden decided that a fight was just about what he needed to restore his self-respect. Bertha had made a fool of him, and he had made a fool of himself by not letting her sneeze her head off while he took Olive aside and asked her to marry him. That would have clinched matters. Either he would have been engaged, or not. It looked now as if he had lost his
